It is the policy of the Department, through the *Division of Social Work*, to establish social work services, where possible, in all relevant aspects of the health, medical and hospital services. Through these services patients in hospitals and sick, elderly and disabled persons in the community may receive assistance with their personal and social problems. Social work departments have been established in the major hospitals in Brisbane and in four country hospitals, and social workers have been appointed to work in health, psychiatric and child welfare and guidance services. Development of this work is co-ordinated through the Division, and the Adviser in Social Welfare acts as official liaison with other State Government Departments as services relating to social work and family welfare are established.

The *Division of Geriatrics* controls a geriatric unit established at Princess Alexandra Hospital. The unit consists of two wards with accommodation for 128 in-patients, administration section, day hospital, and physio-therapy and occupational therapy departments.

The *Division of Laboratory Services* maintains two laboratories—the Laboratory of Microbiology and Pathology and the Government Chemical Laboratory—to ensure the purity of a wide range of foodstuffs and materials. The former also offers a service in clinical pathology to institutions, country hospitals and private doctors, and provides a medico-legal service for the whole State. A diagnostic virus laboratory has been established within the Laboratory of Microbiology and Pathology. The Institute of Forensic Pathology is controlled by the medical staff of the Laboratory of Microbiology and Pathology, and coroners' autopsies are conducted there.

All public hospitals in Queensland operate under the district system, which provides for the constitution of hospitals regions and hospitals districts, and a hospitals board for each district. The State is divided into twelve hospitals regions with a base hospital for each region. Each region comprises a number of hospitals districts, the purpose of the regional scheme being to co-ordinate the public hospitals in the region with the base hospital. The administration of the hospital services, including public dental services, in each hospitals district is vested in the hospitals board, which comprises not less than four nor more than eight members appointed by the Governor-in-Council, and one member elected by the component local authorities. During 1963-64 there were sixty hospitals boards controlling 134 public hospitals, nine of which treated

out-patients only. In addition, twenty-four other hospitals, six of which are treated as public hospitals, received aid from the Government, and an institution for the treatment of Hansen's disease in Aborigines was maintained at Fantome Island near Townsville. Other persons suffering from this disease are treated at an annexe of the Princess Alexandra Hospital, South Brisbane.

South Australia

The First Health Act in South Australia was passed in 1873. This Act, which was modelled on earlier English legislation, established a Central Board of Health, and a number of town councils were constituted as local boards. Regulations were concerned mainly with improved sanitation and the checking of 'epidemic, endemic and contagious diseases'. Amendments to this Act followed in 1876 and 1884, and a fourth Act, replacing earlier legislation, was passed in 1898. The present Health Act dates from 1935. Administration was continued under the authority of the Central Board of Health until 1949, when the Department of Public Health was formed to co-ordinate the work of the Board and other health activities.

The *Department of Public Health* embraces the activities of the Central Board of Health, the School Health Branch (including the Deafness Guidance Clinic), the Poliomyelitis Branch, the Food and Drugs Advisory Committee, the Radiological Advisory Committee, the Clean Air Committee, and also the public health aspects of the control of tuberculosis, including the chest clinic and the State X-ray health surveys. The Central Board of Health administers the Health, Food and Drugs, Dangerous Drugs, Noxious Trades, Bakehouse Registration, and Notification of Births Acts. The Board also has responsibilities under the Local Government Act and the Cremation Act. The Health Act and the Food and Drugs Act constitute every municipal or district council a local board of health or local authority for its area, except that in the metropolitan area the Metropolitan County Board (representing all metropolitan corporations) is the local authority under the Food and Drugs Act. The Central Board of Health acts as a supervisory body over all the 143 local boards under the Health Act, the Food and Drugs Act, and the Bakehouse Registration Act. It has concurrent jurisdiction with local boards. Outside the boundaries of local boards the Central Board is the administering authority.

The State Government conducts a chest clinic and a tuberculosis hospital in the metropolitan area. At the chest clinic patients are examined and treated, suspected cases are investigated, and contacts are advised of precautionary measures and periodically re-examined. The Morris Hospital, Northfield, which at 30 June 1964 had eighty-six beds, cares for the tuberculosis patients received from the chest clinic. The Kalyra Sanatorium at Belair is conducted by the James Brown Memorial Trust Inc. for tuberculosis sufferers. At 30 June 1964 there were seventy beds at the Sanatorium.

The *Hospitals Department* administers three general hospitals in the metropolitan area—Royal Adelaide Hospital, the Queen Elizabeth Hospital, and Morris Hospital (tuberculosis). In the country there are *government hospitals* at Port Pirie, Mount Gambier, Port Lincoln, Port Augusta, Wallaroo and Barmera. In addition there are fifty *other hospitals* in country areas conducted by local boards of management, which receive maintenance subsidies from the State Government and come under the general supervision of the Hospitals Department. The Mental Health Services, a division of the Hospitals Department, is responsible for the management of public psychiatric services.

There are several large *private hospitals* in the metropolitan area, including Calvary Hospital, the Memorial Hospital and St. Andrew's Presbyterian Hospital, all of which are run by denominational bodies. Another large institution is the Home for Incurables at Fullarton, which provides accommodation and nursing attention for persons suffering from chronic disease.

Western Australia

The central health authority is the *Department of Public Health*, administered by a Commissioner who must be a medical practitioner. The Commissioner is responsible for the administration of several important Statutes, including the Health Act, Radioactive Substances Act, Poisons Act, Clean Air Act, Anatomy Act and Cremation Act.

The Health Act is comprehensive in scope. In the administration of its general sanitary provisions, including the registration of lodging houses, eating houses and offensive trades, local health authorities are subject to the overriding authority of the Commissioner. The Act provides for the construction of sewerage schemes in certain areas and confers on the Commissioner the powers necessary for the registration of private hospitals, the licensing of maternity homes and the supervision of the construction and safety of public buildings. Infectious diseases are notifiable under the Act, and the Commissioner is empowered to isolate infected persons. The Maternal Mortality Committee, which was constituted under the Act, is given statutory power to investigate the circumstances of each maternal death.

In 1965 the Department took over the administration of the Poisons Act from the Pharmaceutical Council. The existing Statute provides for all poisons to be classified in eight schedules closely conforming to the recommendations of the National Health and Medical Research Council.

The Department has several major branches comprising the Public Health Laboratories, the Child Health Services, the School Medical and Dental Services, and the Tuberculosis Control Branch.

A special feature of the Department's administration is the existence of a State Health Council. This Council is non-statutory and comprises representatives of all major groups within the medical profession, including nominees of the Faculty of Medicine of the University of Western Australia. The Council's advice is sought on many matters of professional and public health importance. It has four standing committees—the Hospital Requirements Committee, the Mental Health Committee, the Dental Health Committee and the Maternal and Infant Health Committee.

Government and government-assisted hospitals in Western Australia operate under the *Hospitals Act, 1927-1955*, which is administered, subject to the direction of the Minister for Health, by the Medical Department. For administrative purposes a hospital under the direct control of the Medical Department is classified as 'departmental' and is financed from State funds. A hospital classified as a 'Board' hospital has its own board of management and is subsidized by the State Government. In all, forty departmental and fifty-three Board hospitals were located throughout the State at 30 June 1965.

In addition to the government hospitals there are a number of *private general and maternity hospitals* which are registered and inspected by the Department of Public Health. The principal private hospitals are those established by religious bodies in the metropolitan area and the main country towns.

All *mental hospitals* in Western Australia are administered by a Director of Mental Health Services responsible to the Minister for Health. In addition to the major mental hospitals there are day hospitals, out-patient clinics and a child guidance clinic. A new Mental Health Act is expected to come into force during 1966.

Tasmania

The *State Department of Health Services* is under the jurisdiction of the Minister for Health, with the Director-General of Health Services as the permanent head. The Headquarters of the Department controls three Divisions, each under a Director, namely, Public Health, Psychiatric Services, and Tuberculosis. Two specialized services are also part of the Department, namely, the State Health Laboratory under the control of the Director of Pathology and the Government Analyst and Chemist Laboratory under the control of the Government Analyst.

Headquarters Division. The responsibilities of this Division of the Department of Health Services include the public hospital services and the licensing of private hospitals and other medical establishments under the *Hospital Act 1918*; the District Medical Service; Geriatric Services; the School Dental Service; the Tourist and District Nursing Services; legislation concerned with health and allied matters; the Nurses' Registration Board and Dental Mechanics' Registration Board; some specialist medical services; the statistical classification of public hospital morbidity and mortality; the State Drug Advisory Committee; liaison with the Health Departments of other States and the Commonwealth; the Hospital Employees' Award, the Medical Officers' Award, and the Nurses' (Public Hospitals) Award; the control and maintenance of Crown property occupied by various sections of the Department; and the appointment and salaries of staff who are not officers of the Public Service.

The *Division of Public Health* has responsibility for the preventive medical services of the State. The Director is responsible for the operation of the *Public Health Act 1957* and the control of medical officers of health and other health officers employed by the Department and by municipalities throughout the State. A major responsibility is public immunization campaigns, conducted through the municipal councils (preparations distributed include the Salk and Sabin anti-poliomyelitis vaccines and the Triple Antigen vaccines against whooping cough, tetanus and diphtheria). The Division is also responsible for the Child Health Service, the School Medical Service, the Mothercraft Home, the Health Education Council, the Nutrition Advisory Service, industrial hygiene, environmental sanitation, pure food and pure drug quality control, public health aspects of the building regulations, infectious diseases control, and the National Fitness service.

The *Division of Psychiatric Services* controls the major psychiatric rehabilitation hospitals and provides regional clinical psychiatric facilities and the specialists employed, including social workers. Some services operate at the general hospitals, while others, such as the child psychiatric unit and the alcoholic rehabilitation service, are established separately. Day hospital facilities are available, and a clinic is maintained at the Division of Public Health in Hobart. The *Mental Health Act 1963* superseded previous legislation and is based on the modern theory that a mental health institution should be a true hospital, where the majority of patients attend voluntarily and where there should be a high turn-over of short-stay patients who are given intensive treatment. Application of this principle has had the effect of reducing the number of patients compulsorily detained from about 75 per cent of the total psychiatric hospital patient population to about 25 per cent.

The *Division of Tuberculosis* is concerned with the prevention of tuberculosis in the State. It administers compulsory mass chest X-ray services throughout the State, four chest clinics and two chest hospitals.

The *State Health Laboratory* provides certain pathological services to hospitals and doctors and special bacteriological and cytological services in connection with public health and the anti-cancer campaign.

The *Government Analyst and Chemist Laboratory* is a public laboratory for the chemical analysis of a wide variety of foods, drugs and other substances and undertakes work for Government Departments and the public.

State controlled hospitals, for which the State accepts the major financial responsibility, are controlled either directly or through Hospital Boards each consisting of seven members, of whom five are appointed by the Minister. They include four general hospitals, sixteen district hospitals, twelve district nursing centres with bed accommodation, two mental hospitals, two maternity hospitals, two chest hospitals, and three homes for the aged. Under the 'personal patient' scheme a patient in a State-controlled hospital may have his own doctor, if the latter is an honorary doctor at the hospital, for the payment of an additional fee.

Private hospitals are operated by church and other private organizations. There are seven licensed to receive surgical, medical or maternity cases. Nursing homes and rest homes are institutions which do not conform to private hospital specifications with regard to equipment, construction and staffing, as laid down under the Hospitals Act, and treat general cases within limits as specified in the licence. There are thirty-three private institutions concerned with aged people, two for those with incurable or chronic illnesses, two for general convalescence, and two for retarded children.

The *Ambulance Commission of Tasmania* co-ordinates ambulance services through four Ambulance Boards and is responsible to the Minister for Health for seeing that they operate effectively. The Royal Flying Doctor Service was established in 1960 and operates with the ambulance services to bring remote patients to the Royal Hobart or Launceston General Hospitals.

Northern Territory

The *Commonwealth Department of Health* provides health services in the Northern Territory which include hospital, medical and dental services.

Four general hospitals have been established, and at 31 December 1965 the available accommodation for in-patients was as follows: Darwin Hospital, 316; Alice Springs Hospital, 153; Katherine Hospital, 52; and Tennant Creek Hospital, 35. The treatment of Hansen's disease (leprosy) is carried out at East Arm Settlement. A full range of ancillary services is available at the Darwin hospital, which serves as a base hospital for the Territory. Dental clinics have been set up at Darwin and Alice Springs.

Medical and dental services to outback areas are provided by road and air. The Department of Health has two De Havilland Dove aircraft stationed at Darwin and one at Alice Springs. They are staffed and serviced by Trans-Australia Airlines and are extensively used in ambulance and survey medical work. At Alice Springs medical officers of the Department of Health provide the medical services to the Royal Flying Doctor Service (South Australian base). Public health services are provided, and health inspectors visit all settlements periodically. A section of the Department of Health undertakes continuous investigations into native health.

Australian Capital Territory

The *Public Health Ordinance 1928-1951* places under the control of the Minister for Health matters relating to public health and hygiene in the Australian Capital Territory. In addition to the public health activities normally undertaken by the State Governments, the Commonwealth Department of Health undertakes certain duties which in the States would be the responsibility of local government instrumentalities.

A medical officer of health and a staff of six health inspectors have been appointed to administer the Public Health Ordinance and ancillary regulations. During 1965, 1,037 licences were issued under various public health regulations, and legal action was taken in fourteen cases for offences against these regulations. The inspection staff is responsible for the quarantine inspection of parcels arriving under bond at the Canberra Post Office, and, in addition, the inspection of plants and animals and the disposal of refuse from aircraft in Canberra as the first port of entry into Australia.

In continuation of the campaign to control the incidence of poliomyelitis, the Department of Health in Canberra during 1965 gave 7,507 injections of poliomyelitis vaccine to infants, 1,206 to school children, and 898 to adults.

The *Commonwealth Health Laboratory* in Canberra provides full clinical laboratory services to the Canberra Community Hospital and to private medical practitioners in the Australian Capital Territory. During 1965 pathological services were performed in connection with chemical and bacterial analyses of water, milk, other foods, and sewage, and tests of 88,152 human specimens were carried out.

The *Canberra Community Hospital* is administered, subject to the Minister for Health, by a board consisting of five elected members and three members appointed by the Minister. At 30 June 1965 the hospital had accommodation for 454 in-patients.

The *Canberra Mothercraft Society*, which is subsidized by the Commonwealth Department of Health, administers the Infant Welfare Service in Canberra with a staff of nine triple-certificated nurses. The Queen Elizabeth II Coronation Home for Mothers and Babies, which is under the management of the Society, was opened on 7 January 1963. It is staffed by qualified nursing staff and provides post-natal care for mothers and problem babies. The Home has accommodation for two mothers and nine babies.

The Director of the *Tuberculosis Division* of the Commonwealth Department of Health, in addition to the responsibility of co-ordinating the activities of the States in the national campaign against tuberculosis, is concerned with the prevention, detection, examination and treatment of tuberculosis in the Australian Capital Territory. In 1965 eleven cases of tuberculosis were notified in the Australian Capital Territory.

A district nursing service, administered by the Commonwealth Department of Health, was established in 1950 to provide a home-nursing service for the sick and aged. This service, available at the request of a registered medical practitioner, is provided by fifteen sisters, who in 1965 made 39,989 visits.

The supervision of the hygiene of dairies and piggeries and the control of the Canberra Abattoir is the responsibility of the veterinary service of the Department of Health. The duties of this service also include the prevention and control of disease in stock and advice to district stock owners, with field diagnosis on a herd or flock basis supported by laboratory confirmation.

Supervision and care of infant life

Because the health of mothers and infants depends largely on pre-natal attention as well as after-care, government, local government and private organizations provide instruction and treatment for mothers before and after confinement. The health and well-being of mother and child are looked after by infant welfare centres, baby clinics, crèches, etc.

In all States, Acts have been passed with the object of supervising the conditions of infant life and reducing the rate of mortality. (Information regarding infant mortality will be found in the chapter Vital Statistics—see pages 254-8.) Departments control the boarding-out of the wards of the State to suitable persons. Wherever possible the child is boarded out to its mother or to a near female relative. Stringent conditions regulate the adoption, nursing and maintenance of children placed in foster-homes by private persons, while special attention is devoted to the welfare of ex-nuptial children.

Under the provisions of the *Social Services Act 1947-1965* maternity allowances are paid to provide financial assistance towards the expenses associated with the birth of children. A sum of \$30 is payable to the mother in respect of each confinement at which a living or viable child is born if the mother has no other children under sixteen years of age. Where there are one or two other children under sixteen, the amount payable is \$32, and where there are three or more other children under sixteen, the amount payable is \$35. Where more than one child is born at a birth, the amount of the allowance is increased by \$10 in respect of each additional child. More detailed information concerning maternity allowances is given in the chapter Welfare Services.

Nursing activities

Several State Governments maintain institutions which provide treatment for mothers and children, and, in addition, subsidies are granted to various associations engaged in welfare work.

Infant welfare centres. The following table gives particulars of the activities of infant welfare centres for the year 1965. The figures relate to all centres, whether permanently staffed or on a temporary or part-time basis. Centres may be located at accommodation specially provided for this purpose or at halls, schools, etc.

INFANT WELFARE CENTRES: STATES AND TERRITORIES, 1965

—	N.S.W.	Vic.	Qld (a)	S.A. (a)	W.A.	Tas.	N.T.	A.C.T.	Aust.
Number of centres .	424	667	264	268	72	105	16	31	1,847
Attendances at centres	1,079,549	1,383,407	451,951	256,206	231,191	137,276	17,129	42,072	3,598,781
Visits by nurses to homes	n.a.	176,139	30,631	33,844	26,483	80,058	6,910	4,759	n.a.

(a) Year ended 30 June 1965.

Mobile units are used as centres in some States. The numbers of these in 1965 included in the above table were as follows: Victoria, 5; Queensland, 2; South Australia, 4; Western Australia, 4; and Tasmania, 11.

In the last thirty years the number of attendances at the infant welfare centres has quadrupled. The numbers of attendances at five-year intervals since 1930 were as follows: 1930, 919,893; 1935, 1,355,306; 1940, 2,035,299; 1945, 2,927,764; 1950, 3,049,375; 1955, 3,099,233; and 1960, 3,482,383.

Bush Nursing Associations. Treatment for mothers and children is also provided by the Bush Nursing Associations. The number of centres maintained by the Associations in 1965 were: New South Wales, 18; Victoria, 57; Queensland, 5; South Australia, 33; Western Australia, 15; and Tasmania, 24.

Medical inspection of school children

Medical and dental inspection of school children is carried out in all States, in the Northern Territory and in the Australian Capital Territory. In some States travelling clinics have been established to deal with dental defects.

New South Wales

The school medical and dental services in New South Wales are under the control of the State Department of Public Health. The staff of the school medical service in June 1965 included sixty-two medical officers, eleven psychiatrists, ten part-time ear, nose and throat surgeons, an ophthalmologist, seventeen clinical psychologists, eighty-one nurses, sixteen social workers, and twenty-two speech therapists.

The aim of the school medical service is to examine all school children in the State in order to discover any departure from normal health, physical or mental, and to notify the parent or guardian of any need for further investigation or treatment. Annual visits are made to schools in the metropolitan, Newcastle, and Wollongong areas, and in some of the larger country towns. Full examinations are conducted on a child's entry into school. Review examinations, with particular emphasis on vision and hearing, are conducted on pupils in fourth class in primary schools and second and fourth years in secondary schools, and on others who appear to need additional examinations. Medical officers of this service examined 199,166 children in 1965. In other country areas there is a scheme for school children to be examined by local medical practitioners under the supervision of local municipal and shire councils.

The school medical service conducts ten child guidance clinics (nine in the metropolis and one at Newcastle), eight child health centres (seven in the metropolis and one at Newcastle), ten hearing clinics (eight in the metropolis, one at Newcastle and one at Wollongong), and an asthma clinic in Sydney.

In June 1965 the school dental service had a staff of thirty-four dental officers, thirty dental assistants, and six dental nurses. The service is provided by dental clinics established in the grounds of three metropolitan and two country public schools, eighteen mobile clinics in country areas, and three dental teams with the Royal Flying Doctor Service (located at Broken Hill). In 1965, 115,038 school children were examined by the school dental service and 15,718 of these were treated.

Victoria

School medical services are conducted in close association with the Education Department. All children between the ages of five and fifteen years attending State and registered schools are examined regularly and any disabilities found in the children are brought to the notice of their parents. School nurses, under medical direction, visit the homes and schools. Children suffering from physical and mental disabilities are recommended to attend appropriate schools or classes by the medical officers. Some special training for the handicapped is given.

The School Dental Service has an establishment of forty three dental officers and provides dental attention for children in the metropolitan area at three dental centres, and for a number of country districts by means of fifteen mobile units, including six twin-surgery units. It also provides dental services for children's institutions in and around Melbourne and certain provincial centres. The service is now providing dental attention for some 80,000 primary school children.

Queensland

During 1964-65 medical officers and nurses examined 106,295 school children; 4,890 children had disabilities of which parents were notified and advised to seek attention. In western Queensland local doctors act as part-time ophthalmic surgeons. Advice is given on school sanitation, communicable diseases in schools, and health education.

During 1964 school dentists gave treatment to 12,065 school children who resided in areas beyond easy reach of hospital dental clinics. The treatment was carried out at four rail dental clinics and with portable equipment at schools. In addition, school children are treated at hospital dental clinics in the larger towns.

South Australia

State schools within a radius of sixty miles from Adelaide and at five large country centres are visited annually, and the children are examined while in grades 1, 4 and 7 in the primary schools and in their second and fourth years in secondary schools. Efforts are made to visit the remaining country schools every three years, when all the children are examined. Students who wish to become teachers are examined on appointment as Honours Teaching Scholars while still attending secondary schools, again immediately prior to entering the Teachers' College, and finally when they leave the College to take up teaching. Courses of lectures in health education are given to all College students.

During 1965, 80,156 children were examined by medical officers in 234 country and 175 metropolitan schools. Of these, 5,974 required treatment for defective vision, 2,371 for defective hearing, and 12,797 for dental disorders. Dentists using mobile vans examined 5,272 school children in country areas where a private dental service was not readily available; 4,442 children were offered treatment; 3,987 accepted and were treated free of charge. There were 2,584 children examined at the Deafness Guidance Clinic during 1965. Of the 1,483 new patients, 778 were referred to doctors or hospitals for treatment. Educational work was assisted by talks to mothers' clubs and interviews with parents by doctors and dentists, and by home visits and interviews by nurses.

Western Australia

The School Medical Service of the State Health Department employs seven full-time medical officers for schools. During 1964 these officers examined 48,441 children (metropolitan 35,382, country 13,059). The 350 schools visited comprised metropolitan, 265 (Government schools 191, non-government schools 74) and country, 85 (government schools 66, non-government schools 19). The School Medical Services provide for the examination of each school child twice during his school career.

During 1964 the fourteen full-time dentists employed by the School Dental Service visited 4 metropolitan schools, 113 country schools, 9 orphanages, and 3 native missions. The number of children examined was 9,669. With the consent of their parents, 6,861 of these were treated. Twelve dental vans were in operation.

Tasmania

During 1965 three full-time and nine part-time medical officers examined school children in Government and non-government schools. In addition, two regional medical officers of health also examined school children. Twenty two full-time and five part-time sisters visited homes and schools. Of the 20,310 children examined by medical officers, 7,493 were found to have defects.

The school dental service was re-organized during 1964-65 and placed under the control of the senior medical officer, Department of Health Services. A major dental clinic is now established at Hobart. A clinic at Launceston is staffed by two dental officers, and there are eighteen district dental officers in country areas. School dental work on King and Flinders Islands is performed at Government expense by private practitioners. During 1964-65 there were 11,173 new visits to school dentists and 15,488 repeat visits.

Northern Territory

The Schools Medical Officer makes routine physical examinations of all children attending pre-school centres and schools. The only children not so examined by him are those at the Native Welfare Settlement School, i.e. full-blood Aborigines, who are examined during native health surveys. A special dental service for school and pre-school children is available in Darwin and Alice Springs. School doctors and dentists travel throughout the Territory to carry out diagnosis and treatment.

Australian Capital Territory

The Commonwealth Department of Health is responsible for health aspects of child welfare in the Australian Capital Territory. These include the School Medical Service carried out by three medical officers and three trained nurses, and the School Dental Service, staffed by eleven dentists, together with surgery and clinical assistants.

A Child Guidance Clinic has been established to assist children with psychiatric disorders. The clinic assists children of both pre-school and school age, who are referred to the clinic by private doctors, the School Medical Service, social workers, and the Australian Capital Territory Education Clinic.

Medical examinations are carried out at all schools, public and private, within the Territory. The total number of children examined during 1965 was 5,417. The majority of the examinations were of children in the 6, 8, 12, 15 and 17 year age groups, but another large group of children was referred for examination of special conditions. In addition, examination of children attending pre-school centres was made according to the time available, 144 pre-school children being examined.

Defects notified during the year were: 769 eyesight, 65 ear, nose and throat, and 43 miscellaneous; while 184 cases of hearing loss not requiring further treatment were also found. Triple antigen injections, totalling 8,788 in 1965, were given at regular sessions held throughout the year, while 1,206 anti-poliomyelitis injections were given to school children and 7,507 at baby health clinics.

The School Dental Service provides free treatment for children attending infants and primary schools, both public and private, in the Australian Capital Territory. During 1965, 10,005 children were examined in Canberra and Jervis Bay schools. As in previous years, visits were also made to the Cocos (Keeling) Islands and the Wreck Bay Aboriginal settlement. In all, a total of 10,065 children were examined by the School Dental Service. A resident dental officer has been appointed to Norfolk Island.

Disposal of dead by cremation

The first crematorium in Australia was opened in South Australia in 1903. At 31 December 1965 there were nineteen crematoria in Australia, situated as follows: New South Wales, 7; Victoria, 4; Queensland, 3; South Australia, 1; Western Australia, 2; Tasmania, 2. A crematorium in the Australian Capital Territory was completed in 1966. There is no crematorium in the Northern Territory. The following table shows the number of cremations and total deaths in each State for each of the years 1961 to 1965.

CREMATIONS AND TOTAL DEATHS: STATES AND TERRITORIES, 1961 TO 1965

State or Territory	1961		1962		1963		1964		1965

COMMONWEALTH GOVERNMENT ACTIVITIES

Commonwealth services outlined in this chapter are those provided under the National Health Services or otherwise administered by the Commonwealth Department of Health. For particulars of services administered by the Commonwealth Department of Social Services and of Commonwealth expenditure from the National Welfare Fund on all forms of social and health services see the chapter Welfare Services.

At the time of federation the only health function given to the Commonwealth Government under the Constitution was the power to make laws with respect to quarantine. Following on the passing of the *Quarantine Act* 1908 a branch of the Department of Trade and Customs under the

control of a Director of Quarantine was created on 1 July 1909. The Commonwealth Department of Health was formed in 1921 by the extension and development of the quarantine service, the Director of Quarantine becoming the Director-General of Health. An amendment to the Constitution in 1946 gave the Commonwealth power to make laws with respect to pharmaceutical, hospital and sickness benefits, and medical and dental services. In addition, the Commonwealth Government has used its powers under Section 96 of the Constitution to make grants to the States for health purposes.

National health benefits

Pharmaceutical benefits

A comprehensive range of drugs and medicines is made available to all persons receiving treatment from a medical practitioner registered in Australia. The benefits are supplied by an approved pharmacist upon presentation of a prescription, or by an approved hospital to patients receiving treatment at the hospital. The patient pays the first 50 cents of the cost of a prescription dispensed by an approved pharmacist, but pensioners who are eligible for treatment under the Pensioner Medical Service (see page 562) receive all benefits without any contribution being made. Special arrangements exist to cover prescriptions dispensed at locations outside the normal conditions of supply, e.g. in remote areas. Total Commonwealth expenditure on pharmaceutical benefits in the year 1964-65 was \$82,202,610.

Hospital and nursing home benefits

The *National Health Act 1953-1965* provides for the payment of Commonwealth hospital and nursing home benefits. Commonwealth benefits are payable only in respect of treatment received in approved hospitals and approved nursing homes. For the purposes of the National Health Act premises which provide medical treatment, care and accommodation for sick persons are approved either as hospitals or as nursing homes, depending mainly on their clinical standards and the type of patients accommodated. Usually premises are approved as hospitals if their general standards are substantially equivalent to those of a public hospital and if hospital treatment, as defined in the National Health Act, is provided. Premises are approved as nursing homes where their general standards are similar to those prevailing in benevolent homes, convalescent homes, rest homes or homes for the aged, and if nursing home treatment as defined in the Act is provided.

Patients in approved hospitals. A basic principle of the provision of benefits for patients in approved hospitals is the Commonwealth support of voluntary insurance against the costs involved. Insured patients in approved hospitals receive a Commonwealth hospital benefit of \$2 a day which is paid through the contributors' registered hospital benefits organizations. Total payments by contributors to organizations range from 10 cents to 40 cents a week for single persons and from 20 cents to 80 cents a week for families. Examples of contributions and benefits payable, including Commonwealth benefits of \$2 a day, are:

Weekly contributions		Total benefits	
Single person	Family	Daily	Weekly
c	c	\$	\$
10	20	4.40	30.80
15	30	5.60	39.20
20	40	6.80	47.60
25	50	8.00	56.00
40	80	11.60	81.20

A contribution of 50 cents a week covers a family for benefits at least equal to the public ward charge in any State. Contributions are allowable deductions for income tax purposes.

During the waiting period of two months after joining an organization the Commonwealth benefit is payable at the rate of 80 cents a day, unless the organization pays fund benefits, in which case Commonwealth benefit is payable at the higher rate of \$2 a day. While a member is in arrears with his contributions and fund benefits are not payable, the Commonwealth benefit is payable at the rate of 80 cents a day unless the member was in receipt of unemployment or sickness benefits under the *Social Services Act 1947-1965*.

Contributors who would have been excluded from fund benefits because of organizations' rules covering pre-existing ailments, chronic illnesses or maximum benefits are assured of hospital fund benefits by the provisions of the special account plan. The hospital fund benefit usually payable in such cases is \$1.60 a day and is paid either from special account, guaranteed by the Commonwealth, or from the ordinary account of the organization. One condition of payment is that the treatment in respect of which the fund benefit was paid was given in an approved hospital,

although fund benefit is paid in certain circumstances in respect of treatment given in approved nursing homes. If the payments from the special account exceed contributions credited to the account, the amount of deficit is reimbursed by the Commonwealth.

A person who joins a registered hospital benefits organization within eight weeks of being discharged from an approved nursing home is entitled to immediate Commonwealth benefit of \$2 per day and to fund benefits without having to serve a waiting period. If a qualified patient in an approved hospital is not insured (i.e. not a member of a hospital benefits organization), a Commonwealth benefit of 80 cents a day is deducted from his account by the hospital. The Commonwealth subsequently reimburses the hospital. Under arrangements made under the National Health Act pensioners who are enrolled in the Pensioner Medical Service and are treated in public wards of public hospitals are entitled (with a few exceptions) to free public ward treatment. For this the Commonwealth pays the hospitals a benefit of \$3.60 a day for each pensioner.

Patients in approved nursing homes. The Commonwealth nursing home benefit of \$2 a day is payable to all qualified patients in approved nursing homes whether the patients are insured or not. This benefit is deducted from the patient's account and subsequently paid by the Commonwealth to the nursing home. If no charge is made by the nursing home, the Commonwealth nursing home benefit of \$2 a day is still payable to the nursing home in respect of qualified patients.

There is no need for patients in approved nursing homes to be insured with a registered hospital benefits organization. Fund benefits are generally not payable. However, the National Health Act provides that where an insured special account patient is treated in an approved nursing home for an acute illness or condition and is given treatment equivalent to that which he would have received in an approved hospital, approval may be given to the payment of special account fund benefits.

Australians overseas. Australian residents who receive hospital treatment in recognized hospitals in overseas countries, while temporarily absent from Australia, are eligible to receive the Commonwealth and fund benefits to which they are entitled.

Expenditure on hospital and nursing home benefits. The following table shows the amount of Commonwealth hospital and nursing home benefits paid during 1964-65. This does not include expenditure on mental hospitals (see page 560).

**COMMONWEALTH HOSPITAL AND NURSING HOME BENEFITS PAID
STATES AND TERRITORIES, 1964-65**
(\$'000)

Type of patient	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Uninsured patients (80c)	745	456	960	122	151	50	15	116	2,614
Insured patients (\$2)(a)	8,198	4,647	2,230	1,921	1,569	655	(b)	(b)	19,221
Pensioner patients (\$3.60)	5,249	2,750	2,587	1,099	1,349	420	102	28	13,585
Nursing home patients (\$2)	8,044	4,500	3,076	1,778	1,734	664	19,796
Total	22,236	12,353	8,853	4,920	4,803	1,789	117	144	55,216

(a) Does not include payments of \$3,576,182 towards special accounts deficits in 1964-65. (b) Members who live in the Northern Territory or the Australian Capital Territory, or who are abroad, receive their Commonwealth benefit and fund benefit through membership of an organization registered in one of the States and payments to them are included in the respective States.

Registered hospital benefits organizations. The following table shows the number of registered hospital benefits organizations, the membership at 30 June 1965, and fund benefits paid during 1964-65. As many persons contribute on behalf of both themselves and their dependants, the total number of persons covered by hospital benefit schemes is considerably higher than the number of members.

HOSPITAL BENEFITS: ORGANIZATIONS AND FUND BENEFITS, STATES, 1964-65

—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
Registered organizations at 30 June 1965(b)	32	(c) 44	3	13	9	10	111

Fund benefits paid . \$'000	24,778	10,049	3,954	5,328	3,856	1,854	49,819

(a) Members who live in the Northern Territory or the Australian Capital Territory, or who are abroad, receive their Commonwealth benefit and fund benefit through membership of an organization registered in one of the States and payments to them are included in the respective States. (b) Interstate branches are not included. (c) Includes eighteen Bush Nursing Hospitals.

Mental hospitals

In 1946, when Commonwealth hospital benefits were introduced for patients in public hospitals, no provision was made for patients in mental hospitals. To help meet the cost of maintaining patients in mental hospitals the Commonwealth Parliament passed the *Mental Institutions Benefits Act 1948*. This Act ratified agreements with the States, whereunder it was provided that the States would cease making charges for the maintenance of mental patients and that the Commonwealth would pay the States a benefit based on the amount which had been collected by the States from the relatives of patients in mental hospitals by way of charges for maintenance.

These agreements operated for five years and terminated in the latter half of 1954. The amount contributed by the Commonwealth during the operation of the agreements was approximately one shilling (ten cents) a day for each patient. When the agreements terminated, Dr. Alan Stoller, of the Victorian Mental Hygiene Authority, was commissioned to undertake a survey of mental health facilities and needs in Australia. His report, issued in May 1955, stated that serious overcrowding existed in the majority of mental hospitals in Australia. The provision of more beds was the most urgent need, but other accommodation and rehabilitation facilities were also required.

Following the report, the Commonwealth made an offer of \$20 million to the States as part of a capital expenditure programme of \$60 million on increasing and improving patient accommodation. All States accepted the Commonwealth offer. By 1963 more than three-quarters of the total grant under the *States Grants (Mental Institutions) Act 1955* had been distributed, and the Commonwealth Government announced in November 1963 its intention of continuing assistance to the States towards capital costs on a similar basis, but without overall limit, for a period of three years. In May 1964 the *States Grants (Mental Health Institutions) Act 1964* was passed to implement that policy. This Act provided for the continuation of Commonwealth aid of \$1.00 for every \$2.00 of capital expenditure by the States on mental health facilities. The new Act makes no provision limiting the size of the grant and the assistance is limited to the three-year period concluding on 30 June 1967. The following table sets out the amounts which have been paid to the State Governments by the Commonwealth Government from 1955-56 to 1964-65.

EXPENDITURE ON MENTAL HOSPITALS BY THE COMMONWEALTH
GOVERNMENT: STATES, 1955-56 TO 1964-65
(\$'000)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.

1959-60 . . .	718	1,036	149	184	74	134	2,295
1960-61 . . .	866	168	195	91	31	104	1,454
1961-62 . . .	1,297	..	141	56	154	..	1,648
1962-63 . . .	1,295	..	75	104	116	..	1,590
1963-64 . . .	982	..	108	173	332	..	1,595
1964-65(a) . .	659	711	225	265	447	197	2,504
Total, 1955-56 to 1964-65	8,044	6,191	1,668	1,703	1,369	907	19,882

(a) Expenditure for 1964-65 includes final grants, totalling \$406,454, made under the 1955 Act as follows: New South Wales, \$274,938; Queensland, \$21,210; and South Australia, \$110,306.

There are no mental hospitals in the Northern Territory or in the Australian Capital Territory.

Medical benefits

A medical benefits scheme has operated since July 1953, being authorized firstly by the National Health (Medical Benefits) Regulations and then by the *National Health Act 1953-1965*. The basic principle of the scheme is Commonwealth support of voluntary insurance towards meeting the costs of medical attention. The benefits provided by the Commonwealth are paid either on a fee-for-service basis in respect of the items set out in the schedule to the National Health Act or in the form of a subsidy not exceeding half of the payments made to doctors by registered organizations under contract arrangements.

Commonwealth fee-for-service benefits are paid in accordance with the list of benefits set out in the Schedule to the *National Health Act* 1953-1965. The present Schedule came into force on 1 June 1964, and the increased benefits are reflected in Commonwealth expenditure for 1964-65.

In order to qualify for a Commonwealth benefit a person is required to be insured with a registered medical benefit organization. The organization pays the Commonwealth benefit to the contributor, usually at the time it pays its own benefit. Reimbursement of the Commonwealth benefit is subsequently made to the organization by the Commonwealth.

Commonwealth benefits ranging from 80 cents for ordinary general practitioner visits to \$60 for major operations are payable to members of registered medical benefit organizations. The fund benefit payable varies according to the weekly contributions paid by the member and the particular medical service. Examples of the range of benefits are as follows.

Type of service	Combined Commonwealth and fund benefits(a)			
	\$			
Certain major operations	150.00
Appendix operation	45.00
Midwifery	33.75
Tonsils—				
Under 12 years	15.75
12 years and over	22.50
Surgey consultation—general practitioner	from \$1.60 to \$2.00

(a) The total benefit varies according to the weekly contribution rate. The most common contribution rates are 20 cents a week for single persons and 40 cents a week for a family.

NOTE. From 1 April 1965 the majority of medical benefit organizations introduced new tables of fund benefit based on the present Commonwealth Schedule. The general effect of these new tables will be an increase in the fund benefits paid by the organizations to their contributors.

Provision is made for the payment of fund benefit from special account for claims lodged by contributors who have reached maximum benefits or who make claims in respect of pre-existing ailments. The medical special accounts are operated along the same principles as the hospital special accounts (see pages 558-9) and the special account fund benefit paid usually matches the Commonwealth benefit for the particular service.

Australians overseas. Australian residents temporarily absent from Australia who receive medical attention by registered medical practitioners in the country they are visiting are entitled, if insured, to the Commonwealth benefit and the medical fund benefit to which they would be entitled if the service were rendered in Australia.

Expenditure on medical benefits. The following table shows the number of registered medical benefit organizations, their membership, the number of medical services rendered to members and their dependants, and payments of Commonwealth benefits and medical fund benefits to members of registered organizations. As many persons contribute on behalf of both themselves and their dependants, the total number of persons covered by medical benefit schemes is considerably higher than the number of contributors.

MEDICAL BENEFITS: SUMMARY, STATES, 1964-65

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
Registered organizations(b) No.	28	20	6	8	8	10	80

(a) Members who live in the Northern Territory or the Australian Capital Territory, or who are abroad, receive their Commonwealth benefit and fund benefit through membership of an organization registered in one of the States. (b) Interstate branches are not included. (c) Does not include payments of \$681,922 towards special accounts deficits.

Pensioner Medical Service

The Pensioner Medical Service, which commenced on 21 February 1951, was introduced under the authority of the National Health (Medical Services to Pensioners) Regulations made under the provisions of the *National Health Services Act* 1948-1949. The service has been continued under the provisions of the *National Health Act* 1953-1965. The service provided to eligible pensioners consists of medicine provided free of charge and a medical service of a general practitioner nature such as that ordinarily rendered by a general medical practitioner in his surgery or at the patient's home. Specialist services are not provided. Patients may be charged a small fee by doctors for travelling and attendance outside normal surgery or visiting hours. Doctors participating in the scheme are paid on a fee-for-service basis by the Commonwealth Government.

From 1 November 1955 to 1 January 1966 persons eligible to receive the benefits of the service were those who satisfied a means test and received an age, invalid or widow's pension under the *Social Services Act* 1947-1964, or a service pension under the *Repatriation Act* 1920-1964, or a tuberculosis allowance under the *Tuberculosis Act* 1948, and dependants of persons eligible for the service. Since 1 January 1966 all those pensioners and their dependants who qualify under the current means tests are eligible for the benefits of the Pensioner Medical Service. The means test now applied for enrolment in the Pensioner Medical Service is the merged means test determining eligibility for a full or part pension or a tuberculosis allowance.

At 30 June 1965 the total number of pensioners and dependants enrolled in the Pensioner Medical Service was 849,074, while the number of doctors participating in the scheme at that date was 5,896. As a result of the relaxation of the Pensioner Medical Service means test, which became effective as from 1 January 1966, an additional 137,000 pensioners and dependants have been admitted to the Service. During 1964-65 doctors in the scheme provided 7,247,891 services—visits and surgery consultations—for persons enrolled in the scheme. For these services they were paid \$9,320,404. The average number of services rendered by doctors to each enrolled person was 8.5.

Anti-tuberculosis campaign

The main provisions of the *Tuberculosis Act* 1948 are as follows: (a) Section 5 authorizes the Commonwealth to enter into an arrangement with the States for a national campaign against tuberculosis; (b) Section 6 empowers the Commonwealth to take over or provide specified facilities for the diagnosis, treatment and control of tuberculosis; (c) Section 8 provides for the setting up of an advisory council to advise the Commonwealth Minister for Health on matters relating to the national campaign; and (d) Section 9 authorizes the Commonwealth to pay allowances to sufferers from tuberculosis and to their dependants.

Under an arrangement with the Commonwealth Government, each State conducts a campaign against tuberculosis. The Commonwealth Government reimburses the State for all approved capital expenditure in relation to tuberculosis, and for net maintenance expenditure to the extent that it exceeds net maintenance expenditure for the year 1947-48. Thus the States carry out the physical or field work of the national campaign and the Commonwealth acts in an advisory, co-ordinating and financial capacity. For this reason the Commonwealth has not found it necessary to make much use of its powers under Section 6 of the *Tuberculosis Act*. An advisory council, known as the National Tuberculosis Advisory Council, has been set up. There are twelve members, the chairman being the Commonwealth Director-General of Health.

To help reduce the spread of infection the Commonwealth Government pays allowances to persons suffering from infectious tuberculosis, so that they may give up work and undergo treatment. These allowances have been in operation since 13 July 1950. The rates now payable are: married sufferer with a dependent wife, \$25.25 a week; sufferer without a spouse but with a dependent child or children, \$16.00 a week; dependent child or children under sixteen years of age and full-time student children from sixteen to 21 years, \$1.50 a week for each dependent child (additional to child endowment); sufferer without dependants, \$15.25 a week (reducible to \$12.00 a week if a person is maintained free of charge in an institution).

There is a means test on income but not on property. The allowance is reduced by the amount by which a person's income from sources other than his allowance exceeds, in the case of a married person, \$14 a week, and in the case of a person without a dependent wife, \$7 a week.

New tuberculosis cases notified. The following table gives particulars of the number of new cases of tuberculosis notified in Australia for 1965.

TUBERCULOSIS: NEW CASES NOTIFIED(a), STATES AND TERRITORIES, 1965

State or Territory	Age group (years)					Total
	0-14	15-34	35-54	55 and over	Not stated

1964-65 .	1,458	10,354	696	12,508

(a) Includes administrative costs.

Anti-poliomyelitis campaign

Information concerning the initial production by the Commonwealth Government of anti-poliomyelitis vaccine in Australia in 1955, and of the testing procedures which were carried out, is contained in Year Book No. 49 and earlier issues.

Distribution of the Salk poliomyelitis vaccine, which was supplied free of charge to the States, began in July 1956. The States were responsible for the organization and running of their own campaigns and for the distribution of the vaccine in accordance with priority groups established by the National Health and Medical Research Council. Up to 1958 priority was given to children in the 0-14 age group, expectant mothers, and persons subjected to special risk. During 1958 this priority was extended to persons in the 15-44 age group. No child can be vaccinated without the consent of a parent or guardian.

Vaccination against poliomyelitis takes the form of four injections of the vaccine. The second injection is given approximately four weeks after the first the third injection is given not less than thirty-two weeks after the first, and the fourth injection a minimum of one year after the third dose. Where the incidence of the disease in certain areas approaches epidemic proportions, special efforts have been made to vaccinate as soon as possible all persons in the area who give their consent.

One million doses of each of the three types of monovalent Sabin vaccine were imported by the Commonwealth in October 1962, for use in a possible emergency. The decision whether to use the Sabin vaccine rests with the individual State Health Authorities, who have now agreed that routine use of the vaccine is also a matter for the individual States.

Following the success of a pilot scheme in 1964, the Tasmanian Government conducted a full scale Sabin vaccination programme in the latter months of 1965. In this campaign the oral vaccine was made available to all, irrespective of previous vaccination status.

It is difficult to give a completely accurate estimate of the vaccination coverage for the whole of Australia because methods of recording vaccination data differ from State to State. The proportion of children who had received three injections by twelve months of age is considered to be very small; by the recommended dosage schedule the third injection is given at fourteen months or later. From figures available in 1964 more than 60 per cent of children from fifteen months to four years have received three injections. In the age group five to fourteen years, 90 per cent have had three injections, as also have the fifteen to nineteen year olds. Only 40 per cent of persons twenty to forty-five years old have received three or more injections.

Australia-wide information is not available regarding the proportion of the population which has now received a fourth injection, but if information from South Australia can be taken as a guide, it would appear that approximately 16 per cent of those persons who have already received three injections have also received a fourth dose.

New cases of poliomyelitis notified. The numbers of new cases of poliomyelitis notified, and confirmed by the Poliomyelitis Sub-committee of the National Health and Medical Research Council, are shown for each State for each year from 1961 to 1965 in the following table.

POLIOMYELITIS: NEW CASES NOTIFIED, STATES AND TERRITORIES, 1961 TO 1965

Free milk for school children scheme

The *States Grants (Milk for School Children) Act* 1950 was passed with the object of improving the diet of school children by the addition of a small quantity of milk each day. All children under the age of thirteen years attending government or non-government primary schools, including nursery schools, kindergartens, crèches and missions for Aborigines, are eligible to receive free milk. The cost of the milk and half the capital or incidental costs, including administrative expenses of the scheme, are reimbursed by the Commonwealth to the States. All States now participate in the scheme. At 30 June 1965 approximately 1,678,000 children were entitled to receive free milk under this scheme. Expenditure by the Commonwealth Government during the years 1960-61 to 1964-65 was as follows.

**COMMONWEALTH EXPENDITURE ON MILK FOR SCHOOL CHILDREN SCHEME

1962-63 . .	2,636	1,901	1,146	714	586	384	53	60	7,480
1963-64 . .	2,663	2,186	1,120	708	618	399	50	55	7,799
1964-65 . .	2,881	2,069	1,215	760	640	389	72	60	8,085

The figures in the foregoing table differ slightly from those in the table shown in the chapter Welfare Services, as they include capital and administrative costs. Figures in the latter table represent only expenditure which is a charge on the National Welfare Fund (i.e. the cost of the milk).

Commonwealth organizations concerned with health

National Health and Medical Research Council

In 1926 the Commonwealth Government established a Federal Health Council, in accordance with a recommendation of the Royal Commission on Health (1925), 'for the purpose of securing closer co-operation between the Commonwealth and State Health Authorities'. In 1936 the Commonwealth Government decided to create a body with wider functions and representation, and the National Health and Medical Research Council was established with the following functions: to advise Commonwealth and State Governments on all matters of public health legislation and administration, on matters concerning the health of the public and on medical research; to advise the Commonwealth Government on the expenditure of money specifically appropriated to be spent on the advice of this Council; to advise the Commonwealth Government on the expenditure of money on medical research and on projects of medical research generally; and to advise Commonwealth and State Governments on the merits of reputed cures or methods of treatment which are from time to time brought forward for recognition.

The Council consists of the Commonwealth Director-General of Health (as chairman), two other officers of the Commonwealth Department of Health, the official head of each State Health Department, the Director of Public Health for Papua and New Guinea, a representative of the Commonwealth Serum Laboratories Commission, and ten other members, one each being nominated by the Australian Medical Association, the Australian Dental Association, the Australian Paediatric Association, the Australian College of General Practitioners, the Royal Australasian College of Physicians, the Royal Australasian College of Surgeons, the Australian Regional Council of the Royal College of Obstetricians and Gynaecologists, the College of Pathologists of Australia, the College of Radiologists of Australasia, and the Australian universities having medical schools. An eminent layman and laywoman, appointed by the Commonwealth Minister for Health, also serve on the Council.

The Council has established three advisory committees—the Medical Research Advisory Committee, the Medicine Advisory Committee, and the Public Health Advisory Committee—to provide advice in each specialized field. It has also established other committees to consider specialized subjects such as antibiotics, dental health, food standards, maternal and child health, nursing, nutrition, occupational health, and veterinary public health.

The first session of the National Health and Medical Research Council was held at Hobart in February 1937. The sixtieth session was held at Canberra in October 1965.

Under the *Medical Research Endowment Act 1937* the Commonwealth Government has made an annual appropriation of funds to assist: (a) departments of the Commonwealth or of a State engaged in medical research; (b) universities for the purpose of medical research; (c) institutions and persons engaged in medical research; and (d) in the training of persons in medical research. For 1964-65 this appropriation was \$826,000 and for 1965-66, \$878,000.

National Biological Standards Laboratory

The *Therapeutic Substances Act 1953-1959* provides the Commonwealth with powers to ensure that therapeutic substances used for the prevention, diagnosis and treatment of disease in man and animals are safe, pure and potent. The Director-General of Health is authorized under this Act to set up laboratories to test such substances. In 1958 the first steps were taken to establish an Australian National Biological Standards Laboratory in Canberra.

The Laboratory is divided into two main divisions, a Biological Division and a Pharmaceutical Division. The Biological Division consists of the Bacterial Products Laboratory, the Viral Products Laboratory, an Endocrine Products Laboratory, and an Antibiotic Products Laboratory. The Pharmaceutical Division consists of an Analytical Chemistry Laboratory and a Pharmacology Laboratory.

Samples of therapeutic agents available in Australia are taken and tested for compliance with legal standards. A major function of the laboratories is the establishment of such standards where none at present exist or present standards are unsatisfactory. The laboratories receive international reference standards of biological substances from stocks maintained by the World Health Organization, and will on request issue Australian reference standards which have been assayed against international standards.

Commonwealth Serum Laboratories

The laboratories were established in 1916 under the administration of the Department of Trade and Customs and from 1921 to 1961 were operated under the Department of Health. Control of the laboratories passed to the Commonwealth Serum Laboratories Commission on 2 November 1961.

The laboratories' basic function is to ensure the supply of essential biological products in accordance with national health needs. This includes production and supply of essential biological products; research and development relating to biological products and allied fields; and the maintenance of potential production capacity for use in emergencies.

Since their foundation the laboratories have greatly extended in size and scope. They now produce some 450 regular products and many special products for use in the diagnosis, prevention and treatment of human and animal diseases. Professional, technical and other staff total over 900.

Products comprise a full range of human bacterial and virus vaccines, veterinary bacterial and virus vaccines, serum products such as blood fractions, a wide variety of antibacterial and antitoxic sera, antivenenes, penicillin, endocrines, including insulin, A.C.T.H., pituitary and thyroid extracts, allergy testing materials and desensitizing preparations, culture media, and diagnostic agents for clinical and laboratory work. More recently, tissue culture materials have been prepared and supplied to virus research workers throughout Australia.

Continual research is conducted into the relevant aspects of microbiology, immunology and related fields. As the growth of medical and scientific knowledge in Australia and overseas reveals new methods of diagnosis, prevention and treatment of diseases, this information is applied to the preparation of new biological products at the laboratories.

Facilities are maintained for investigations into public health matters which are inconvenient or impracticable to handle at the Commonwealth Health Laboratories or the School of Public Health and Tropical Medicine. The laboratories serve as a national centre for the maintenance in Australia of the international standards of the Permanent Commission on Biological Standards (World Health Organization). They act as a regional reference centre for WHO in collating reports of the prevalence of certain infectious diseases and provide facilities for the identification of these diseases. Veterinary biological products produced at the laboratories have given the lead to other producers in Australia, resulting in the diminution of the incidence of a number of serious infectious stock diseases.

Commonwealth Health Laboratories

Health laboratories of which there are fifteen, are situated in the following towns: Albury, Alice Springs, Bendigo, Cairns, Canberra, Darwin, Hobart, Kalgoorlie, Launceston, Lismore, Port Pirie, Rockhampton, Tamworth, Toowoomba and Townsville. They were established as an essential part of the quarantine system but were also to undertake research into local health problems and to provide doctors of each district with up-to-date facilities for laboratory investigation and diagnosis. It was realized that co-operation between the general practitioner, with his clinical observations and knowledge of the environment of disease on the one hand, and the staff of a well-equipped laboratory on the other, is essential to the investigation and control of disease.

From this standpoint the laboratories have proved their value in the determination of leptospirosis and endemic typhus in North Queensland, in the investigation of special local problems in Darwin, of undulant fever throughout Australia, of silicosis and tuberculosis at Kalgoorlie, and of plumbism at Port Pirie. In these investigations close co-operation exists with State and local health and hospital services, especially in Queensland where collaboration has yielded exceptionally valuable results in differentiating the groups of fevers previously unclassified in that State. In this investigational work, as well as in more routine activities, the laboratories have at their disposal the full resources and technical and specialist facilities available at the Commonwealth Serum Laboratories and the School of Public Health and Tropical Medicine, Sydney.

The laboratories are unique in that, with the exception of the use of X-rays, they cover all the fields of diagnostic requirements, namely, pathology, public health, haematology, parasitology, mycology, bacteriology, biochemistry, and blood group serology.

Commonwealth Acoustic Laboratories

Sponsored by the National Health and Medical Research Council, the Acoustic Research Laboratory, Sydney, investigated inter-communication difficulties and noise problems in aircraft and tanks (1942-46). It then investigated the problem of congenital deafness in children resulting from maternal rubella. The Department of Health took over the laboratory in January 1947, and subsequently established branch laboratories in all other State capitals.

The *Acoustic Laboratories Act* 1948 gave the Minister for Health power to establish, maintain and operate, within the Commonwealth, acoustic laboratories for scientific investigations, including tests in respect of hearing aids and their application to the needs of individuals, and in respect of problems associated with noise as it affects individuals. Scientific investigations are carried out in the Central Laboratories in Sydney by specialized scientific groups in psychology and audiology, acoustics and electroacoustics, medical ultrasonics and psychoacoustics. The results of this research are published in scientific literature and Commonwealth Acoustic Laboratories reports. In 1949 the Government approved the provision and maintenance of hearing aids, without charge, to deaf school and pre-school children. This service has since been extended to those whose hearing loss is discovered after leaving school, but who are still under twenty-one years. Since May 1964 the cost of hearing aids has been met from the National Welfare Fund. The laboratories' functions also include: provision and maintenance of hearing aids on behalf of the Repatriation and other Commonwealth Departments; assistance to the State Education Departments in measuring deafness by providing and maintaining portable audiometers; testing hearing of civil aviation aircrew as required by international agreement; and the making of independent tests on behalf of State and other authorities. The Central Laboratories located in Sydney are responsible for staff training, production of equipment, calibration of hearing-aids and audiometers, and the technical administration of branch laboratories.

Commonwealth X-ray and Radium Laboratory

In 1928 the Commonwealth Government purchased ten grammes of radium for use in medical treatment and research in Australia. The use of this radium was to be co-ordinated by the Department of Health, and in 1929 the Department established the Commonwealth Radium Laboratory to act as custodian of the radium and to ensure its equitable distribution and efficient use. The radium is distributed on loan to treatment centres throughout Australia. Under the terms of these loans, treatment at well-equipped clinics is available to all persons requiring it, irrespective of their ability to pay. Portions of the original stock of radium have been remounted from time to time, reflecting changes in techniques of treatment.

In 1935 the work of the laboratory was extended to include physical aspects of X-ray therapy, and the name of the laboratory was changed at that time to its present form. Since 1939 its functions have included investigations of the physical aspects of the diagnostic use of X-rays with particular emphasis on miniature radiography and high-kilovoltage techniques. In 1946 the laboratory imported the first artificially-produced radioactive isotopes used in Australia and established a system for the procurement and distribution of these substances.

A radiochemical laboratory and associated facilities were set up in the laboratory to permit the assay of radioactive materials present in minute amounts in the environment—in air, water, soil, and foods such as milk, grain and vegetables. A programme of monitoring the fall-out in Australia arising from the testing of nuclear weapons is continuing.

The laboratory assists with services developed in the capital cities of Australia to provide local facilities for the production of radon, for the calibration of X-ray therapy equipment, and for the measurement of the exposure to radiation of those who work with X-rays and radioactive materials. The services of the laboratory are available to all who work with ionizing radiations.

A radon service has been operated by the laboratory since its inception. During 1964-65 34,480 millicuries of radon were issued by the laboratory in the form of implants, needles and tubes for use in Victoria, Tasmania, South Australia and Western Australia. A further 23,291 millicuries were issued by the associated centres in Sydney and Brisbane. The corresponding figures for 1963-64 were 39,766 millicuries and 23,688 millicuries, respectively. The issue of radon from a few centres to serve hospitals all over the continent is an Australian development which enables very efficient use to be made of the radium available.

Since 1935 the laboratory has maintained the Australian (free-air) standard for the precise measurement of X-ray doses. Sub-standard clinical dosimeters used by the laboratory and by centres in other States are calibrated in terms of this standard.

Through the development of atomic energy programmes overseas, supplies of radio-isotopes have been available for use in Australia since 1946. Some of the radio-isotopes required in Australia are prepared by the Australian Atomic Energy Commission in its reactor at Lucas Heights. At the present time the procurement and distribution of radio-isotopes to be used in medicine and medical research are the responsibility of the Department of Health, and these isotopes are procured by the laboratory, as a central procurement agency, principally from Great

Britain, Canada, and the United States of America. The procurement and distribution of radio-isotopes for industrial and non-medical uses are the responsibility of the Australian Atomic Energy Commission.

The importation of radio-isotopes is restricted under the Customs (Prohibited Imports) Regulations. Approval for importation is given either by the Director-General of Health or by the Australian Atomic Energy Commission, depending on the category of use, after it has been established that the isotope will be used safely and usefully.

During 1964-65, 42 different isotopes were procured for use in medicine and medical research. They represented 1,705 separate deliveries, of which 83 (including six different isotopes) were from the Australian Atomic Energy Commission. Of the 42 isotopes, 20 were for use in medical diagnosis or treatment, as distinct from medical research. Bulk supplies of radio-isotopes used for diagnosis or treatment are obtained regularly, and these are distributed by the laboratory as individual doses for use on patients throughout Australia in accordance with a policy developed by the Radio Isotopes Committee of the National Health and Medical Research Council. These radio-isotopes are issued free of charge. In the year ended 30 June 1965, 22,498 individual doses of these materials were issued for medical diagnosis and therapy.

Investigations of the degree of protection necessary in particular applications of X-rays and radioactive materials continue to be an important activity of the laboratory. It prepares specifications of the protection facilities necessary in departments and laboratories employing ionizing radiations in medicine, research and industry, and carries out measurements of radiation levels in existing departments and laboratories. A film-badge service to measure the radiation dose received by those exposed to ionizing radiations is maintained. In 1964-65, 65,299 film-badges were processed, assessed and reported on; the corresponding figure for the previous year was 72,411.

The laboratory maintains a library of radiological literature and issues library bulletins at appropriate intervals. Technical communications on topics related to its functions are issued from time to time.

School of Public Health and Tropical Medicine

In March 1930 the Commonwealth Government, under an agreement with the University of Sydney, established a School of Public Health and Tropical Medicine at the University of Sydney for the purpose of training medical graduates and students in the subjects of public health and tropical medicine. The organization of the Australian Institute of Tropical Medicine at Townsville was merged in the new school, and the staff, equipment and material were transferred to Sydney.

The School comprises sections of Preventive Medicine, Tropical Medicine, Occupational Health, Environmental Health, Biochemistry, Bacteriology and Pathology, Parasitology, Medical Entomology, and Medical Statistics. The Child Welfare section of the Institute of Child Health is located at the School, with which it is closely associated. The Occupational Health Section undertakes surveillance of the health of persons employed at the Small Arms Factory, Lithgow, and at the Munitions Filling Factory, St. Mary's. The Library, which includes approximately 17,000 bound volumes and a large collection of official and institutional papers and reports, forms an important information centre in the subjects of public health and tropical medicine.

The work of the school comprises both teaching and investigation. Courses are held for the university post-graduate diploma in public health and the diploma in tropical medicine and hygiene. Lectures are given in public health and preventive medicine as prescribed for the fifth year of the medical curriculum. Courses are provided also in hygiene and social medicine for students of architecture and social studies; in tropical medicine for lay officers, nurses in tropical service and missionaries; and in industrial health for engineering students. Training is also provided for certain personnel of the armed services, for laboratory workers from various services and institutions, and for post-graduate nursing diploma students.

Investigations cover a wide range of public health and medical subjects, both in the laboratory and in the field. Field work has been carried out in Australia and in Papua, New Guinea, Norfolk Island and Nauru in co-operation with the local administrations and the South Pacific Commission. Limited accommodation and other facilities for investigation can be made available at the school for independent research workers.

Institute of Child Health

Associated with the School of Public Health is the Institute of Child Health, part of which is located in the School of Public Health and Tropical Medicine in the grounds of the University of Sydney and part at the Royal Alexandra Hospital for Children, Camperdown. The activities of the Institute are concerned with research into medical and social problems of childhood, undergraduate teaching of students of the Faculty of Medicine in the University of Sydney, post-graduate teaching of doctors and members of associated professions, and collaboration with other bodies concerned with the general field of child health.

The establishment of the Institute at present consists of the director, two senior medical officers, one child psychiatrist, five other medical officers, a psychologist, two social workers and clerical staff. The director of the Institute is the Professor of Child Health in the University of Sydney. He is also a senior honorary paediatrician on the staff of the Children's Hospital. The child psychiatrist is also Associate Professor of Child Psychiatry in the University of Sydney. The director is required to co-ordinate and control undergraduate and post-graduate teaching in paediatrics and child health. Each group of medical students attends the Children's Hospital for ten weeks tuition in paediatrics and child health.

The particular research activities of the Institute vary with the immediate and long-term problems which present themselves. Fields of study have included rheumatic fever, scurvy, accidents, prematurity, hypothyroidism, and mental deficiency. Studies are undertaken into the problems of infants and children deprived of a normal home life. Members of the Institute staff are available for consultation by Commonwealth and State authorities and voluntary agencies.

Commonwealth Bureau of Dental Standards

This Bureau is concerned with research, standards and testing related to dental and allied materials and processes. It became part of the Department of Health in January 1947, but for the preceding eight years it was sponsored by the National Health and Medical Research Council. During that time the then Dental Materials Research Laboratory established itself as a recognized authority in its special field and proved to be of value to the defence services, government departments, the dental profession, and manufacturers of dental products. By maintaining the quality of dental materials and improving techniques for their use the Bureau continues to assist the dentist in his service to the community—a service that calls for restorations and appliances of a high degree of precision and permanence under very exacting conditions.

The Bureau operates under Section 9 of the *National Health Act* 1953–1964 and its functions are as follows: original research into dental equipment, materials, techniques and processes; regular reporting of the results of these investigations in recognized Australian scientific journals; the development of specifications for dental materials and equipment, through the Standards Association of Australia, in consultation with a committee representing the Commonwealth Department of Health, the Australian Dental Association, and manufacturers and distributors; and the provision of a consultative service and testing facilities for manufacturers and distributors of dental materials with a view to assisting them in the improvement of existing products and the development of new materials.

Australian Institute of Anatomy

The Australian Institute of Anatomy is situated in a building erected in Canberra by the Commonwealth Government under the *Zoological Museum Agreement Act* 1924. The Institute became part of the Commonwealth Department of Health in 1931, and a number of Health Department sections are now situated in the Institute. These include the Museum and Medical Artistry Section, the Nutrition Section, and a Veterinary Laboratory. The scientific research work of the Institute is concentrated on problems of nutrition, taking the form of field surveys of the dietary status of the Australian population and laboratory investigations into the biochemistry of nutrition and metabolism.

Control of infectious and contagious diseases

The provisions of the various Acts with regard to the compulsory notification of infectious diseases and the precautions to be taken against their spread are dealt with under the headings of quarantine and notifiable diseases.

Quarantine

The *Quarantine Act* 1908–1961 is administered by the Commonwealth Department of Health and has three sections of disease control, as follows: (i) human quarantine, which ensures that persons arriving from overseas are free of quarantinable disease; (ii) animal quarantine, which controls the importation of animals and animal products from overseas and the security of other animals present on vessels in Australian ports; and (iii) plant quarantine, which regulates the conditions of importation of all plants and plant products with the object of excluding plant diseases, insect pests and weeds.

In respect of interstate movements of animals and plants, the Act becomes operative only if the Governor-General considers that Commonwealth action is necessary for the protection of any State or States, and in general the administration of interstate movements of animals and plants is left in the hands of the States.

Human quarantine. All passengers and crews arriving in Australia from overseas, whether by air or sea, are subject to a medical inspection for the purpose of preventing the introduction of disease into Australia. At the major ports full-time quarantine officers carry out the work, but in the minor ports local doctors act as part-time quarantine officers. In each State, quarantine activities are controlled by the Commonwealth Director of Health, who is a medical officer of the Commonwealth Department of Health.

The main concern of the examining officers is to detect cases of the quarantinable diseases smallpox, cholera, yellow fever, plague, and typhus fever. These diseases are not endemic to Australia and it is of great importance to prevent their entry. Quarantine stations at the major ports and at Darwin and Townsville are kept ready for occupation at all times. In addition, persons arriving in Australia and suffering from infectious diseases such as chicken pox, mumps, scarlet fever, and measles are directed to appropriate care and placed in isolation where necessary.

Valid vaccination certificates are required of travellers to Australia as follows.

Cholera. All arrivals from infected areas and from India, Pakistan, Burma, Thailand, Vietnam, Malaysia, Philippines, and Indonesia. No certificate is required in respect of children under one year of age.

Yellow fever. All arrivals from yellow fever endemic zones.

Smallpox. All arrivals from all countries except British Solomon Islands, Fiji, Nauru, New Zealand, Norfolk Island, Ocean Island, Australian Territory of Papua and New Guinea, Gilbert and Ellice Islands Colony, Christmas (Indian Ocean), Cocos (Keeling), Heard, Kerguelen, Lord Howe, Macquarie and Tonga Islands; provided travellers have not been outside these areas for at least 14 days before arrival and that these areas are free of smallpox. Australia reserves the right, in respect of arrivals from other countries, to isolate any person who arrives by air without a smallpox vaccination certificate and refuses to be vaccinated. Children under one year of age are exempt. For passengers arriving in Australia by sea, exemption is granted to infants under twelve months of age and to persons who hold religious convictions against vaccination or who are suffering from a medical condition certified by a medical practitioner to contra-indicate smallpox vaccination.

All passengers, whether they arrive by sea or air, are required to give their intended place of residence in Australia, so that they may be traced if a case of disease occurs among the passengers on the aircraft or ship by which they travelled to Australia.

The numbers of cases of infectious (non-quarantinable) diseases which were discovered among the passengers and crew of overseas vessels and aircraft calling at Australian ports during 1964-65 and during the preceding four years are shown in the following tables.

HUMAN QUARANTINE: CASES OF INFECTIOUS (NON-QUARANTINABLE) DISEASES ON OVERSEA VESSELS AND AIRCRAFT CALLING AT AUSTRALIAN PORTS, 1964-65

Disease	Number of overseas vessels and aircraft on which cases were found	Number of cases of infectious disease	
		Passengers	Crew
Chicken pox . . .	42	109	5
Infectious hepatitis . .	7	8	1
Measles . . .	53	188	..
Meningitis . . .	1	1	..
Mumps . . .	12	12	1
Poliomyelitis . . .	1	1	..
Pulmonary tuberculosis .	6	..	6
Rubella . . .	6	13	..
Scarlet fever . . .	1	1	..
Venereal disease—			
Gonorrhoea . . .	5	..	5
Other . . .	1	..	1
Total . . .	(a) 107	333	19

(a) On some vessels there were cases of more than one disease.

**HUMAN QUARANTINE: OVERSEA VESSELS AND AIRCRAFT ARRIVING IN
AUSTRALIA AND CASES OF INFECTIOUS (NON-QUARANTINABLE)
DISEASE FOUND, 1960-61 TO 1964-65**

Year	Number of oversea vessels and aircraft cleared		Number of oversea vessels and aircraft on which cases were found	Number of cases of infectious disease	
	Ships	Aircraft		Passengers	Crew
1960-61 . . .	3,481	2,354	55	296	4
1961-62 . . .	3,761	2,417	67	221	15
1962-63 . . .	2,943	2,423	91	438	35
1963-64 . . .	3,184	2,620	92	361	11
1964-65 . . .	3,359	2,936	107	333	19

Animal quarantine. Animal quarantine, authorized by the provisions of the *Quarantine Act* 1908-1961, aims at preventing the introduction or spread of animal diseases. It covers the importation of all animals, raw animal products and biological cultures associated with animal diseases, and goods associated with animals.

Of the domesticated animals, only horses, dogs, cats and poultry are admitted from a limited number of countries depending on diseases being absent in the country of origin. All must be accompanied by health certificates which include prescribed tests. On arrival in Australia, they are subject to quarantine detention. Zoological specimens are imported into registered zoos, where they remain in permanent quarantine. Circuses are also registered if exotic species of animals are kept. In a similar manner, animals for scientific purposes are imported to approved laboratories. All these premises are kept under constant surveillance. Raw animal products such as hair, types of wool, skins and hides are specially treated under quarantine control. Such items as raw meat, sausage casings and eggs, which cannot be sterilized, are admitted from very few countries. Other items, such as harness fittings, fodder and ship's refuse, are treated to destroy any possible infection. Special attention is given to the importation of biological substances of animal origin. The Animal Quarantine Service is also responsible for the health certification of animals for export overseas in accordance with the requirements of the various countries.

The division of Veterinary Hygiene was created in 1926 to deal with the administration of animal quarantine. The central administration is situated within the Health Department at Canberra, with a director, an assistant director and veterinary officers. The Principal Veterinary Officer of the Department of Agriculture in each State is appointed Chief Quarantine Officer (Animals) of that State, and members of his staff Quarantine Officers (Animals). These State officers carry out the quarantine policy formulated by the central administration. Quarantine accommodation is provided in permanent animal quarantine stations at each capital city.

The Division participates in world-wide international notifications of the more serious contagious diseases of animals and maintains a census of such diseases throughout the world. Information regarding animal diseases and parasites in Australia is also collected and disseminated by means of service publications. Consultation on technical matters is maintained with various scientific institutions notably the Commonwealth Scientific and Industrial Research Organization. In matters of policy and the quarantine control of imports there is a close liaison with the Department of Customs and Excise.

The Division collaborates with the General and Plant divisions of the quarantine service. Many diseases of animals are communicable to man and for this reason animal and general quarantine administration are in some respects inseparable. Similarly the interests of animal and plant divisions overlap, many items such as insects, fodder and straw being the subject of combined control.

Every two years the director of the Division convenes the Biennial Conference of Principal Commonwealth and State Veterinarians, which meets under the auspices of the Australian Agricultural Council to discuss problems of animal health, disease control and animal quarantine.

Plant quarantine. Since 1 July 1909 the importation into Australia of all plants or parts of plants, cuttings, seeds and fruits, whether living or dead, has been subject to an increasingly stringent quarantine with the object of preventing the introduction of insect pests, plant diseases and weeds not yet established in this country. Under the *Quarantine Act* 1908-1961, quarantine inspectors are required to examine all plant material at the first port of entry and to release only material free from diseases and pests. Everyone entering Australia is required to declare if he or she has any plant material in luggage or personal effects. Heavy penalties are laid down for those found evading the regulations. All plant material entering as cargo must also be declared.

When the Commonwealth became responsible for all plant quarantine, the State Governments agreed to co-operate by providing and maintaining inspection facilities and personnel, for

which they are reimbursed by the Commonwealth. In 1921 the administration of the regulations came under the newly-formed Department of Health and in 1927 the Division of Plant Quarantine was created. It is controlled by a director who is responsible for policy and legislation and for co-ordinating the work of the State officers who carry out the detailed administration in their capacity as Commonwealth officers.

Any plant material found carrying diseases or pests, or suspected of doing so, may be ordered into quarantine for remedial treatment, or, if treatment is impracticable, may be destroyed. The cost of treatment is met by the importer. Regulations governing the different types of plants are based on the following broad principles. Importation of plants likely to be infected with plant diseases or pests, of noxious plants or fungi and of poison plants is prohibited. Agricultural seed, not restricted under quarantine legislation, must conform to standards of purity, and insect pest and disease freedom. Seed of commercial crops which could introduce diseases are prohibited imports except with special permission. All plant products not specifically restricted, such as timber, logs and crates, are subject to inspection upon arrival and treatment if necessary. Many commodities, including hops, cotton, peanuts in shell, potatoes and certain crop seeds, may be imported only by approved importers under specified conditions. All nursery stock, including bulbs, must be grown in post-entry quarantine. Prior approval is necessary, and such material may be imported only by approved importers who are registered for this purpose. The number of plants which may be imported in any one year is limited. The importation of propagating material of commercial fruits, vines and berries is permitted only after special prior approval and is subject to specific screening for virus by qualified authorities. Soil is a prohibited import, and any vehicles or goods contaminated with soil are required to be thoroughly cleaned, at the expense of the importer, before entry is permitted.

Notifiable diseases

Methods of prevention and control. Provision exists in the Health Acts of all States for the compulsory notification of certain infectious and other diseases and for the application of preventative measures. When any such disease occurs the local authority must be notified at once, and in some States notification must be made also to the Health Department.

As a rule, the local authorities are required to report from time to time to the Central Board of Health in each State on the health, cleanliness and general sanitary state of their several districts and on the appearance of certain diseases. Regulations provide for the disinfection and cleansing of premises and for the disinfection or destruction of bedding, clothing or other articles which have been exposed to infection. Regulations also provide that persons suspected to be suffering from, or to be carriers of, infectious disease must submit to clinical and laboratory examination. Persons suffering from certain communicable diseases, for example, smallpox and leprosy, are detained in isolation.

Notifiable diseases and cases notified, 1965. The following table shows, by State and Territory, the number of cases notified in 1965 for those diseases notifiable in all, or nearly all, States and Territories. In May 1965 the National Health and Medical Research Council at its Fifty-ninth Session proposed a basic list of diseases to be notifiable in each State and Territory, and this table is based upon that proposal. The table does not include all diseases which are notifiable in a State or Territory. Diseases on the basic list which are not yet notifiable are indicated by an asterisk. Factors such as the following affect both the completeness of the figures and the comparability from State to State and from year to year: availability of medical and diagnostic services; varying degrees of attention to notification of diseases; and enforcement and follow-up of notifications by Health Departments.

NOTIFIABLE DISEASES(a): NUMBER OF CASES NOTIFIED(b),
STATES AND TERRITORIES, 1965

Disease	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

Typhoid	5	6	..	1	2	..	3	1	8
Typhus (all forms)	2	2	4

(a) This table is based on a proposal made by the National Health and Medical Research Council at its 59th Session in May 1965 to recommend to State Health Departments a basic list of notifiable diseases.

(b) No cases of cholera, plague, smallpox or yellow fever were notified. (c) Not notifiable in one State; Australian figure not available. (d) Notifiable in South Australia from 4 November 1965; Australian figure not available. (e) Includes hepatitis, serum (homologous). (f) Queensland figure includes erythema nodosum and pleural effusion. * Not notifiable.

Tuberculosis and poliomyelitis. The number of new cases of tuberculosis notified in each State and Territory by age groups for the year 1965 is shown on page 563. Some data regarding deaths from tuberculosis are shown on page 263 of the chapter Vital Statistics. Cases of poliomyelitis notified in each State and Territory for the years 1961 to 1965 are shown on page 564.

Infectious hepatitis. The following table shows the number of cases of infectious hepatitis notified in each State and Territory during the years 1961 to 1965.

INFECTIOUS HEPATITIS: CASES NOTIFIED, STATES AND TERRITORIES, 1961 TO 1965

State or Territory	1961	1962	1963	1964	1965
New South Wales	6,050	3,358	2,822	2,731	3,325
Victoria	3,515	3,533	3,840	2,697	1,987
Queensland(a)	1,022	884	1,433	1,163	556
South Australia	1,406	504	293	289	414
Western Australia	262	117	145	101	83
Tasmania	304	630	856	636	197
Northern Territory	61	101	104	57	128
Australian Capital Territory	281	88	20	12	51
Australia	12,901	9,215	9,513	7,686	6,741

(a) Includes hepatitis, serum (homologous).

Venereal diseases. The prevention and control of venereal diseases are the responsibility of State Health Departments. The necessary powers for the purpose are provided either by a special Venereal Diseases Act or by a special section of the Health Act. Venereal disease was made a notifiable disease in South Australia in November 1965, and the disease is now notifiable in all States and Territories. While the provisions of the legislation differ from State to State, the Acts usually make it obligatory upon the patient to report for and continue under treatment until certified as cured. Treatment of venereal disease must be by a registered medical practitioner. Facilities for treatment of venereal disease free of charge may be arranged at subsidized hospitals or at special clinics. Penalties may be imposed on a patient who fails to continue under treatment. Clauses are inserted in the Acts which aim at preventing the marriage of any infected person, or the employment of an infected person in the manufacture or distribution of foodstuffs.

Commonwealth grants to organizations associated with public health

In addition to providing the services mentioned on pages 558-73, the Commonwealth Government gives financial assistance to certain organizations associated with public health. Examples of organizations included in this category are the National Fitness Organizations, the Royal Flying Doctor Service of Australia, the Red Cross Blood Transfusion Service, the Lady Gowrie Child Centres and the National Heart Foundation of Australia.

National fitness

In 1938, arising from a recommendation of the National Health and Medical Research Council, the Commonwealth Government appointed a National Co-ordinating Council for National Fitness, under the Commonwealth Minister for Health, to effect collaboration of Commonwealth, State, and local government authorities in the National Fitness Movement. Following the recommendations of the first Co-ordinating Council meeting in 1939, the Commonwealth Government agreed to make available an annual sum of \$40,000 for five years, and grants were allocated to each State for purposes of organization and to each of the six Australian universities to establish lectureships in physical education.

The movement was placed on a statutory basis with the passing of the *National Fitness Act* 1941. The Act provides for a Commonwealth Council for National Fitness to advise the Minister for Health concerning the promotion of national fitness. It provides also for the establishment of a Trust Account, known as the National Fitness Fund, to assist in financing the movement. In June 1942 the annual appropriation from revenue to the National Fitness Fund was increased to \$145,000 to include grants to the State Education Departments and for the work in the Australian Capital Territory. The annual appropriation was increased to \$200,000 in 1962, the increase of \$55,000 being made available to the National Fitness Councils in the States. The \$200,000 is disbursed as follows: State National Fitness Councils, \$128,908; Universities, \$24,800; State Education Departments, \$34,000; central administration, \$6,792; and Australian Capital

Territory, \$5,500. The annual grant of \$5,500 allocated in the Australian Capital Territory is distributed mainly on a \$1 for \$1 basis to youth and sports organizations for the purchase of equipment, the development of coaching schemes, and the extension of club and camp facilities.

Royal Flying Doctor Service of Australia

The purpose of the Royal Flying Doctor Service of Australia is to provide medical and dental services to persons in isolated areas. Most remote homesteads are equipped with two-way radio sets which they use for receiving ordinary radio programmes, participating in the School of the Air, and for contacting each other. In cases of minor illness or injury they also use these sets to seek medical advice. If the illness or injury is serious a doctor flies to the homestead and, if necessary, flies the patient to the nearest hospital. Standard medicine chests are supplied by the service. Each chest contains a first-aid book and instructions on the use of the various drugs and medical supplies. Further instructions are given by doctors over the air. From time to time special purpose work is undertaken in connection with flood relief, searching for lost parties, and co-ordinating cattle movements.

The service is not conducted for profit. In some sections small charges are made for particular services or a fixed annual charge is levied on graziers. Other sections rely on voluntary contributions from those who use the services. Donations and government contributions help to provide much of the overhead and capital expenditure incurred each year. The Commonwealth has made an annual grant to the service for operational expenses since 1936. The Commonwealth annual grant to the Royal Flying Doctor Service of Australia towards maintenance was increased from \$110,000 to \$150,000 per annum for three years from 1 July 1965. The Commonwealth grant towards capital expenditure was increased from \$80,000 to \$130,000 per annum for the same period. This capital expenditure grant is made on a \$1 for \$1 basis, in respect of approved projects.

The Royal Flying Doctor Service of Australia is conducted by a federal council comprising representatives of seven sections, namely Queensland, New South Wales, Victoria, South Australia, Western Australia, the Eastern Goldfields of Western Australia, and Tasmania. The Queensland, New South Wales, South Australian, and Tasmanian sections are centred in their own States, but in Western Australia there are three centres, that in the far north being under the control of the Victorian section and that in the south-east under the control of the Eastern Goldfields section. The third, which has bases at Port Hedland and Meekatharra, is sponsored by the Western Australian section.

Red Cross Blood Transfusion Service

The Australian Red Cross Society conducts a blood transfusion service in all States. The costs of the service are borne by a Commonwealth grant equal to 30 per cent of the certifiable operating expenses incurred by the Society in the conduct of the blood transfusion service in each State, payment by the Government of the State concerned of 60 per cent of the expenses, and payment by the Society of the remaining 10 per cent. The payments made by the Commonwealth Government to the State Governments in 1964-65 were as follows: New South Wales, \$109,656; Victoria, \$128,612; Queensland, \$90,202; South Australia, \$46,740; Western Australia, \$41,786; Tasmania, \$10,786; total, \$427,782. The Commonwealth also assists the Society to the extent of ninety per cent of the cost of operating blood transfusion services in the Northern Territory and the Australian Capital Territory.

Lady Gowrie Child Centres

In 1940 the Commonwealth Government established a pre-school demonstration centre in each of the six State capital cities. These centres are known as the Lady Gowrie Child Centres and are administered by local State committees under supervision of the Australian Pre-school Association located at Canberra. An annual grant is made available by the Commonwealth towards the operation of the centres, \$116,700 being allocated for 1964-65 and \$120,000 for 1965-66.

The specialized function of the centres is that of demonstration and research, and the programmes are carried out under the supervision of the Federal Pre-school Officer. Each centre is concerned with a study of the factors promoting and retarding physical and mental health in young children and in demonstrating an educational health programme based on the developing needs of children aged three to six years. The centres are used for observation by students of medicine, psychology, education, social studies, architecture, nursing and domestic science, and by student teachers.

Home Nursing Subsidy Scheme

The Home Nursing Subsidy Scheme provides payments to assist the expansion of home nursing activities. To be eligible for a subsidy an organization must be non-profit making and must receive assistance from a State Government, local government body or other authority established by or under a State Act. It must employ registered nurses. It is provided that Commonwealth subsidy must not exceed the amount of State assistance received by the

organization concerned. Eligible organizations established prior to November 1956 now receive \$2,000 a year in respect of each additional qualified nurse employed. New organizations established since November 1956 receive \$1,000 a year in respect of each qualified nurse employed. Expenditure during 1964-65 on the promotion of the Home Nursing Service was \$464,678. The Commonwealth subsidy paid to various district nursing organizations has led to the employment of 283 trained nurses.

National Heart Foundation of Australia

The National Heart Foundation of Australia is a national organization established to promote research in cardiovascular disease, to rehabilitate heart sufferers, and to foster the dissemination of information about heart diseases. Formed in 1960, as a result of a public appeal yielding \$5 million to which the Commonwealth Government contributed \$20,000, the Foundation has its headquarters in Canberra. The organization is controlled by a Board of Directors assisted by various Committees. State Divisions with their own administrations deal especially with rehabilitation and education. From its inception to the end of 1965 the Foundation has allocated over \$1 million for grants-in-aid towards research in university departments, hospitals and research institutes, research fellowships tenable in Australia and overseas, and overseas travel grants. Most of the annual expenditure of about \$600,000 is devoted to supporting research in cardiovascular disease.

INSTITUTIONS

Institutions referred to under this heading are classified into the following groups: (i) Public hospitals and nursing homes (referred to as 'public hospitals' in issues of the Year Book prior to No. 51, 1965); (ii) Mental hospitals; (iii) Private hospitals and nursing homes (previously referred to as 'private hospitals'); (iv) Repatriation hospitals; (v) Isolation (leper) hospitals.

Public hospitals and nursing homes

The statistics shown under the heading 'public hospitals and nursing homes' refer to institutions providing hospital and nursing home treatment, whether general or special, with the exception of mental hospitals, private hospitals and nursing homes, repatriation hospitals, and leper hospitals. They include institutions wholly provided for by the State, partially subsidized by the State or by State endowments but receiving private aid also, and hospitals established and endowed by individuals for the treatment of the sick generally. Public hospitals are premises of this kind in which patients are received and lodged exclusively for 'hospital' treatment, i.e. nursing care for the purpose of professional attention. Public nursing homes are such premises in which patients are received and lodged exclusively for the purpose of nursing home care, i.e. of a kind ordinarily provided in a benevolent home, convalescent home, home for aged persons or rest homes for patients requiring professional attention. The statistics shown under this heading agree in scope with those classified as public hospitals in issues of the Year Book prior to No. 51.

Number, staff and accommodation

Details regarding the number of public hospitals and nursing homes, staff, and accommodation for the year 1963-64 are given in the following table.

PUBLIC HOSPITALS AND NURSING HOMES: NUMBER, STAFF AND ACCOMMODATION, STATES AND TERRITORIES, 1963-64

—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) Includes honorary and visiting medical officers. trainees, nursing aides, and nursing aide trainees.

(b) Qualified and student nurses, assistant nurse

In-patients treated

The following table gives particulars of in-patients treated. The figures shown refer to cases, that is to say, a person who is admitted to hospital or nursing home twice during a year is counted twice. Newborn babies are excluded unless they remain in hospital or nursing home after their mothers' discharge.

**PUBLIC HOSPITALS AND NURSING HOMES: IN-PATIENTS TREATED

Persons	15,577	10,663	6,650	3,333	2,479	1,340	201	312	40,555
In-patients at end of year—									
Males	7,833	4,079	4,234	1,501	1,593	936	193	110	20,479
Females	10,581	5,988	4,888	1,679	1,874	1,046	201	210	26,467
Persons	18,414	10,067	9,122	3,180	3,467	1,982	394	320	46,946
Average daily number resident	17,181	9,497	8,471	3,005	3,284	1,898	378	290	44,004

In addition to those admitted to the hospitals and nursing homes, there are large numbers of out-patients treated. During 1963-64 there were 1,394,645 out-patients treated in New South Wales, 725,495 in Victoria, 679,356 in Queensland, 127,465 in South Australia, 163,000 (estimated) in Western Australia, 100,564 in Tasmania, 117,863 in the Northern Territory and 18,876 in the Australian Capital Territory, making an estimated total for Australia of 3,327,000. The figures quoted refer to cases, as distinct from persons and attendances.

Revenue and expenditure

Details of the revenue and expenditure for the year 1963-64 are shown in the next table. The revenue includes the Commonwealth Hospital Benefits Scheme. For some States expenditure on capital items out of individual hospitals' own funds are not included in the figures shown. Comparison between the States should therefore be made with caution.

Summary for Australia

A summary, for the years 1959-60 to 1963-64, of the number of public hospitals and nursing homes in Australia, medical and nursing staffs, beds, admissions, in-patients treated, out-patients, deaths, average daily number resident, revenue and expenditure is given in the following table.

PUBLIC HOSPITALS AND NURSING HOMES: AUSTRALIA, 1959-60 TO 1963-64

	1959-60	1960-61	1961-62	1962-63	1963-64
Hospitals and nursing homes	736	736	739	746	748
Medical staff(a)	9,954	10,386	10,535	11,022	11,337
Nursing staff(b)	36,023	37,607	39,082	40,211	42,106
Beds and cots	60,203	61,039	61,650	62,487	63,424
Admissions	1,153,690	1,182,198	1,235,665	1,267,092	1,318,241
Total in-patients (cases) treated	1,196,111	1,225,060	1,278,417	1,309,325	1,362,081
Deaths	35,407	36,619	37,569	38,530	40,555
Average daily number resident	40,672	41,009	42,166	42,926	44,004
Out-patients (cases)(c)	2,710,900	2,794,400	2,946,800	3,107,300	3,327,000
Revenue \$'000	197,953	218,798	239,787	258,271	278,216
Expenditure \$'000	195,975	217,112	239,548	254,753	275,526

(a) Honorary, visiting and salaried. (b) Qualified and student nurses, assistant nurses, assistant nurse trainees, nursing aides, and nursing aide trainees. (c) Partly estimated.

Mental hospitals

In addition to the mental hospitals proclaimed under the Lunacy and Mental Health Acts of the various States, the statistics shown in the following tables include other institutions providing accommodation and treatment of patients who are legally certified as requiring treatment for mental disorders. The statistics also include the number of voluntary patients in these institutions. With the exception of tables relating to revenue and expenditure, particulars of the two authorized hospitals conducted by religious organizations in New South Wales are included. Particulars of reception houses, observation wards in gaols, psychiatric clinics, and intellectual deficiency training centres are excluded.

Hospitals, staff and accommodation

Particulars of the number of hospitals, the medical and nursing staff, and accommodation are given in the following table for the year 1964. Figures for Victoria relate to 31 December 1964. Figures for the other States relate to 30 June 1964.

MENTAL HOSPITALS: NUMBER, STAFF, ACCOMMODATION, STATES, 1964

	N.S.W.	Vic. (a)	Qld (b)	S.A.	W.A.	Tas.	Aust.
Number of hospitals	15	10	5	2	6	1	39
Medical staff—

Nursing staff and attendants—							
Males	1,482	1,254	675	313	236	117	4,077
Females	1,635	1,446	543	305	242	119	4,290
Persons	3,117	2,700	1,218	618	478	236	8,367
Accommodation—							
Number of beds and cots	13,279	9,586	4,322	2,442	1,923	850	32,402

(a) 31 December 1964. (b) Includes the Epileptic Home. (c) Includes 47 visiting specialists in New South Wales who are paid for their services.

Patients

Information regarding patients treated during 1963-64 is given in the following table. The figures include voluntary patients in all States with the exception of South Australia.

Persons who are well advanced towards recovery are allowed to leave the hospitals and live with their relatives or friends, but they are under supervision and their names are kept in the records. These persons have been included in the table below as patients at the end of the year.

MENTAL HOSPITALS: PATIENTS, DEATHS, ETC., STATES, 1963-64

Number of patients at end of year per 1,000 of population—							
Males	3.4	2.62	2.91	2.23	3.26	1.85	2.85
Females	3.09	2.48	2.12	1.78	2.26	2.04	2.54
Persons	3.17	2.55	2.52	2.01	2.77	1.94	2.69

(a) Year ended 31 December 1964. (b) Includes persons treated at the Epileptic Home. (c) Excludes voluntary patients. (d) The period of collecting of these statistics in Western Australia was changed in 1964 from a calendar to a fiscal year and therefore figures for that State for 1963-64 are partially included in statistics for the year ended 31 December 1963.

Revenue and expenditure

Mental hospitals are maintained by the State Governments. They derive a small proportion of their revenue from other sources (chiefly patients' fees, pharmaceutical benefits and sale of farm produce), but in 1963-64 these sources provided less than 8 per cent of all their revenue. For a statement on the funds provided by the Commonwealth Government for mental hospitals, see page 560. In New South Wales the expenditure includes the cost of Broken Hill patients treated in South Australian mental hospitals.

MENTAL HOSPITALS: FINANCES, STATES, 1963-64

(a) Excludes the two authorized hospitals conducted by religious organizations. (b) Includes institutions in addition to the ten hospitals. (c) Includes the Epileptic Home. (d) Comprises whole of receipts and payments of mental health services, including expenditure by other Departments for this purpose. (e) Capital expenditure includes purchases of land, cost of new buildings and additions to buildings.

Summary for Australia

The following table gives a summary relating to mental hospitals in Australia for each of the years 1959-60 to 1963-64.

MENTAL HOSPITALS: SUMMARY, AUSTRALIA, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Hospitals	40	40	38	39	39
Medical staff(a)	281	297	346	373	355
Nursing staff and attendants	7,106	7,412	7,587	7,914	8,367
Beds and cots	32,191	32,170	32,113	32,607	32,402
Admissions(b)	9,982	13,395	14,637	17,091	16,135
Discharges(b)	9,171	10,963	13,278	15,676	15,172
Deaths(b)	2,403	2,289	2,327	2,368	2,459
Patients at end of year(b)	32,282	34,110	32,256	31,303	30,081
Revenue (excluding Government grants) \$'000	2,276	2,920	3,203	3,658	4,104
Total expenditure \$'000	40,710	44,151	48,696	50,740	56,143

(a) Includes visiting specialists who are paid for their services, as follows: 1960, 44; 1961, 43; 1962, 57; 1963, 54; and 1964, 47. (b) Excludes voluntary patients in South Australia.

Patients in mental hospitals

The total number of inmates of mental hospitals and patients on trial leave each year from 1960 to 1964 is shown in the following table. A more rational attitude towards the treatment of mental cases has resulted in a greater willingness in recent years to submit afflicted persons to treatment at an early stage, and an increase in the number of recorded cases, therefore, would not necessarily imply an increase in mental diseases. The numbers of patients in mental hospitals in the several States is affected to some extent by differences in practice. For instance, in some States there is a greater tendency to treat certain mental diseases in clinics attached to general hospitals.

PATIENTS IN MENTAL HOSPITALS(a): STATES, 1960 TO 1964

State	1960	1961	1962	1963	1964
New South Wales	12,665	14,486	14,233	13,747	13,039
Victoria	9,600	9,773 (b)	8,440	8,329	8,064
Queensland(c)	4,364	4,311	4,272	4,199	4,005
South Australia(d)	2,564	2,506	2,409	2,221	2,075
Western Australia	2,302	2,279	2,134	2,120 (e)	2,189
Tasmania	787	755	768	687	709
Australia	32,282	34,110	32,256	31,303	30,081

(a) Figures for Victoria and Western Australia relate to the number of patients on the books of mental hospitals at 31 December of the year stated and figures for the other States relate to 30 June of the year stated. (b) Excludes patients in two institutions listed as mental hospitals in previous years but re-classified in 1962 as mental deficiency training centres. (c) Includes persons treated at the Epileptic Home. (d) Excludes voluntary patients. (e) At 30 June.

Private hospitals and nursing homes

In addition to the other hospitals and nursing homes referred to in previous sections, there are private hospitals and nursing homes in each State. The figures shown in the following table refer to those private hospitals and nursing homes which have been approved for the payment of hospital benefits under the Commonwealth *National Health Act* 1953-1965. Statistical information on patients, staff and finance of these institutions is not available on a uniform Australia-wide basis.

Repatriation hospitals

The medical care of eligible ex-servicemen and dependants of deceased ex-servicemen is a major function of the Commonwealth Repatriation Department (*see* the chapter Repatriation), which provides a comprehensive service.

In-patient treatment is provided at Repatriation General Hospitals in each capital city; in addition, there are auxiliary hospitals in all States except Tasmania. 'Anzac Hostels' are maintained in Queensland and Victoria for long-term patients. In-patient treatment may also be provided in country hospitals at the Department's expense in certain circumstances. Mental patients requiring custodial care are, by agreement with the State Governments, accommodated at the expense of the Department in mental hospitals administered by the State authorities.

The average daily number of patients resident in the six Repatriation General Hospitals and nine auxiliary hospitals during the year ended 30 June 1965 was 3,896. The number of medical, nursing and other staff employed at these institutions at 30 June 1965 was 5,963 and a further 525 were employed at Repatriation out-patient clinics and limb and appliance centres. Total expenditure by Repatriation institutions during 1964-65 was \$21,593,458.

Isolation (leper) hospitals

There are four isolation hospitals in Australia for the care and treatment of persons suffering from Hansen's disease (leprosy). The numbers of isolation patients at these hospitals on 31 December 1965, were: Little Bay (New South Wales), 10; Fantome Island (North Queensland), 14; Derby (Western Australia), 178; and East Arm Settlement (Northern Territory), 43. In addition, there were 60 voluntary patients resident in the East Arm Settlement, mostly for the purpose of reconstructive surgery. This type of patient was included in figures for East Arm Settlement published in previous issues of the Year Book. With the exception of the Little Bay lazaret, nursing services are provided mostly by Sisters of religious orders under supervision of Government medical officers.

Special wards for the isolation and treatment of leprosy patients are also provided at other centres. The location of these wards and the numbers of isolation patients resident at 31 December 1965, were: Concord Repatriation Hospital (New South Wales), 1; Fairfield (Victoria), 8; Princess Alexandra Hospital (Queensland), 4; and Wooroloo (Western Australia), nil.

Of the total 258 cases in isolation, 204 were full-blood Aborigines, 21 were others of Aboriginal blood, 3 were Pacific Islanders, 2 were Asians, 7 were of mixed race, and 21 were Europeans.

CHAPTER 18

EDUCATION, CULTURAL ACTIVITIES AND RESEARCH

For the most recent statistics available on subjects dealt with in this chapter reference should be made to the series of mimeographed bulletins *Social Statistics* issued by this Bureau. The *Quarterly Summary of Australian Statistics* contains summarized information on these subjects, and financial aspects are dealt with in the annual bulletins *Commonwealth Finance and State, Territory and Local Government Authorities' Finance and Government Securities*. The Annual Reports of the respective State Education Departments provide detailed statistical and other information concerning particular States.

EDUCATION

An account of the development of the Australian school system up to 1929 may be found in Year Books Nos. 1, 2, 17 and 22. In Year Book No. 40 a review of changes which occurred up to 1951 and of the practices then current was presented from material furnished by the Commonwealth Office of Education, which contributed much of the textual matter in the following sections.

Education in Australian schools

Administration and organization

In Australia the provision of schools is mainly the responsibility of State Governments. During the nineteenth century all six Australian colonies had established systems of compulsory education, beginning with the *Education Act 1872* in Victoria, and followed by similar Acts in Queensland (1875), South Australia (1875), New South Wales (1880), Tasmania (1893), and Western Australia (1893). These Acts, with subsequent amendments, constitute the legal basis of compulsory education in the Australian States to-day.

School attendance is compulsory throughout Australia between the ages of six and fifteen at least. The minimum leaving age is fifteen years in New South Wales, Victoria, Queensland, and South Australia, and sixteen years in Tasmania, while in Western Australia attendance is compulsory until the end of the year in which the child turns fifteen years. The Education Acts require that all children between the prescribed ages must attend either a government school or some other recognized educational institution. Children may be exempted from the requirement of compulsory attendance if they live too far from a school or suffer a physical disability. These children usually receive correspondence tuition.

The school year in Australia begins at the end of January or early in February; it ends in mid-December. The long vacation is taken over the summer months (December to February) and two short vacations divide the school year into three terms.

At government primary schools it is usual for both boys and girls to attend the same school; at the secondary level practices vary, but the trend is towards mixed schools. Non-government schools cater mainly for boys and girls separately.

Government school systems

Government schools, except in the Commonwealth Territories, are a responsibility of the six State Governments. Although the educational systems are not identical, they have many similar features. Responsibility for framing educational policy and having it put into effect rests with a Minister for Education, who is a member of the State Cabinet. The administrative authority in each State is an Education Department headed by a Director-General or Director of Education. Separate divisions of the Education Department in each State administer primary, secondary and technical education (in New South Wales there is a separate Department of Technical Education). Other divisions look after such matters as the recruitment and training of teachers, pupil guidance, research, and the education of atypical children. In some States administration has been decentralized to a degree by the appointment of 'Area' or 'Regional' directors, who are responsible for policy in the area which they control.

Tuition at government primary and secondary schools is free in all States. Parents are usually expected to bear the cost of text-books, uniforms and charges for such things as the use of sports materials. However, income tax concessions exist in respect of these expenditures for both government and non-government systems, and certain text-book costs are subsidized in the case of pupils attending government and non-government schools in some States.

Non-government schools systems

More than 80 per cent of the children at non-government primary and secondary schools attend Roman Catholic schools, which form a highly developed but not centralized system. At the primary level these children normally attend mixed parish schools, but at the secondary level there are boys' schools, approximately half taking boarders, and girls' schools. Some of the small convent schools in country districts enrol young boys as well as girls. The organization of Roman Catholic schools is primarily on a diocesan basis under the general direction of the bishop, although many of the religious orders which conduct schools are Australia-wide, and have their own internal organization.

The majority of other non-government schools, sometimes known as 'private' or 'independent' schools, are conducted by, or are under the auspices of, various religious denominations, particularly the Church of England, Presbyterian and Methodist Churches. Others are conducted by the Baptist, Lutheran, Congregational, and Seventh-day Adventist Churches and by smaller religious groups. There are Jewish schools in several capital cities. A few non-government schools, including some of the foremost, are undenominational and conducted under the auspices of corporate bodies.

The methods adopted by the educational authorities to ensure an acceptable standard of education at non-government schools vary from State to State. In New South Wales, Victoria, Western Australia, and Tasmania these schools are regularly inspected. In Victoria and Tasmania, schools and teachers must be registered. In Queensland eight grammar schools which exist by statutory authority and are subsidized by the State are subject to annual inspection. Other non-government schools in Queensland and also those in South Australia are not subject to inspection.

The principals of a number of the larger non-government schools have formed organizations with both State and Australia-wide coverage, namely, the Headmasters' Conference of Australia and the Headmistresses' Association of Australia.

Schools and courses

Primary education in government schools. Though school attendance is not compulsory until the age of six, most Australian children begin school when they are five, attending infants' schools or infants' classes attached to a primary school. In some States the first year in the infants' department is known as 'kindergarten'. The emphasis in infants' classes, which occupy two or three years, is on general development, play activities and the informal aspects of education, with a gradual shift towards more formal activities in the second and third years. Creative expression through drawing, dancing, handiwork, dramatization, painting and similar activities is encouraged. Attention is given to speech training and to activities with music. At the end of their infants' school training most children are able to read with some fluency, carry out simple arithmetical operations founded on the basic number facts, and write in pencil. In addition, they have acquired elementary skills in art, music and the like.

At about the age of eight most children pass into the primary school proper, where they usually spend four or five years. Primary schools are normally provided when and where there is sufficient population to justify them. Irrespective of the size or the location of the school, standards of tuition do not vary appreciably, because teachers within a State follow similar courses of training and transfer freely between metropolitan and country areas. The Education Departments prescribe syllabuses of instruction, which are drawn up with the assistance of expert committees. The primary syllabuses have an emphasis on basic subjects like reading, writing, arithmetic, social studies, and oral language, but the teacher has some freedom to modify courses to suit local circumstances and the varying abilities of his students.

Children attend primary schools in their own districts, usually within walking distance of their homes, on five days each week. The school day is broken up into three or four sessions by a lunch break and by a morning and sometimes an afternoon recess. The total period of instruction is four and a half to five hours daily with individual subject lessons lasting twenty to thirty minutes. Periods are set aside for physical education and sport. One teacher generally has charge of a class and teaches it all the subjects set out in the curriculum for the particular grade.

Pupils do not, as a rule, sit for a public examination during or at the end of their primary course, and progression from primary to secondary school is automatic. Allocation to particular schools or particular courses is based on the recommendations of the headmaster, general ability tests, tests of achievement in the basic subjects, and parents' wishes. In South Australia pupils may proceed to secondary school on receiving the Progress Certificate, which is awarded on satisfactory completion of the seventh grade, the highest grade at primary level.

Secondary education in government schools. The age of transfer from a government primary to secondary school is usually between twelve and thirteen. Most secondary schools are co-educational, although separate schools for boys and girls are not uncommon in capital cities. In the cities and larger country centres secondary courses are provided in separate schools from primary courses, but in less populous areas secondary classes sometimes share buildings with primary classes.

The secondary student takes up new studies such as foreign languages and technical or commercial subjects, and moves on to more specialized studies in natural and social sciences and mathematics. The study of basic subjects begun in primary school is continued. The actual subjects studied depend on the ability of the pupil and the type of school. A school day is divided into 'periods' and the children are taught by a number of teachers, each specializing in a particular subject or group of subjects.

In the past, to meet the varying abilities and needs of students, various kinds of secondary schools were established in which different types of education were provided, although in country areas secondary schools tended of necessity to be comprehensive and offered a full range of secondary courses. But following the re-examination by expert committees in all States of the problems associated with the provision of appropriate secondary education for all, significant changes in the structure and curricula of secondary schools are taking place. In New South Wales, for example, following a committee's recommendation that the secondary curriculum should offer a core of common basic education to all students, secondary schools have become comprehensive. Pupils of different aptitudes and interests in a given locality now attend the same secondary school, undertake this core of common basic studies, and in addition specialize according to their proven abilities and interests.

The most common type of secondary school is the comprehensive or multi-purpose high school, which offers a wide range of subjects. To cater for this diversity of subjects, most high schools now have modern facilities for the teaching of domestic science, commercial subjects, woodwork and other technical subjects. In some States there are still, however, separate high schools specializing in technical, commercial or home science subjects. In some States there are also a few separate agricultural high schools, some of them residential. The curriculum consists of general educational subjects and practical farm training. There are also 'area' and 'rural' schools offering up to three years of secondary study, and in some States courses in agriculture are also given at high schools.

Primary and secondary education in non-government schools. Non-government schools follow curricula similar to those laid down by Education Departments, and prepare their students for examinations conducted by public examining authorities. Most non-government schools are comprehensive type schools, providing a range of subjects and courses at various levels. Although there are similarities between non-government and government schools in the courses they provide, more emphasis is given to the religious training of pupils in denominational schools. A few schools, mostly Roman Catholic secondary schools, specialize in agricultural and technical courses. Non-government schools offer some facilities additional to those normally found in government schools, such as personal tuition in music, ballet, etc. A few are organized on 'experimental' lines.

Examinations

During the course of secondary education State-wide examinations are taken at two levels. The earlier examination qualifies pupils for entry to trade courses at technical colleges and agricultural colleges, to junior commercial positions in, for instance, insurance and banking, to nursing and secretarial courses, to lower grades of the public service, and to industry. The examination at the end of the secondary school course qualifies students for entry to teachers' colleges, the higher grades of the public service, and commercial occupations; this examination is also the qualification for entry to the university, certain subjects and combinations of subjects being set down as the matriculation requirements by the respective universities.

In most States the higher examination is controlled by a board consisting of representatives of the Department of Education, the universities, non-government schools, and sometimes of other bodies such as teachers' organizations. A brief description of the examinations in each State follows.

New South Wales. For pupils who commenced their secondary education in 1961 or earlier, the secondary course was of five years duration with an Intermediate Certificate Examination taken at the end of three years, at about the age of fifteen, and the Leaving Certificate Examination (Matriculation) taken after a further two years. For pupils who commenced their secondary education in 1962 or later, the full secondary course is of six years' duration, with a School Certificate Examination at the end of the fourth year, age about sixteen, and a Higher School Certificate Examination (Matriculation) after a further two years. The last Intermediate and Leaving Certificate Examinations under the old system will be conducted in 1966. Thereafter pupils who leave school before gaining their School Certificate will receive a signed statement of attainment from their school principal.

Victoria. The Intermediate Examination is taken at the end of the fourth secondary year, at about the age of sixteen, the School Leaving Examination at the end of fifth year, and the Matriculation Examination at the end of sixth year. Pupils at approved non-government schools and certain government schools may be accredited for the Intermediate and Leaving by passing examinations set by their own schools.

Queensland. The Junior Public Examination is taken at the end of third year, at about the age of fifteen and a half. The Senior Public Examination conducted by the University of Queensland is taken at the end of fifth year, at about the age of seventeen and a half, and matriculation is obtained on results in this examination.

South Australia. The Intermediate Examination is taken at the end of the third year, at about the age of fifteen and a half. The Leaving Examination is taken at the end of the fourth year and up to 1965 matriculation was gained on results in this examination. From 1966 matriculation will be gained from a Matriculation Examination to be held at the end of the fifth year.

Western Australia. The Junior Certificate Examination is taken at the end of third year, at about the age of fifteen and a half. Students who pursue a less academic course may take the High School Certificate Examination at this level. The Leaving Certificate Examination is taken at the end of fifth year, at an average age of seventeen and a half, and matriculation is gained on results in this examination.

Tasmania. The Schools Board Certificate Examination is taken at the end of the fourth year, at about the age of sixteen and a half, and the Matriculation Examination conducted by the University of Tasmania at the end of the fifth or sixth year.

Numbers of schools, teachers and pupils

The statistics which follow relate generally to schools providing education according to the primary or secondary school curricula of the various State Education Departments, or both, whether provided in government or non-government schools. Junior technical schools, correspondence schools, and schools in institutional homes, hospitals and similar establishments are included. Institutions providing only pre-school education, senior technical and agriculture colleges, evening schools, continuation classes, and institutions such as business colleges and coaching establishments are, as a rule, excluded.

School censuses are conducted annually at or about the beginning of August throughout all States and Territories of Australia. The numbers of pupils in the tables which follow refer to enrolments at the school census date. The numbers of schools and teachers refer to the position at dates which vary from State to State and in some instances from year to year. While it has not been possible to present all figures on a uniform basis between States, continuity of the figures for any one State over the period of years shown has been maintained as far as possible. Particulars relating to senior technical colleges are given on pages 597-600.

Schools, teachers and pupils

The numbers of government and non-government schools, teachers, and pupils for 1965 and earlier years are shown in the following tables.

NUMBERS OF SCHOOLS AND PUPILS, BY CATEGORY OF SCHOOL STATES AND TERRITORIES, 1965

(a) Excludes teachers-in-training generally. (b) The methods used for calculating equivalent full-time units of part-time teaching vary from State to State, between government and non-government schools, and between primary and secondary schools within States. For most schools the information is based on either the total hours worked or total number of class periods taken in a week by part-time teachers, in relation to the normal hours worked or periods taken by full-time teachers. (c) A large proportion of male part-time teachers in Victoria are engaged in junior technical schools. A teacher is included as part-time if his teaching time at a junior technical school is less than 32 hours a week. (d) Excludes unqualified teachers and teaching assistants at mission schools.

(a) Comprises Aboriginal children at special schools whose ages were not collected.

(b) Aboriginal children included in specified age groups.

Grades of pupils

The numbers of pupils enrolled in grades in each State and Territory are shown in the following table. The grading of pupils differs for the various school systems in Australia because of the differences in curricula set by Education Departments. In addition, the methods of allocating classes to grades vary from State to State, and there are also differences in the administrative methods of aggregating grades of a more or less similar nature. The figures presented in these tables represent essentially the system of grading adopted in each different State and are therefore not comparable between States.

(a) Opportunity classes. (b) Mainly Aboriginal children at special schools at missions and pastoral stations.

Teacher training and recruitment

Teachers for government schools

Recruitment of teachers. The teacher shortage evident in past years has now been overcome to a certain extent. Some States have no difficulty in recruiting and training sufficient staff to meet the present needs of primary schools. Despite expanded training programmes the shortage of secondary school teachers has proved a greater problem, especially in mathematics and science.

State Education Departments recruit most prospective teachers for government service from students leaving schools after a secondary course. Each Department offers training awards annually on the basis of academic merit and personal suitability. The traineeships cover the cost of a teacher training course (which may include university studies) and provide a living allowance. Students are usually required to enter into a bond to serve for a specified number of years in the government schools of the State where they have trained. In some States intending teachers can obtain a scholarship at Intermediate Certificate level to enable them to complete teachers' college entrance requirements. Such an award entails a bond of service for a longer period.

Training of primary school teachers. In most States teachers for government primary schools are trained in teachers' training colleges controlled and administered by the State Education Departments. These colleges are described on page 616. Generally, the duration of courses for primary teachers is two years. The basic subjects taken in the various courses are history and

principles of education, general and special methods of teaching in the primary school, school organization, and educational psychology. In addition, students undertake courses in English (including speech training), mathematics, handicrafts, music, art, social studies, natural science, and physical and health education. Optional subjects may include dramatic art, visual aids, and so on. Supervised practice teaching in schools and the observation of demonstration lessons form part of all training courses. Since primary teachers in Australia may be called upon at some time to teach grouped classes in a small school or a 'one-teacher' school, special training for this kind of work is included in their course.

Training of secondary school teachers. Secondary teachers are normally specialists in a combination of subjects, such as English and history, modern languages, or mathematics and science. Intending secondary school teachers are normally required to complete a university degree and a year of professional training qualifying for a Diploma in Education. The degree courses followed are usually in arts, science, or economics, with the major studies providing the essential background for future subject teaching. During the post-graduate or professional year the student takes such subjects as the history and principles of education, comparative education, educational psychology, and special teaching methods. Training also includes practice teaching under the supervision of teachers' college and university staff, and the observation of demonstration lessons.

At several Australian universities students wishing to take up teaching as a profession can receive their professional training along with the study of their teaching subjects as part of a first degree course in Education. The time taken to complete such a Bachelor of Education degree course is four years.

Training for specialist teaching. Teachers of specialist subjects, such as music, art, manual arts, domestic science, and commercial subjects, receive from two to five years training which varies according to the institution concerned and the type of secondary school in which the teacher is to serve. In several States the shorter courses are provided wholly by the teachers' colleges. In five States teachers of music receive their specialist training at conservatoria of music. Where the specialist course is given at an institution other than the teachers' college—e.g. at a university, technical college, or conservatorium of music—as is usual for teachers of specialist subjects in high schools, trainees are required to attend teachers' college or university lectures in education, and in some cases the specialist course is followed by a year of professional training. Courses designed to train physical education teachers are offered in universities in all States, and in three States at a teachers' college as well.

Training for teachers of agricultural subjects in secondary schools is available in five States and consists of either an agricultural college diploma or a university degree course together with professional training. In Victoria there is also a two-year agricultural college diploma course which follows on the normal two-year primary teachers' course. Teachers of technical subjects in secondary schools may be trained in manual or industrial arts courses of two to four years duration, at teachers' colleges, technical colleges, or, in one State, at a university. These courses include basic training in such subjects as wood and metal work, and geometrical drawing. In Victoria there is a separate Technical Teachers' College. Some teachers of trade subjects in technical schools are recruited from the ranks of qualified tradesmen engaged in industry or commerce. These teachers upon appointment usually receive instruction in classroom teaching techniques and procedures.

In-service training. As almost all teachers now enter the profession by way of teachers' colleges or universities, where they receive basic professional training, in-service training in Australia is directed chiefly towards keeping teachers abreast of developments and adding to their basic training. In-service training usually takes the form of short courses held sometimes during vacations, sometimes during school-time or in the evening. In some States in-service courses for teachers in remote areas are provided by correspondence. Courses consist of discussions and lectures given by senior staff members of Education Departments and university and teachers' college lecturers on such subjects as classroom techniques and supervision, librarianship, visual aids, music, arts and crafts, and physical education. In some States there are also in-service courses for special groups of teachers such as headmasters or teachers in one-teacher schools. In addition, district inspectors are responsible for organizing short conferences of teachers, where professional topics are discussed. Education Departments encourage teachers to pursue university courses and in some States pay the cost of courses undertaken by selected teachers.

In 1965 and 1966 groups of Australian teachers again attended refresher courses in New Caledonia for Australian and New Zealand teachers of French. These courses were offered to the Australian Government by the French Government. The official publications of the Education Departments contain articles dealing with educational theory and practice. Magazines of the teachers' organizations, which reach the majority of government teachers, also contain articles of this type.

Status of teachers. Most teachers in governmental schools are permanent public servants and have security of tenure, superannuation rights, and the right of appeal in matters of promotion. The centralized education systems and the general policy of providing fully trained teachers for both city and country areas mean that teachers are subject to transfer to any part of the State in which they serve. It is common for a teacher's first appointment to be to a country school.

In each State there is a union of State school teachers and these together form a federal body, the Australian Teachers' Federation. Their aim is to advance the teachers' status and conditions and to stimulate community interest in educational problems.

Training of non-government school teachers

Teachers for non-government schools receive their training in a number of ways. The Roman Catholic Church staffs both its primary and secondary schools mainly with members of religious orders whose training has been obtained in conformity with the requirements of the particular order concerned. In recent years there has been a growth in the number of lay teachers being employed in Catholic schools, and training of students to become lay primary teachers has been instituted. Secondary teachers receive their academic training mostly through courses provided by Australian universities.

Other non-government schools tend to recruit their staffs from teachers who have already obtained qualifications in Australia or overseas. In New South Wales and Victoria non-government school authorities offer courses designed specially for teachers in their schools. Non-government schools recruit also university graduates who are then given professional guidance by senior members of the school staff. In some instances private students may enrol at government teachers' colleges on payment of a fee, but the number of places available is limited. Some teachers destined for non-government schools train in this way.

During vacations many non-government teachers attend in-service training courses organized by Education Departments. In recent years vacation courses have been provided by bodies other than Education Departments for teachers from both government and non-government schools. For example, an independent body, the Nuclear Research Foundation, has provided such courses for teachers of science in secondary schools in New South Wales. The training of pre-school teachers is carried out in five States in kindergarten training colleges set up by the Kindergarten Unions. These are described on page 616.

Other aspects of school education

Information relating to school medical and dental services is given in the chapter Public Health, and particulars of School Savings Banks in the chapter Private Finance.

Provisions for isolated areas

Although the task of bringing education to isolated areas in Australia presents problems, all education authorities have aimed at providing opportunities for country children comparable to those available to city children. Country children follow the same curricula (with local adaptation, if desirable) and are under the guidance of teachers who are trained for service in country and city schools alike.

In areas where there are sufficient children of school age a 'one-teacher' school may be formed with all primary grades in a single classroom under the control of the one teacher. Special training is given to teachers undertaking work of this kind. Children who complete a primary course in a one-teacher school and cannot attend a secondary school may do secondary correspondence lessons under the teacher's supervision.

In districts where a number of small centres are scattered around a larger centre or country town the tendency is to close the one-teacher schools and transport pupils each day by buses to a 'consolidated' school in the larger centre. Consolidated schools provide primary instruction and from two to four years of post-primary instruction. The post-primary curriculum adopted is usually directed towards practical activities and training in subjects bearing on the primary industries of the locality.

Where a group of children is too small to warrant the establishment of a one-teacher school at public expense a 'subsidized' school may be opened. The Education Department pays part of the cost and in some States appoints a teacher. Some States also administer 'provisional' schools, which are completely financed by the Government but which are not large enough, or sufficiently assured of adequate continued attendance of pupils, to warrant classification as permanent schools.

Correspondence schools. These have been established in each State capital city to meet the needs of children whose daily attendance at school is prevented by distance between home and school, by illness or by physical disability. The correspondence schools also cater for inmates of penal institutions, Australian children overseas, pupils of other schools in which particular courses are not available, student teachers, members of the Defence Forces, and other adults completing their secondary education. Where children are involved, lessons are done with the help of a supervisor, usually a member of the child's family, and posted back to the correspondence school in the capital city, where they are corrected and returned with helpful comments. Every endeavour is made to maintain a personal link between teacher and pupil. Correspondence schools began with primary grades only, but were soon extended to cater for secondary pupils, and it is now possible to do a complete secondary course to matriculation standard by correspondence. Each year more than 20,000 students receive all or part of their instruction by correspondence.

Schools of the air. These are intended to give the outback child of school age some of the benefits of school life and to supplement correspondence education. Using the two-way wireless equipment developed first by the Royal Flying Doctor Service, children hundreds of miles apart participate in the same lesson, and teacher and pupils can talk directly with each other. The first School of the Air was established in 1950 at Alice Springs in the Northern Territory; it has been followed by similar schools at Broken Hill in the far west of New South Wales; Ceduna and Port Augusta in South Australia; Charleville, Mount Isa and Charters Towers in Queensland; and Meekatharra, Derby, Kalgoorlie and Port Hedland in Western Australia. These eleven schools serve children in an area of a million square miles.

Handicapped children

Special provision is made for the education of physically and mentally handicapped children, both by the State authorities and by church and voluntary organizations, often working in conjunction. In many cases, where residential schools are necessary for particular groups, educational facilities and teaching staff are provided by a State Education Department, while a voluntary organization provides accommodation and accepts responsibility for the general welfare of the children. Among the facilities available are: hospital schools for sick and crippled children; 'spastic centres' for cerebral palsied children; special schools and special classes for deaf children; schools for blind children; and special schools and classes for mentally retarded children. Special schools and classes have involved the appointment of departmental specialists, the provision of special training courses, and close liaison with school health services. In some States clinics attached to hospitals, or functioning as an independent child welfare service, handle cases of personality maladjustment and work in co-operation with the psychological services of the Education Departments.

Educational guidance

Each Australian State has a comprehensive system of educational guidance administered by trained and experienced educational psychologists and backed by a system of individual pupil record cards. The functions of these services are advice concerning suitability of various secondary studies for particular children, diagnosis and guidance of atypical children, preliminary guidance and, in some States, research. The weight given to each of these functions varies from State to State, but the aim is to provide thorough educational guidance for all children.

Throughout Australia branches of the Commonwealth Employment Service co-operate with State Education Departments by giving post-school vocational guidance, using the data obtained during the school careers of the children and made available by the Education Departments. In New South Wales a similar service is also provided by the Youth Welfare Section of the State Department of Labour and Industry.

Research

All State Education Departments have set up branches undertaking research directed towards departmental activities. The work of the research branches is concerned with such matters as curriculum content, new teaching methods, evaluation procedures, wastage rates, and educational statistics.

School broadcasting and television

Over the years an extensive school broadcasting system has been developed in Australia by the co-operative efforts of the Australian Broadcasting Commission and education authorities. The Australian Broadcasting Commission's Education Department is responsible for preparing and broadcasting programmes, but it draws freely on the advice and services of teachers and maintains permanent liaison with State Education Departments. It is estimated that in 1965 approximately ninety-six per cent of Australian schools were equipped to receive radio broadcasts. In 1965 over 3,500 separate programmes were produced for schools.

School broadcasts are presented as part of the regular Australian Broadcasting Commission programmes without separate stations or wave lengths. Special efforts are made to relate the broadcasts to school work by the extensive distribution of booklets, giving details of programmes in advance, and subject notes accompanied by picture sheets, work books, and teachers' notes. Broadcasting has proved to be a most effective way of reaching the outback children of Australia, and radio lessons have been designed to supplement correspondence lessons.

The year 1965 saw a further increase in the number of schools receiving television broadcasts and in the number of programmes produced. During 1964, after consultation with the six Education Departments, the Australian Broadcasting Commission increased its output of school television programmes, especially instructional programmes in mathematics and science for secondary schools. This was increased further in 1965. At the same time most Education Departments began to subsidize the purchase of television sets, and by the end of 1965, 2,879 schools in Australia were equipped to use educational television programmes. Some 700 separate programmes were produced for telecast to schools in 1965.

Scholarships and bursaries

All States have schemes of financial assistance to school pupils, mostly at the secondary level, through scholarships or bursaries. As tuition in government schools is free, this assistance is usually in the form of maintenance allowances, both for children living with their parents and for those living away from home. These may be paid in a lump sum or in instalments throughout the year. Awards are usually made on the results of a competitive examination, and sometimes a means test is applied. Other government and private authorities, such as the Repatriation Department and the Legacy War Orphans Fund, assist special categories of pupils with their school education. Many non-government schools also award scholarships, on a competitive basis, which enable students to attend the particular schools without payment of fees.

In 1964 the Commonwealth Government, with the co-operation of the State Departments of Education, introduced a programme of secondary scholarships to encourage successful candidates to complete the final two years of secondary schooling. Ten thousand of these scholarships are awarded each year. In addition, there are 2,500 scholarships for technical education each year.

School transport

All States have systems of subsidies whereby transport is made available free or at concession rates for children travelling to and from school. In some States allowances are paid if private transport has to be used.

School buildings

The great increase in the school population in the last decade led to an expansion in school building. To cope with this growth in population, it was necessary at first to make use of temporary and emergency structures, but the period of resorting to this expedient has now given way to one of consolidation and development in school building programmes. Quite large schools may be built in stages to match increase in local population in new and rapidly developing suburbs in metropolitan areas. Authorities are giving much attention to the use of new materials and especially to the planning of sites. An increasing number of schools are planned with playing fields and tennis courts. Gymnasiums which may also serve as assembly halls are included, and lighting, heating and ventilation to meet different climatic conditions are carefully planned.

During the period 1 July 1964 to 30 June 1968 a total of \$39,623,200 will have been provided by the Commonwealth Government for the building and equipping of science laboratories in both government and non-government schools. Non-government schools in the Australian Capital Territory and the Northern Territory do not receive this assistance. In these areas the Commonwealth Government meets interest charges on loans raised for approved building projects and also repays the amounts of capital borrowed in equal annual instalments over periods of twenty years.

Textbooks, materials and other equipment

The State Education Departments supply government schools, free of charge, with essential equipment, including scientific apparatus, maps, blackboards, chalk and cleaning materials, and non-consumable equipment for commercial, home science and manual training. Garden tools and physical training equipment are also supplied in most States. Readers and writing equipment for individual pupils are usually supplied free in primary schools, and several Education Departments produce monthly school magazines which are supplied free or cheaply. In primary schools (except in one State) and in secondary schools, textbooks must, however, be purchased by students. In several States schools own stocks of textbooks which are hired to students, and in one State secondary textbooks are sold at reduced prices. In four States certain textbook costs are subsidized for pupils attending government and non-government schools. Equipment such as

radios, television sets, film and filmstrip projectors, pianos, duplicators, and library books is ordinarily purchased for individual schools by the parent and citizen organizations associated with them, with the assistance of subsidies from the Departments.

The design of school furniture is undergoing considerable change following research on posture and the physical measurement of children. Dual desks are now being replaced in many schools by individual tables and chairs, provided in a range of sizes suitable to each class. In line with modern educational practice, the new type of furniture has been designed to allow more flexible arrangements of the classroom.

Visual aids

Visual aids are widely used in Australian education. Each of the State Education Departments has a visual education branch to handle the production and distribution of such materials. Film strips and posters are distributed free or at low cost. Films are held in central libraries and are requisitioned by schools as required for teaching purposes.

Pre-school education

Pre-school centres of various kinds are conducted by approved private individuals, by church bodies and by voluntary organizations such as the Kindergarten Unions. Over recent years the Commonwealth Government, State Governments, and some municipal councils have provided an increasing amount of financial assistance and they themselves maintain centres.

The Australian Pre-School Association is a federal body composed of the Kindergarten Unions and several other organizations. Its aim is to promote the development of pre-school education throughout Australia. It is also responsible for the administration of six Lady Gowrie Child Centres which were established in capital cities by the Commonwealth Government as model pre-school centres. Pre-school centres are located in city and country areas. Programmes are adapted to suit the areas in which centres are situated. Types of pre-school centres are nursery kindergartens, crèches with full-day care for children in closely settled industrial areas, play groups and play centres, occasional care centres, and residential holiday homes. Pre-school centres can cater only for a small proportion of children in the three to five or six year age group, but radio and television have brought a form of education within the reach of practically every pre-school child in Australia. 'Kindergarten of the Air', the first programme of its kind in the world, is a session of twenty-five minutes broadcast every week-day over the national radio network of the Australian Broadcasting Commission. Through it, young children in hospitals, in homes in city and country towns and in bush homesteads in the outback, perhaps many miles from any school, receive many of the advantages of pre-school training. 'Kindergarten Playtime' is a fifteen minute television programme transmitted each week-day. It is based on the interests of children from three to five years and is now broadcast in all State capital cities and many country regions by the Australian Broadcasting Commission. It is envisaged that this programme will be replaced by a more comprehensive thirty-minute programme 'Kindergarten Play School' in 1966.

Technical education

The following description of technical education refers to training in technical fields given by institutions other than secondary schools and universities. Students may proceed to this kind of training after completing three to five years at secondary school. Each State has developed a system of technical education based on institutions set up in all the State capital cities and in many country areas. These institutions are known variously as technical colleges, technical schools, institutes of technology, and schools of mines. The earliest began as local and even private ventures in the second half of the nineteenth century, but almost all of them have now come under the control of the State Governments.

The technical colleges in Queensland, South Australia, Western Australia, and Tasmania are administered by branches of the State Education Departments and are financed from the budget of the State Minister for Education. Certain recommended technical colleges and institutes are assisted by special Commonwealth Government grants introduced in 1965 following recommendations of a Committee set up to consider the future of tertiary education in Australia. New South Wales has a separate State Department of Technical Education. In Victoria there is a dual system with a number of the older colleges controlled by their own 'councils' in addition to government-controlled colleges administered by the Technical Education Branch of the Education Department. The council-controlled colleges receive government grants-in-aid and their teachers' salaries are paid by the State Government.

Australian technical colleges offer training in all the major industrial skills and in a wide variety of commercial, artistic and domestic occupations. The three main types of courses are described below.

Trade courses

These offer part-time training for apprentices. In developing a system of technical education, the Australian authorities were influenced by the British tradition which regards practical experience on the job as the fundamental training procedure, to be supplemented by theoretical and practical training at an appropriate school. In each of the Australian States there is an apprenticeship authority which supervises the administration of apprenticeships and an education authority which provides technical education through its technical colleges.

The time spent on training varies from three to five years in different trades and States. Between four and eight hours instruction a week are required. Most of this takes place in the employer's time, and it is unusual for more than two hours a week to be spent in attending classes outside working hours.

Certificate courses

There is considerable variation between the States in the aims and organization of certificate courses. In New South Wales they provide training of a semi-professional nature in occupations for which no apprenticeship awards exist. Some of the courses are open to qualified tradesmen only. For others no occupational entry qualifications are demanded, but it is necessary to hold an Intermediate Certificate or its equivalent. The courses are usually for four years, most of them being part-time.

The Victorian certificate course is designed to develop specialized skills in a particular phase of an occupation. In the building field, for instance, there is a certificate course in architectural drafting. The courses are offered at three levels—professional certificate courses which include diploma subject-matter and can be counted towards a diploma; special short courses which are designed to increase the efficiency of people in their chosen field; and technicians' courses which give a standard of training between trade and professional courses. In general, they consist of part-time day and/or evening instruction concurrent with employment in the field, and entrance requirements are of approximately Intermediate Examination standard. Courses in other States are mostly part-time and of two to seven years duration. They provide a wide range of training for skilled technical and semi-professional workers, and in most cases entrance is at the level of the Intermediate Examination or equivalent.

Diploma courses

Diploma courses are designed to provide professional training in fields such as architecture, art, building, commerce, management, public administration, manual arts, the various branches of engineering and metallurgy, and pure and applied science. They usually follow completion of a full secondary school course. The courses consist of complete progressive units of study in which the lecture room, laboratory and workshop are closely associated. They vary from three to five years full-time and from three to seven years part-time study. At least one full year of employment in an appropriate occupation is usually required. The aim of the courses is to develop highly trained technologists with the qualifications and experience required for membership of a professional institution.

Other technical courses

Most colleges provide short post-diploma and refresher courses to keep students in touch with new developments in their fields, as well as courses of general interest, such as handicrafts and motor mechanics. Training in certain technical aspects of agriculture such as farm mechanics and wool classing is often given in the technical colleges. Some also offer general secondary courses to enable adults to prepare for matriculation and other public examinations.

Technical correspondence teaching

Each State has a well developed system of technical education by correspondence to extend the facilities of a metropolitan college to rural students. Entrance qualifications are identical with those for the regular classes. A major problem of correspondence work is the linking of theory with practice. This is overcome to a certain extent by holding practical sessions at appropriate training centres once or twice a year at the technical college where the correspondence school is based, or at a mobile workshop stationed for the time at a focal point within the district. In New South Wales these mobile workshops are rail cars equipped with machinery and fittings to make them self-contained training schools for engineering and other trades. Among practical courses offered by correspondence are trade drawing, fitting and machinery, welding, diesel engine operation, automotive engineering and workshop practice, and farm mechanics.

Technical colleges, teachers and students

The numbers of colleges, teachers and enrolments of individual students during the years 1960 to 1964 are given in the following table.

**TECHNICAL EDUCATION: COLLEGES, TEACHERS AND ENROLMENTS
STATES AND TERRITORIES, 1960 TO 1964**

State or Territory	Colleges	Teachers			Students enrolled		
		Full-time	Part-time	Total	Males	Females	Persons
New South Wales(a)(b)—							
1960	51	1,286	1,682	2,968	62,523	34,195	96,718

(a) Excludes correspondence students. (b) Includes A.C.T. (c) Includes teachers in both junior and senior technical colleges. (d) Number of teaching positions. (e) In 1961 there was a transfer of classes in the hobby category to the Adult Education Board.

Training of technical instructors

Prior to the 1939-45 War technical colleges were staffed chiefly by trained teachers in the employment of the Education Departments or technicians drawn from industry. Although some of the latter were highly qualified, the great majority had not been trained as teachers.

To preserve links with industry and trade practice, schemes have been developed which continue the recruitment of specialist tradesmen as instructors but provide also for their training in educational method and teaching techniques. In Victoria the Technical Teachers' College provides training for students with appropriate diploma or trade qualifications and suitable industrial experience. In New South Wales technical college lecturers and tradesmen-instructors receive an in-service course of teacher training in general educational theory and teaching method,

while correspondence courses and visiting lecturers assist the newly appointed tradesman-instructor in country colleges. Variations of this scheme are in operation in other States. Many technical teachers, principally of academic, commercial and domestic science subjects, hold trained teacher's certificates from teachers' colleges.

Government expenditure on schools and technical education

The following tables show particulars of the total net expenditure (i.e. gross expenditure less receipts for services rendered) from certain funds on government schools, education departments and technical education. The data have been compiled on the same basis as far as differences in organization and accounting methods between States and Territories will permit. The tables include only expenditure from the consolidated revenue funds and certain trust or special funds. They exclude loan fund expenditure; expenditure on debt charges, pay-roll tax and superannuation payments, in so far as it is possible to identify these items; and some items for which information cannot be obtained from the public accounts of all States.

Government schools' and education departments' expenditure

The figures relate throughout to years ended 30 June. Net expenditure per pupil relates the total net expenditure to the mean of the numbers of pupils enrolled at government schools at two consecutive school censuses. Net expenditure per head of population relates the total net expenditure to the mean population.

GOVERNMENT SCHOOLS AND EDUCATION DEPARTMENTS: NET EXPENDITURE STATES AND TERRITORIES, 1960-61 TO 1964-65

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T. (a)	A.C.T.	Aust.

1964-65	33.87	28.90	25.07	34.87	33.62	39.16	41.68	38.60	31.53

(a) Figures exclude expenditure on new buildings and works, which amounted to \$413,000 in 1960-61, \$648,000 in 1961-62, \$661,000 in 1962-63, \$462,000 in 1963-64, and \$709,000 in 1964-65.

The following table shows, for the six States, the net expenditure on government schools and education departments classified into the following headings: Primary Education, Secondary Education, Administration, Transportation of School Children and Students, and Training of Teachers. Expenditure on technical and agricultural education is excluded from the tables. It has been necessary to estimate some items of expenditure, largely because the meanings of 'primary' and 'secondary' differ between States and because elementary and higher educations are sometimes given in the same school by the same teachers. Expenditure on government schools in the Northern Territory and Australian Capital Territory is not included in the following table because the detail is not available.

**GOVERNMENT SCHOOLS AND EDUCATION DEPARTMENTS: CLASSIFICATION
OF EXPENDITURE, STATES, 1959-60 TO 1963-64**
(\$'000)

Non-government schools' finance

Most Roman Catholic parochial schools charge fees, but payment is not insisted on in the case of families who cannot afford it. At the majority of non-government secondary schools privately endowed scholarships are available in varying numbers, and reductions in fees are normally made for children of clergy or for two or more members of one family attending the same school. With these exceptions, pupils of non-government schools must pay fees.

Certain State scholarships and bursaries are tenable at approved non-government secondary schools. Since the establishment of educational systems by the State Governments, official policy has been largely against the provision of direct financial assistance to non-government schools. Most States, however, have come to assist non-government schools in approved building projects. This assistance takes the form of payment of interest charges on loans raised for the extension of teaching space. The eight undenominational grammar schools in Queensland receive a State subsidy under '*The Grammar Schools Acts 1860 to 1900*'. In 1956 the Commonwealth Government undertook to contribute to the interest payments on loans raised in order to build non-government secondary school accommodation in the Australian Capital Territory. This contribution is now available for both primary and secondary school buildings, extensions and additions. As from 1964-65 the Commonwealth Government has provided assistance to non-government schools for the building and equipping of science laboratories. (See page 596.)

Universities

Students qualify for entrance to Australian universities by passing a matriculation examination in one of the States after five or six years of secondary education. Each university has its own regulations for matriculation, specifying the number and combination of subjects to be passed for admission. Students entering the universities have the choice of undergraduate study in various faculties. All universities provide also postgraduate courses of study. The Australian universities, with their faculties, are listed below in the order of their foundation.

University of Sydney, 1850. Sydney, New South Wales: Agriculture, Architecture, Arts, Dentistry, Economics, Engineering, Law, Medicine, Science, Veterinary Science.

University of Melbourne, 1853. Melbourne, Victoria: Agriculture, Applied Science, Architecture, Arts, Dental Science, Economics and Commerce, Education, Engineering, Law, Medicine, Music, Science, Veterinary Science.

University of Adelaide, 1874. Adelaide, South Australia: Agricultural Science, Architecture and Town Planning, Arts, Dentistry, Economics, Engineering, Law, Medicine, Music, Science, Technology and Applied Science.

University of Tasmania, 1890. Hobart, Tasmania: Agricultural Science, Arts, Commerce, Education, Engineering, Law, Medicine, Science.

University of Queensland, 1909. Brisbane, Queensland: Agriculture, Architecture, Arts, Commerce and Economics, Dentistry, Education, Engineering, Law, Medicine, Science, Veterinary Science.

University of Western Australia, 1912. Perth, Western Australia: Agriculture, Arts, Dental Science, Economics and Commerce, Education, Engineering, Law, Medicine, Science.

Australian National University, 1946, Canberra, Australian Capital Territory: Institute of Advanced Studies—John Curtin School of Medical Research, Research School of Physical Sciences, Research School of Social Sciences, Research School of Pacific Studies; School of General Studies (formerly Canberra University College, established in 1930)—Arts, Economics, Law, Oriental Studies, Science.

University of New England, 1954 (formerly New England University College, established in 1938), Armidale, New South Wales: Agricultural Economics, Arts, Economics, Rural Science, Science.

University of New South Wales, 1958 (formerly the New South Wales University of Technology, established in 1948), Sydney, New South Wales: Applied Science, Architecture, Arts, Commerce, Engineering, Medicine, Science.

Monash University, 1958, Melbourne, Victoria: Arts, Economics and Politics, Engineering, Law, Medicine, Science.

University of Newcastle, 1965 (formerly Newcastle University College, established in 1951), Newcastle, New South Wales: Applied Science, Architecture, Arts, Commerce, Engineering, Science.

Flinders University of South Australia, 1966 (formerly the University of Adelaide at Bedford Park), Bedford Park, South Australia: Arts, Science.

Each of the universities was established by a parliamentary Act as an autonomous institution, with its own Governing Council or Senate. Nevertheless, the Australian universities receive substantial government support from both State and Commonwealth sources, only part of their income being derived from students' fees, private donations and bequests.

There are also two university colleges. Townsville University College, founded in 1961, is a part of the University of Queensland. It offers some courses in the faculties of Agriculture, Arts, Commerce and Economics, Dentistry, Education, Engineering, Law, Medicine, Science and Veterinary Science. Wollongong University College was opened in 1962 and is affiliated with the University of New South Wales. It offers some courses in the faculties of Arts, Commerce, Engineering, and Science.

Organization of courses

Bachelor degree courses are from three to six years in length, depending on the faculty, and for the majority full-time attendance is required. Certain courses, however, may also be undertaken by part-time or evening students. The university academic year begins in March and finishes in early December. At most universities two short vacation periods divide the year into three terms, but there are four terms in some universities.

Several universities make provision for external tuition, whereby students living away from university towns may take a restricted number of courses by correspondence. The University of Queensland has developed a system of correspondence tuition which now caters not only for students within the State but for those in the Northern Territory, Papua and New Guinea, adjacent Pacific islands and Asian countries. External students living in Queensland receive tutorial assistance at university centres in the principal country towns.

The University of New England's Department of External Studies offers a wide range of subjects for external study, leading to the degrees of Bachelor of Arts, Bachelor of Letters, Bachelor of Education, the Diploma of Education, and the Diploma in Educational Administration. External students must attend short annual residential schools of instruction in their subjects, usually held at the university.

Post-graduate courses leading either to a Master's degree or to a Doctorate are available at all universities. Facilities cover the humanities, social sciences and pure and applied sciences. Additional courses are constantly being introduced by the universities at both the undergraduate and the post-graduate level to cover new fields of knowledge and specialization. Among announcements of new courses made in 1965 were: at the University of New South Wales, Diploma in Hospital Administration, Bachelor of Social Work, and postgraduate Diplomas in Biochemical Engineering and Civic Design; at the University of Adelaide, Diploma of Computing Science; and at the University of Tasmania, a Faculty of Medicine was established.

Research

A wide range of research work and training in research techniques is carried out by the universities as part of their normal functions. Post-graduate students and members of university staff are engaged in research, both as part of their work for post-graduate degrees and also as part of group and departmental research programmes. Support for research in universities is derived from public and private sources, including funds and foundations established to encourage research in a particular field.

University expansion and development

Since the 1939-45 War the Australian universities have had to face greatly increased demands on their facilities, firstly from large numbers of ex-service personnel in the immediate post-war years and later from greatly increased numbers of students leaving secondary schools each year. By 1965 the total enrolments in Australian universities had reached a figure of 83,320, compared with an early post-war peak of 32,453 in 1948.

To assist the universities to cope with these demands, increasing co-operation between the Commonwealth Government and the State Governments in university finance became necessary. The Commonwealth Government set up a Committee on Australian Universities, whose 1957 report ('The Murray Report') led to more finance becoming available to universities and to the setting up of a permanent body, the Australian Universities Commission, to advise the Commonwealth Government on university development. In the years since the Murray Report the following major developments have taken place in the Australian university structure: the University of New South Wales was created from the earlier University of Technology in 1958; in the same year Monash University was established in Victoria; in 1960 the Australian National University was reconstituted, combining both undergraduate and post-graduate facilities, and now consists of the Institute of Advanced Studies and the School of General Studies created from the Canberra University College; the University of Queensland set up the University College of Townsville in 1961; the University of New South Wales established the Wollongong University College in 1962; in 1965 the University of Newcastle was created from the Newcastle University College; and in 1966 the University of Adelaide at Bedford Park became The Flinders University of South Australia.

The New South Wales Government is proceeding with plans for the construction of a fifth university, to be called Macquarie University, on a site at North Ryde. It is intended that the new university should be opened not later than 1967. In 1964 the Victorian Government announced plans for the extension of facilities for tertiary education. These plans include the development of a third university in the metropolitan area, to be named La Trobe University, and the extension of the Ballarat School of Mines to teach the humanities and to provide degree courses. The Queensland Government is proceeding with plans for the construction of a third university Institution at Mount Gravatt. It is expected that the campus will be established within the next four years as a satellite of the University of Queensland.

Despite their expansion, the Australian universities are still faced with a problem in providing tuition for all students who reach matriculation standard. As a result, several universities have found it necessary to impose quotas on enrolments in their courses.

During 1961 the Commonwealth Government set up a committee to consider the pattern of tertiary education in relation to the needs and resources of Australia and to make recommendations to the Australian Universities Commission on the future development of tertiary education. The first two volumes of the Committee's Report were made public early in 1965, and the third volume in October 1965.

University teaching and research staff

The following tables show particulars of the teaching and research staff of the universities during 1965 and earlier years.

UNIVERSITIES: TEACHING AND RESEARCH STAFF(a), 1965

University	Full-time teaching and research staff					Part-time teaching and research staff(c)	Full-time research only staff	Part-time research only staff(d)

1965 . . .	6,169	69,540	2,146	3,382	323	3,035	83,320

(a) Includes *ad hoc* courses. (b) Adjustment made for students enrolled for more than one course.

University new students enrolled

The numbers of new students enrolled for courses at the universities during 1965 and earlier years are shown in the following tables.

UNIVERSITIES: NEW STUDENTS ENROLLED, 1965

University	Degree courses	Diploma courses		Certificate courses	Miscellaneous subjects (a)	Adjusted total(b)
		Post-graduate	Sub-graduate			
Australian National	1,175	103	1,248
Sydney	3,228	151	111	34	66	3,590
New South Wales	3,302	107	74	..	484	3,967
New England	1,244	110	..	1	21	1,371
Newcastle	561	3	15	579
Melbourne	2,582	15	230	..	260	3,008
Monash	1,892	46	13	1,935
Queensland	3,147	9	226	24	180	3,586
Adelaide	1,821	8	362	3	28	2,215
Western Australia	1,245	3	19	1,267
Tasmania	562	6	6	15	126	670
Total	20,759	458	1,009	77	1,315	23,436

(a) Includes *ad hoc* courses.

(b) Adjustment made for students enrolled for more than one course.

Of the new students enrolled in 1965, 16,263 were males and 7,173 females. Included in those enrolled for degrees were 697 enrolled for higher degree courses: Australian National University, 164; Sydney, 107; University of New South Wales, 140; New England, 16; Newcastle, 10; Melbourne, 55; Monash, 66; Queensland, 34; Adelaide, 50; Western Australia, 19; and Tasmania, 36.

UNIVERSITIES: NEW STUDENTS ENROLLED, AUSTRALIA, 1961 TO 1965

1965 . . .	49,916	26,492	6,912	83,320

Assistance to university students

The Commonwealth Government, through the Commonwealth Scholarships Board, grants undergraduate and post-graduate scholarships to university students. (Details of the Commonwealth Scholarship Scheme are given on page 618.) Commonwealth, State and local governments also award cadetships and other assistance to their employees. Foreign students are assisted by the Commonwealth Government under arrangements such as the Colombo Plan. The Universities themselves grant exhibitions and scholarships as well as special assistance to teachers, etc.

The following tables give details of students assisted at universities in 1965 and earlier years.

UNIVERSITIES: ASSISTED STUDENTS, 1965

University	Source of assistance					Type of course	
	Commonwealth Government	State Governments	Universities	Other	Adjusted total (a)	Higher degrees	Other

Resident university students

In 1965, 6,658 full-time and 267 part-time students were in residence at affiliated colleges, halls of residence and university hostels. The 6,925 students in residence were distributed as follows: Australian National University, 658; Sydney, 818; New South Wales, 285; New England, 1,063; Melbourne, 1,475; Monash, 205; Queensland, 1,181; Adelaide, 381; Western Australia, 578; and Tasmania, 281. There were 5,131 male students and 1,794 female students in residence.

University degrees conferred, etc.

The following table shows the numbers of degrees conferred and diplomas and certificates granted for males and females separately at each university during the year ended 31 July 1965.

GRADES AND EXAMINATIONS IN THE PRIMARY AND SECONDARY SCHOOL SYSTEMS IN EACH STATE AND TERRITORY, 1965

The grade terminology follows, as nearly as possible, that used in government primary and high schools in each State in 1965. It is not necessarily used in all types of schools. The grade has been written in approximately to agree with the age-scale shown on the diagram, in order to indicate differences in age-grade patterns between States. The diagram should not be taken as a comparison of academic standards of grades between States. For a more detailed presentation of the systems operating in each State, reference should be made to diagrams etc. appearing in the annual reports of State Ministers of Education.

(a) In N.S.W. and A.C.T. an additional secondary grade (Form VI) will operate as from 1967. (b) In S.A. and N.T. Matriculation may be gained only at end of Fifth Year as from 1967. (c) In Tasmania many A GRADE pupils study for Matriculation over a two year period. (d) In Victoria, owing to differences of commencing school, younger pupils spend two years in Grade 1.

(a) Figures for 1962 and later years refer to degrees conferred during the 12 months ended July. Figures for 1961 refer to degrees conferred during the calendar year. Details of degrees conferred during the five months ended December, 1961, which are included in both 1961 and 1962 figures shown in the table, are as follows: Arts, 129; Music, 10; Law, 59; Commerce and Economics, 45; Education, 18; Science, 97; Architecture and town planning, 9; Engineering, 56; Dentistry, 8; Medicine, 207; Physiotherapy, 1; Agriculture and agricultural economics, 15; Forestry, 3; Veterinary science, 25; total degrees, 682, including 10 Higher doctorates, 34 Ph.D.'s, 86 Master's degrees, and 552 Bachelor's degrees.

University finance

Australian universities are incorporated by statute. Since their establishment they have come to depend greatly on government grants for their income. In recent years large amounts have been required for new buildings, as well as for current expenditure to provide staff and equipment to cope with increased student enrolments. In 1964 income from other than State and Commonwealth grants, including student fees, amounted to little more than one-fifth of the total income. Income from non-government sources includes grants, mainly for research purposes, from businesses, international foundations, and private individuals. Some income is also received from endowments.

Financial assistance to universities from the Commonwealth Government

Prior to 1939 Commonwealth assistance was almost entirely concerned with research projects carried out by or in collaboration with the universities. During and since the 1939–45 War the Commonwealth extended assistance to university students, at first to increase the number of highly trained people required for the war effort, then with the object of rehabilitating ex-servicemen, and finally as a social service benefit to the community. For the purpose of reconstruction training, the Commonwealth Government made available to the universities approximately \$2 million for buildings and \$1 million for equipment.

Following a report submitted by a committee of inquiry appointed to report on university finances and requirements, the Commonwealth, since 1951, has made matched grants to the States for recurrent expenditure on university purposes. Since 1958 the Commonwealth has also assisted with the capital needs of the universities for building projects and for equipment, and provided unmatched recurrent grants and grants for the building programmes of residential colleges affiliated with universities. In the 1961–63 triennium the Commonwealth matched State grants for buildings at teaching hospitals and in 1960 instituted grants for research at universities. As well as making grants available for State universities, the Commonwealth has continued to support the university institutions for which it is responsible.

In 1959, following the Report of the Committee on Australian Universities, the Commonwealth Government established the Australian Universities Commission under the *Australian Universities Commission Act 1959*. The Commission's principal functions are to advise the Prime

Minister on financial assistance to Commonwealth universities and to States in relation to their universities and also on the balanced development of Australian universities. The Commission commenced its work in July 1959. Since its establishment the Commission has produced two reports; the first, presented in October 1960, and covering the years 1961 to 1963, recommended Commonwealth grants totalling \$86 million for State universities. The Commission later recommended a separate grant of \$4 million for teaching hospitals. The Commission's second report was presented in August 1963, and recommended Commonwealth grants totalling more than \$121 million for State universities, subsequently increased by \$3 million for teaching hospitals, for the period 1964 to 1966. The *Universities (Financial Assistance) Act 1963* gave effect to the major financial recommendations contained in the Commission's second report and was later amended by the *Universities (Financial Assistance) Act 1965*.

Commonwealth grant for recurrent expenditure in universities. This is a continuation of matched grants provided since 1951. The maximum amounts available in 1964, 1965 and 1966 are shown in the following table. These amounts have been adjusted to allow for the recommendations of the Report of the Inquiry into Academic Salaries by Mr. Justice Eggleston. However, the amounts are subject to further amendment when the full cost is known.

**STATE UNIVERSITIES, ETC.: COMMONWEALTH GRANT
FOR RECURRENT EXPENDITURE, 1964 TO 1966**

University, etc.	1964	1965	1966
	\$'000	\$'000	\$'000
Sydney	4,640	5,154	5,676
New South Wales(a)	4,450	4,352	4,832
New England	1,364	1,454	1,550
Newcastle	618	704
Macquarie	112	224
Melbourne	3,868	4,298	4,796
Monash	2,072	2,770	3,358
La Trobe	106	218
Queensland(b)	2,968	3,430	3,884
Adelaide(c)	2,582	2,856	3,246
Western Australia	1,794	1,974	2,166
Tasmania	744	844	942
South Australian Institute of Technology	230	258	290
Total	24,712	28,226	31,886

(a) Includes grants for the University Colleges at Wollongong and Newcastle (the University of Newcastle as from 1 January 1965). (b) Includes grants of \$160,000, \$192,000 and \$240,000 respectively for each of the three years for the University College at Townsville. (c) Includes grants of \$112,000, \$208,000 and \$418,000 respectively for each of the three years for the University of Adelaide at Bedford Park (The Flinders University of South Australia as from 1 July 1966).

Since 1961 matched grants have been made on a basis of \$1 of Commonwealth money for every \$1.85 of income received by a university from fees and State grants. From 1951 to 1960 the matching ratio was, in general, \$1 to \$3.

Commonwealth grants for the teaching and administrative costs of residential colleges. From 1964 the grants consist of unmatched Commonwealth payments each year of \$5,000 (previously \$4,000) to each college affiliated with or administered by a university, plus the sum of \$30 for each resident student, and a further \$10 for each non-resident student receiving tutorial assistance. The total Commonwealth grant paid in 1965 was \$464,450.

Commonwealth grants for selected building projects in universities. Those grants, for the period 1964 to 1966, are shown in detail in the Second Schedule to the 1965 Act. Payments are made up to a given maximum for each project, on the basis of \$1 from the Commonwealth for every \$1 of State grants. From 1964 there was a change in this grant in that, where appropriate, an allowance for furnishings and equipment is included in the building grants for each project. Previously, separate grants were provided for these items. Also, from 1964, the schedule showing grants for university building projects includes grants for university computing facilities, but grants for the erection and alteration of buildings for halls of residence administered by universities are shown elsewhere. The total Commonwealth grant under this heading for each University is shown in the following table. The amounts shown include additional grants recommended in the *Report of the Committee on the Future of Tertiary Education in Australia* and approved by the Commonwealth Government.

**STATE UNIVERSITIES, ETC.: COMMON-
WEALTH GRANTS FOR BUILDING PROJECTS
ETC., 1964 TO 1966**

University, etc.	Amount
	\$'000
Sydney	4,680
New South Wales	3,880
New England	1,352
Newcastle	1,020
Macquarie	2,100
Melbourne	4,812
Monash	4,470
La Trobe	1,410
Queensland(a)	3,216
Adelaide(b)	3,668
Western Australia	1,920
Tasmania	936
South Australian Institute of Technology	662
Total	34,126

(a) Includes amount of \$100,000 for new university institution in Brisbane. (b) Includes amount of \$2,835,000 for University of Adelaide at Bedford Park (the Flinders University of South Australia as from 1 July 1966).

Commonwealth grants for special research projects in universities. Under the 1963 Act special provision is made to assist universities to develop and extend their research programmes, including the purchase of equipment. Under the 1961-1963 legislation grants were provided for equipment only. The grants are available on the basis of \$1 from the Commonwealth for every \$1 of State grants. For the 1964 to 1966 triennium the Australian Universities Commission recommended a Special Research Grant of \$10 million for the State universities. Of this amount \$6 million is being allocated by the Commission in agreement with State governments, while the remaining \$4 million is being allocated by the Australian Research Grants Committee (*see* page 618) to individuals or research teams whether inside or outside universities. To the end of 1965 \$4 million had been allocated by the Commission; the maximum amount available to each university is shown in the following table.

**STATE UNIVERSITIES: COMMONWEALTH

ALLOCATED BY AUSTRALIAN UNIVERSITIES
COMMISSION, 1964 TO 1966**

University	Amount
	\$'000
Sydney	624
New South Wales	396
New England	120
Newcastle	34
Melbourne	624
Monash	176
Queensland(a)	288
Adelaide(b)	370
Western Australia	244
Tasmania	124
Total	3,000

(a) Includes \$12,000 for Townsville University College. (b) Includes \$40,000 for the University of Adelaide at Bedford Park (Flinders University of South Australia as from 1 July 1966).

Commonwealth grants for buildings for halls of residence and affiliated residential colleges. Under the 1963 Act an amount representing the grant available to each university for both types of student residence is shown in the Fourth Schedule. Previously, grants for buildings for university-administered halls of residence were included in the Schedule showing university building projects. Payments were made up to a given maximum for each project. For halls of residence the grant comprised \$1 from the Commonwealth for every \$1 of State grants. For affiliated residential colleges Commonwealth grants were up to half of the cost of a project, the other half being met from college or State Government sources. For the 1964-66 triennium, however, payments are made up to a given maximum for each project on the basis of \$1 from the Commonwealth for every \$1 of residential college funds and State grants. The maximum Commonwealth grants available for each State university in the 1964-66 triennium are shown in the following table.

STATE UNIVERSITIES: MAXIMUM COMMONWEALTH GRANTS FOR BUILDINGS FOR HALLS OF RESIDENCE AND AFFILIATED RESIDENTIAL COLLEGES, 1964 TO 1966

University	Amount
	\$'000
Sydney	632
New South Wales	588
New England	950
Newcastle	220
Melbourne	560
Monash	1,210
La Trobe	440
Queensland	774
Adelaide	640
Western Australia	618
Tasmania	354
Total	6,986

University income and expenditure

The following tables show particulars of the income and expenditure of each university in 1964 and the totals for 1960 to 1964.

(a) Includes funds expended by various government departments and other bodies in respect of universities but not controlled by the universities. (b) In the case of endowments, only income from property and other investment of these endowments is included. The treatment of donations depends on the terms of the gift, etc. When the capital sum is specified to be expended over several years, only the portion of the capital sum allocated to each year is shown as income in that year, but if the capital sum is available for spending without limitation as to time, the full amount is recorded as income in the year it is received, irrespective of whether it is spent in that year or not. The capital value of land and buildings donated to the universities is not recorded as income, unless these properties are sold, in which case the amounts realized are included. (c) Excludes fees collected on behalf of student unions. (d) Income received specifically for new buildings, major alterations and additions to buildings, installation of services, purchase of land and buildings and major equipment.

(a) Figures for 1961, 1962, 1963 and 1964 were compiled on a new basis and totals for individual universities are not necessarily comparable with previous years.

Other tertiary institutions

In addition to the degree-granting universities, various other institutions offer courses at tertiary level which may lead to a certificate, diploma, or similar qualification. Included among these institutions are technical colleges, which have been described on pages 597-9.

Teachers' colleges

The State Education Departments conduct teachers' colleges to train teachers for government schools. There are eight colleges in New South Wales, twelve in Victoria, four in South Australia, and two each in Queensland, Western Australia and Tasmania, making a total of thirty colleges. These colleges provide a variety of teacher training courses, including those for primary teachers, secondary teachers, and those specializing in teaching infants, handicapped children, art, music, and handicrafts. A description of the courses is given on page 593. Teachers' colleges are co-educational and, in the larger States, have been established in country areas as well as in cities. Students entering them have completed their secondary schooling and are usually about seventeen years of age. The principal and staff of the colleges are responsible to the Director of Education in the State concerned.

Kindergarten training colleges

The Kindergarten Unions in all States except Tasmania have established teacher training colleges providing three-year courses. The minimum entrance age is usually seventeen years and at least the Leaving Certificate is required for admission. In addition, in New South Wales, the Sydney Day Nursery and Nursery Schools' Association maintains a training college.

The pre-school teacher training courses in these colleges are all full-time diploma courses and are similar in content and standards. Teachers are trained for work with children between the ages of two and seven years, and the training courses include the study of general educational theory, the theory of pre-school education, general cultural subjects, and art and crafts (including music). In addition, training is given in practical pre-school teaching.

Agricultural colleges

There are seven State agricultural colleges—Hawkesbury and Wagga (New South Wales), Longerenong and Dookie (Victoria), Lawes (Queensland), Roseworthy (South Australia), and Muresk (Western Australia), offering a comprehensive course of two or three years leading to the award of a Diploma in Agriculture or in a specialized field such as animal husbandry, dairy manufactures, and horticulture. The School of Horticulture, Burnley, Victoria, also offers a three-year diploma course.

Agricultural colleges are government institutions administered by the State Departments of Agriculture in New South Wales, Victoria, South Australia, and Western Australia, and by the State Department of Education in Queensland. Their purpose is to teach the principles and practices of agriculture and its specialized branches to those intending to take up farming as a career and to those who propose to enter such occupations as agricultural field officer or technical officer in food processing industries.

The minimum entrance standard is the penultimate major secondary examination of the State concerned, except in Western Australia where it is the sub-leaving examination. As entry is competitive, there is a tendency for students to hold better than the minimum qualifications. All the colleges are fully residential, and the minimum age at which students may enter them varies from fifteen to seventeen years, depending on the college and the type of course.

In addition to their formal courses of training, agricultural colleges offer short courses of from three days to one month to farmers and teachers in country districts.

Schools of forestry

Since 1965 tertiary training in forestry, previously carried out by the Australian Forestry School, Canberra, has been provided by a Department of Forestry in the Faculty of Science within the Australian National University's School of General Studies. A four-year degree course is offered. Training in forestry is also carried out at the Creswick School of Forestry in Victoria.

Conservatoria of music

There are conservatoria of music in five States. Those in Victoria and South Australia are attached to the Universities of Melbourne and Adelaide respectively. The New South Wales State Conservatorium, the Queensland State Conservatorium and the Tasmanian Conservatorium are controlled by the respective Departments of Education. All five conservatoria offer diploma courses for entry to which matriculation status is not required; at Melbourne and Adelaide degree courses are also available to matriculated students.

The Canberra School of Music was established in July 1965. It is administered by the Department of the Interior.

Service and administrative colleges

Each of the three armed services maintains institutions for the training of officers. Descriptions of these can be found in the chapter Defence. The Royal Military College, Duntroon, Australian Capital Territory, has arrangements with universities whereby its graduates may enter university courses at an advanced stage. The Royal Air Force Academy, Point Cook, Victoria, has evolved from the Royal Australian Air Force College, which was established in 1948 as a tertiary training centre to provide a professional education for permanent officers of the Air Force. It is affiliated to the University of Melbourne and has adopted that University's Bachelor of Science course leading to the degree of Bachelor of Science (Melbourne). The Academy is also permitted to present students for higher degrees in science and the degree of Doctor of Philosophy. Students may also proceed to the University of Sydney to take a degree in Engineering.

The Australian School of Pacific Administration, controlled by the Department of Territories, trains students in the various aspects of service and administration in Commonwealth Territories, including teaching.

Australian Administrative Staff College

Opened in 1957, the Australian Administrative Staff College is a private organization working in close co-operation with government and other public bodies, the armed services and the trade union movement. It was founded, and is owned, by a large group of leading Australian companies and has its permanent premises at Mount Eliza, near Melbourne. The College conducts residential courses for administrators to further the study of the problems which arise in managerial work.

Commonwealth activities in education

Fields of activity

Although education is primarily the responsibility of the States, the Commonwealth has instituted a number of measures of direct assistance to educational institutions and to students. It is responsible for public education in its own Territories and is engaged in educational activities incidental to its responsibilities in such areas as defence, external relations, immigration, and social services. Activities of the Commonwealth in education are not administered by a single authority but are divided among a number of departments and instrumentalities. Education in Commonwealth Territories is described in the chapter The Territories of Australia; various schools and colleges for the defence services are treated in the chapter Defence; and other activities which may be considered broadly as educational are described in the section on Broadcasting and Television and elsewhere in the chapter Transport and Communication.

Education Division, Prime Minister's Department

The major responsibilities of the Commonwealth in support of education services in Australia rest with the Minister-in-charge of Commonwealth Activities in Education and Research. He is assisted by the Education Division of the Prime Minister's Department which, under the Minister's direction, is concerned with Commonwealth policy in education and support of research and with Commonwealth-State relations in this field, including, in particular, grants for universities, colleges of advanced education, technical training facilities, and science laboratories; special grants for research projects; and the various Commonwealth Scholarship schemes.

Commonwealth Office of Education

The Commonwealth Office of Education, whose officers are members of the Education Division, Prime Minister's Department, was set up under the *Education Act 1945* to provide advice to the Commonwealth Government on educational matters and to serve as a channel for liaison between Commonwealth and State educational authorities. Among its major commitments are those which arise from international relations in education, including the association of Australia with the aims and activities of the United Nations Educational, Scientific and Cultural Organization (UNESCO), and the planning and supervision of training for overseas students given awards by the Australian Government to attend Australian universities and similar institutions. The Office acts as the administering authority for Australian participation in the Scheme of Commonwealth Co-operation in Education and concerns itself with the techniques of teaching English as a second language in connection with the assimilation of immigrants and tuition for sponsored foreign students.

Commonwealth Scholarships Board

This Board under its former title of the Universities Commission was also established by the *Education Act 1945*. Prior to 1945 the Commission had functioned under wartime National Security Regulations. The Board consists of a chairman, who is the Director of the Office of Education, and four other members. The main responsibilities of the Board at present are advising the Government on the policy and administration of Commonwealth University and Commonwealth Advanced Education scholarships and Commonwealth Post-graduate Awards. The Board

is responsible for arranging and supervising the training of ex-service personnel and war widows at university and university type institutions under the Korea and Malaya Training Scheme and the Disabled Members' and Widows' Training Scheme. It was also responsible for arranging and supervising training under the Commonwealth Reconstruction Training Scheme until its completion at the end of 1961.

Advisory bodies

The Commonwealth Government has established various advisory bodies whose fields of concern relate to matters of education. Already mentioned (pages 610-11) is the Australian Universities Commission which advises the Commonwealth Government on university development. The Commonwealth Advisory Committee on Advanced Education advises the Minister on the balanced development of tertiary education outside universities. Within financial limits nominated by the Minister, the Committee recommends grants to the States for colleges of advanced education and directs grants to any such colleges established by the Commonwealth. The Australian Research Grants Committee advises the Minister on the merit of applications for research grants from individuals and research teams, and suggests the allocation of funds. The Queen Elizabeth II Fellowships Committee advises the Minister on the merit of applicants for these Fellowships, which are awarded for post-doctoral study in the physical and biological sciences, and advises generally on the administration of this scheme of Fellowships.

Assistance to students

The Commonwealth Government provides financial assistance to students who are undergoing tertiary training through a number of scholarship schemes, all of which are administered by the Commonwealth Scholarships Board. The most extensive of these is the Commonwealth University Scholarship Scheme, under which 6,000 scholarships are offered annually to undergraduates at universities.

The majority of the undergraduate scholarships are open entrance awards allocated among the States on a population basis and awarded competitively on the results of examinations accepted for matriculation in each State. In addition, 1,530 later year awards are available to students who have completed one or more years of a course, and mature age awards are available to older persons in the twenty-five to thirty years age group. All successful applicants have their fees paid. Scholarship holders may also be paid a living allowance subject to a means test. As from 1 January 1965 the maximum rates of allowance have been £396 10s. (\$793) per annum for a scholar living away from home and £260 (\$520) per annum when living at home.

At 30 June 1964, 18,464 Commonwealth scholars were enrolled in undergraduate courses. These included 5,610 new award holders. Up to the end of 1964, 24,368 scholars had completed undergraduate courses under the scheme. In addition to these awards the Commonwealth Government provides up to 1,000 scholarships each year for students taking approved courses of advanced education at institutions other than universities. Benefits are as for Commonwealth University Scholarships.

In 1959 a scheme of Commonwealth post-graduate awards tenable at Australian universities was introduced under which 100 awards were made available each year. The benefits comprise a living allowance without means test, and payment of university fees. The possible number of post-graduate awards was increased to 225 from 1963 and to 400 from 1965. The Commonwealth Government contribution towards the stipend in respect of each award was raised to \$1,800 per annum from 1 January 1964. Awards may be renewed annually up to a maximum period of four years; in 1965, 621 students were holding awards.

When training under the Commonwealth Reconstruction Training Scheme was completed at the end of 1961, a total of 21,424 students had completed training. At the end of 1965 twenty-three students were in training under the Korea and Malaya Training Scheme and the Disabled Members' and Widows' Training Scheme, seven of them following full-time courses.

The Commonwealth schemes of secondary and technical scholarships are referred to on page 596.

International relations

The Commonwealth has been actively involved in the considerable extension which has recently taken place in relations and exchanges with other countries in the field of education. A significant encouragement to this growth has been membership in UNESCO, to which Australia has belonged since 1946 when the organization was founded.

Twelve specialist UNESCO committees in Australia are responsible for a wide and varied programme of activities and have helped to make Australia's contribution to many international conferences and seminars highly effective. The Committees' projects include the organization of Australian and regional seminars, information programmes, and the preparation and circulation of travelling exhibitions which deal with subjects forming part of UNESCO's programme. The Australian National Advisory Committee for UNESCO co-ordinates the work of the specialist committees and advises the Commonwealth Government on Australian participation in UNESCO.

With the co-operation of educational institutions, State Education Departments and other bodies, the Commonwealth has accepted increasing commitments in schemes of international assistance and co-operation. The Colombo Plan Technical Co-operation Scheme, the United Nations Expanded Programme of Technical Assistance, the Australian International Awards Scheme, the Australian South Pacific Technical Assistance Programme, and the Special Commonwealth African Assistance Plan are some of the programmes through which the Commonwealth Government is providing training for overseas students in Australia and is sending Australian experts and equipment to many of the newly developing countries, especially in Asia and Africa. Australia is also actively sharing with other Commonwealth countries in the Scheme of Commonwealth Co-operation in Education which includes the Commonwealth Scholarship and Fellowship Plan. There were some 1,700 sponsored foreign students in Australian educational institutions in 1965, compared with about 800 in 1956. Over three-quarters of these were Colombo Plan trainees, most of whom were studying in various fields of engineering, science, medicine, education and economics.

In 1964, by agreement between the United States and Australian Governments, the Australian-American Educational Foundation, financed jointly by the two Governments, was established to operate a scheme of educational exchanges between the United States and Australia. This new scheme has similar aims and purposes to the Fulbright Scheme which it replaces and which had operated wholly on American funds.

Support is given to Australian participation in many international governmental and non-governmental organizations. For example, Australian educationists have attended yearly meetings of the International Bureau of Education, and regular contributions are made to the Bureau's international surveys into various aspects of education. Assistance has been given to bodies such as the Australian Teachers' Federation in sending delegates to meetings of the World Confederation of Organizations of the Teaching Profession.

Grants for other educational purposes

The Commonwealth gives assistance to various educational schemes and institutions. Grants are made each year by the Commonwealth to the Australian Pre-school Association for the development of kindergarten education, to the Commonwealth National Fitness Council, to the Australian Council for Educational Research, to the Department of Adult Education at the University of Sydney for the publication of the *Current Affairs Bulletin*, and to assist in the provision of training in occupational therapy, physiotherapy, and nursing. The cost of the Departments of Indonesian and Malayan Studies at the University of Melbourne and the University of Sydney is also met by the Commonwealth Government.

Migrant education

The Commonwealth Government's post-war immigration policy has brought to Australia a large number of immigrants with little or no knowledge of English. To assist the assimilation of these newcomers into the Australian community, a system of migrant education has been developed to teach them English and to give them information about Australia. This service is provided free of charge to immigrants above school leaving age.

Before arriving in Australia migrants who do not speak English are given some instruction in English by shipboard education officers. Some may have attended classes in Europe organized by the Inter-governmental Committee for European Migration, with which the Australian Government co-operates. In Australia evening classes are arranged by State Education Departments wherever nine or more migrants in country areas, or twelve or more migrants in city areas, wish to learn English. There is also available through State Education Departments a free correspondence course in English. In addition, English lessons are broadcast regularly by the Australian Broadcasting Commission. The Commonwealth Office of Education provides technical advice on all aspects of migrant education and is responsible for the preparation of teaching materials, while responsibility for the overall supervision of the programme rests with the Department of Immigration, which also meets the costs.

In November 1965, 12,670 migrants were enrolled in classes and 6,986 were enrolled in radio and correspondence courses. Since the inception of the programme in 1948 approximately 500,000 migrants have been enrolled for English tuition.

Technical training by government departments

Although most needs of departments for trained staff are met by apprenticeship schemes and other technical college courses and by the universities, some departments provide training which is not available elsewhere. The most important field for which such training is provided is the training of telephone, telegraph, radio, and television technicians by the Postmaster-General's Department.

Adult education

The term 'adult education' as used in Australia refers mainly to non-vocational educational and cultural activities for adults. While the nature of the recognized adult education authorities varies from State to State, their major activities have many common features. Regular courses of lectures are organized on such topics as literature, music, drama, international affairs, languages, and crafts. Some authorities also organize discussion groups, festivals and summer schools, and provide special services for groups in remote areas. In 1960 an Australian Association of Adult Education was formed, and its first Annual Conference was held in Adelaide in 1961. The Association handles matters pertaining to adult education at a national level and arranges liaison with similar bodies in other countries.

One of the first bodies active in the field of adult education in Australia was the Workers' Educational Association, which formed associations in all States in 1913. Its aims are to bring the universities into closer relationship with the community in general and to provide for higher education in civic and cultural subjects. These associations have been superseded by Adult Education Boards or Councils set up by the State Governments in Victoria, Queensland and Tasmania, and by the University in Western Australia. In the other two States, New South Wales and South Australia, the associations continue to co-operate with the universities in their extension work and are given direct grants by the Governments concerned.

There are throughout Australia various other organizations which are active in the field of adult education. The New Education Fellowship, for example (see page 623), has since its inception in Australia been interested in adult education.

The organization of adult education and some of the activities in each State are described in the following pages.

New South Wales

The majority of State Government grants for adult education are allocated on the advice of the Adult Education Advisory Board. Grants are made to the University of Sydney (Department of Adult Education), the Worker's Educational Association, the University of New England (Department of University Extension), the Public Library of New South Wales (Adult Education Section), the Arts Council of Australia (New South Wales Division), and the New Education Fellowship.

University of Sydney. There were formerly two separate authorities concerned with adult education at the University of Sydney, the Extension Board and the Department of Tutorial classes. However, administrative amalgamation of the work of these two bodies took place in 1964 with the formation of a new Department of Adult Education. This new Department provides all the services previously supplied by the two bodies. The two earlier bodies, however, maintain their identities under the new organization. The work of the Department of Adult Education is carried out under the supervision of two Senate Committees, namely, the University Extension Board and the joint committee for Tutorial Classes.

The University Extension Board provides two forms of education—the extension of existing university education to the public in the form of lectures, or to graduates in the form of refresher courses; and the extension of academic education beyond the existing university curriculum by special courses or classes in subjects not provided by University Departments. The Joint Committee for Tutorial Classes works in conjunction with the Worker's Educational Association. Its activities include the provision of tutorial classes in a wide variety of subjects, discussion groups, and 'kits' to serve the needs of country districts and people who cannot be catered for by tutorial classes. It also publishes the fortnightly *Current Affairs Bulletin*.

University of New South Wales. The Division of Post graduate and Extension Studies was formed in 1961 and is largely financed by the Council of the University. Its major concern is to provide university courses of an academic nature through correspondence, radio and television. In addition, however, extension courses in the humanities, languages and child development are offered.

University of New England. The Department of University Extension at the University of New England brings university extension activities especially to the people of northern New South Wales and conducts lectures, discussions, courses, radio talks, and classes in arts and social sciences in towns throughout this region. Short residential courses are held on topics of interest to primary producers in the area. Vacation schools attract participants from many other areas as well.

Workers' Educational Association. In addition to co-operating with the University of Sydney Department of Adult Education, the Workers' Educational Association itself provides classes in a wide variety of fields. It publishes *The Australian Highway*, a bi-monthly journal of adult education, and maintains a property near Sydney where short residential schools are held through the year. The Association also organizes educational conferences and public lecture series at frequent intervals.

Public Library of New South Wales. The Public Library of New South Wales Adult Education section provides an adult education library service for all classes and groups conducted by the bodies mentioned above, with the exception of the University of New South Wales Division of Postgraduate and Extension Studies.

New South Wales Department of Education. The New South Wales Department of Education has established evening colleges consisting of classes held in school buildings and staffed largely by departmental teachers. Such colleges provide a wide range of educational, cultural and leisure activities for adolescents and adults, and at some there are facilities enabling adults to prepare for public examinations.

Arts Council of Australia. Adult education of a more informal kind is provided by the New South Wales Division of the Arts Council of Australia, which maintains a mobile theatre unit and organizes touring ballet, opera and drama companies to country towns.

Victoria

The Council of Adult Education is a government instrumentality established by the *Adult Education Act* 1946. Its aims are to stimulate adult education in Victoria and to encourage voluntary organizations and associations by giving them advice and assistance. Its activities include a variety of classes, usually lasting from ten to twenty weeks, on topics ranging from social studies, psychology, language and literature to crafts, music and drama. The general Summer School organized by the Council of Adult Education for many years, is no longer held. In its place four separate non-residential schools are held in the Melbourne area. The Council publishes a monthly newsletter *Group Affairs* and a quarterly journal *Adult Education*. Its group service assists, and provides programme material for, discussion groups formed by organizations and individuals throughout the State. An important development is the extension of the council's activities, including classes and discussion groups, to the prisons, as part of a general plan for penal reform in Victoria. Through its Community Arts Service the Council organizes tours by musicians and by theatrical and other companies to country towns which otherwise would have no opportunity of seeing such performances. The Council's income is derived mainly from a government grant, but also from student fees and Community Arts Service performances.

The University of Melbourne Extension Committee arranges free public lectures and organizes classes for matriculation students on points of interest in their studies.

The Victorian Education Department arranges classes in commercial subjects, arts and crafts, and shorthand and typing. Evening classes in leaving and matriculation subjects are also offered.

Queensland

The Queensland Board of Adult Education was constituted in 1944 and is responsible under the Minister for Education for the provision of adult education facilities throughout the State. Under the executive officer of the Board are seven district officers, one based in Brisbane and six in large country towns, who are responsible for organizing activities in country areas. The cost of the programme is borne by the State Government and admission to all courses is free. Activities include lectures, group meetings on a variety of topics, generally short-term but some extending over a full year, and film screenings. Library and film services are provided. A Public Lecture Committee established by the University of Queensland is responsible for organizing public lectures by local speakers and distinguished visitors to the University. Through the Institute of Modern Languages the University provides facilities for the study of modern languages by members of the general public.

The Queensland Division of the Arts Council of Australia sponsors and organizes lectures, film screenings, exhibitions, drama festivals, and professional performances.

South Australia

Since 1917 the University of Adelaide, through the Joint Committee for Tutorial Classes, has provided in the metropolitan area a series of tutorial classes, lecture classes and study circles on a wide range of subjects of cultural and current interest, in co-operation with the Workers' Educational Association of South Australia. In 1957 a Department of Adult Education was established in the University and a full-time Director appointed. A wide range of university extension courses and educational conferences, summer schools and seminars, including a number dealing with subjects at post-graduate level, are organized directly by the University. The Workers' Educational Association of South Australia, in addition, carries on an independent educational programme of classes, schools, exhibitions, and film festivals.

The State Education Department also arranges an extensive programme of educational activities for adults. In addition to classes in academic and craft subjects, the Department's Adult Education centres offer a wide range of leisure interests and cultural subjects.

The Arts Council of Australia (South Australian Division) organizes adult education activities in the liberal arts.

Western Australia

Adult education in Western Australia is organized by the Adult Education Board established in 1928 under the terms of the statutes of the University of Western Australia. The Board has a considerable degree of autonomy. Its executive officer is the Director of Adult Education. In the metropolitan area the Board conducts classes, refresher courses and short schools, conferences, seminars, and public lectures and maintains a library. The Board's country work operates mainly through a box library scheme for discussion groups. Lecture tours and week-end schools are held, and local adult education is encouraged through local committees. Metropolitan work and country work are drawn together in an annual summer school. The Board also operates a community arts service and arranges screenings of foreign films. Regional drama festivals and music festivals are arranged, culminating in the annual Festival of Perth, inaugurated and administered by the Board.

Tasmania

Some form of adult education has existed since the formation in 1913 of a Workers' Educational Association, which worked in conjunction with the University of Tasmania for a number of years. The Association received a grant through the university, which had a Director of Tutorial Classes. Later, the grant was paid direct to the Association by the Government, and the university's tutorial department ceased to exist. The Adult Education Board, established under the *Adult Education Act* 1948, organizes classes of ten weeks duration on a wide range of subjects. The Board sponsors special lectures, film screenings and art exhibitions, recitals of music, and dramatic performances in both city and country areas. Its income is derived from a State Government grant and from students' fees. The executive officer of the Board is the Director of Adult Education. Activities are organized on a regional basis by organizers based in Hobart, Launceston and three large country centres.

The Arts Council of Australia (Tasmanian Division), which works in close contact with the Adult Education Board, organizes exhibitions, concerts and public performances.

Australian Capital Territory

The School of General Studies of the Australian National University has organized classes and discussion groups through its Adult Education Department since 1959.

The Arts Council of Australia (A.C.T. Division) organizes cultural activities of general community interest.

Overseas students in Australian educational institutions

The development of closer ties in education between Australia and other countries and the demand for education in many countries in Asia, Africa and the Pacific have brought about a remarkable growth in the number of overseas students who come to Australia to further their education. Part of the growth and much of the awareness of the facilities available may be attributed directly to the schemes mentioned on pages 618-9. Since 1955, when there were about 3,500 overseas students in Australia, the number has increased to almost 13,000 in 1965. More than half attend institutions of higher education such as universities and technical colleges. Between 1955 and 1965 the numbers of foreign students in institutions of higher education have risen from about 1,800 to 7,200, most of whom came from Asian countries. Australian institutions have shown a readiness to accept overseas students, and in many cases special provisions have been made to suit their needs. Nevertheless, population growth and the demand for education, especially for higher education, within Australia have forced many institutions to restrict the admission of overseas students in common with Australian students.

Organizations associated with education

Australian Council for Educational Research

The Australian Council for Educational Research, a non-governmental body, is engaged on educational research in a wide variety of fields, ranging from tertiary to pre-school education. It conducts surveys and inquiries, makes grants to approved educational investigators, serves as a centre for disseminating educational information, provides training for research workers, and standardizes and distributes educational and psychological tests for use in Australia. Although this council is an autonomous body, the Commonwealth and State Governments give substantial financial support.

New Education Fellowship

The New Education Fellowship is a world organization of parents, educators and other citizens interested in the development of new educational practices. It was founded in London in 1915 and spread to Australia at the time of a regional conference held here in 1937. There are now sections in each State. Its Australia-wide journal *New Horizons in Education* is published twice a year. A major conference of the world organization was held in Australia in 1962, during which prominent educationists from Australia and overseas met in all States.

Australian College of Education

The Australian College of Education was formed in 1959. Its aim is to bring together leading teachers and administrators in every field of education, to raise the standard of the profession of education in Australia, to establish and proclaim fundamental educational values, and to recognize outstanding contributions to educational practice. Chapters of the College have been set up in all States, and several of the addresses and papers delivered at meetings of the College have been issued in published form.

Parent and citizen organizations

In Australia, where all government schools are administered by central departments, there is limited opportunity for local participation in education. Public interest is expressed through parents' committees or organizations of parents and other citizens interested in supporting their local school. The Education Acts of all States provide for the formation of groups of this type, whose aims are to promote an interest in the school by bringing parents and teaching staff together, to help provide supplementary teaching aids and recreation materials, to foster the regular attendance of children at school, and to help find accommodation for teachers. In several States the general maintenance of school buildings, equipment and grounds is a statutory responsibility of the parent groups, costs being covered by government grants. Lunch canteen services at local schools are maintained by groups in some States. Parent groups have established school children's insurance schemes, operated through State Government insurance offices or private insurance companies. These schemes cover accidents to children which occur between the time of leaving home for school and returning home by the usual direct route.

State-wide councils or federations of parents' groups are associated in a federal body, the Australian Council of School Organizations.

CULTURAL ACTIVITIES

Libraries

The Munn-Pitt report of 1935 greatly stimulated interest in libraries and librarianship throughout Australia. This is seen in the rapid development of libraries, the passing of legislation in all States to increase library services, and the establishment in 1937 of the Australian Institute of Librarians to improve the standard of librarianship. This body was reconstituted in 1949 as the Library Association of Australia and incorporated by Royal Charter in 1963, and its functions now include the promotion and improvement of libraries and library services. The Association conducts annual examinations in all States, for which students are prepared by courses of instruction. Formal library schools are conducted by the National Library of Australia, Canberra, the Library Board of New South Wales (held at Newcastle Public Library), and the State Library of Victoria, Melbourne. In 1960 the first library school to be attached to an Australian University was opened in the University of New South Wales, and the Royal Melbourne Institute of Technology set up a library school in 1963.

Commonwealth libraries

National Library of Australia. This Library grew directly from the Library of the Commonwealth Parliament established in Melbourne in 1901, the Committee of which soon afterwards announced its intention of developing a library patterned on the Library of Congress at Washington, U.S.A., capable of serving purposes beyond those essential to the Parliament itself, appropriate to a national library and on a national scale. This policy was steadily pursued, so that, in addition to its primary function of serving Parliament, it gradually became a central source of information for the Government and its departments and other agencies, and assumed increasing reference and bibliographical responsibilities in relation to scholarship and research in Australia and abroad. It was also influenced by the basic elements of the national library concept of the older countries of Europe: namely, that a national library is the proper place to collect the national literature systematically and to make it known and available for use, and that it is a place to which scholars may turn for what is most significant in the literature of other countries. For these growing extra-Parliamentary activities the Parliamentary Library Committee, in 1923, adopted the title of Commonwealth National Library.

In 1957 a committee appointed to examine the future control and functions of the Commonwealth National Library recommended its establishment as the National Library of Australia, separate from the Parliamentary Library, with wide functions and controlled by a board subject to a Minister; the transfer, as a separate agency to an appropriate department, of its Archives Division, which constituted the Commonwealth's agency for the custody and organization of departmental records of permanent value which need no longer be held within departmental offices; and that the Parliamentary Library be a separate library under separate Parliamentary control. Continuing co-operation, where possible, between the two libraries was also proposed.

Effect was given to these recommendations by the *National Library Act* 1960, which created the National Library of Australia as a body corporate under the control of a Council of nine members, of whom one is a Senator elected by the Senate, one a member of the House of Representatives elected by that House, and seven appointed by the Governor-General. Its functions are: to maintain and develop a national collection of library material, including a comprehensive collection relating to Australia and the Australian people; to make the national collection available to such persons and institutions in such manner and subject to such conditions as the Council determines with a view to its most advantageous use in the national interest; to make available such other services in relation to library matters and material, including bibliographical services, as the Council thinks fit, particularly for the purposes of the library of the Parliament, the Departments and authorities of the Commonwealth, and the Territories of the Commonwealth; and to co-operate in library matters (including the advancement of library science) with authorities or persons, whether in Australia or elsewhere.

The National Library comprehensively collects and preserves Australian books, periodicals, newspapers, government publications, pictures, prints, manuscripts, maps, moving picture films and sound recordings. It is assisted in this by the deposit provisions of the *Copyright Act* 1912-1950 and has also been enriched by the acquisition of such notable collections as the Petherick collection of 16,500 items in 1911, the Cook manuscripts in 1923, the Cumpston collection on Public Health in Australia in 1936, the Mathews Ornithological collection in 1940, the Nan Kivell collection of 16,000 items of Australian and Pacific interest including original paintings, prints, manuscripts and printed material in 1959, the David Nichol Smith collection of 18th century English literature in 1962, the Clifford Family collection in 1964, and the Ferguson collection which is still under transfer. A feature of the Library's Australian work is the copying on microfilm, in association with the Public Library of New South Wales, of all important unique material overseas relating to Australia, including over three million pages in the Public Record Office in London. Compilation of a guide to collections of manuscripts relating to Australia began in 1964. The Library maintains a permanent exhibition of selected paintings, prints and other historical material from its collections. This exhibition is displayed in Parliament House, Canberra.

The Library publicizes Australian publications, both at home and abroad, through select lists which include *Australian Books* (annual) and *Australian Public Affairs Information Service* which is a subject index to current literature (monthly with an annual cumulation), and by collections of Australian books maintained by it at all posts at which Australia is officially represented abroad. In London and New York the National Library maintains and staffs Australian Reference Libraries supervised by its own Liaison Officers in those centres. In the discharge of its wider bibliographical responsibilities, the library publishes the *Australian National Bibliography* (monthly with an annual cumulation), which lists books, pamphlets, maps, prints, sheet music, government publications, the first issue of each new periodical or newspaper, and moving picture films produced in or relating to Australia. Commonwealth and State official documents, both monographic and serial, are listed in *Australian Government Publications* (annual). The Library is also building up union catalogues of serials in the social sciences and humanities, and of monographs in Australian libraries. A revised loose-leaf edition of *Serials in Australian Libraries: Social Sciences and Humanities*, of which the letters A-E have been issued since 1964, will progressively supersede the interim edition published in two volumes in 1963.

In 1956 the Australian Bibliographical Centre was established within the National Library to serve as the secretariat of the Australian Advisory Council on Bibliographical Services. The Council, made up of representatives of the National Library, State libraries and library boards, the Commonwealth Scientific and Industrial Research Organization, each of the universities, and the Library Association of Australia, plans the further development and co-ordination of bibliographical services and co-operates with UNESCO and its committees. The Centre organizes bibliographical projects recommended by the Council and operates as a centre for bibliographical information in Australia and overseas. It has published a *Union List of Newspapers in Australian Libraries: Part 1: Newspapers published outside Australia* (1959); and *Part 2: Newspapers published in Australia* (1960). Both were supplemented in 1964. *Resources of Australian Libraries*, a summary report of a survey conducted for the Council in 1961 by Maurice F. Tauber, was published in 1963.

The Library acts as a central library of documentary and educational films, its film collection containing approximately 8,000 titles, together with Australian historical films and a great number of film strips. It published *Australian Films: a Catalogue of Scientific, Educational and*

Cultural Films, 1940-58 in 1959 and annual supplements in succeeding years. A revised edition of the *Catalogue of 16-mm. Films*, which lists all films available for loan, was published in 1960. It was supplemented in 1964 and annual accession lists are issued. Special efforts are made to discover and preserve samples of early Australian film production.

Through its Extension Services Section the Library conducts the Canberra Public Library Service for residents of the Australian Capital Territory, to whom 702,931 books were lent during 1964-65. It also assists in the provision of similar services in the Northern Territory, the Territory of Papua and New Guinea, and Norfolk Island.

The National Library's collections contain approximately 810,000 volumes, 26,000 paintings, pictures and prints, 15,000 reels of microfilm, 1,000 running feet of manuscripts, 25,000 motion picture stills, 14,800 reels of moving picture films, 135,000 maps, and 400,000 aerial photographs. Special features of the book collection are its strong holdings of Australiana, materials relating to the Pacific area and east and south-east Asia, the publications of foreign governments and international organizations, and works in the social sciences, particularly in political theory and economics.

Patent Office Library. The Library of the Commonwealth Patent Office, Canberra, contains approximately 10,650 books and a wide variety of periodicals and other literature relating to pure and applied science, industrial technology and the industrial property (patent, trade mark, design and copyright) laws and practice of most countries. Patent specifications of inventions are received from the principal countries of the world; present holdings are more than 9,500 000. Indexes include a microfilm of a classified index to 3,000,000 U.S.A. patents and translations of abstracts of U.S.S.R. patents.

Commonwealth Archives Office. In 1943, following a report by an Inter-departmental Committee, the Prime Minister directed the formation of a War Archives Committee to arrange for the preservation of war records. This Committee recognized that war archives could not be separated from peace-time archives, and in 1946 the name was changed to the Commonwealth Archives Committee. In 1952 the National Library became the sole Archival Authority for the Commonwealth, and the Chief Archives Officer became the Executive Officer for the Committee. In March 1961, in accordance with a recommendation of the National Library Inquiry Committee, the Archives Division of the National Library was reconstituted as the Commonwealth Archives Office within the Prime Minister's Department. The Archives Office is primarily a central agency for the control of those records created by the Commonwealth Government which are no longer required for frequent use in the day-to-day business of government. This function is carried out through the following three basic activities.

Control of destruction. No Commonwealth records may be destroyed without the concurrence of the Chief Archivist whose responsibility it is to safeguard reference interests other than those of the department which compiled the records. This concurrence is given as far as practicable through continuing disposal authorities which enable Commonwealth departments to destroy certain routine classes of records automatically, but records not covered by such continuing authorities are checked before destruction is authorized.

Provision of accommodation. Any records which are no longer in active use but which are considered, either by the originating department or by the Archives Office, to warrant preservation, either permanently or for a further period, may be transferred to an archives repository. While in archival custody they are arranged and described so that the best use can be made of them.

Provision of information. Records in the custody of the Archives Office are available for use by the depositing and other departments of the Commonwealth Public Service. The Office also provides departments with a service for the provision of information from the records in its custody.

As a complementary function the Office also provides a service to persons engaged in academic and other forms of research. The headquarters of the Commonwealth Archives Office is in Canberra and there are branches in Sydney, Melbourne, Brisbane, Adelaide, and Perth.

Commonwealth Scientific and Industrial Research Organization. The library holdings of the Organization cover the pure and applied sciences. In addition to the Central Library in East Melbourne, each of the Divisions and Sections has a specialized collection covering such subjects as food preservation, forest products, chemistry, physics, animal health, and fisheries. The collections are particularly strong in the publication of oversea scientific and technical research institutions, with many of which extensive exchange arrangements have been made.

The Central library maintains a union catalogue of the holdings of all C.S.I.R.O. libraries and is responsible for the following publications: *Scientific Serials in Australian Libraries*; *Australian Science Index*, an index of articles published in Australian scientific and technical periodicals; a *Directory of Scientific and Technical Research Centres in Australia*; and *C.S.I.R.O. Abstracts*, which include abstracts of papers published by C.S.I.R.O. officers,

C.S.I.R.O. translations, translations available from other Australian organizations, and additions to the British Commonwealth Index of Scientific Translations. The larger libraries in the Organization have photocopying facilities which, while normally for internal use, provide a service for the public when a publication is not held elsewhere in Australia.

The Australian War Memorial Library. In the War Memorial library are housed the documentary and pictorial records of Australia's fighting services in the 1914-18 and 1939-45 Wars, together with collections covering the war in Korea, 1950-53, and earlier wars in which Australian troops participated—Sudan, 1885; South Africa, 1899-1902; and the Boxer Rebellion in China, 1900-01. Books, periodicals and other records covering contemporary trends and events in the fields of military history and military science are constantly being added.

The printed records section contains approximately 70,000 volumes, a large collection of military maps, newscuttings and newspapers, sound recordings of war leaders, personalities and events, war posters, and postage stamps. Many personal collections by distinguished soldiers and historical documents relating to the wars have also been placed in the Memorial's custody for preservation. Written records comprise correspondence files of headquarters and units of both World Wars, and the original war diaries compiled from day to day by each unit during its service. The collection of official war photographs covering the 1914-18, 1939-45 and Korean Wars numbers over 250,000, and a collection of official motion picture film depicts Australia at war. Facilities for public research are not yet fully developed, but requests for information are met where practicable.

Other Commonwealth Government libraries. Most Commonwealth authorities have specialized collections in their own fields and in addition draw largely on the National Library.

Northern Territory Library Service. The Northern Territory Library Service maintains five centres in the Territory. At 30 June 1966 stocks totalled 52,371 volumes which were held at the following centres: Darwin, 24,035; Nightcliff, 3,829; Alice Springs, 16,298; Tennant Creek, 4,405; Katherine, 3,804.

State libraries

State Public Libraries (other than university *see* pages 630-2). In each of the capital cities, there is a well-equipped public library, the libraries in Melbourne and Sydney especially comparing very favourably with similar institutions elsewhere in the world. The following statement gives the number of volumes in the public library of each capital city at 30 June 1964. Later figures for some of the libraries and details of other library services in the States are given in the text relating to the respective States.

STATE PUBLIC LIBRARIES, 30 JUNE 1964

Library	Number of volumes in—		
	Reference branch	Ordinary lending branch	Country lending branch
Public Library of New South Wales	(a) 662,578	..	(b) 110,987
State Library of Victoria . . .	830,000	135,000	48,000
Public Library of Queensland . .	173,663	..	78,802
Public Library of South Australia .	220,558	(c) 92,960	220,660
State Library of Western Australia (d)	211,059
State Library of Tasmania . . .	96,355	(e) 210,283	172,950

(a) Includes 186,415 volumes in the Mitchell Library and 20,519 volumes in the Dixon Library. (b) Includes 1,941 volumes in the model school library. (c) Includes 34,178 volumes in the children's branch and 14,254 volumes in the youth lending branch. (d) The State Library is the reference division of the Library Board of Western Australia. (e) Includes 155,549 volumes in the children's branch.

New South Wales. The Free Library Movement in New South Wales, founded for the establishment of a system of public libraries on the basis suggested in the Munn-Pitt Report of 1935, helped to pave the way for the Library Act, 1939-1959, which was fully proclaimed as from 1 January 1944. At 30 June 1965, 168 councils had established libraries in terms of the Library Act. During 1965 they spent on their libraries \$3,536,582, including \$967,778 received in subsidy.

There are 225 libraries, of which sixty-six are in the metropolitan area and 159 in the country. There are also twenty-one bookmobiles, of which two are in Sydney, seven in the suburbs of Sydney and twelve in country municipalities and shires. These libraries contain 3,066,124 volumes.

New South Wales departmental libraries are staffed by officers attached for duty from the State Library, which also provides a central cataloguing service for municipal and shire libraries constituted under the 1939-1959 Act. The State Library maintains an adult education section servicing adult education activities for the universities of Sydney and New England and the Workers' Educational Association.

The Circulation Department forwards books on loan to country State schools, to municipal and shire libraries, and to individual borrowers. During 1964-65, 83,849 books were lent to small State schools, 3,637 to public libraries and institutions, many of them in country areas, and 32,749 to individual borrowers.

The State Library, known as the Public Library of New South Wales, includes a general reference department of 494,886 volumes, together with the Shakespeare Tercentenary Memorial Library and the Mitchell and Dixon Libraries and Galleries which are mainly devoted to Australian and Pacific material. The Mitchell Library, with more than 60,000 volumes and pamphlets and 300 paintings, was bequeathed to the trustees of the Public Library in 1907 by Mr. D. S. Mitchell, together with an endowment of \$140,000. In 1965 there were 207,550 volumes in the library, in addition to valuable manuscripts, maps and other material. In 1929 Sir William Dixon gave a collection of historical pictures then valued at \$50,000. These were subsequently added to and at his death in 1952 Sir William bequeathed the whole of his collection of books, manuscripts, pictures and other material, together with an endowment of more than \$226,000, mainly for the printing or reprinting of historical documents relating to Australia and the Pacific. The total number of volumes in the State Library now exceeds 832,000, apart from manuscripts, historical pictures and other material. The maintenance and control of the ordinary lending branch of the Public Library were transferred in 1908 to the Sydney Municipal Council to become the City of Sydney Public Library. The State Library, which had previously been the repository for State archives, transferred this responsibility to an Archives Authority in June 1961. The Authority consists of nine members, of whom the Trustees of the Public Library have a right to nominate one.

Other important libraries in New South Wales are: Teachers' Colleges, 280,022 volumes; the City of Sydney Public Library, 252,237; Railway Institute, 170,475; Technical Education Branch, 168,436; Australian Museum, 34,748; Government Transport Institute, 32,727; New South Wales Teachers' Federation Library, 22,500; Workers' Educational Association, 15,000; and the Library at the National Herbarium, 10,430 volumes. At 30 June 1964 the Parliamentary Library contained 149,500 volumes.

Victoria. Until the establishment of the Free Library Service Board in 1947 the only public library facilities available in Victoria (apart from those of the Public Library and one or two Metropolitan municipal libraries) were those offered by about 200 Mechanics' Institute Libraries situated in country areas all over the State. The Board's policy has been to replace these services with modern public libraries controlled by local Municipal Councils and subsidized by the Board. Since the Board's inception 112 municipalities have established libraries. Of these, twenty-seven are in the city and eighty-five in the country. An amount of \$854,000 was paid to the Councils in library subsidy for the year 1964-65 and \$1,648,000 was expended in municipal library services for the same year. More than 1,700,000 books are available to the communities in which libraries are established.

A feature of the services provided in the country is the number of co-operative or regional library groups now being developed. These services, of which there are eighteen comprising a total of seventy-two councils, consist of groups of councils which pool their financial resources, book-stocks and trained staff, in order to provide more comprehensive, efficient library facilities. Approximately 140 Mechanics' Institute Libraries are still in existence in country areas. In 1964-65 forty-five of them shared a grant of \$4,000.

The State Library of Victoria was established in 1856. It is controlled by a board of seven trustees and receives its finance from the State Government. The reference collections now total about 830,000 volumes, and the lending and travelling libraries have another 183,000 volumes. In addition, the library files 3,000 current periodicals, about 2,000 government publications from Australia and overseas, and 500 newspapers, in all about 50,000 volumes. Special collections include the J. K. Moir Collection of Australiana, the M. V. Anderson Chess Collection and the Green and Brodie Shipping Collections. The Victorian Historical Collection contains nearly 20,000 pictures, drawings, prints and objects of historical interest. The Archives Division is responsible for the preservation of government records. Under the *Library Council of Victoria Act* 1965 the administration of both the State Library of Victoria and of the Free Library Service Board will be merged under a nine-member council. The library system will be reorganized into

three divisions, namely the State Library Division, the Public Records Division (at present the archives division of the State Library), and the Extension and Circulation Division. The functions previously carried out by the Free Library Service Board will be carried out by this latter division.

Queensland. The Library Board of Queensland was established in 1945 under the provisions of 'The Libraries Act of 1943'. Its duty is to attain the fullest co-operation and improvement of the library facilities of the State, with the object of placing such facilities on a sound basis for the benefit and educational improvement of the citizens generally. The Board consists of eight members including the State Librarian as *ex officio* member and secretary. A general function of the Board is to ensure that the fullest co-operation exists with the Department of Education, the University of Queensland, local bodies, and other bodies having for their object the encouragement of education, literature and the arts and sciences. A specific function of the Board is the control and management of the Public Library of Queensland. Its policy is to build up the main collection of the Library as the State's reference centre.

The Country Extension Service, which is administered as a department of the Public Library, lends books of non-fiction free to adults and children residing outside the metropolitan area and to municipal libraries in areas of low population.

The Oxley Memorial Library, established in 1923, has been administered as a department of the Public Library since 1946 and the collection has been kept separate. It contains books, manuscripts, pamphlets and other graphic material relating to the history and literature of Australia, and of Queensland in particular, and provides facilities for research students in Queensland literature and history.

In 1958 the section of the Libraries Act dealing with the preservation of public records was proclaimed, and in 1959 an Archives Section of the Public Library was instituted and an archivist appointed.

The Library Board staffs the libraries of the Teachers' Colleges as well as the libraries of nine government departments, of which the largest is the Department of Primary Industries. The work is co-ordinated by an officer-in-charge, who also gives assistance and advice when required to independently staffed departmental libraries.

Since 1948 a course in librarianship has been held annually at the Public Library for the purpose of preparing trainees for the examinations of the Library Association of Australia, up to 1961 for its Preliminary Examination, from 1962 for subjects 1 to 3 of its re-organized Registration Examination. In 1959 a course covering some compulsory subjects of the Association's Registration Examination was inaugurated at the Central Technical College, Brisbane.

The holdings of the Public Library of Queensland and its extension services in 1964-65 were: main reference collection, 162,999 volumes and 9,507 maps and pamphlets; Country Extension Service, 84,227 volumes; Oxley Memorial Library, 23,681 volumes and 19,692 maps, pamphlets and miscellaneous items.

Local authorities are empowered by the Libraries Act to establish and conduct library services as a function of local government. The Board encourages local authorities to use these powers. In 1964-65 seventy-three local authorities were conducting 117 library services. The Brisbane City Council has established fifteen of these libraries. There were 100 libraries in Queensland free to adults. To help overcome the problems of a large area and sparse population, various local authorities provide library services on a regional basis. By 30 June 1965 four regional library services had been established: the South Western (seven shires), the Central Western (eight shires), the North Western (ten shires), and the Central Highlands (five shires), with head-quarters at Charleville, Barcaldine, Mt. Isa and Emerald respectively. Other regional services are being planned. During 1964-65 the Board received a grant of \$494,330 from consolidated revenue to finance the activities of the Public Library and to pay subsidies to local bodies of 50 per cent of endowable expenditure on books and the acquisition or improvement of library buildings and equipment. Subsidies were paid to four regional library service boards, fifty-three local authorities and thirty-seven other bodies.

The library of the Parliament of Queensland was established in 1860. At 30 June 1965 the library held 93,867 books and pamphlets, consisting of official publications and books devoted largely to history, the social sciences, biography and literature.

'The Libraries Act Amendment Act of 1949' provides for the Public Library and the Parliamentary Library each to receive a copy of all books, pamphlets, maps, and other printed material published in Queensland.

South Australia. In the reference department of the Public Library of South Australia there are about 227,600 volumes, most of which may be borrowed. Over 4,000 periodicals are filed and the collection of newspapers includes every newspaper printed in South Australia. There

are 46,200 volumes in the lending department available to persons living in the metropolitan area and the country lending service has 262,000 volumes, of which more than one-third are suitable for children. The library has an active programme for the publishing of facsimile editions of early Australian texts.

The Research Service specializes in scientific and technical inquiries and supplements the resources of the Public Library by borrowing from other libraries and by obtaining microfilm copies of material not available locally. It has an extensive collection of trade catalogues.

The library of the Parliament of South Australia held approximately 65,000 volumes at 31 December 1965.

There are twenty-two local public libraries in South Australia provided by fourteen local government authorities. The libraries are subsidized on a \$1 for \$1 basis by the State Government. The Libraries Board of South Australia, through the Public Library of South Australia, provides various central services. Book-stocks are pooled in the Public Library of South Australia and are interchanged between the libraries.

At the end of June 1965 these local public libraries contained 145,800 books. There were 93,856 registered borrowers. During 1964-65, 1,444,170 books were lent.

Western Australia. In 1955 the Library Board of Western Australia was made responsible for all public library services throughout the State to which the State Government contributes funds. The Board has the following major functions: to encourage local authorities throughout the State to establish public libraries and to provide as a State subsidy all books and bibliographical services necessary for such libraries when established; to administer the State Library; to advise the Government on all matters relating to libraries; and to provide for the training of librarians.

Local public libraries are subsidized on a \$1 for \$1 basis, the local authority providing accommodation and staffing, and the Board all books and related services. The Board provides at least one volume per head of the population. All non-fiction books may be made available at any public library throughout the State on request to the Board. All cataloguing is done by the Board. The first library under this scheme was opened in August 1954. By 31 December 1965 eighty-one libraries had been established.

The State Library, established in 1887, is the reference division of the Library and Information Service of Western Australia. In addition to providing the normal facilities of a reference library for the metropolitan area, it extends its service throughout the State through local public libraries. It is divided into four subject departments as follows: J. S. Battye Library of West Australian History; Library of Business, Science and Technology; Library of Social Sciences, Philosophy and Religion; and Library of Literature and the Arts.

The State Bibliographical Centre and the Central Music Library are housed in the State Library building and there is also a commercial information centre. The State archives are maintained by the State Library and managed by the staff of the Battye Library. The State Library is fully equipped with microfilm and photocopy apparatus.

The book-stock of the Board at 30 June 1965 was: 681,628 volumes comprising lending library services (including books in public libraries), 454,466 volumes; State Library, 216,700 bound volumes; Central Music Library, 2,561 books on music and 7,901 scores.

The University of Western Australia, through its Adult Education Board, manages the Adult Education Library of some 17,000 volumes of general reading and fiction. Books are sent to country readers each month.

There are some 100 special libraries in government departments and industrial firms. Union catalogues of periodicals and books received in the libraries in Western Australia are maintained by the Library Board of Western Australia in the Bibliographical Centre in the State Library building.

Tasmania. The Tasmanian Library Board, constituted in 1944, is responsible for administering the State Library headquarters in Hobart, for the extension of library services throughout the State, for the control of State aid to libraries and for the State archives. The first stage of a new State Library headquarters building in Hobart was completed in 1962. The State Government provided \$435,040 towards the cost of library services in 1964-65.

Municipal libraries are assisted with the purchase of books and participate in a book exchange scheme. In 1965 forty-five municipalities took part in the service, leaving only four outside the scheme. In Hobart the Board operates the Hobart Lending Library on behalf of the City Council. Two bookmobiles operate in Hobart and country districts, catering for areas without library premises, for children, old people's homes, etc.

The Board also operates a Reference Library in Hobart from which reference services are available to people throughout the State. There is also a documentary film library and a recorded music library. The Board arranges screenings of documentary films, recitals of recorded music, lectures, library weeks in country centres, puppetry demonstrations, etc.

The Parliamentary Library works in close collaboration with the State Library, which provides a reference officer to serve members during sessions.

University libraries

These libraries provide material not only for the education of graduates and undergraduates, but also for research workers and practical investigators all over the continent. Much of the material they contain is not available elsewhere, for although in most cases smaller, they are in many directions more highly specialized than the public libraries. They lend to one another and to State and private institutions as well as to individual investigators. Each of them is governed by a librarian, who is responsible as a rule to an executive sub-committee and a committee which is practically co-extensive with the professorial staff.

The following table shows the volumes held, accessions during the year, and expenditure of the Australian university libraries.

UNIVERSITY LIBRARIES, 1965

University	Volumes	Accessions during year	Expenditure (a)
			\$'000
Australian National	363,937	34,723	482
Sydney	922,176	52,224	664
New South Wales	274,208	41,067	615
New England	193,717	18,765	234
Newcastle	92,813	12,602	(b)
Melbourne	421,207	31,365	579
Monash	195,000	35,000	615
Queensland	379,276	42,676	438
Adelaide	383,213	29,199	603
Flinders	51,157	25,443	(c)
Western Australia	260,479	13,148	300
Tasmania	139,119	8,821	134
Total	3,676,302	345,033	4,664

(a) 1964. (b) Included with University of New South Wales. (c) Included with University of Adelaide.

Australian National University. This library consists of two main collections; the former Australian National University Library, founded in 1948, which serves primarily the Institute of Advanced Studies, and the former Canberra University College Library, founded in 1938, which serves primarily the School of General Studies. At the end of 1965 the stock included 70,600 volumes in oriental languages. The collection serving the Institute of Advanced Studies (198,600 volumes) specializes in the fields of the physical and medical sciences, excluding clinical works. The R. G. Menzies Building of the University Library, which was opened by Queen Elizabeth in March 1963, houses the administrative, cataloguing, etc., departments serving the whole university as well as certain research collections of the Institute of Advanced Studies. In the social sciences the library endeavours to provide a good working collection while giving consideration to the holdings of the Commonwealth National Library. It possesses significant collections in anthropology, linguistics, mathematics, and mathematical statistics. The collection serving the School of General Studies (114,800 volumes) has been built up to meet the needs primarily of undergraduates studying arts, economics, law, oriental studies, and science.

University of Sydney. The library consists of the central collection which is known as the Fisher Library, the Law Library, the Medical Branch Library, the Burkitt Library for pre-clinical medicine, and some fifty-two departmental libraries. The University Library, together with departmental libraries and associated libraries in the University grounds, holds a total of more than one million volumes.

The first books were acquired in 1851, and shortly afterwards the library of Sydney College was added. The collection of Nichol D. Stenhouse was acquired in 1878 as the gift of Thomas Walker. In 1885 Thomas Fisher bequeathed the sum of \$60,000, the income from which is used as a book fund. The Fisher Fund was matched in 1961 by establishment of the W. H. and Elizabeth M. Deane Library Fund. Perhaps the finest collection in extent and importance which has been given to the University is that of Sir Charles Nicholson. There have been numerous other benefactions, among which may be mentioned the library of Sir Francis Anderson, the W. H. Deane collection of books and manuscripts and the Dalley-Scarlett music library. In 1961 the University acquired the English literature collection of the late Hugh Macdonald, and the late Professor J. Stewart's library, an outstanding collection on archaeology and numismatics, was acquired in 1963. The Sydney University Library has an extensive collection of mediaeval manuscripts and early printed books.

University of New South Wales. The libraries in this university consist of the Central Library and a Bio-medical Library at Kensington. There is also a library at Wollongong University College. The Broadway campus is serviced by the Sydney Technical College Library, where about 20,000 books from the University's library are placed. Service to the university division at Broken Hill is also provided by the Department of Technical Education. In December 1965 the university had 283,321 volumes in its libraries and in Department of Technical Education libraries. This figure is less than the 1964 figure because it does not include volumes at the University of Newcastle which was then affiliated with this institution.

University of New England. The library was founded in 1938, when the New England University College was established. Sir William Dixon was its first benefactor. The library, which contains 135,000 bound volumes, is adding to its collection at the rate of 20,000 volumes a year. It receives about 3,500 current periodicals annually. It is housed in a three-storied, air-conditioned building, which also makes provision for a bindery and photographic and archives division. A further wing is to be built later to house a library of post-graduate and research volumes which, at present, are on the library's main shelves. The library has its own training officer and conducts formal courses in librarianship.

University of Melbourne. Early in 1854 the first allocation for books was made, but the library was housed in temporary quarters until 1959. The W. L. Baillieu Trust made available the first instalments of a \$200,000 gift for building purposes, which have been followed by subsequent gifts and substantial grants from the Commonwealth and State Governments, and a new building was occupied at the beginning of 1959, the first in the University to be designed specifically for library purposes. Since 1959 the use of the library has increased fourfold, and during the academic year admissions of readers to the building average 8,000 a day. The resources of the library are also used extensively on inter-library loan by industries and other organizations throughout Australia. The University Library, including thirteen branch libraries in various departments, is administered from the centrally situated Baillieu Library. The large medical branch library is specially rich in periodicals.

Monash University. The library started to acquire books in 1960 and subscribes to some 4,300 journals. It has been decided that the library organization will develop into four large units—the main library, a bio-medical library, a law library, and a library for the physical sciences and technology. The physical sciences and technology library has been named the Hargrave Library and was opened in December 1962. The main library, catering mainly for the humanities, was occupied in November 1963. The bio-medical library was occupied in 1966.

University of Queensland. The library was founded in 1911. The main library is in its own building in the University and there are a considerable number of departmental libraries. Among the more important possessions of the library are its large holdings of periodicals, its geology collection, and its material relating to the history, development and culture of the countries surrounding the Pacific Ocean. Tropical aspects of agriculture and veterinary science are also emphasized.

University of Adelaide. The main library is the Barr Smith Library which commemorates its first benefactor, Robert Barr Smith, who, with members of his family in and after 1892, gave the university over \$100,000 for the library. Seats are provided for 1,000 readers, including 270 in the main reading room. There are branch libraries for medicine, law and music. The South Australian branches of the Australian Medical Association, the Australian Physiotherapy Association and the Australian Dental Association make annual contributions towards the maintenance of the medical library in return for borrowing privileges for their members. The Waite Agricultural Research Institute has a separately administered library of about 20,000 publications in agriculture. Total holdings of the university libraries at the end of 1965 were 395,000 volumes. Some 13,500 serial titles are received.

University of Western Australia. The first full-time library staff was appointed in 1927. Provision for a permanent library building was not possible when the university moved to its present site, and space and facilities were inadequate for many years. A new four-storey building was completed at the end of 1963. The building provides facilities for microfilm readers, type-writing booths and photo-copying facilities. The University Library developed very slowly in the early years, but recently has been adding about 14,000 volumes a year to its stock. In addition to the main library there are a number of departmental libraries of which the more important are engineering, agriculture, pre-clinical, and law. There is also a medical library, in accommodation provided by the Royal Perth Hospital, for the use of the medical school.

University of Tasmania. Although this library was founded in 1893, a full-time librarian was appointed for the first time at the end of 1945. The library receives currently about 3,800 periodicals. The University Library also collects private and business archives and it has some important classical manuscripts as well as a collection of early printed books.

Children's libraries and school libraries

New South Wales. Children's libraries are being developed as departments of municipal and shire libraries. The Education Department maintains a school library service for the fostering of State school libraries, which are maintained partly by parents' and citizens' associations and partly by departmental subsidy. Secondary and central schools, and an increasing number of primary schools, have teacher librarians.

Victoria. Under the auspices of the Free Library Service Board 120 municipal children's libraries have been, or are being, established as part of the library services provided by the councils concerned. All these libraries provide comprehensive modern children's book collections which are constantly being augmented. An annual grant of \$10,000, which is additional to the ordinary annual municipal library grant, is provided to assist these libraries. In addition, twelve independently controlled children's libraries shared in this grant in 1965.

The Education Department is making provision for the building of library rooms in new schools. Where accommodation is available in existing schools, library furniture is provided free of cost to the schools and the Government subsidizes the purchase of books. In June 1965, 515 schools had central libraries. A scheme of circulating libraries for small schools, particularly in remote areas, has been operating for some years. One hundred and forty schools benefited from this scheme in 1965. Since that date the scheme has been varied and books are no longer circulated, but individual schools receive books on a non-circulatory basis. The Education Department has a library service officer with a small staff to advise and assist schools in the establishment and organization of libraries. A one-year course for the training of teacher-librarians was established at Melbourne Teachers' College in 1955. Approximately twenty-five teachers are trained each year.

Queensland. The Library Board of Queensland stresses to local bodies the importance of providing adequate library services for children. There are in Queensland 121 libraries free to children, of which thirteen are conducted by the Brisbane City Council. The children's libraries at Rockhampton, Toowoomba and Townsville are particularly active. Country children who are not catered for locally may borrow from the Country Extension Service which possesses a separate children's collection. The purchase of books for State school libraries in Queensland is financed by school committees and parents' associations, with a subsidy from the Department of Education on a \$1 for \$1 basis. Trainees at the Teachers' Colleges are instructed in school library organization and management.

South Australia. A children's library of 36,000 volumes is used by school classes and individual children living in the metropolitan area. In 1964-65, 234,800 books were lent. There is a large collection of historical children's books assembled for the use of research workers. In August 1957 a youth lending service was opened for young people from thirteen to eighteen years of age. It has a stock of 14,900 volumes.

Western Australia. The Education Department provides library services, issues of books and subsidies on library books to schools. The Library Services Branch of the Department provides advisory services to assist schools in all aspects of library organization and service. It also relieves schools of the professional and routine tasks of book preparation by providing a central cataloguing service for both new books and those previously uncatalogued in school libraries, a central processing service to cover books in plastic and prepare them for use, and a library book repair and binding service. Book selection in schools is assisted by a Model Library and by lists of recommended books.

The Teachers' Colleges provide courses in school library organization and service. At the Perth Technical College part-time courses are provided on the syllabus for the examinations of the Library Association of Australia and are attended by many school librarians. The proposed Western Australian Institute of Technology is planned to have a large library to serve students and staff. The Perth Technical College and technical schools are equipped with libraries, and an allocation of funds is provided annually to each school and college department for the purchase of books and periodicals. Books for technical schools other than Perth Technical College are centrally ordered, catalogued and processed by the Library Services Branch.

All high schools are provided with library accommodation and furniture. New high schools opened in 1965 and 1966 have been provided with a main library, reading room, private study room, and librarian's office. High school libraries are staffed by one or two trained teacher-librarians according to the size of the school. New high schools are issued with books to a value of \$1,000 in each of their first three years. All high schools receive annually an issue of books, as well as being entitled to a subsidy for the purchase of library books. A number of primary schools have organized school libraries in rooms which have become available, or in premises provided by the Parents' and Citizens' Associations. Annual issues of books are made to all primary schools, varying according to the size of the school, and a subsidy is provided for the purchase of library books. The Charles Hadley Travelling Library provides 400 boxes of books which are circulated to all small schools, mission schools and special classes. Children who are unable to attend school, mainly those in isolated areas, are provided with books from the Correspondence School's Library.

Tasmania. The Lady Clark Memorial Children's Libraries, with headquarters at the State Library, Hobart, aim at serving all children in Tasmania. At 30 June 1965, 163 children's libraries and depots had been established.

The Education Department provides library quarters in all high schools and in some of the larger primary schools. The purchase of books is financed by parents' associations and by departmental subsidies. Teacher-librarians are appointed in high schools. The Schools Library Service issues loan collections of books to schools and gives advice on the setting up of school libraries.

Special libraries

Before the 1939-45 War the number of special libraries, apart from those maintained by government departments, was small, but during recent years many manufacturing, commercial, research, and other firms, as well as statutory bodies, have found it necessary to establish special libraries to serve their staff. These libraries, which are most numerous in Sydney and Melbourne, are being increasingly administered by trained librarians.

Museums and art galleries

In 1964 an annual collection of statistics on a uniform basis was commenced from Australian museums and art galleries. So far, the collection is essentially exploratory and detailed statistics have not yet been compiled. The following paragraphs provide summarized results of the collection and refer individually to the more important museums and art galleries.

A museum or art gallery is considered to be a building, group of buildings or parts of buildings, managed as a unit and intended predominantly for the permanent display of objects of interest (museum) or objects of art (art galleries) to the general public. Institutions displaying live exhibits are excluded (the more important of these are mentioned on pages 638-9), as are buildings used for temporary displays (exhibitions, commercial galleries exhibiting only for sale) without a permanent stock of exhibits; permanent exhibitions which are ancillary to other activities, such as exhibits at council chambers, libraries, hotels, and other commercial enterprises providing services to tourists and sightseers; collections which are not readily accessible to the general public, such as university collections for the use of students and research workers; and historic homes, etc. not specifically intended for the permanent display of objects of interest (i.e. where the building itself and its normal fittings are essentially on display).

Museums and art galleries, 1965

The following table sets out summary information in respect of the institutions in Australia which have been identified in 1965 as museums and art galleries (branches of museums and art galleries are not shown separately).

MUSEUMS AND ART GALLERIES: SUMMARY, 1965

Major institutions

Some detail is provided here in respect of the seventeen institutions identified in 1965 as major because of the size of their display, the value of their exhibits, their popularity, and the extent of the information and investigation services which they provide.

Australian Capital Territory

The Australian War Memorial, Canberra. The Memorial comprises the national collection of war relics and the building in which these are preserved. The building was opened in 1941. The memorial is owned by the Commonwealth Government and is administered by a director responsible to a board of twelve trustees. There is a collection of 4,000 art works and a museum collection of more than 40,000 war relics, the gathering of which began on the battlefields of the 1914–18 War and was continued during the subsequent campaigns in which Australian forces have participated. The collection has been enhanced by gifts of relics from the Governments of Great Britain, the sister dominions, and of allied countries, and also by presentations made by ex-servicemen and relatives of those who died. The collection consists of items such as tanks, aeroplanes, submarines, field-guns and boats, and the widest possible range of war trophies down to the smallest items, each relic dependent for its value on its historical background. The works of art, all by Australian artists, depict battle scenes, individual officers and men, etc., and include oil and water colour paintings, drawings, statuary, bronzes, dioramas, and mosaics. There is also a library, which is described on page 626. The area used for display is 80,300 square feet. Total

attendance during 1964-65 was 510,736 with an average attendance of 1,139 on weekdays, 1,796 on Saturdays and 2,306 on Sundays. Staff numbered sixty-nine. Expenditure (excluding expenditure on the maintenance of the building and environs) was \$341,350, and the major items of receipt were Commonwealth Government contributions (\$251,578) and the sale of publications, etc. (\$51,286).

The Australian Institute of Anatomy, Canberra. The Institute is described in the chapter Public Health, page 569. The museum has a display area of 9,048 square feet. It contains displays of biological and anatomical aspects of man and the anatomy of Australian animals. A display of Aboriginal and Melanesian artefacts from the National Ethnographic Collections is temporarily housed in the Institute. Estimated attendance in 1965 was 170,000. The museum has a staff of twelve. Museum expenditure, wholly met by the Commonwealth Government, was about \$32,000 for administration and other current expenditure, and \$7,400 for maintenance of building, etc. in 1965.

New South Wales

The Australian Museum, Sydney. Founded in 1836, this is the oldest museum in Australia. It is administered by a director and a board of twenty-five trustees as a Government Department attached to the New South Wales Department of Education, with a staff of seventy-six. It has fine collections of all groups of animal, including insect fossils as well as mineral and ethnological collections, particularly in relation to Australia and the Pacific. There is a valuable library which in 1964-65 comprised 34,748 bound volumes. Its staff, during 1964-65, spent 620 man-days on field work in Australia and New Guinea, engaged in the collection of zoological, geological and anthropological specimens and a study of animal habits and environments. Total attendance in 1964-65 was 358,045 with an average daily attendance of 885 on weekdays, 1,058 on Saturdays, and 1,385 on Sundays. Twenty-two educational course lectures and 520 lectures to school parties were provided, as well as 62 other lectures, film sessions, etc., with total attendance at these of nearly 34,647. The total area available for display is 51,874 square feet. Current expenditure (excluding amounts spent by the Public Works Department on maintenance, major additions and alterations), amounted to \$254,280.

Museum of Applied Arts and Sciences, Sydney. This museum, with branches at Bathurst, Goulburn and Broken Hill, New South Wales, is owned by the New South Wales Government, and administered by a director and a board of seven trustees appointed by the Governor of New South Wales. The museum specializes in applied arts (ceramics, glass, oriental arts, costumes, musical instruments, furniture, etc.), applied science and technology (engineering, transport, textiles, electronics, etc.), and among its special features are a Watt beam engine of 1785, No. 1 New South Wales locomotive, Lawrence Hargrave models, and a planetarium. Total display area is 20,700 square feet. The museum's library contains about 7,500 books and periodicals. Attendances in 1965 were Sydney, 201,112, Bathurst, 15,810, and Goulburn (estimated), 18,000. The museum had, in 1965, a staff of forty-seven. During 1965, 101 man-days were spent on field work in New South Wales. Botanical material for phytochemical studies was collected and field experiments were undertaken to determine growth rates, oil yields and fertilizer responses in oil-bearing species.

Geological and Mining Museum, Sydney. This museum is administered as a branch of the Department of Mines by a curator under the control of the Government Geologist. This museum is the only one in Australia devoted solely to geology and mining. The display contains a unique collection of ores and economic minerals from New South Wales with material from the other States and from overseas for comparison. Its most important functions are the identification of mineral and rock specimens, several thousands of which are received annually, and the supply of some 20,000 to 30,000 specimens free of charge to schools. The museum has 8,500 square feet of display area and a staff of thirteen. Total attendance during 1965 was 24,637 with an average attendance of forty on weekdays, 114 on Saturdays and 158 on Sundays. During the year ten man-days were spent on fieldwork in the collection of bulk specimen material for distribution to schools and palaeontological specimens for research. Expenditure (excluding new works and maintenance) amounted to \$30,940 in 1965.

Art Gallery of New South Wales, Sydney. The Gallery originated in the Academy of Art founded in 1871. It is administered by a director and secretary under a board of thirteen trustees responsible to the New South Wales Minister for Education. The gallery has 7,789 exhibits, including 1,641 oils and 157 pieces of sculpture. Australian art in all aspects (except early colonial and native) and modern European painting and sculpture are featured. An Aboriginal art collection includes a unique set of large Melville Island graveposts. There are display areas of 40,000 square feet and a library with 4,292 books. Assistance is provided to governments and private organizations in the design of books, coins, notes, etc., the preparation and judging of exhibitions, and in the supply of research material and information. Total attendance in 1965 was estimated at 312,000. Staff numbered thirty-one. Apart from payment of wages and salary and maintenance of buildings, the State Government in 1965 contributed \$20,000 to the Gallery. Other income came mainly from the sale of publications, etc. (\$12,393).

Victoria

National Museum of Victoria, Melbourne. The museum was founded in 1854. It is State-owned and administered by a director and board of seven trustees. It houses substantial collections in the fields of zoology, geology and anthropology. There is a small branch at Tidal River, Victoria. The museum has display areas of 40,738 square feet and a library. Fieldwork involving 67 man-days was undertaken in 1964-65 for the collection of specimens and research. Two hundred and twenty-five lectures were provided to school parties with a total attendance of 9,011. Staff numbered fifty-four. Total expenditure by and on the museum in 1964-65 amounted to \$163,222.

Institute of Applied Science of Victoria, Melbourne. The Institute was founded in 1870. It is State-owned and administered by a director and board of seven trustees. Its collections are concerned with aspects of application of all science subjects, but with special emphasis on transport, astronomy, public health, arms, agriculture and electronics. The total area available for display is 26,000 square feet. Its library contains about 3,000 books and periodicals. A planetarium was opened in December 1965. Total attendance during 1964-65 was estimated at 371,670. The Institute provided 108 educational course lectures and 103 lectures to school parties. Total attendance at these and other lectures amounted to about 7,141. Staff numbered sixty-five. Expenditure during 1964-65 (including works and maintenance) amounted to \$138,732.

National Gallery of Victoria, Melbourne. The State-owned gallery is administered by a director and board of seven trustees. Its large collections of over 20,000 items feature paintings by Rembrandt, Tiepolo and the Flemish primitives, Durer engravings, Blake drawings, and English 18th century furniture. Attendance during 1964-65 was estimated at 371,670. The gallery has a display area of 44,000 square feet. During 1964-65 there were 465 art school educational course lectures, seventy-one guide lectures to adult parties, and 325 guide lectures to school parties with a total attendance at these lectures of 31,576. Staff numbered forty-four. Excluding new works and maintenance, expenditure in 1964-65 amounted to \$297,356 and \$80,000 was spent by the Felton Bequest Committee on the acquisition of new exhibits.

Queensland

Queensland Museum, Brisbane. The Museum, founded in 1855, is the State museum of natural science. It is administered by a Director as a sub-department of the Queensland Department of Education. The collections are in the fields of the natural sciences, ethnology and history and include extensive collections of fossil vertebrates. The museum has a display area of 27,700 square feet. Field work involving seventy-five man-days was undertaken in 1964-65 for the collection of zoological, geological and anthropological material for research, reference and display purposes. Its extensive library contained about 36,000 volumes of books and periodicals. Total attendance in 1964-65 was estimated at 119,800. Twenty school holiday film programmes and forty-nine guide lectures to school parties were provided as well as seventeen other lectures, and the total attendance amounted to 7,857. Staff numbered twenty-nine. Expenditure (excluding maintenance of buildings) amounted to \$90,344.

Queensland Art Gallery, Brisbane. This State gallery was established in 1895. It is administered by a director and board of thirteen trustees. The gallery especially features Australian art of all periods, British modern art, French sculpture, and French paintings from the Rubin collection. The Art Gallery has a display area of 6,600 square feet and 1,749 display items, including 540 oils. Its library contains 892 items, and special attention is given to the collection of books and periodicals on Australian art of any period and to books and periodicals which have particular reference to works in the collection. There were forty art school and educational course lectures in 1964-65, and attendances at these and other lectures, film sessions, etc. was more than 2,000. Staff numbered fifteen. Its expenditure (including maintenance) was \$64,024. It had no bequest income.

South Australia

The South Australian Museum, Adelaide. The museum forms a part of the South Australian Department of Public Service and is administered by a director and board of five trustees. It features natural science and anthropological collections. The latter refer to the Australasian and Pacific regions and include an outstanding collection of Aboriginal artefacts. During 1964-65, 780 man-days were spent in field work in South Australia to supplement the State collections of fauna and flora and to assist the projects of the research staff. The museum's area available for display is 39,980 square feet, and it has a library of more than 23,000 books and periodicals. Total attendance during 1964-65 was estimated at 190,000 with an average attendance of 175 on weekdays, 540 on Saturdays and 810 on Sundays. There were fifty-four lectures to school parties and fifteen other lectures, sessions, etc., with a total attendance of 2,140. The museum had, in 1964-65, a staff of sixty-one. Total expenditure in 1964-65 (including new works and maintenance) was \$229,428.

National Gallery of South Australia, Adelaide. The gallery originated in 1881. It is State-owned and administered by a director and board of seven trustees. Apart from the usual art gallery collections, devoted chiefly to British and Australian works, it features a large collection of prints containing examples from European, British, Oriental, and Australian schools and a numismatic collection which is widely regarded as the finest in Australia. It also contains the South Australian Historical collection and a small collection of weapons. It has a display area of 28,178 square feet and a library. In June 1965 it had 55,805 exhibits, including more than 2,000 oils and watercolours, and nearly 12,000 engravings and prints. Six loan exhibitions were conducted in conjunction with other Australian art galleries in 1964-65, and there were eighty guide lectures to school parties and thirty-one other guide lectures, film sessions, etc., with a total attendance of 4,925. Staff numbered twenty-five. Total expenditure (including maintenance) was \$138,058.

Western Australia

Western Australian Museum, Perth. The museum was established in 1895. It is administered by a director and board of five trustees appointed by the Western Australian Government. The zoological collections cover all vertebrate and most invertebrate fields, particularly marine. There are collections relating to vertebrate palaeontology and meteorites, fossil invertebrates, and some fossil plants. There are extensive collections of Aboriginal artefacts and European arms and armour. In 1964-65 the area available for display totalled 16,750 square feet. During that year 340 man-days were spent on field work in collecting zoological, palaeontological and anthropological material in many parts of the State. The library contained 1,860 books and periodicals. Total attendance was 140,290 in 1964-65 with an average daily attendance of 392 on weekdays, 394 on Saturdays and 336 on Sundays. There were 320 guide lectures to school parties in 1964-65 with a total attendance of 14,000, and in addition 41,000 children visited the Museum's Children's Centre during vacation periods for supervised activities. No other lectures were given at the Museum, but the staff participated in adult education programmes outside the Museum and in university teaching. Staff numbered thirty-seven. Total expenditure (including works and maintenance) amounted in 1964-65 to \$146,196, which was met mainly from State funds, but also from trust funds from private persons for specific purposes.

The Western Australian Art Gallery, Perth. The gallery was established in 1895 and is administered by a director and government-appointed board of five trustees. It features especially collections of Australian paintings, drawings, ceramics and sculpture, a fine collection of Australian contemporary art, and a major Henry Moore sculpture. It has collections of coins and of Western Australian stamps. Altogether there are 3,387 items. The gallery has a library with some 950 books and periodicals and a display area of 9,000 square feet. Total attendance in 1964-65 was 120,348 with an average attendance of 294 on week days, 491 on Saturdays and 347 on Sundays. There were ten guide lectures to school parties and twenty-one other lectures, film sessions, etc., with a total attendance of 2,551. Staff numbered eighteen. Expenditure (including maintenance) in 1964-65 was \$82,122.

Tasmania

Tasmanian Museum and Art Gallery, Hobart. Opened in 1887, the Tasmanian Museum and Art Gallery is State-owned and administered by a board of trustees. It has a branch at Zechan, namely The West Coast Pioneer's Memorial Museum. The museum part contains zoological, anthropological and geological displays relating to Tasmania. The art displays contain an excellent holding of Tasmanian historical works. The area available for display is 52,000 square feet. In 1964-65 there was a staff of twenty-five. Total expenditure (including expenditure on new extensions) amounted to \$167,880.

Queen Victoria Museum and Art Gallery, Launceston. This institution, opened in 1891, is owned and administered by the Launceston City Council through a director and a sub-committee of aldermen. It has a branch at Cradle Mountain. Attention is concentrated on collections relating to the natural, biological and historical environment of Tasmania, featuring Tasmanian fauna, Aboriginal relics and historical material. The arts associated with Tasmania are represented by an excellent collection of early colonial period painting and also by a fine collection of costumes, lace and ceramics. Total display area amounts to 26,456 square feet and there is a library with some 2,000 books. In 1964-65, 141 man-days were spent on fieldwork in geological, zoological and anthropological activities. Attendance was 60,133 with an average attendance of 173 on weekdays and Saturdays and 112 on Sundays. There were seventy-one educational course lectures and twenty-two other lectures, with an estimated total attendance of 3,200. There was a staff of sixteen. The Queen Victoria Museum and Art Gallery received \$14,000 in 1964-65 from the State Government, but the remainder out of a total expenditure of \$50,064 was met, in the main, by the municipality.

Other museums and art galleries

A short description of some of the twenty-eight remaining museums and art galleries is given in the following paragraphs. The institutions are grouped into those owned by the States, by municipalities and private trusts, by universities, and by private persons.

State-owned institutions. The Dixon and Mitchell Libraries (sections of the Public Library of New South Wales) have galleries in which paintings, drawings, engravings, photographs, coins, and postage stamps, all related to Australian and south-west Pacific history, are exhibited. The main area of display comprises 7,051 square feet. Only a fraction of the many thousands of items can be shown. There is a geological museum, maintained by the Victorian State Mines Department, with a comprehensive collection of geological specimens. In South Australia there is a small museum of local and tourist interest—the Old Government House, Belair, displaying furniture, etc. of the colonial era.

Municipal and private trust institutions. In 1965 there were twelve institutions owned by various non-metropolitan municipalities throughout Australia. These range from the Mildura Art Centre with expenditure of more than \$60,000 in 1965 to the Broken Hill Art Gallery, a part of the Broken Hill Technical College, where local artists' pictures of mining activities are exhibited amongst others. Similar institutions are often maintained in major provincial cities by private trusts. These and the municipal institutions often exhibit artistic, historical and other items of special local interest, and as a rule there are associated with them various local societies devoted to the exploration and encouragement of the arts, local history and the like. Thus the Lionel Lindsay Art Gallery and Library at Toowoomba, Queensland, is administered by a board of trustees, originally appointed in 1959 by deed of trust.

University institutions. Most university collections, some of them comprehensive and containing unique material, are reserved essentially for the use of students and research workers, and are therefore not included as museums or art galleries. However, the John Darnell Art Gallery of the University of Queensland, originating from a bequest in 1930, and the Macleay Museum of Natural History at the University of Sydney, stemming from a gift to the university in 1888, and the Nicholson Museum of Antiquities at the University of Sydney are open to the public.

Private museums and art galleries. Only four establishments of this nature combine the sale of objects of art or interest with permanent displays and are therefore included here as museums or art galleries; three of them are in South Australia and one in the Northern Territory.

Botanical and zoological gardens

In addition to the zoological gardens referred to in the following paragraphs there are numerous privately owned zoos and sanctuaries, many of them at tourist resorts, which maintain collections of Australian flora and fauna. There are also various national parks, forests, reserves, etc., dedicated for public use, which are preserved largely in their natural condition.

New South Wales

The Sydney Botanic Gardens are situated on the shores of Farm Cove, Sydney Harbour, close to the heart of the city and on the site of the first farm established in 1788 by Governor Phillip. Now occupying sixty-six acres, they contain a large and varied collection of flowering plants, shrubs and trees as well as hothouses of orchids and ferns.

The Zoological Gardens at Taronga Park, on the northern side of Sydney Harbour, were opened in 1916. The area is about seventy acres. The natural formation has been retained as far as practicable, with the object of displaying the animals in natural surroundings, and an aquarium has been built within the gardens. In 1964–65 admissions to the grounds were 923,115 and to the aquarium 305,983. The receipts of the zoological department of the Taronga Park Trust amounted to \$420,056 in 1964–65, excluding an annual State grant of \$6,500, and expenditure amounted to \$428,768. Exhibits at 30 June 1965 comprised 1,299 mammals, 2,919 birds, 256 reptiles, and 1,048 fish.

Victoria

The main botanical gardens in the State are the Royal Botanic Gardens, an area of eighty-eight acres within one mile of the centre of the City of Melbourne and containing over 12,000 species of plants, of which there are some 30,000 individual specimens. Many species of native birds breed on islands in lakes within the gardens.

The Zoological Gardens are situated in Royal Park and contain a wide selection of animals, birds and reptiles. A wild life sanctuary is also maintained at Healesville and contains specimens of indigenous fauna.

Queensland

Botanical gardens have been established in Brisbane and in several other cities. The Brisbane Botanic Gardens were established in 1855 by the Government of New South Wales. In 1925 the Queensland Government transferred them to the Brisbane City Council. They occupy approximately forty-six acres on the banks of the Brisbane River in the central city area and are noted for their collections of palms, tropical trees and shrubs, and succulents; they contain over 7,500 plants.

South Australia

The Botanic Garden established in 1855, was opened to the public in 1857. It contains forty-five acres of tropical and sub-tropical trees, shrubs and plants, a large range of glasshouses, and a rockery with cacti and succulents. Adjoining is the Botanic Park of seventy-five acres which is treated as an arboretum.

The Zoological Gardens, opened in 1883, have an area of approximately nineteen acres and contain a fine collection of animals, reptiles and birds. There were 312,300 visitors in 1964-65.

Western Australia

A botanic garden for the native plants of Western Australia was officially inaugurated in March 1963, and planting of the garden began in May 1963. It was officially opened in October 1965. The site of twenty-five acres selected for garden development during the first five years is in King's Park, a reserve of almost 1,000 acres close to the centre of Perth. An arboretum of thirty-six acres for the collection of native trees was founded in June 1962. It is now almost fully planted, and, with the exception of some rare mallees, nearly all trees native to the southern part of the State are represented.

The Zoological Gardens, which were opened in 1898 at South Perth, have an area of forty-six acres and are under the control of the Acclimatisation Committee. Animals, birds and reptiles are exhibited. During the year 1964-65, 134,541 adults and 127,324 children visited the zoo.

Tasmania

The Hobart Botanical Gardens adjoining Government House on the Queen's Domain contain a fine collection of exotic trees and shrubs. They are controlled by a Board appointed by the State Government, which supports the gardens by annual grants.

There is no zoo in Tasmania, but a small collection of animals and birds is maintained by the Launceston City Council at the City Park.

Northern Territory

The Darwin Botanical Gardens were established in 1873 and were planted with imported exotic plants and trees. The gardens now occupy eighty acres and feature tropical plants of both native and overseas origin. They are controlled by the Darwin City Council.

Book publishing

Australian book publishing

Some statistics relating to Australian book publishing are compiled by the National Library of Australia as part of its bibliographical responsibilities (see page 624). Through the deposit provisions of the *Copyright Act* 1912-1950, its overseas collection agents and its own efforts, the library receives practically all Australian publications, although not necessarily in the year of publication. Because the statistics compiled and shown hereunder are classified according to the year of publication, the figures are subject to revision as publications not yet received in the National Library come to hand.

For books published in 1961 and thereafter, the method of counting conforms with international practice. Each title is counted as one unit. The figures cover all non-periodical publications (i.e. those published at irregular intervals or regularly at intervals of one year or longer) published in Australia. They refer to all publications of five pages or more and include pamphlets, new translations and re-editions. They include government publications, educational textbooks, university theses, etc., but exclude publications not available to the general public, advertising material, publications of transitory interest, off-prints, musical works, children's picture books, maps and charts.

Number of publications

The following table shows the number of books, etc., published in Australia during the years 1961 to 1965 received by the National Library to the end of 1965.

**NUMBER OF PUBLICATIONS RECEIVED BY THE NATIONAL LIBRARY
AUSTRALIA, 1961 TO 1965**

Received by the National Library to the end of—	Published during—				
	1961	1962	1963	1964	1965
1961	1,840	
1962	2,848	1,793	
1963	2,963	2,501	1,416	..	
1964	2,993	2,675	2,167	1,385	
1965	3,013	2,700	2,312	1,934	2,039

The next table shows the 1963, 1964 and 1965 publications received up to the end of 1965, classified by subject matter.

**NUMBER OF 1963, 1964 AND 1965 PUBLICATIONS RECEIVED BY THE
NATIONAL LIBRARY, BY SUBJECT(a): AUSTRALIA, TO 1965**

Subject	Published during—		
	1963	1964	1965
Bibliography, libraries, general	61	38	29
Philosophy, psychology	17	17	19
Religion	79	70	52
Social sciences	708	698	789
Philology	33	30	36
Science	223	190	179
Technology, business	517	384	357
Art, amusement	110	106	75
Literature	323	253	297
Australian poetry	47	33	23
Australian drama	4	22	4
Australian fiction	180	153	204
Australian essays	4	3	2
Australian humour and miscellany	10	3	12
Criticisms, anthologies, school editions	45	20	35
Other literature	33	19	17
Travel, biography, history	241	148	206
Total	2,312	1,934	2,039

(a) The classification is based on the divisions of the Dewey Decimal Classification.

Commonwealth Literary Fund

In 1908 the Commonwealth Government, under Alfred Deakin, first established the Commonwealth Literary Fund. The Fund was entirely a compassionate one devoted to literary pensions for aged or infirm authors, for the families of literary men who died in poverty, and for writers who were unable for financial reasons to continue their activities.

In 1939, in an endeavour to encourage the development of Australian literature and to foster appreciation of it, the Commonwealth Government greatly enlarged the scope of the Fund. The Fund now awards fellowships each year, assists in the publication of manuscripts of high literary merit, makes annual grants for lectures in Australian literature, and awards pensions to writers who have achieved a nation-wide reputation for their work in the field of creative literature. The fellowships are awarded each year to writers who have proved their capacity in the field of creative literature, to enable them to devote their time to working on a literary project they specify. A fellowship carries a maximum value of \$4,000 a year. The Fund does not seek out people on whom to bestow fellowships, but considers only those who submit applications.

The Fund also assists in the publication of manuscripts which have outstanding literary merit, but which, in the opinion of publishers, may constitute a commercial risk. This assistance takes the form of a guarantee of assistance to the publisher. The Fund does not itself enter the field of publishing, nor does it make outright grants to authors to enable them to arrange publication. Since 1940 annual grants for special lectures in Australian literature have been made to all universities. In 1956 the Fund initiated a scheme of lectures to the general public and to schools, mainly in country areas, with the co-operation of State adult education authorities and Education Departments. Annual grants are now made to the States for this purpose. The Fund also assists certain literary magazines of long standing and recognized literary value.

The Fund is administered by a Committee consisting of one representative of each of the three main political parties in the Parliament, the Chairman being nominated by the Prime Minister. The Committee is advised on all literary matters by an Advisory Board of six persons with literary qualifications.

Literature Censorship Board

In 1937 the Commonwealth Government introduced legislation to provide for a Literature Censorship Board to advise the Minister for Customs and Excise on imported literature. At the same time an Appeal Censor was appointed to afford appellants an avenue of appeal which did not make expensive court proceedings necessary. The Appeal Censor was replaced by an Appeal Board in 1960. The Literature Censorship Board consists of a Chairman, a Deputy Chairman, and four other members, while the Appeal Board is made up of a Chairman and two other members.

The Boards were set up to deal with that part of the problem which provides the greatest amount of controversy—restriction on books which have a real place in the field of literature. In practice, no imported publication having literary merit is prohibited without prior reference to the Literature Censorship Board. Should the Minister decide to prohibit the importation of a book on the recommendation of the Board, an appeal against the decision may be made for reference to the Literature Censorship Appeal Board. A decision to prohibit the importation of a book may be challenged through the normal processes of law. Control of indigenous matter comes under the jurisdiction of the State Governments.

Film production

Australian film production

Australia was one of the pioneers in the history of film-making, a short story film, *John Vane, Bushranger*, having been made in 1904, only a year after America's *The Great Train Robbery*, which is generally considered to be the first genuine story-film. It has been claimed that *The Kelly Gang*, made in 1905–6, was the first full-length feature film produced in the world. Following the outbreak of the 1914–18 War a series of short patriotic films were produced. In 1917 the first of a successful series of rural comedies was made, featuring a family called the Hayseeds. In the same year *The Kelly Gang* was remade and the first film version of *For the Term of his Natural Life* appeared. A first film version of C. J. Dennis's *The Sentimental Bloke* was made in 1919.

The year 1920 was notable for a number of productions with an authentic Australian flavour: *On our Selection*, a first version of *Robbery Under Arms*, another remake of *The Kelly Gang*, and C. J. Dennis's *Ginger Mick*. Production continued at about the same level until the coming of sound in 1928. Altogether, approximately 255 theatrical films were produced by Australian units in the silent period (1900–1930). Lack of equipment hampered the commencement of production of sound films in Australia, but during the 1930's nearly 60 sound films were produced.

During the 1939–45 War, commercial film production combined with the Commonwealth Government in making films. Since the war, a number of British and American companies have made films in Australia. Altogether, about 129 feature films were produced in Australia between 1930 and 1965.

Australian National Film Board

The Australian National Film Board was inaugurated in April 1945, on the recommendation of a Commonwealth Government inter-departmental committee. It was attached, for administrative purposes, to the Department of Information. With the abolition of that Department in March 1950, administration of the Board was transferred to the News and Information Bureau, Department of the Interior.

In November 1950 the Board was reconstituted as an advisory body to the Minister for the Interior on matters concerned with the production, acquisition and distribution of films required by Commonwealth departments for use within Australia on important matters of national interest and welfare, such as school and adult education, rehabilitation, social development,

international understanding, trade and tourist expansion, and immigration; and for dissemination abroad to expand trade and commerce with other countries, to encourage tourist traffic with Australia, to improve Australia's relations with other countries and, where necessary, to explain Australia's national policies, and to encourage immigration.

The constitution provides for a membership of twelve, with the Director of the News and Information Bureau as chairman and the remainder representative of Commonwealth departments, State government instrumentalities, and organizations interested in the production, distribution or utilization of films for national publicity.

Film Division of the News and Information Bureau

The first Australian Government organization for the production of motion pictures for national information purposes was the Cinema and Photographic Branch of the Department of Commerce, set up in Melbourne in 1920. Early in the 1939-45 War the newly-established Department of Information was made responsible for the operation of the Cinema Branch and for an Official War Photography Unit. When the Australian National Film Board was established in 1945, the Film Division of the Department of Information became the official film production and distribution agency for Commonwealth departments and instrumentalities. In 1950, with the closing down of the Department of Information and the transfer of its functions, the Division became the Film Division of the News and Information Bureau then set up within the Department of the Interior. The Film Division is also known as the Commonwealth Film Unit. Theatrical and television distribution in Australia, and both theatrical and non-theatrical distribution overseas, of all Film Division productions are organized by the Bureau's home office or its overseas representatives. Non-theatrical distribution in Australia is organized through the National Library, Canberra, in co-operation with State film distribution agencies.

Since 1946 the Film Division has produced films for general exhibition, as well as training and special purpose films. In 1964-65 the Film Unit produced 109 reels of new films and thirteen reels of foreign versions of existing films. Prints are distributed to fifty overseas centres. In Britain there is regular distribution through commercial theatres and a large non-theatrical and educational series of circuits. By arrangement with the British Broadcasting Corporation items of topical interest photographed by the Film Division are flown to London for television. In the United States of America there is wide non-theatrical distribution and considerable use of the films by television networks. In Canada an arrangement with the Canadian Film Institute secures placement of films on television and the Australian High Commission handles the films for non-theatrical use. Selected films have been recorded in French, Dutch, German, Italian, Swedish, Russian, Spanish, Japanese, Malay, Thai, and various dialects of Hindustani and Tamil.

In addition to films made on its own initiative, the Film Division produces films under the sponsorship of, or with the co-operation of, Commonwealth departments and many other bodies such as the Australian Road Safety Council, the Snowy Mountains Hydro-electric Authority, the Australian National University, the Australian Broadcasting Commission, the Victorian State Electricity Commission, the National Capital Development Commission, the Atomic Energy Commission, the British Broadcasting Corporation, the Australian National Shipping Line, and the Institute of Aboriginal Studies.

Film censorship

Legislation. The Commonwealth Government's powers over censorship of films extend only to imported films and imported advertising matter and stem from the Customs Act. Under that Act the Customs (Cinematograph Films) Regulations provide for the appointment of a Film Censorship Board whose function is to ensure that films and related advertising material coming within certain defined categories are not admitted into Australia. Under those regulations the Film Censorship Board may pass films in their original form, reject them, or pass them after eliminations have been made. Legislation passed by the State Governments of Victoria, Queensland, Western Australia, and Tasmania names the Commonwealth Film Censorship Board as the censorship authority and vests in it the power to classify films as suitable for general exhibition or not. The State Acts give the Commonwealth Board the authority to censor films made in Australia for commercial exhibition and advertising matter made in Australia.

The Censorship organization comprises a Censorship Board of seven persons and an Appeal Censor, the headquarters being in Sydney. Importers have a right of appeal to the Minister against decisions of the Board and the Appeal Censor.

Thirty-five mm. films for exhibition in motion picture theatres. In 1965, 1,162 films comprising approximately 4½ million feet were censored. This represented approximately 824 hours screening time. Of these films, 351 originated in the United States of America, 349 in the United Kingdom, and 462 in other countries. The principal suppliers among the last mentioned were: U.S.S.R., 87; Italy, 65; France, 42; Greece, 35; Germany, 23; Japan and Switzerland, 21 each. Included in

these figures were 435 full-length feature films which constituted the main theatrical attractions. This was an increase of 13 over imports for 1964. Feature films came from: The United States of America, 144; the United Kingdom, 78; Italy, 53; U.S.S.R., 51; Greece, 34; France, 15; Germany, 14; and Japan, 10. Seventeen feature films were initially rejected and cuts were made from 99. There were sixteen appeals, fifteen against rejections and one against cuts. Two were allowed and fourteen disallowed. Feature films classified as suitable for general exhibition numbered 223, and 212 were not suitable for children. Of the latter, 32 carried the special condition that all advertising should indicate that they were suitable only for adults. These classifications are advisory only and are designed to enable picture-goers and particularly parents to obtain a general idea of the nature of any particular film. In addition to these imported films, 148 35mm. films of 184,729 feet produced in Australia were cleared. These were mainly newsreels and documentaries intended for commercial exhibition or export.

Sixteen mm. films. Excluding those imported for television use, 6,451 16mm. films of approximately 4½ million feet were examined. These were films commercially produced for screening in theatres used by business undertakings for advertising and instructional purposes and for screening in churches, schools and universities, and on home movies. Six were rejected.

Eight mm. and 9 5mm. films. Approximately 76,000 feet of these small dimension type films were examined. One hundred and seven films with an approximate footage of 7,500 feet were rejected.

Television films. In 1965, 11,129 films, predominantly 16mm., of approximately 14½ million feet, for use on television, were censored. The number of films is not a true indication of volume because many of these were of short duration. In terms of screening time the films censored for television amounted to approximately 6,753 hours. On a footage basis the United States of America supplied 79 per cent of the total imports and the United Kingdom 16 per cent. Ninety-four television films were rejected outright and an additional seven were classified as unsuitable for televising. Eliminations were made from 1,082. There were ten appeals, all against rejection, of which four were allowed and six disallowed.

Foreign language films. Countries other than the United Kingdom and the United States of America supplied 462 of the 35mm. films imported for theatrical exhibition, of which 213 were feature films. Generally, the dialogue is in a foreign language with explanatory English captions. A few have an English commentary and in some cases English 'dubbed' dialogue. Of 6,451 16mm. commercial films censored, 1,312 originated from non-English-speaking countries. The chief supplying countries were: Germany, 241; France, 170; Japan, 136; Czechoslovakia, 80; Italy, 74; China, 55; Malaysia, 52; Switzerland, 46; Sweden, 39; U.S.S.R., 38; Holland, 33; and India, 30.

Export of films. The quantity of films exported for the year was approximately 2.5 million feet, consisting mainly of newsreels, advertising films and documentaries. This footage included in many cases several prints of the one film. It also included large quantities of exposed negatives sent overseas for processing.

Arts Council of Australia

Patterned on the Council for the Encouragement of Music and Arts which operated in the United Kingdom during the Second World War, an Australian organization was brought into being in 1943. In 1945 it became The Arts Council of Australia. Originating in New South Wales, Divisions are active now in the Australian Capital Territory, New South Wales, Queensland, South Australia, and Tasmania. A Federal Council was formed in 1964. New South Wales has a country branch network of over fifty centres. Rapid development in Queensland has resulted in the formation of over twenty-six branches.

The Arts Council receives State Government grants through the Departments of Education in New South Wales, Queensland and South Australia. From 1963 to 1966 substantial contributions were received from a private organization. Some activities of the Council are supported financially by non-metropolitan local government bodies and grants were made by the Gulbenkian Foundation in 1964 to 1966 to help in re-establishing the Federal Council. The New South Wales Division is a member of the Adult Education Advisory Board in that State, representing the 'live art' section of adult education. The Tasmanian Division is represented on, and works closely with, the Adult Education Board of that State.

Activities of the Arts Council are directed towards decentralization of the arts for the benefit of country centres and metropolitan and country schools. It is greatly concerned with taking the arts to children as a basic cultural development. Tours of high standard companies in opera, ballet, drama, puppets, etc. are operating throughout the year. The Young Elizabethan Players Company was formed jointly by the Arts Council and the Australian Elizabethan Theatre Trust in 1958 to take Shakespeare to schools in New South Wales and Queensland, and is still operating.

The Council handles a wide range of art exhibitions, both for city and country areas. Summer schools for drama, painting, pottery, music and other arts are an established annual feature of the work of the New South Wales and Queensland Divisions.

Yearly drama festivals are conducted for the Little Theatre movement. In 1963 and again in 1965 the New South Wales Division sponsored the first arts festivals for Sydney (North Side Arts Festival), with a wide range of cultural activities concentrated on the north side of Sydney Harbour. The festival is now a biennial event with the third festival being planned for August 1967.

Australian Elizabethan Theatre Trust

Inaugurated in 1954 to commemorate the first visit to the Commonwealth of Her Majesty the Queen, the Australian Elizabethan Theatre Trust has since presented drama, opera and ballet throughout the Commonwealth. The Trust receives annual grants from the Federal Government, the State Governments and city councils. Its income also includes subscriptions from members and donations from business houses.

In the field of drama it has presented, *inter alia*, the works of Australian playwrights, including plays which were subsequently presented overseas. The Elizabethan Trust Opera Company has given seasons of opera and has presented overseas guest artists, conductors and producers. Since 1956, to the end of 1964, more than 1,000 performances of opera have been given by the Trust Opera Company in all States and in the Australian Capital Territory. Twenty-six operas have been the repertoire in this period. The Australian Ballet, which commenced its inaugural season in November 1962, has visited all mainland capitals and New Zealand and presented world premiere productions of three commissioned ballets during 1964. The Commonwealth Government gave financial assistance for the Ballet to represent Australia at the Commonwealth Festival of Arts in Britain in 1965. The company also danced in Baalbeck, Nice, Paris, Berlin, Copenhagen, and Honolulu. The Trust has also been associated with commercial managements in the presentation of overseas attractions and large-scale musicals.

Country areas have been visited by Trust companies presenting opera, drama and puppets, in association with the Council of Adult Education in Victoria and The Arts Council of Australia. During 1966 four companies of Young Elizabethan Players will again present Shakespeare for schools in five States.

In Victoria the Trust is associated with the University of Melbourne in the Union Theatre Repertory Company. It is also associated with the University of New South Wales Drama Foundation in the Old Tote Theatre Company which had its inaugural season during 1963. The corresponding activity in Adelaide, the South Australian Theatre Company, was introduced by the Trust during 1965. Assistance is given to the Perth Playhouse, the Festival of Perth, the National Theatre and Fine Arts Society of Tasmania, and other companies. The Trust contributes productions to the biennial Adelaide Festival of Arts, five presentations being listed for the 1966 Festival.

One of the most important activities undertaken by the Trust is its association with the University of New South Wales and the Australian Broadcasting Commission in the establishment and maintenance of the National Institute of Dramatic Art. This provides a training ground for young Australian actors, producers and technicians. The Australian Ballet Foundation, in which the Trust and J. C. Williamson Theatres Ltd. are associated, also conducts the Australian Ballet School in Melbourne.

Historic Memorials Committee

The Historic Memorials Committee was established in 1911 for the purpose of securing portraits of distinguished Australians who had taken an active part in Federation. Later the Committee decided to obtain portraits of all Governors-General, Prime Ministers, Presidents of the Senate, Speakers of the House of Representatives, and other notable Australians. In addition the Committee may commission, and has in fact commissioned, paintings recording special events connected with the Commonwealth Parliament.

The Committee comprises the Prime Minister (Chairman), the President of the Senate, the Speaker of the House of Representatives, the Vice-President of the Executive Council, the Leader of the Opposition, and the Leader of the Opposition in the Senate. An Art Advisory Board, comprising a group of artists, was established in 1912 to assist the Committee by advising on works of art to be commissioned by the Committee.

Commonwealth Art Advisory Board

Since its beginning in 1912 the Art Advisory Board has always consisted of artists. At present there are five members. As well as assisting the Historic Memorials Committee the Board also advises the Government on the purchase of works of art for inclusion in the National Collection. In 1965-66, \$40,000 was provided for this purpose. The National Collection now contains over 1,000 works of art.

The Board, on behalf of the Government, also organizes and finances exhibitions of Australian art in overseas countries. In addition, it financially assists the showing in State Art Galleries of major exhibitions from abroad or assembled by one or more State Art Galleries. \$20,000 was provided in 1965-66 to meet the costs involved in these exhibitions.

SCIENTIFIC RESEARCH

This section refers specifically to various organizations, etc. associated with scientific research. Particulars regarding Commonwealth medical research organizations are given in the chapter Public Health.

A special article on Science and Technology in Australia, prepared by the Commonwealth Scientific and Industrial Research Organization of Australia, was included in Year Book No. 49 (see p. 781).

Outline of Research in Australia

Scientific research in Australia prior to 1939-45 War

Interest in science goes back to the beginning of Australian history. Captain James Cook discovered the east coast of Australia when returning from a scientific expedition to the South Pacific, and one of his passengers was the President of the Royal Society, Sir Joseph Banks, who was the first of many naturalists to be fascinated by the unique flora and fauna of the continent. The Stone Age culture of the Aborigines drew the early attention of anthropologists. The Aboriginal boomerang was a source of interest to the Surveyor-General of New South Wales, Sir Thomas Mitchell, who attempted to apply its spinning characteristics in a 'boomerang propeller' for driving steamships.

Until the 1914-18 War Australian science rested on the individual accomplishments of a few outstanding men, working largely in isolation. Three names stand out in this period—Farrer, Hargrave and Mitchell. After years of patient work as a plant breeder, Farrer developed the first successful strain of rust-resistant wheat. Hargrave's experiments in aviation attracted world-wide attention. Mitchell, a hydraulic engineer, invented a thrust bearing which made it possible to increase greatly the motive power of ocean-going screw steamships.

During the first world war Australia followed the British example and set up, in 1916, the Commonwealth Advisory Council for Science and Industry which finally became the Commonwealth Scientific and Industrial Research Organization (C.S.I.R.O.). Between the two world wars most of the systematic research done in Australia was carried out in the Council's laboratories. A little was done by some State departments of agriculture, but very little in the universities, which had not yet come to be regarded as research centres. Many of the most able Australian scientists were attracted to posts abroad.

Scientific research during and following 1939-45 War

The situation changed with the onset of the 1939-45 War and the economic expansion which followed it. Until 1939 the activities of the Council for Scientific and Industrial Research had been concentrated in the biological sciences, stimulated by the needs of primary industry. With the war C.S.I.R.'s work expanded greatly and spread into the physical sciences, with particular attention to the technical problems of industrial production. Many products previously imported from overseas, such as drugs and precision instruments, had to be manufactured locally, and much research and developmental work was necessary before this could be done. The work was carried out by C.S.I.R., by university science departments, and by industrial firms. These wartime activities had permanent effects, particularly in the universities and in C.S.I.R.

Australian National University and other university research

In 1946 the Commonwealth Government established the Australian National University, whose statutory functions required it to 'encourage and provide facilities for post-graduate research and study, both generally and in relation to subjects of national importance to Australia'. The growth of the National University, with its major emphasis on research and post-graduate training, introduced a new influence on the university scene which, apart from its own research activities, has provided an important stimulus, indirectly, for the growth of research in

other universities. This was made financially possible by increased grants from the Commonwealth. Until 1936 only small *ad hoc* research grants had been made to the universities. In 1936 a five-year programme was inaugurated by which £30,000 (\$60,000) was spent annually on grants for research in the physical and biological sciences. This figure had grown to £100,000 (\$200,000) in 1950, after which the amount was absorbed in the new system of Commonwealth grants to the States for university purposes. In 1957 the report of the Committee on Australian Universities (the Murray Report) recommended increases in research funds, and drew attention to the small number of post-graduate students. A further increase was approved in 1963, following the second report of the Australian Universities Commission, and in 1965 the Commonwealth established the Australian Research Grants Committee to administer the awards.

The growth of university research is reflected in the increase of post-graduate studies. The Ph.D. degree was introduced into Australia only after the second world war, and the first such award was made by the University of Melbourne in 1948. From then until 1964 more than 1,000 Ph.D.'s were awarded in mathematics, science and engineering, and more than 150 Ph.D.'s are currently being awarded annually in these fields. More than one-quarter of all Ph.D. degrees awarded in this period have been in chemistry.

Research in the universities is mostly of a 'pure' or 'fundamental' character, although universities have also concerned themselves with 'applied' research directed to the solution of practical problems, e.g. in metallurgy, chemical industry, agriculture, and food processing. A recent example of co-operation between a university and a State government agency was the investigation carried out by the University of Melbourne into the production of town gas from the lignite of the Yallourn-Morwell deposits in Gippsland, Victoria. In 1959 the University of New South Wales established Unisearch Ltd., with the purpose of assisting by research and other suitable means the advancement, development and practical application of science to industry and commerce.

Research by Government agencies

The post-war growth of C.S.I.R.O. has proceeded in both pure and applied science. Although increasing attention is being paid to industrial problems, the major impact of C.S.I.R.O. activities is still in the field of primary production. Research on pasture improvement, for example, is estimated to have brought about a doubling of the high-quality pasture in the decade 1948-58, and the successful programme of rabbit control that followed C.S.I.R.O.'s work on myxomatosis brought about a notable increase in the numbers of sheep during the same period. Apart from C.S.I.R.O., the research activities of other Commonwealth agencies have grown substantially since the war. These include the Weapons Research Establishment (set up in 1947) and other laboratories of the Department of Supply, all concerned with defence research and development. In 1954 the Atomic Energy Commission decided to set up its own research establishment at Lucas Heights, near Sydney. The Royal Australian Navy also maintains an experimental laboratory. Other agencies engaged in research include the Bureau of Meteorology, the Ionospheric Prediction Service, the Bureau of Mineral Resources, Geology and Geophysics, and various laboratories attached to the Commonwealth Health Department.

Research work by State Government agencies remains largely in the field of agriculture. In Queensland the great importance of the sugar industry is reflected in the work of the Bureau of Sugar Experiment Stations. Some coordination of research in agriculture is exercised through the Standing Committee on Agriculture, a joint Commonwealth-State body. In recent years some interest has also been shown in problems related to power generation, public health and water supply.

Research in industry

Research in industry has also expanded, though not at the same rate as in Government agencies or the universities. Since 1955 several large firms have established their own central laboratories, and appreciable sums are being spent on research in the chemical, metals, sugar and paper industries.

Research in social sciences

Research in the social sciences has developed largely since the war. Before 1939 such work was virtually confined to anthropology and economics. The need for a much wider scale of activity was one of the motives for the establishment of the Australian National University, with a Research School of Social Sciences and a Research School of Pacific Studies. In 1952 the Social Science Research Council was established, with support from the Carnegie Corporation and the Commonwealth Government, to encourage the advancement of the social sciences, to foster research and to subsidize the publication of studies. The Institute of Applied Economic Research, supported by private funds, was set up at the University of Melbourne in December 1962; its work ranges from the economics of industry to the economics of welfare. In 1961 the Australian National University set up the New Guinea Research Unit, based in Port Moresby, which is carrying out a range of investigations into economic and social change in the Territory of Papua

and New Guinea as it moves towards self-government. The first election held in the Territory in 1964 was the subject of a full-scale study. In 1964 the Commonwealth Parliament passed an Act to set up the Australian Institute of Aboriginal Studies, whose functions are to promote Aboriginal studies, assist universities and other institutions in training research workers, and to assist in the publication of research results. Despite these developments, the growth of research in the social sciences has been considerably slower than in the natural sciences. Its future growth will, however, be stimulated by the establishment of new universities with strong interests in the social sciences, and by the increased demand for information about social changes arising from both public and private sources.

Distribution of Australian research work

Research in Australia has not, on the whole, been strongly concentrated in particular fields. Nevertheless, some fields have attracted more attention than others, either because of their special economic or social importance or because Australia offers particular facilities for pursuing them. The wool industry, mineral processing, and the manufacture of paper from native hardwoods are examples of the former. The most notable example of the latter is radio-astronomy, for which Australia has special advantages because of its geographical position. The projected installation of one of the world's largest optical telescopes, to work in conjunction with radio-astronomical observations, will enable the exploitation of Australia's climatic advantages for optical astronomy. The combination will give Australia a premier position in this field of physical science. Hitherto the most notable achievements of Australian scientists have been in the biological sciences, as shown by the three Nobel Prizes won by Australians—Florey for work on penicillin, Burnet for immunology, and Eccles for neuro-physiology.

Commonwealth Scientific and Industrial Research Organization

The Commonwealth Scientific and Industrial Research Organization (C.S.I.R.O.) is Australia's largest civil scientific body. Established as the Council for Scientific and Industrial Research (C.S.I.R.) in 1926, it was re-organized in 1949 under the Science and Industry Research Act and now has a staff of more than 5,500 including some 1,700 professional scientists. An account of the organization and work of the former Council, and the earlier Commonwealth Institute of Science and Industry from which the Council was formed, was given in earlier issues of the *Official Year Book*. (See No. 14, p. 1061 and No. 37, p. 1183.)

The principal function of C.S.I.R.O. is to carry out scientific research for the primary and secondary industries of the Commonwealth and its Territories. C.S.I.R.O. does not conduct defence research, medical research or atomic energy research. The other powers and functions of C.S.I.R.O. as defined in the Science and Industry Research Act of 1949, include:

- the training of scientific research workers and the awarding of scientific research studentships and fellowships;
- the making of grants in aid of pure scientific research;
- the recognition or establishment of associations of persons engaged in any industry, for the purposes of carrying out industrial scientific research and the co-operation with, and the making of grants to, such organizations;
- the testing and standardization of scientific apparatus and instruments and the carrying out of scientific investigation connected with standardization;
- the collection and dissemination of information relating to scientific and technical matters;
- the publication of scientific and technical reports, periodicals and papers.

Before 1939 C.S.I.R. was engaged largely in research into problems of primary industry, in particular, plant and animal diseases and nutrition, soils, pasture improvement, insect pest control, usage of Australian timbers, food processing, and fisheries. Since 1939 an extensive programme of wool research has been developed and research has been extended into the physical and engineering sciences with particular reference to international standards, radiophysics, various aspects of chemistry, metal physics, meteorological research, mineral processing, building research, dairy products research, engineering research, and coal utilization.

Organization

C.S.I.R.O. is a statutory corporation operating under its own Act of Parliament and exercising its powers subject to the regulations and the approval of the Minister. The Minister responsible for the Act is the Prime Minister, but he has delegated this responsibility to the Minister-in-charge of Commonwealth Activities in Education and Research.

The governing body of the Organization is the Executive, which consists of nine members appointed by the Governor-General. There are five full-time members, one of whom is Chairman, and four part-time members. At least five of the members must possess scientific qualifications. The Executive is responsible to the Minister for the policy and the work of the Organization.

For carrying out its research work, C.S.I.R.O. is divided into four major group laboratories and a number of Divisions and Sections. The four group laboratories are the Animal Research Laboratories comprising four Divisions, the Chemical Research Laboratories comprising six Divisions, the National Standards Laboratory comprising two Divisions, and the Wool Research Laboratories comprising three Divisions. There are also seventeen independent Divisions in other research fields and an additional ten independent Sections. The Head Office is in Melbourne and associated with it are the Central Library (see pages 625-6), the Film Unit, and the Translation Unit. Regional Administrative Offices are located at Brisbane, Canberra, Melbourne, and Sydney. The Organization also maintains the Australian Scientific Liaison Office in London and the Office of the Scientific Attaché in Washington.

Since the Organization's activities are Commonwealth-wide and often involve extensive field work, a number of branch laboratories and field stations have been established in various parts of Australia. The more important of these are included in the following lists.

Laboratories and Divisions

Animal Research Laboratories, consisting of the following four Divisions:

- Animal Genetics, Sydney, with a branch laboratory and field station at Rockhampton, Queensland, and field stations at Armidale and Badgery's Creek, New South Wales, and at Cunnamulla, Queensland.
- Animal Health, Melbourne, with branch laboratories in Sydney and Brisbane, and field stations at Jirraoomba, Queensland, and Werribee, Victoria.
- Animal Physiology, Sydney, with a laboratory and field station at Armidale, New South Wales, and a branch laboratory in Brisbane.
- Nutritional Biochemistry, Adelaide, with a field station at O'Halloran Hill, South Australia.

Chemical Research Laboratories, Melbourne, consisting of the following six Divisions:

- Applied Mineralogy, with branch laboratories in Perth and Sydney.
- Chemical Engineering.
- Chemical Physics.
- Mineral Chemistry.
- Organic Chemistry.
- Physical Chemistry and
- Microanalytical Laboratory.

National Standards Laboratory, Sydney, consisting of the following two Divisions:

- Applied Physics.
- Physics, with the Solar Observatory at Culgoora, New South Wales.

Wool Research Laboratories, consisting of the following three Divisions:

- Protein Chemistry, Melbourne.
- Textile Industry, Geelong, Victoria.
- Textile Physics, Ryde, New South Wales.

The other Divisions are:

- Building Research, Melbourne, with an office in Port Moresby, New Guinea.
- Coal Research, Sydney.
- Dairy Research, Melbourne.
- Entomology, Canberra, with branch laboratories in Sydney, Brisbane, Hobart, Perth and Armidale, New South Wales, and field centres at Albury, Trangie, and Wilton, New South Wales, and at Amberley, Queensland.
- Fisheries and Oceanography, Cronulla, New South Wales, with branch laboratories in Brisbane, Melbourne and Perth.
- Food Preservation, Sydney, with branch laboratories at Gosford, New South Wales, (operated jointly with the New South Wales Department of Agriculture), and in Brisbane and Hobart.
- Forest Products, Melbourne.
- Land Research, headquarters in Canberra, and field stations and laboratories at Alice Springs, Katherine, and Darwin, Northern Territory, and Kununurra, Western Australia.
- Mathematical Statistics, Adelaide, with officers stationed at a number of Divisions and Sections and at the University of Melbourne.
- Mechanical Engineering, Melbourne.
- Meteorological Physics, Melbourne.
- Plant Industry, Canberra, with branch laboratories in Perth, Hobart, Brisbane and Melbourne, and at Deniliquin and Armidale, New South Wales, field stations and experimental farms at Canberra and Deniliquin, and at Kojonup and Baker's Hill, Western Australia, and a tobacco research institute at Mareeba, Queensland.

Radiophysics, Sydney, with the Australian National Radio Astronomy Observatory at Parkes, New South Wales, and the Solar Observatory at Culgoora, New South Wales.
 Soils, Adelaide, with branch laboratories in Brisbane, Canberra, Perth, and Hobart, and Townsville, Queensland.
 Tribophysics, Melbourne.
 Tropical Pastures, Brisbane, with branch laboratories at Townsville and Lawes, Queensland, and field stations at Samford and Woodstock, Queensland.
 Wildlife Research, Canberra, with a branch laboratory in Perth.

Sections

Computing Research, Canberra, with subsidiary installations at Adelaide, Melbourne and Sydney.
 Editorial and Publications, Melbourne.
 Horticultural Research, Adelaide, with a field station at Merbein, Victoria.
 Irrigation Research Laboratory, Griffith, New South Wales.
 Mineragraphic Investigations, Melbourne.
 Ore Dressing Investigations, Melbourne.
 Physical Metallurgy, Melbourne.
 Soil Mechanics, Melbourne, with a branch laboratory in Adelaide.
 Upper Atmosphere, Camden, New South Wales.
 Wheat Research Unit, Sydney.

The Organization's total budget for 1965-66 was more than \$38,000,000. About three-quarters of this was provided by the Commonwealth Government, while much of the remainder was provided by trust funds which have been set up by various primary producer groups. The largest of these is the Wool Research Trust Fund, but the wheat, dairy, beef cattle, leather, and tobacco industries also contribute substantial amounts. The funds are derived from a levy on produce matched by a Government contribution.

Mount Stromlo Observatory

Mount Stromlo Observatory—since 1957 incorporated into the Australian National University—is the largest observatory in the southern hemisphere. It is in effect the Department of Astronomy of the Australian National University, and its staff members assist in the training of the future astronomers of Australia. In its instrumental resources it is second only to some of the great observatories of America. Since it is located south of the Equator, it is placed especially advantageously for the conduct of research into the structure of the Milky Way system and of the Star Clouds of Magellan. The telescopes and auxiliary equipment at the Observatory provide access to parts of the sky that are forever hidden from the view of northern hemisphere astronomers. There is increasing emphasis on researches observational and theoretical, relating to the physics of the atmospheres of the stars. Mount Stromlo astronomers have therefore a special responsibility to do research on stars and other celestial objects at far southern declinations.

Mount Stromlo itself is a ridge of hills, approximately one mile long, situated at $35^{\circ} 19' 16''$ South Latitude and $149^{\circ} 0' 20''$ East Longitude, seven miles west of the city of Canberra. Its highest point is about 2,560 feet above sea level, and telescopes can be situated so as to be well screened from the lights of the city.

The first permanent installation on the site was established in 1911, but, because of the war and other circumstances, the development of the Observatory was delayed. It was not until 1925 that regular astronomical work could be undertaken. Since then the Observatory has developed steadily, and under its third Director the scientific staff now consists of fifteen astronomers. This does not include fifteen scholars and a number of oversea astronomers visiting Mount Stromlo for periods of a year or so. With technical, clerical and maintenance personnel, the total staff amounts to about 80.

Mount Stromlo Observatory possesses ten mounted telescopes with apertures ranging from five inches to 74 inches. The 74-inch reflector is of the largest size of telescope in the southern hemisphere. There are also special telescopes for the Time Service, and the University of Uppsala, Sweden, has a 26-inch Schmidt telescope on Mount Stromlo.

The principal fields of research at Mount Stromlo are as follows.

- Studies of the structure and dynamics of the Milky Way system.
- Investigation of the Large and Small Magellanic Clouds.
- Studies of the physical properties of the interstellar medium of gas and dust, and its relation to the spiral structure of our galaxy.
- Studies of the physics of the stars of the southern hemisphere by spectrographic means and by photoelectric techniques.
- Maintenance of the National Time Service, leading to studies of the variable rotation of the earth and polar motion.

Published accounts of the researches have a world-wide distribution.

The Observatory is at present completing a major expansion of equipment and staff. A permanent field station is in operation on Siding Spring Mountain (Latitude 31° 16' South; Longitude 148° 41' East; altitude 3,820 feet) near Coonabarabran, New South Wales. This is an area having less cloud than Mount Stromlo. The principal instrument is a modern 40-inch reflector, alongside of which is a 16-inch telescope. Both telescopes were built in the United States and are now in operation. A 24-inch polarization reflector will be placed into operation in the middle of 1966. Other sites are being examined for the future development of astronomy in Australia. A more detailed description of the Observatory's work is given in Year Book No. 46, pages 1142-4.

Australian Atomic Energy Commission

Establishment and functions of the Commission

In November 1952 a Commission of three members was appointed to control the Commonwealth's activities in relation to uranium and atomic energy, and in April 1953 upon the enactment of the *Atomic Energy Act* 1953 the Commission was established as a statutory authority with powers and functions as defined in the Act. Under amending legislation the number of Commissioners was increased to five in April 1958. The Commission is a corporate and autonomous body, controlling its own service. It functions under the direction of the Minister for National Development.

The functions of the Commission fall under two main headings. Firstly, it is responsible for undertaking and encouraging the search for and mining of uranium and is empowered to co-operate with the appropriate authorities of the States in connection with these and related matters. Secondly, it is authorized to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research, and generally fostering the advancement of atomic energy technology.

Uranium prospecting and mining

Production of uranium concentrate in Australia is now confined to the Rum Jungle Plant, Northern Territory. Since 1953 mining and treatment operations here have been conducted for the Commonwealth by a mining company. Mining of presently known reserves of uranium in this area was finished in 1963, but treatment of stock-piled ore will continue for some years. Australia's own domestic requirements of uranium oxide to the end of the present century are expected to be greater than currently known reserves. Because of this the Commonwealth has continued exploration for uranium in the Rum Jungle area, and has sought to encourage private producers to resume exploration.

Research

The Commission's Lucas Heights Research Establishment is Australia's atomic energy research and information centre. Its research programme is concerned with the development of nuclear power, the production and utilization of radioisotopes, and other related fields, and is directed towards the long-term development of national resources.

The research programme over the past few years has been a technical and feasibility study of an advanced high temperature gas cooled reactor system in which the core was composed of ceramic materials—oxides of uranium, plutonium, thorium and beryllium. Carbon dioxide was considered as the coolant gas. The study has been largely concerned with fundamental research and development in the fields of reactor materials, nuclear and reactor physics, and nuclear engineering. The feasibility study has provided valuable personnel training in nuclear science and engineering. The Commission now proposes to widen its research programme to study the technical and economic features of other types of reactors which have particular relevance to future nuclear power generation in Australia.

The use of radioisotopes is increasing rapidly in Australia in scientific research and development, in treatment of diseases and in agriculture and industry generally. Most of these, especially short-lived radioisotopes which cannot be imported, are being produced in the Commission's high flux research reactor HIFAR, at Lucas Heights. The A.A.E.C. is also producing the majority of cobalt 60 teletherapy sources for cancer treatment in Australia, and is exporting high activity sources to New Zealand and to Asia. The Commission is promoting research into radioisotope application and is co-operating with universities, industry and Governmental bodies in making available the most up-to-date techniques involving the use of radioisotopes in every field.

Large-scale hydrological investigations using radioactive tracers have been conducted by the Commission. These have included sand tracing in Botany Bay and silt tracing in Newcastle Harbour and the Hunter River in association with maritime and development authorities.

Extensive research and development work on the technical and scientific applications of gamma radiation is also being carried out. The possibilities of radiation for such purposes as industrial sterilization, food preservation, disinfestation of wheat and flour, and the control of fruit fly and other insect pests are being investigated. Scientists at Lucas Heights are also studying the biological effects of radiation and questions of health and safety.

Considerable potential exists in Australia for possible future application of nuclear explosives for large civil engineering and mining projects. The Commission has maintained close interest in the developmental work under the United States Plowshare Program. A United States expert visited Australia in 1962, and an Australian technical mission visited the United States of America in 1963 to make a detailed examination of the use of nuclear explosives for peaceful purposes. The Commission continues to receive data and reports relating to progress in this field.

The Research Establishment has developed facilities for the absolute standardization of radioisotopes and has participated in international intercomparisons in the health and safety field. Work is directed to various aspects of radiation dosimetry, to radiation biology, and to aspects of the toxicology of beryllium compounds.

Lucas Heights is a centre of specialized equipment and information. In addition to the research reactor HIFAR, used for testing materials and producing radioisotopes, there is much other equipment unique in Australia. All these facilities are available to universities and other institutions under suitable conditions. In these endeavours the Atomic Energy Commission is working in close co-operation with the United Kingdom Atomic Energy Authority, under arrangements which give Australia access to results of British research on peaceful atomic energy uses. Results of research in Australia are in like manner available to Britain. Work in Australia, though constituting a self-contained programme, is co-ordinated with the British programme to avoid overlapping of research objectives and duplication of investigations. Australia also has bilateral arrangements with the United States, Canada and Japan, and recently accredited a diplomatic mission to the European Atomic Energy Community (Euratom). Australia is also taking part in the promotion of the peaceful uses of atomic energy through the International Atomic Energy Agency. For the year 1964-65 the Commission placed \$110,000 worth of research contracts mainly within Australian universities on matters related to the research programme at Lucas Heights. Since 1954 the Commission has placed research contracts to a total value of about \$1,048,000.

The Australian Institute of Nuclear Science and Engineering comprises the Australian Atomic Energy Commission and Australian universities. The Institute's operations are financed by membership subscriptions and a Commonwealth Government grant which amounted to \$150,000 in 1965-66. The purpose of the Institute is to stimulate research and training in nuclear science and engineering within the universities and to arrange access for university research workers to the highly specialized equipment at the A.A.E.C. Research Establishment.

The Australian School of Nuclear Technology is jointly sponsored by the Commission and the University of New South Wales. Courses are now being offered in nuclear technology, production and use of radioisotopes, radiological safety, health physics, and other related topics. Application for admission is open to graduates from Australia and overseas.

Standards Association of Australia

The Standards Association of Australia is the national standardizing organization and issues Australian standard specifications and test methods for materials and products and standard codes of practice.

The Standards Association was established in July 1929 by the amalgamation of the Australian Commonwealth Engineering Standards Association and the Australian Commonwealth Association of Simplified Practice. It was incorporated by Royal Charter in 1950. It is an independent body in close touch with modern industrial requirements and has the full recognition and support of the Commonwealth and State Governments and of industry. Half of its funds are provided by Commonwealth Government grant, the remainder coming from membership subscriptions, other contributions, and sale of publications. Organizations, companies and individuals are eligible for subscription membership.

The governing body of the Association is a Council, on which industry is fully represented, together with official representatives of the Commonwealth and State Governments and their technical departments, and of scientific, professional and commercial organizations. Voluntary assistance is rendered in the drafting of specifications and codes by several thousand individuals who are experts in their particular fields. They are organized into some hundreds of committees. These committees are grouped under broad industry divisions, including building construction and civil engineering, electrical engineering, mechanical engineering, chemical, timber, plastics, packaging, and iron and steel.

The Association publishes standards of many kinds for the benefit of industry and commerce. Its specifications provide a suitable standard of performance, quality and dimension, and an equitable basis for tendering. They help to eliminate redundant qualities and sizes. They enable purchasers to obtain their requirements with greater assurance of satisfaction, with more rapid delivery, and without the necessity of drafting individual specifications. As a rule the Association creates national standards based on Australian practices, but attention is also given to international recommendations issued by the international standards bodies referred to below. There is also some endorsement of British standards, with or without modification. More than 1,400 Australian standards have been published and more than 600 projects are in hand.

The underlying principles covering the preparation of the specifications and codes are that they shall be in accordance with the needs of industry; that the common interests of producer and consumer be maintained; that periodical revision should keep the work abreast with progress; and that standardization be arrived at by general consent without coercion. The Association has two specialized libraries, one in Sydney and one in Melbourne, containing the national standards of all countries with standards organizations. These libraries serve to provide necessary material for committee work and also give freely a service to those concerned with standards or related matters, e.g. to importers and exporters seeking details of practice in other countries.

The Association has international affiliations and is a member, representing Australia, of the International Organization for Standardization (ISO) and of the International Electro-technical Commission (IEC). Close links are maintained with the British Standards Institution and the standards organizations of other British Commonwealth countries. The Association is the Australian agent of the British Standards Institution and can supply all British standards. Its functions are linked to some extent with those of the National Association of Testing Authorities in that whereas the Standards Association establishes and publishes standard test methods, the Association of Testing Authorities works to ensure that registered testing laboratories maintain their level of competence.

The headquarters office of the Association is in Sydney and there is a major branch office in Melbourne. Branch offices are located also in other capital cities and at Newcastle, New South Wales.

National Association of Testing Authorities

The National Association of Testing Authorities organizes testing facilities throughout Australia to serve private and governmental needs.

Membership is open to authorities whose testing laboratories conform to the standards of staffing and operation defined by the Association. Testing authorities may register their laboratories voluntarily. The Association assesses the competence of the laboratories and ensures that their standards of competence are maintained. Certificates of test issued by registered laboratories may be endorsed in the name of the Association. NATA endorsed test certificates are generally accepted by governmental, industrial and commercial interests.

Laboratories are registered for performance of specific tests in the fields of metrology, mechanical testing, electrical testing, optics and photometry, industrial radiography and flaw detection, heat and temperature measurement, chemical testing, biological testing, and acoustic and vibration measurement. At the end of 1965 there were 522 laboratories registered with the Association, which had a further ninety applications for registration before it.

Scientific societies

Royal Societies

The following table contains the latest available statistical information regarding the Royal Society in each State.

ROYAL SOCIETIES, DECEMBER, 1965

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Canberra
Year of charter	1866	1859	1884	1880	1913	1844	1930

Number of books in library	32,000	26,150	66,857	23,000	6,500	35,100	..
Societies on exchange list	395	335	285	350	231	314	..

(a) Cumulative total.

(b) Volumes of proceedings.

Australian Academy of Science

The Australian Academy of Science is the national institution representing science in Australia. Constituted by Royal Charter in 1954, the Academy promotes scientific knowledge and research, maintains standards of scientific endeavour and achievement in the natural sciences in Australia, and recognizes outstanding contributions to the advancement of science. The Academy represents Australian science and scientists at the national and international level, organizes meetings of scientists, holds symposia, and arranges for visits of scientists from other countries to Australia.

In its functions it is comparable with the Royal Society of London and national academies of science of many other countries. Its 106 Fellows (designated F.A.A.) are eminent in some branch of the physical or biological sciences in Australia, occupying professional positions in universities, the Commonwealth Scientific and Industrial Research Organization, other research organizations, and industry. A very few places are reserved for Fellows who have rendered conspicuous service in the cause of science. No more than six new Fellows are elected in any one year.

The Australian Academy co-ordinates Australian contributions to such co-operative ventures as the International Geophysical Year, the International Year of the Quiet Sun, and the International Biological Programme. Representation is provided at the General Assemblies of the International Scientific Unions and similar bodies relating to astronomy, geophysics, geology, physics, crystallography, mathematics, biochemistry, physiology, geography, biological sciences, chemistry, Antarctic research, space research, and oceanic research.

As the Australian Academy of Science is too young a body to be financially self-sufficient, the Commonwealth Government makes annual grants of general purpose funds without affecting the autonomy of the Academy. These grants, together with substantial private benefactions, enable the Academy to continue its work. Research fellowships provided by industry are administered. The Academy is managed by an elected council comprising a President, Treasurer, two secretaries and eight ordinary members who are drawn equally from the physical sciences and biological sciences. Chief administrative officer is the Executive Secretary who is not a Fellow. Its conference centre in Canberra was opened in 1959.

Australian and New Zealand Association for the Advancement of Science

This association was founded in 1887. Its headquarters are at Science House, Sydney, and congresses are held at intervals of approximately eighteen months in the various States and in New Zealand. The 39th Congress is to be held in Melbourne in January 1967.

Other scientific societies

The Linnean Society of New South Wales, with headquarters in Sydney, was founded in 1874. Sir William Macleay, who died in 1891, during his lifetime and by his will endowed the Society to the amount of \$134,000, which has been increased by investment to approximately \$240,000. The Society offers annually to graduates of the University of Sydney, who are members of the Society and resident in New South Wales, a research fellowship (Linnean Macleay Fellowship) in various branches of natural history. The library has some 19,000 volumes. Ninety volumes of proceedings have been issued, and the Society exchanges with about 300 kindred institutions and universities throughout the world. The membership at the end of 1965 was 299.

The British Astronomical Society has a branch in Sydney, and in each of the States there is a branch of the Australian Medical Association.

There are more than 200 other learned societies devoted to the study of particular sciences. Some of these, including the Royal Australian Chemical Institute and the Institute of Engineers, Australia, are qualifying bodies, admission to which is by qualification only. Others, such as the Institute of Food Technologists, are open to any interested person. Some societies, such as the Australian Biochemical Society, have annual symposia of a very high standard. A great many of these bodies publish appropriate journals.

STATE GOVERNMENT EXPENDITURE ON EDUCATION, ETC.

Estimates of the expenditure by each State Government on education and related items are shown in the following tables.

Expenditure from revenue and special funds

Details shown on page 654 relate to net expenditure from Consolidated Revenue and the special funds: Opera House Account, Maintenance and Repairs to Schools and Police Buildings Account and the Joint Coal Board Welfare Fund (New South Wales); Forestry Fund (Victoria); and Lotteries Commission Fund (Western Australia). Details exclude expenditure from the Commonwealth university grants, and expenditure on debt charges, pay-roll tax and superannuation payments. The cost of medical and dental inspection of school children is also excluded, as this service is considered to be more appropriately classified under public health.

For these reasons, the figures do not represent total current government expenditure on education in each State. Furthermore, because of differences in organization and accounting methods the information shown is not on exactly the same basis for all States, and consequently comparisons of State expenditures are approximate only.

STATE NET EXPENDITURE ON EDUCATION, ETC. (a) FROM REVENUE AND SPECIAL FUNDS, 1960-61 TO 1964-65

(\$'000)

Year	New South Wales	Victoria	Queensland	South Australia	Western Australia	Tasmania	Total
1960-61 . .	116,270	80,386	33,894	28,254	22,756	11,512	293,072
1961-62 . .	125,974	89,264	36,016	32,534	25,016	12,722	321,526
1962-63 . .	135,176	100,352	39,852	35,612	26,922	13,920	351,834
1963-64 . .	151,262	113,288	43,894	40,318	29,940	15,340	394,042

CHAPTER 19

NATIONAL ACCOUNTS

NATIONAL INCOME AND EXPENDITURE

National accounting aims at providing a systematic summary of the transactions taking place in the economy, especially of those that relate to the production and use of goods and services, and to transfers of income or capital between sectors of the economy.

Estimates of national income and expenditure have been compiled by the Bureau since 1944-45 and have been published annually as papers entitled *National Income and Expenditure* accompanying the Commonwealth Budgets. Detailed annual estimates of national income and expenditure on a revised basis were published in *Australian National Accounts, National Income and Expenditure*, 1948-49 to 1964-65. Preliminary estimates for 1965-66 were published in a Budget Paper. Quarterly estimates are published in *Quarterly Estimates of National Income and Expenditure*.

The figures shown on pages 659-66 are as published in *Australian National Accounts, National Income and Expenditure*, 1948-49 to 1964-65.

Description of the National Accounts

A brief description of the conceptual basis of national accounts is given in this section, but for a more detailed treatment of the concepts and structure of the Australian National Accounts reference should be made to *Australian National Accounts, National Income and Expenditure*, 1948-49 to 1964-65 or to Year Book No. 50, pages 1253-68.

Definition and relationship of the concepts of product, income and expenditure

The main concepts of product, income and expenditure in the Australian National Accounts are defined and expressed in equivalents as follows.

Gross national expenditure within a given period is the total expenditure on final goods and services (i.e. excluding goods and services produced or imported and used up in the process of further production) bought for use in the Australian economy. It is equivalent to gross national product, plus imports of goods and services, less exports of goods and services.

National turnover of goods and services is the total flow of final goods and services within a given period in the Australian economy as a whole (i.e. excluding goods and services produced or imported and used up in the process of further production) derived from production in Australia and imports. This value is equivalent to gross national product plus imports of goods and services or, alternatively, to gross national expenditure plus exports of goods and services.

Gross national product is the total market value of goods and services produced in Australia within a given period after deduction of the cost of goods and services, other than capital equipment, used in the process of production. Thus gross national product, as here defined, is 'at market prices'. It is equivalent to gross national expenditure, plus exports of goods and services, less imports of goods and services.

Gross national product at factor cost is that part of the cost of producing the gross national product which consists of gross payments to factors of production (labour, land, capital, or enterprise). It represents the value added by these factors in the process of production and is equivalent to gross national product, less indirect taxes, plus subsidies.

Net national product is the part of the value added within a given period by factors of production (labour, land, capital, or enterprise) which accrues as income to their suppliers after allowing for the depreciation of capital equipment. It is equivalent to gross national product at factor cost less allowance for depreciation.

National income is the net income accruing within a given period to Australian residents from their services in supplying factors of production (labour, land, capital, or enterprise) in Australia or overseas. It is equivalent to net national product, plus income receivable from overseas, less income payable overseas.

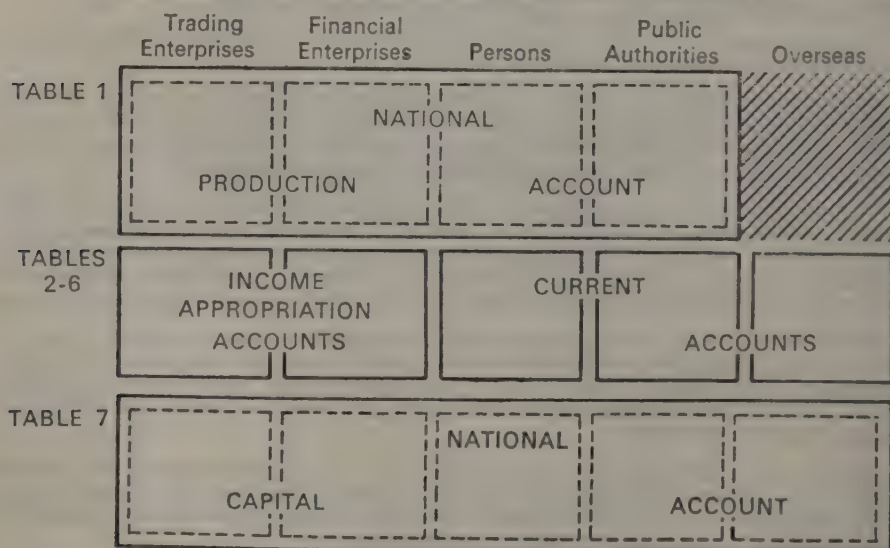

Personal income is the total income, whether in cash or kind, received by persons normally resident in Australia. It includes both income received in return for productive activity (such as wages, salaries and supplements, incomes of unincorporated enterprises, etc.) and transfer incomes (such as cash social service benefits, interest, etc.). Personal income also includes any property income received by non-taxable organizations such as private schools, churches, charitable organizations, etc. However, it excludes any income which might be said to accrue to persons in the form of undistributed company income and retained investment income of life insurance, etc., funds.

Framework of accounts and sectors

In the accounts shown in Tables 1 to 7 four internal sectors are distinguished—persons, public authorities, financial enterprises, and trading enterprises. In addition, there is an overseas sector which shows a summary of the transactions into which overseas governments, persons and businesses enter with Australian residents. All the sectors (except the overseas sector) engage in productive activity, but in the tables a national production account for the whole economy is shown instead of separate accounts for each sector. Similarly, the tables show only a national capital account for the economy, but a current (or income appropriation) account is shown for each sector. The system of accounts as thus envisaged is a completely articulated system in that a credit in any account must be matched with a corresponding debit in some other account—or in the same account if a complete consolidation of the transactions appropriate to that account has not been carried through.

The framework of sectors and accounts underlying the form of social accounts shown in this Year Book is set out in the following diagram. As stated in the previous paragraph, each sector could be envisaged as having separate production, appropriation and capital accounts, but in the tables compiled for Australia the production and capital accounts have been combined. In the diagram the solid rectangles depict the actual form of the tables, and the remaining rectangles show the full amount of detail which would be needed to provide the complete articulation of the accounts. The appropriate number of each table on pages 659–63 is shown on the left of the diagram.

ARTICULATION OF AUSTRALIAN NATIONAL ACCOUNTS

Description of the accounts

The *national production account* is a consolidation of the production accounts of each sector. The production account is shown as receiving revenue from the sale of goods and services to final buyers; all intermediate goods and services are cancelled out, since they represent a cost to one producer to offset the revenue of the other. On the payments side are shown the payments of indirect taxes, and, since the accounts are presented from the point of view of the producing unit, the wages and salaries paid to employees. The balance is the gross operating surplus which is carried to the trading enterprises income appropriation account.

The *trading enterprises income appropriation account* is shown as receiving the gross operating surpluses from the national production account, and dividends, non-dwelling rent and interest from other sectors. The allocation of this total to depreciation allowances and to various transfer payments (taxes, dividends, interest, etc.) is shown on the appropriation side. All net income of unincorporated enterprises is treated as being transferred to persons. Any income of trading companies not distributed but retained for use in the business is shown as undistributed income and transferred to the national capital account either directly or by way of the overseas current account (when it accrues to non-residents).

The *financial enterprises income appropriation account* is in the main similar to the preceding account. There is, however, no operating surplus, as property income (which is treated as transfer income, not as income of factors of production) is the sole receipt.

The *personal current account* records all receipts on current account whether of factor incomes (wages and salaries) or transfer incomes (interest, etc., dividends, net business incomes, cash benefits from public authorities, and remittances from overseas). On the payments side are shown current payments for goods and services and transfer payments (taxes, interest, etc., remittances to overseas). The balance is transferred to the national capital account under the heading of saving.

The *public authorities current account* reflects a distinction between current and capital expenditure, which is necessarily arbitrary in some measure and has been made on the basis of excluding from the current account expenditure on public works and increase in stocks. Expenditure on public works is taken to include new buildings, construction, plant and machinery, and any replacement of assets charged to loan funds or capital works votes. It includes capital expenditure of public enterprises, including replacements of assets charged to depreciation reserves but not those charged directly to working expenses. It includes all expenditure on roads for which a satisfactory distinction between new works and maintenance cannot be made, but excludes all defence expenditure, which is included in the current account.

The income of public enterprises shown in this account is derived by deducting from their operating surplus any depreciation shown by these enterprises in their published accounts, except in the case of enterprises (e.g. railways and Postmaster-General's Department) whose accounts are included in the Commonwealth or State budgets and are for the present analyzed on the basis of these cash accounts in which depreciation is not deducted. The depreciation allowances set aside by the enterprises whose accounts are not included in Commonwealth or State budgets are shown in the capital account. As in the case of persons, all overseas gifts are included in the current account. These include gifts for international relief, technical assistance, etc., grants, and other expenditure in connection with the administration of Papua and New Guinea.

The *overseas current account* records all transactions of a current nature between Australian and overseas residents. It should be emphasized that this account is shown here from the point of view of overseas residents, i.e. receipts from Australia are shown as credits, and payments to Australia as debits. Australians temporarily overseas are regarded as residents, and visitors to Australia as non-residents.

Capital transactions of the four domestic sectors and the net deficit on current account with overseas are shown in the *national capital account*. On the receipts side are shown the savings of the various sectors—saving by enterprises, personal saving, the retained investment income of insurance funds, and the public authority surplus on current account. Net apparent capital inflow from overseas and withdrawal from monetary reserves is also reflected in the item 'deficit on current account with overseas'. On the payments side are shown the purchases by all sectors of new buildings and capital equipment and the increase in the value of stocks. The private component of capital expenditure includes new dwellings and major alterations to dwellings and expenditure of a capital nature by private non-profit institutions (churches, schools, clubs, etc.), but excludes motor vehicles for personal use and other durable consumer goods, which are included in personal consumption expenditure.

Estimates at constant prices

For certain types of economic analysis it is useful to examine estimates of the principal flows of goods and services in the economy revalued in such a way as to remove the direct effects of changes in their prices which have occurred between the years under review. Such estimates, conventionally described as 'at constant prices', are presented in Table 8 (at both current and average 1959-60 prices) for gross national product, gross national expenditure, personal consumption expenditure, and certain of their components.

Constant price estimates amount to an attempt to express every component item of expenditure as the product of a price and a quantity, instead of only as a value, and to substitute for the actual current prices the prices that ruled in the chosen base year. Such estimates can be made only on the basis of approximations and assumptions, and this should be borne in mind in the interpretation and use of the results.

Estimates of gross national expenditure at constant prices. Where possible, a direct revaluation is made of each item at constant prices instead of using the prices at which quantities are bought or consumed. However, where it is not possible to express the values in successive years as the product of prices and standard units of quantity (e.g. for many items of capital expenditure by public and private sectors, for which homogeneous and standard components of expenditure do not exist), the values are divided by an appropriate price index, or by a substitute index of cost of production based on materials and wages. The estimates resulting from the application of this method, therefore, have considerable limitations for many uses, for example in studies of productivity. A broadly similar treatment is applied to current expenditure by public authorities, including expenditure on defence.

The information available on which to base an estimate of changes in stocks at constant prices is very limited, and the estimate made is subject to an appreciable margin of error. The method used involves an adjustment for stock revaluation, arising out of the replacement during the year of trading stocks with equivalent new stocks different in value from those held at the beginning of the year.

Estimation of gross national product at constant prices. The essential nature of gross national product is that it is the value added to goods and services by productive activity in the economy. The measure of gross national product obtained by adding up the major forms of income, namely, wages and salaries and gross operating surplus, is not in itself the measure of a flow of goods and services, and in these terms gross national product cannot be expressed at constant prices since it has no units of quantity to be revalued.

Gross national product, however, is the difference between the value of output and the value of materials used in production, that is, the difference between the values of two flows of goods and services. By revaluing each of these flows it is possible to express, in these terms, gross national product at constant prices. This relationship has been used in the estimation of gross national product at constant prices in Table 8.

Part I. of *Australian National Accounts, National Income and Expenditure, 1948-49 to 1964-65* contains a fuller discussion of the conceptual problems involved in making these estimates, and Appendix B of that publication contains a brief account of the sources and methods used in preparing the estimates.

Reliability and future revisions

Estimates of national income and expenditure are necessarily prepared from a very wide range of information, some of which is available quickly, some of it with a delay of several years after the period to which it relates. Some of it is closely related to the desired national income concepts, while some of it is not completely satisfactory in various respects, including coverage, concepts and timing. Estimates, in particular for the most recent years, are therefore subject to revision.

This applies especially to estimates based on income tax statistics—income of companies, non-farm unincorporated enterprises, depreciation, and part of gross private fixed investment—which are subject to substantial revisions for the last two years, as tabulations of income tax statistics do not become available until about twenty-two months after the end of each financial year.

It is not possible to put precise limits on the degree of revision likely in any particular series, nor to state degrees of reliability in a statistical sense. These depend in large part on the range and quality of the basic statistical data. For illustrations of common causes of revisions reference should be made to *Australian National Accounts, National Income and Expenditure, 1948-49 to 1964-65*.

National accounts and tables

Items in tables 1 to 7 are consecutively numbered from 1 to 28, with or without the addition of a letter, and this system is used to identify the corresponding credit and debit entries in the accounts and as a key to the notes on pages 667-70. In some cases the items correspond exactly, while in other cases an entry in one table is the sum of two or more entries in other tables; here the total is given a number, and the components have a number and a letter. In the remaining type of case all entries are given the same number and a distinguishing letter, because in this group one item is not the sum of one or more entries. The relationship between these items can still be traced through because the sum of all credit entries must equal the sum of all debit entries.

Description of items in the National Accounts

Tables 1 to 7

Item 1. Wages, salaries and supplements. Payments in the nature of wages and salaries as defined for pay-roll tax, including allowances for income in kind (board and quarters, etc.), together with supplements to wages, and pay and allowances of members of the forces. In addition to wages and salaries paid by employers subject to pay-roll tax, this item includes wages and salaries paid by employers not subject to pay-roll tax, based on estimates of employment and average earnings. Supplements consist of employers' contributions to pension and superannuation funds, direct payments of pensions and retiring allowances, and amounts paid as workers' compensation for injuries. Pay and allowances of members of the forces consist of active pay, field allowances, subsistence allowances, dependants' allowances, and the value to the members of the forces of food, clothing, normal medical attention, etc. supplied in kind.

Item 2. Gross operating surplus of trading enterprises. The operating surplus, before deduction of depreciation provisions, dividends, interest, rent and royalties, and direct taxes payable of all trading enterprises operating in Australia. Trading enterprises include all companies, public enterprises, partnerships, and self-employed persons engaged in the production of goods and services for sale, but exclude financial enterprises. Public trading enterprises are government undertakings which attempt to recover all, or a substantial part, of their costs through charges made to the public for the sale of goods and services. All owners of dwellings are included whether they let the dwellings or occupy them themselves. Trading enterprises' gross operating surplus is shown separately for companies (item 2a), unincorporated enterprises (item 2b), dwellings owned by persons (item 2c), and public enterprises (item 2d).

Item 3. Indirect taxes less subsidies. Indirect taxes comprise taxes on purchases, sales or other transactions, or on the ownership of property, etc., paid by enterprises, public authorities and persons. They include licence fees in respect of rights conferred, such as liquor licences, etc. Subsidies are transfer payments made with the object of assisting certain industries. Such payments may take the form of bounties on goods produced, subsidies to producers to ensure a guaranteed price, payments to transport undertakings to permit a reduction of freights on certain classes of goods, assistance to producers, etc.

Item 4. Imports of goods and services. The value of goods imported from overseas and amounts payable overseas for services. In Table 6 this item is sub-divided into the following components.

Item 4a. Imports f.o.b. Recorded trade figures adjusted for the purpose of balance of payments estimates. The principal adjustments are the addition of unrecorded imports, including ships and aircraft for use on overseas routes, the subtraction of films imported on a rental basis, imports of gold, goods for repair and goods intended for re-export, and the deduction of a 'valuation adjustment' representing the excess of the recorded value of imports (based on value for duty) over the estimated selling price to the importer as shown on invoices accompanying customs entries:

Item 4b. Transportation. Freight payable to foreign carriers on goods imported into Australia and transported between Australian ports, fares payable in Australia, the overseas expenditure of Australian ships, remittances to foreign airlines, and premiums (less claims) on marine insurance payable overseas on imports into Australia, less the net earnings on marine insurance business undertaken by Australian firms in respect of both exports and imports.

Item 4c. Travel. Net remittances in the form of travellers' cheques, etc. by Australians visiting overseas for pleasure and for business.

Item 4d. Government transactions. Expenditure overseas for defence, including the pay and allowances of personnel serving overseas, expenditure overseas on diplomatic, consular and trade representation, contributions to international organizations, government pensions paid abroad, overseas expenditure on immigration, and miscellaneous payments for services.

Item 4e. Other goods and services. Cinema and television film rentals payable overseas, expenses of Australian firms transacting business overseas, commissions, brokerage, etc., and the value of repairs on goods previously exported for repair and return, etc.

Item 5. Net current expenditure on goods and services—personal consumption. Net expenditure on goods and services for purposes of consumption by persons and private non-profit making bodies serving persons. This item excludes the purchase of dwellings and capital expenditure by non-profit making bodies (included in item 8), and maintenance of dwellings (treated as expenses of private enterprises), but includes personal expenditure on motor vehicles and other durable goods and the imputed rent of owner-occupied dwellings. Purchase of motor vehicles is the estimated expenditure by persons on new motor vehicles, secondhand motor vehicles purchased

from business enterprises and public authorities, and net dealers' margins on purchases and sales of motor vehicles within the personal sector. Motor vehicles include cars, station wagons, motor cycles, and motor scooters bought on personal account. The value of income in kind (e.g. food produced and consumed on farms, board and lodging provided free to employees) is included in both personal income and personal consumption expenditure, but goods chargeable to business (expense) accounts are excluded.

Item 6. Net current expenditure on goods and services—financial enterprises. The current expenditure of banks, instalment credit companies, short-term money market companies, and building societies after deduction of bank charges to customers. Charges by instalment credit companies are treated as interest receipts and therefore not offset against expenditure. This item includes wages, salaries and supplements, indirect taxes, and other payments for goods and services. Public financial enterprises are government businesses (mainly banks, including the Reserve Bank) which operate in a manner analogous to other financial enterprises, in that their current expenditure is largely financed by the net receipt of interest. The interest received by government housing authorities is treated as a receipt by public financial enterprises, but their other receipts, including net profit on sale of houses, and all their expenditure, are included in those of public trading enterprises.

Item 7. Net current expenditure on goods and services—public authorities. Expenditure by public authorities (not public enterprises) which does not result in the creation of fixed tangible assets or in the acquisition of land, buildings or secondhand goods (other than imported). It comprises expenditure on wages, salaries, and supplements, and on goods and services other than fixed assets and stocks; fees, etc., charged by public authorities for goods sold and services rendered are offset against purchases. Net expenditure overseas by public authorities and purchases from public enterprises are included. All expenditure on defence is classified as current.

Item 8. Gross fixed capital expenditure—private. Expenditure on fixed assets whether for additions or replacements. This item includes expenditure on dwellings (item 8a), other building and construction (item 8b), and vehicles, plant, machinery, etc. (item 8c). It includes also expenditure on secondhand assets (other than houses purchased from public authorities) as well as new assets, less sales of existing assets. Expenditure on ordinary repair and maintenance of fixed assets is excluded as being chargeable to current account. Major additions are, however, regarded as capital expenditure. New dwellings purchased by persons from public housing authorities are included in private capital expenditure.

Item 9. Gross fixed capital expenditure—public enterprises. Expenditure on fixed assets whether for additions or replacements, including wages and salaries paid by public enterprises in connection with capital works.

Item 10. Gross fixed capital expenditure—public authorities. Expenditure on fixed assets whether for additions or replacements other than for defence purposes. Because it has not been possible to make a satisfactory dissection, all expenditure on roads, including maintenance, is classified as fixed capital expenditure. Expenditure on housing, included in this item, includes the estimated expenditure on construction of dwellings for rental purposes and hostels for migrants and others, but excludes houses built for sale, which are included in private capital expenditure. Advances by War Service Homes Division and other authorities for financing home purchase schemes are also excluded.

Item 11. Increase in value of stocks. The change in book value of non-farm stocks held by trading enterprises and public authorities (item 11b) and the change in the value of farm stocks (item 11a).

Item 12. Statistical discrepancy. The difference between the sum of the direct estimates of gross national product and imports of goods and services on the one hand and the sum of the estimates of components of gross national expenditure and exports of goods and services on the other hand. Conceptually these two totals are the same. Inclusion of the discrepancy on the expenditure side of the national production account implies nothing as to the relative accuracy of the estimates of gross national product and expenditure. Similarly its inclusion in the capital account does not imply that estimates in this table are less accurate than those in other tables, or that capital expenditure estimates are less accurate than estimates on the receipts side of this account.

Item 13. Exports of goods and services. The value of goods exported overseas and receipts from overseas for other goods and services. In Table 6 this item is sub-divided into the following components.

Item 13a. Exports f.o.b. The recorded trade figures adjusted for balance of payments purposes. The adjustments are similar to those made to the recorded import figures but no change is made to the basis of valuation. The adjustment for unrecorded exports includes exports of uranium ores.

Item 13b. Transportation. The expenditure of overseas carriers in Australian ports, the overseas earnings of ships owned or chartered by Australian operators, the remittances from overseas to Australian domestic and international airline operators.

Item 13c. Travel. Net receipts of travellers' cheques, etc. from persons visiting Australia for pleasure and for business.

Item 13d. Government transactions. Receipts for services rendered by the Australian Government to other governments and other payments in Australia by foreign governments on defence and other projects, on diplomatic, consular and trade representation, and for pensions paid in Australia.

Item 13e. Other goods and services. The value of Australian production of gold less net industrial usage, business expenses of overseas firms in Australia, and commissions, brokerage etc.

Item 14. Depreciation allowances. The financial provisions made for depreciation which are deducted to obtain net income. The estimates represent, in the main, amounts allowed under income tax legislation, but include also the estimated depreciation on tenanted and owner-occupied dwellings owned by persons and provisions made by public enterprises. This item is divided into depreciation allowances of trading enterprises (item 14a) and of financial enterprises (item 14b).

Item 15. Interest, etc. Comprises interest, non-dwelling rent and royalties. This item appears in most accounts as receipts and payments of interest, etc. but in the case of some entries the amounts are combined with dividends and overseas profits. The item is shown net of intra-sector receipts and payments. Payment of interest, etc. by public enterprises is included in item 15g. Payment of interest, etc. by trading enterprises (item 15a) includes interest charged on borrowings for the purchase of a house by persons, which is treated as an appropriation from the gross operating surplus of dwellings owned by persons. Non-dwelling rent includes only actual payments. It is estimated net of the expenses of the owner of the premises on rates, maintenance, etc., which are treated as working expenses of the enterprises renting the building. Royalties include mining and forestry royalties paid to public authorities and royalties and fees for use of trade marks, patents, etc. paid overseas.

Item 16. Income tax, estate and gift duties. Income tax payable by trading and financial companies (items 16a and 16b) and persons (item 16c) are amounts payable at rates of taxation applicable in each year. Income tax payable by companies in respect of the most recent year's income is estimated on the basis of rates of tax applicable in respect of the preceding year's income. The difference between the amounts of income tax payable and the cash receipts by public authorities (part of item 16e) is included in item 16f. Income tax payable by persons (item 16c) includes the total income tax payable by individuals on all forms of income whether wages, business income or property income. Estate and gift duties (item 16d) are the amounts actually paid by persons in that year.

Item 17. Dividends. All receipts and payments of dividends, including dividends payable overseas and the remitted profits of Australian branches of overseas enterprises. Dividends payable (items 17a and 17c) are the dividends declared by trading and financial companies in respect of the year (including an estimate of dividends to be declared in respect of the most recent year). Receipts of dividends (other than dividends receivable from overseas subsidiaries) are cash receipts, and the difference between the amounts payable and received is included in item 17h. The items are shown net of intra-sector receipts and payments.

Item 18. Undistributed income. The undistributed income of companies comprising trading enterprises (item 18a) and financial enterprises (item 18c) is the balance of total company income, including profits receivable from overseas (items 18b and 18d) after deducting income tax and dividends payable, and is equal to the sum of undistributed income accruing to overseas residents (item 18f) and undistributed company income accruing to residents (item 18g). Profits receivable from overseas is the unremitted part of profits earned by overseas branches of Australian companies and undistributed profits of overseas subsidiaries.

Item 19. Unincorporated enterprises income. The gross operating surplus of unincorporated enterprises less interest, etc. paid and depreciation allowances. It comprises the income of farm unincorporated enterprises (item 19a) and the income of all other unincorporated enterprises (item 19b).

Item 20. Personal income from dwelling rent. The gross operating surplus of dwellings owned by persons less interest, etc. paid and depreciation allowances.

Item 21. Public enterprises income. Includes income of public trading enterprises (item 21a) and income of public financial enterprises (item 21b). For trading enterprises it is equal to gross operating surplus after the deduction of depreciation allowances; for financial enterprises it is

the net income after depreciation allowances, interest paid, and net current expenditure on goods and services by government banks are deducted from total receipts of interest and non-dwelling rent. Depreciation allowances deducted in arriving at the income of public trading enterprises are those shown in their published accounts, except in the case of enterprises whose accounts are included in the Commonwealth or State budgets and are analysed on the basis of their cash accounts in which depreciation is not deducted. In particular, no amount is included for the Post Office or most railways, since cash accounts for these enterprises have been used.

Item 22. Retained investment income of life insurance funds, etc. Total dividends, interest, etc. received by life insurance and superannuation funds, less depreciation allowances, income tax and dividends payable, and the undistributed income of non-mutual life insurance companies.

Item 23. Oversea gifts. All transfers to or from overseas on public authority or private account which are not payments for goods and services or payments of dividends, interest, etc.

Item 23a. Personal remittances overseas. Gifts of money by resident persons and private institutions, payments for sustenance, and transfers of emigrants' funds and legacies from Australia to overseas, together with the value of goods exported as personal effects and gifts.

Item 23b. Personal remittances from overseas. Gifts of money received from non-resident persons and private institutions, receipts for sustenance, and transfers of immigrants' funds and legacies from overseas to Australia, together with the value of goods imported as personal effects and gifts.

Item 23c. Public authority overseas grants. Grants, to, and payments made on behalf of, the Territories of Papua and New Guinea, and expenditure overseas in respect of technical assistance and relief under the Colombo Plan and United Nations projects. Payments to United Nations and other organizations due by virtue of membership of these organizations are included in net current expenditure on goods and services.

Item 24. Personal saving. The excess of personal income over the sum of personal consumption expenditure, interest paid, income tax payable and estate and gift duties paid, and remittances overseas. It includes saving through life insurance and superannuation funds (defined as premiums, etc. paid less claims, etc. received and administrative expenses of life insurance offices) and the increase in assets of marketing authorities. It includes also changes in holdings of cash and securities, the net increase in bank deposits less advances, the reduction in the outstanding advances of instalment credit companies to persons and unincorporated enterprises, and the increase in the equity of persons in dwellings and in capital equipment, buildings and stocks of unincorporated enterprises. Personal saving is estimated as the balancing item in the personal current account.

Item 25. Cash benefits. Current transfers to persons from public authorities in return for which no services are rendered or goods supplied. Principal components are scholarships; hospital, medical, pharmaceutical, maternity, sickness, and unemployment benefits; child endowment; widows', age, invalid, and repatriation pensions; and attendance money for waterside workers.

Item 26. Grants towards private capital expenditure. Grants to meet part of the costs of private capital expenditure, e.g. Commonwealth Home Savings grants, grants towards construction of science laboratories in private schools and of houses for aged persons, etc.

Item 27. Public authorities surplus on current account. The excess of current revenue, including income of public enterprises, over current outlay. Current outlay includes current expenditure on goods and services, as defined in item 7, and transfer payments (interest, cash benefits, subsidies, grants towards private capital expenditure, and overseas grants). The surplus is transferred to the capital account where it is shown as part of total funds available for financing capital outlay.

Item 28. Oversea balance on current account. The excess of payments to the rest of the world on current account over receipts from the rest of the world on current account. In the national capital account it is shown divided into drawings on Australia's overseas monetary reserves (item 28a) and net apparent capital inflow (item 28b).

CHAPTER 20

PRIVATE FINANCE

Further information on the subjects dealt with in this chapter is contained in the annual bulletins *Banking and Currency* and *Insurance and Other Private Finance*. Current information is contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics* (monthly), and the monthly mimeographed statements *Banking Statistics* (bulletin and preliminary statement), *Savings Bank Statistics* (bulletin and preliminary statement), *Australian Life Insurance Statistics*, and *Finance Companies: Australia*. The annual mimeographed bulletin *Australian Fire, Marine and General Insurance Statistics* contains the latest information available on the subject of general insurance. Other relevant mimeographed statements are: *Finance Companies: July 1964 to October 1965*; *Instalment Credit for Retail Sales*; *Unit Trusts, Land Trusts, and Mutual Funds*; *New Capital Raisings by Companies in Australia*; and *Capital and Maintenance Expenditure by Private Business in Australia*—quarterly; *Government Pension and Superannuation Schemes*, 1963–64; *Survey of Private Pension and Retiring Allowance Schemes*, 1962–63; *Survey of Selected Large Private Pension Funds*, 1964–65, and *Registered Building Societies*, 1963–64. Preliminary monthly statements *Instalment Credit for Retail Sales* and preliminary estimates of *New Capital Raisings* are issued also.

CURRENCY

Pre-decimal currency

Until 13 February 1966 Australian currency was based on the British unit, which is the pound (£) divided into 20 shillings (s.) each of 12 pence (d.). When the Australian currency was introduced in 1909 the Australian pound was specified as equivalent to 123.27447 grains of gold $\frac{11}{12}$ ths fine or 113 002 grains of fine gold and, until the depression in 1930, was identical with the pound sterling. There was a gradual depreciation of the Australian pound in terms of sterling from the beginning of 1930 until 3 December 1931 when it was stabilized at the rate of £125 Australian = £100 sterling. This relationship has been maintained until the present time. Following the depreciation no action was taken to define the value of the Australian pound in terms of gold until 5 August 1947 when the Australian Government advised the International Monetary Fund, in terms of the membership agreement, that the par value of the Australian pound was 2.86507 grams (44.2148 grains) of fine gold. From 18 September 1949 this was reduced to 1.99062 grams (30.720 grains) of fine gold. It remained unchanged until the introduction of decimal currency (see below).

When the Commonwealth was established in 1901, the currency in Australia consisted of United Kingdom gold, silver and bronze coins, notes issued by the banks, and Queensland Treasury notes. Queensland Treasury notes were in circulation in Queensland only, having superseded bank notes in that State after the 1893 crisis. Under the Commonwealth Constitution the control of currency, coinage and legal tender and the issue of paper money was vested in the Commonwealth. The Commonwealth assumed these powers by enacting the *Coinage Act* 1909 and the *Australian Notes Act* 1910.

Decimal currency

Decimal currency was introduced into Australia on 14 February 1966. The new system is based on a major unit—the dollar—equal to ten shillings in the old currency. The minor unit—the cent—is one hundredth part of the major unit and is equal to 1.2 pence. The par value of the Australian dollar, under the terms of the International Monetary Fund, was established at 0.99531 grams of fine gold.

The official changeover arrangements provide for a dual currency and for a transition period of eighteen months to two years following the changeover. In broad terms, the main features of the transition period are that (i) banking business will be conducted entirely in decimal currency, (ii) monetary machines will be progressively converted to \$ c operation, (iii) some businesses will operate in £ s. d. while others will operate in decimal currency, and (iv) £ s. d. and \$ c notes and coins will be interchangeable.

Legislation

Commonwealth. The *Currency Act* 1963 provided for (i) the introduction of a decimal currency system, (ii) established the dollar as the new monetary unit, (iii) established its relationship to the system of pounds, shillings and pence, (iv) settled the denominations and composition of the new decimal coins, (v) furnished the Treasurer with certain powers to effect the transition to the decimal currency system, and (vi) gave statutory effect to the appointment of the Decimal Currency Board. The Act made no provision for the transition period.

During 1965 the following legislation was enacted by the Commonwealth Parliament: the *Decimal Currency Board Act* 1965 (No. 94 of 1965); the *Currency Act* 1965 (No. 95 of 1965); the *Reserve Bank Act* 1965 (No. 96 of 1965); and a number of miscellaneous amending Acts. The sections of the *Currency Act* 1963 dealing with the Decimal Currency Board were renamed as the *Decimal Currency Board Act* 1965. The other provisions of the *Currency Act* 1963 were repealed by the *Decimal Currency Board Act* 1965, and were re-enacted, with amendment, as the *Currency Act* 1965. The *Currency Act* 1965 re-enacted the repealed parts of the *Currency Act* 1963, with some amendments, repealed the *Coinage Act* 1909-1947 and provided for the circumstances of the dual-currency transition period following the changeover. The *Reserve Bank Act* 1965 amended the *Reserve Bank Act* 1959 (the Principal Act) by providing for the denominations and specifications of the new dollar notes, and that the existing and the new notes will be legal tender for amounts of £ s.d. or \$ c. A number of money references in other Commonwealth laws needed specific amendment—that is, where the exact conversion provided for by the *Currency Act* 1965, in the 'blanket provision' of section 10, would not be appropriate. About thirty Acts required revision in this way (*see* pages 70-5).

State. While the 'blanket provision' referred to above provides that a reference to an amount of £ s.d. in a law of the Commonwealth will be construed after the changeover as a reference to the exact \$ c equivalent, this provision does not extend to State Acts. Each State has therefore passed legislation substituting amounts of \$ c for amounts of £ s.d. in State Acts.

Relationship between £ s.d. and \$ c

The relationship between the £ s.d. and decimal currency systems is established by the *Currency Act* 1965. The relationship is:

£1 = \$2 1s. = 10 cents 1d. = 5/6 cent

This provides the basis for conversion of amounts from one currency to the other. Problems in conversion arise, however, because there is a difference in value between the minor units (the penny and the cent) in the two systems, and because, for certain purposes, it is not practicable to use fractions of a cent or of a penny. To meet these problems, the *Currency Act* 1965 includes a table showing the whole-cent conversion of each pence amount up to and including elevenpence. The following table shows both exact and whole-cent conversions of pence amounts.

Pence	Exact cents	Whole cents	Difference in cents	
			+	-
1	$\frac{5}{6}$	1	$\frac{1}{6}$	
2	$1\frac{1}{3}$	2	$\frac{1}{3}$	
3	$2\frac{1}{2}$	2		$\frac{1}{2}$
4	$3\frac{1}{3}$	3		$\frac{2}{3}$
5	$4\frac{1}{6}$	4		$\frac{5}{6}$
6	5	5
7	$5\frac{5}{6}$	6	$\frac{1}{6}$	
8	$6\frac{2}{3}$	7	$\frac{1}{3}$	
9	$7\frac{1}{2}$	8	$\frac{1}{2}$	
10	$8\frac{1}{3}$	8		$\frac{1}{3}$
11	$9\frac{1}{6}$	9		$\frac{5}{6}$
12	10	10
Total differences			$1\frac{1}{2}$	$1\frac{1}{2}$

The use of the whole-cent conversion is prescribed in the following circumstances:

- where an amount of £ s.d. is payable before the changeover, but is paid after that day in \$ c;
- where, after the changeover, an amount of £ s.d. is paid by cheque or other bill of exchange or promissory note (which must be in terms of \$ c);

- (c) where an amount of £ s.d. is payable before the close of the transition period, but is paid after that period—in \$ c; and
- (d) where an amount of £ s.d. is payable periodically under a contract, agreement, etc. (e.g., life assurance premiums, hire purchase payments, rent, etc.).

An exact conversion is prescribed for amounts of £ s.d. appearing in laws of the Commonwealth, contracts, agreements and legal documents generally—except that periodical payments in contracts, etc., will be converted on a whole-cent basis. Where the law does not prescribe the conversion to be used, the circumstances of the case will indicate the appropriate conversion. Generally, an exact conversion is appropriate for unit rates, and a whole-cent conversion for final balances. The manner in which prices expressed in £ s.d. will be fixed in \$ c is not covered by the Commonwealth currency law.

Conversion tables

For the guidance of those having to convert amounts from one currency to the other, the Decimal Currency Board issued five conversion tables.

An EXACT EQUIVALENTS table—which converts amounts of £ s.d. to their equivalents in \$ c.

A BANKING AND ACCOUNTING table—showing the conversion of amounts of £ s.d. in whole pence on a whole-cent basis.

A COMPREHENSIVE CONVERSION table—showing the conversion of amounts of £ s.d. ending in halfpence on a whole-cent basis.

A CONVERSION TABLE: \$ c TO £ s.d.: FOR USE WITH PRICE-COMPUTING INSTRUMENTS—showing the conversion of amounts of \$ c in whole cents on a nearest-penny basis.

A CONVERSION TABLE: \$ c TO £ s.d.: FOR USE WITH PRICE-COMPUTING INSTRUMENTS—showing the conversion of amounts of \$ c in whole cents on a nearest-halfpenny basis.

These tables are reproduced at the beginning of this volume.

Commonwealth assistance

In accordance with the Government's original decision, assistance is being made available to owners of a large proportion of those monetary machines requiring conversion or adaptation for decimal currency operation. Principal machines which qualify are: cash registers, adding machines, accounting machines, punched card tabulators and electronic computers, price-computing scales and fabric measuring machines, electric petrol pump computers, postal franking machines, taximeters, and cheque-writing machines. For some machines the assistance takes the form of a payment of cash compensation to the machine owner; for others it takes the form of conversion to \$ c operation, or replacement with an equivalent decimal machine in certain cases where replacement would cost no more than conversion, as part of a programme planned and supervised by the Decimal Currency Board.

The conversion or replacement of eligible cash registers, adding machines and accounting machines—totalling approximately 250,000—presents the biggest single task in the Government's assistance programme. It will be carried out, on a regional zone basis, over a period of 100 weeks from the end of January 1966. For this latter programme each State has been separated into three broad areas, city, suburban and country. Conversion is to proceed simultaneously in each State and in zones within each of these areas.

Changeover date

On Monday, 14 February 1966 (C-day), all Australian banks commenced operating in \$ c. They had operated in £ s.d. until the close of business on Wednesday, 9 February. During the intervening four days, in which they completed their conversion arrangements, they were not open for normal business. Apart from banks, all other organizations, businesses and institutions were left free to convert their financial operations to a \$ c basis at any convenient time during the transition period; for most business concerns this would be when their machines were converted or replaced. However, a considerable number of organizations commenced operating in decimal currency, with the banks, on changeover day, having made their own changeover arrangements independently of the official programme for the conversion of business machines. These organizations included all Commonwealth and State Government Departments, all railways and government bus and tram services, and many private firms, particularly larger ones.

Transition period

Decimal currency became the official currency on 14 February 1966, and decimal notes and coins became legal tender from that time. From that day onwards all cheques and other bills of exchange, and all promissory notes, have to be executed in dollars and cents. During the transition period, however, contracts and other monetary transactions may be arranged in terms of either £ s.d. or \$ c. The amounts owing under such contracts and transactions must be settled in terms of \$ c if payment is made by cheque. Where payments are made by cash the following arrangements apply:

- \$1 note interchangeable with 10s. note;
- \$2 note interchangeable with £1 note;
- \$10 note interchangeable with £5 note;
- \$20 note interchangeable with £10 note;
- 50-cent coin will be used as a 5s. coin;
- 20-cent coin interchangeable with florin;
- 10-cent coin interchangeable with shilling;
- 5-cent coin interchangeable with sixpence;
- 2- and 1-cent coins in lots of the value of 5c (= 6d.) will pay amounts of sixpence;
- Threepences, pennies and halfpennies in lots of the value of 6d. (= 5c) will pay amounts of 5 cents.

After the end of the transition period (which will be fixed by Proclamation) all references to £ s.d. in contracts, agreements, etc. with continuing effect will be converted automatically into their exact equivalents in decimal currency. Payments of amounts owing in terms of £ s.d. will be made in \$ c on a nearest-cent basis according to the conversion table shown in the Currency Act. After the end of the transition period contracts and other documents will have to be made out in terms of \$ c, and threepences, pennies and halfpennies will be legal tender only in multiples of sixpence—as will have been the case during the transition period for banking transactions and for cash payments of decimal amounts. All £ s.d. notes and coins from sixpence upwards will continue to be legal tender on the same basis as decimal notes and coins.

Notes and coins*Dimensions—Notes*

\$1	.	.	.	140 mm. x 70 mm.	(approximately 5½ inches by 2¾ inches)
\$2	.	.	.	145 mm. x 72.5 mm.	(" " 5½ " by 2¾ ")
\$10	.	.	.	155 mm. x 77.5 mm.	(" " 6¼ " by 3 ")
\$20	.	.	.	160 mm. x 80 mm.	(" " 6¼ " by 3¼ ")

Dimensions—Coins. Sample measurements have given the following results.

DIMENSIONS OF DECIMAL CURRENCY COINS
(Inches)

	1-cent (bronze)	2-cents (bronze)	5-cents (cupro- nickel)	10-cents (cupro- nickel)	20-cents (cupro- nickel)	50-cents (silver)
Diameter—						
Maximum	0.693	0.854	0.767	0.932	1.124	1.2415
Minimum	0.687	0.850	0.762	0.927	1.120	1.2403
Average	0.690	0.852	0.765	0.930	1.123	1.2409

Average	2.874	3.775	2.6425	3.4862	4.507	4.075

Australian coinage

Prior to Federation in 1901 the coins circulating throughout Australia were many and varied. For a full account of the history of pre-Federation coinage see Year Book, No. 51, 1965, pages 812-14. After Federation the only coins which were legal tender within Australia until 1909 were English coins.

The Constitution in 1901 gave the Commonwealth Parliament power to make laws with respect to coinage and in 1909 the Coinage Act was passed prescribing the standard weight and fineness of coins. The first coins exclusively for circulation in Australia—silver (925 fine) florins, shillings, sixpences and threepences—were minted in 1910, by the Royal Mint, London, followed by bronze coins in 1911. The Melbourne Branch of the Royal Mint produced in 1916 the first Commonwealth coins (pence) minted in Australia. The Sydney Branch of the Royal Mint commenced production of halfpennies in 1919 and in 1922 the Perth Branch minted its first pennies.

The Commonwealth Treasury administered the Coinage Act which was repealed and replaced by the *Currency Act* 1965. All coins produced under authority of these two Acts have been ordered by the Treasury.

Australian Mints

Soon after the discovery of gold in Australia a branch of the Royal Mint was established in Sydney in 1855. The Melbourne branch was opened in 1872 and the Perth Branch in 1899. The States of New South Wales, Victoria and Western Australia provided an annual endowment in return for which the mint receipts were paid to the respective State Treasuries. Established in the three main gold-producing colonies to refine and assay gold, the branches were soon also minting sovereigns and half-sovereigns for the British Government. The Commonwealth Government exercised no control over the operations of these mints. Its role has been that of a commercial customer concerned with the quality and cost of the coin produced to its orders. Owing to losses incurred in its operations, the Sydney branch was closed at the end of 1926.

The Australian branches of the Royal Mint were concerned primarily with the refining of gold, minting of Imperial gold coins and the production of bars and ingots of gold bullion for export. The minting of Imperial gold coins was discontinued in September 1931.

From 1910 to 1916 Australian coins were minted in England by the Royal Mint, London, and the Mint, Birmingham Ltd., and in 1916, 1917 and 1918 by the Indian Mints. The minting of Australian coins was undertaken by the Australian Mints in 1916, and coins have been minted at the Melbourne branch of the Royal Mint from 1916 to the present time, at the Sydney branch from 1919 until that Mint closed in 1926, and at the Perth branch in 1922 and from 1940 to the present time.

During the 1939-45 War the two Australian mints were unable to meet the demand for Australian coins, and some coins were minted in the United States of America and India. In 1951-52 and 1952-53 some coins were minted at the Royal Mint, London, to meet the heavy demand for coins. Details of Australian coins obtained from each mint to 30 June 1965 are as follows: Melbourne, \$115,911,000; Perth, \$4,843,396; Sydney, \$976,000; United Kingdom Mints, \$6,032,000; United States Mints, \$12,000,000; Indian Mints, \$338,000; total \$140,100,396.

The construction of the Royal Australian Mint in Canberra provided the Commonwealth Government for the first time with facilities for minting its own coinage.

Coins in circulation

Brief historical notes relating to the Australian pre-decimal coinage are given in Year Book No. 37, pages 557 and 558. For weight, metal, composition, etc., of Australian pre-decimal coins in circulation see Year Book No. 39, page 697. The silver coins issued prior to July 1947 had a millesimal fineness of 925 (thirty-seven fortieths silver and three-fortieths copper) and those issued after 1 July 1947 (dated 1946 and later) had a millesimal fineness of 500 (one-half silver and one-half other metals).

The net issues of Australian silver and bronze coins from 1910 to 30 June 1965 were: crown (5s.), \$551,000; florin (2s.), \$47,102,000; shilling (1s.), \$21,530,000; sixpence (6d.), \$15,980,000; threepence (3d.), \$15,463,000; total silver coin, \$100,498,000; penny (1d.), \$6,818,000; half-penny ($\frac{1}{2}$ d.), \$1,804,000; total bronze coin, \$8,621,000. Except in the total, no allowance has been made for \$128,000 worth of damaged silver coin, for which denominations are not available, withdrawn since 1910.

Profits on coinage

Australian coins are token coins and, as the face value of the coins is greater than the value of the bullion they contain, a profit is made from their issue. This profit forms part of the Commonwealth Consolidated Revenue. In the following table details are given of the value of coins issued, the cost of bullion, the cost of minting, and sundry expenses connected with the issue, and the profits made on the issue of coins during the years 1960-61 to 1964-65.

AUSTRALIAN SILVER AND BRONZE COINS: PROFITS FROM ISSUE
1960-61 TO 1964-65
 (\$'000)

Year	Face value of coin issued (a)	Cost of bullion	Gross profit	Cost of minting and sundry charges	Net profit
Silver coin—

(a) Includes selected and proof pieces.

Minus sign (—) denotes a loss.

Gold receipts and issues

Since early in the 1939-45 War all gold has been acquired by the Reserve Bank, and the export and use of gold has been subject to regulation by the Commonwealth Government. All trading banks in Australia, the Deputy Masters of the branches of the Royal Mint in Perth and Melbourne, and two private refining companies were authorized under the Banking (Gold) Regulations to deal in gold on behalf of the Reserve Bank. The Melbourne Mint ceased to deal in gold in 1964 and from 1 August 1964, a third refining company replaced the Melbourne Mint as an authorized dealer to receive and issue gold. The Royal Australian Mint at Canberra is not authorized to receive and issue gold.

The receipts of gold at Australian mints during 1964 and 1965 amounted to 809,468 and 727,333 fine ounces respectively (Perth, 740,271 and 727,333 fine ounces respectively, Melbourne, 69,197 fine ounces in 1964).

Details of the production of gold, subsidy payable, etc. are given in the chapter Mineral Industry.

Price of gold

The following table shows the average prices of gold, the average values of the sovereign's gold content in London, and the sovereign's Reserve Bank buying price in Australia for the years 1960-61 to 1964-65. The average price of gold in Australia is based on the Reserve Bank's buying price for gold lodged with the mints.

PRICE OF GOLD: LONDON AND AUSTRALIA, 1960-61 TO 1964-65

Year	London		Australia		
	Average price per fine oz.	Average value of sovereign's gold content	Average price per fine oz.	Sovereign	
				Reserve Bank buying price	Equivalent to a premium on mint par value of—
	£stg s. d.	£stg s. d.	\$	\$	per cent
1960-61 . . .	12 11 9	2 19 3	31.25	7.25	267.8
1961-62 . . .	12 10 1	2 18 10	31.25	7.25	267.8
1962-63 . . .	12 10 6	2 19 0	31.25	7.25	267.8
1963-64 . . .	12 10 9	2 19 1	31.25	7.25	267.8
1964-65 . . .	12 11 8	2 19 3	31.25	7.25	267.8

In December 1951 arrangements were made whereby producers could sell a proportion of newly-mined gold for industrial purposes on overseas premium markets. Under these arrangements gold is acquired by the Reserve Bank in the usual manner and sold, at the Bank's buying price, to an association representing gold producers participating in the scheme. The association pays the Bank's handling charges and the costs of preparation of the gold and makes arrangements for export and sale. The gold can be sold only against payment in United States dollars. Profits earned by the association after meeting administrative expenses are distributed to members in proportion to the quantity of gold delivered to the Reserve Bank. Until August 1952, when permission was given for the export of fine gold, gold exported under this arrangement was not to exceed a fineness of 22 carats ($11\frac{1}{12}$ ths).

The average prices per fine ounce in Australian currency obtained for gold exported under this scheme for each month during 1964-65 for which there were sales were: July, \$31.365; September, \$31.433; October, \$31.488; November, \$31.506; December, \$31.510; January, \$31.507; February, \$31.480; March, \$31.465; April, \$31.541; May, \$31.437; and June, \$31.422.

The Australian note issue

In 1901 notes in circulation in Australia consisted of bank notes payable in gold coin and issued by the trading banks and Queensland Treasury notes. Bank notes circulated in all States except Queensland, but were not legal tender except for a brief period in 1893 in New South Wales. There were, however, some restrictions on their issue or other provisions for the protection of the public. Queensland Treasury notes were issued by the Queensland Government and were legal tender in that State. Notes of both categories continued in circulation until 1910 when the *Australian Notes Act 1910* and *Bank Notes Tax Act 1910* were passed by the Commonwealth Parliament. The *Australian Notes Act 1910* prohibited the circulation of State notes as money and the *Bank Notes Tax Act 1910* imposed a tax of ten per cent per annum on 'all bank notes issued or re-issued by any bank in the Commonwealth after the commencement of this Act, and not redeemed'. These Acts put an end to the issue of notes by the trading banks and the Queensland Treasury. The *Reserve Bank Act 1959* expressly prohibits persons, including States, from issuing bills or notes payable to bearer on demand and intended for circulation.

Pre-decimal currency notes

The *Australian Notes Act 1910* empowered the Governor-General to authorize the Commonwealth Treasurer to issue Australian notes in denominations of 10s., £1, £5, and £10 and any multiple of £10. These notes were to be legal tender and payable in gold coin on demand at the Commonwealth Treasury at the seat of Government. The Act came into force by proclamation on 1 November 1910 and notes were issued forthwith.

The *Australian Notes Act 1910* vested control of the note issue in the Commonwealth Treasury. In 1920 control of the note issue was transferred from the Treasury to the Commonwealth Bank. A new Note Issue Department under the control of a Notes Board was created for this purpose. In 1924 a Commonwealth Bank Board was established and control of the Note Issue passed from the Notes Board to the new Bank Board. In 1959, when the Reserve Bank was established, control of the note issue passed to the new Reserve Bank Board.

The *Commonwealth Bank Act* 1920 authorized the issue of a 5s. note. However, notes of this denomination have not been issued. As stated above, Australian notes originally issued were payable in gold coin on demand at the Commonwealth Treasury at the Seat of Government. When the control of the Australian Note Issue was transferred to the Note Issue Department of the Commonwealth Bank, it was provided that the notes should 'bear the promise of the Treasurer to redeem the notes in gold coin on demand at the Head Office of the Commonwealth Bank'. By the *Commonwealth Bank Act* 1932 this provision was abolished, and since 1932 Australian notes have not contained any such promise and are merely stated to be legal tender throughout the Commonwealth of Australia and the Territories of the Commonwealth.

Between 1910 and the changeover to decimal currency, Australian notes were issued in denominations of 10s., £1, £5, £10, £20, £50, £100, and £1,000. Notes of the £1,000 denomination were never issued to the public but were used initially by banks as a means of effecting inter-bank settlements and later by the Reserve Bank to facilitate internal transfers. The issue to the public of £20, £50 and £100 notes ceased in 1945. Immediately prior to the changeover to decimal currency, notes in denominations of 10s., £1, £5, and £10 were on issue. All £ s. d. notes issued prior to the changeover remain legal tender to any amount within Australia until a date to be fixed by proclamation as provided in the *Reserve Bank Act* 1965.

Decimal currency notes

The *Reserve Bank Act* 1965 authorized the Bank to issue Australian notes in denominations of \$1, \$2, \$5, \$10, \$20, or \$50, or in any other denomination that the Treasurer, by instrument of writing published in the Gazette, determines. The Act provided that each note of the previous currency should have the value in dollar currency set out in the following table:

10s.	• • • • •	\$1
£1	• • • • •	\$2
£5	• • • • •	\$10
£10	• • • • •	\$20
£20	• • • • •	\$40
£50	• • • • •	\$100
£100	• • • • •	\$200
£1,000	• • • • •	\$2,000

The Act came into force on 14 February 1966 and notes of \$1, \$2, \$10, and \$20 denominations were issued forthwith as legal tender to any amount throughout Australia.

The dollar notes were designed by Gordon Andrews and were printed by the Note Printing Branch of the Reserve Bank of Australia. Each note is slightly smaller than the £ s. d. note it replaced. The dimensions are shown on page 674. The \$1 note features on the front a portrait of Her Majesty, Queen Elizabeth II in the regalia of the Order of the Garter and a new exemplification of the coat-of-arms of the Commonwealth of Australia. On the back is a line interpretation of an aboriginal bark painting and of aboriginal rock paintings and carvings. On the front of the \$2 note is a portrait of John Macarthur (1767-1834) and a portrayal of the wool industry. John Macarthur played an important role in the early promotion of the Australian wool industry. On the back, William Farrer (1845-1906), a pioneer in scientific wheat breeding, is portrayed with reproductions of different varieties of wheat ears of today. The \$10 note carries a portrait on the front of Francis Greenway (1777-1837), Australia's first fully qualified architect, with a background of an assemblage of his architectural work. On the back, Henry Lawson the poet and short story writer (1867-1922), is portrayed against a background composed of photographs of his time and personal letters and manuscripts. The \$20 note features on the front a portrait of Sir Charles Kingsford Smith with pendulum tracings symbolic of wings. Sir Charles Kingsford Smith (1897-1935) was a pioneer of aviation and of air routes both within Australia and linking Australia with Europe and north America. Lawrence Hargrave (1850-1915), an Australian aeronautical pioneer, is portrayed on the back with his drawings of flying machines and kites. Each note contains a newly designed watermark portrait of Captain James Cook and an embedded metallic thread running vertically near the centre of the note.

Gold reserve against the note issue

The *Australian Notes Act* 1910 provided that the Treasurer should hold, in gold coin, a reserve of an amount not less than one fourth of the notes issued up to \$14,000,000 and an amount equal to the excess over \$14,000,000. In 1911 this provision was amended and the Treasurer was required only to hold, in gold coin, an amount not less than one fourth of the total amount of Australian notes issued. In June 1931, to permit further shipments of gold to meet short-term obligations in London, an amendment to the Commonwealth Bank Act provided for the reduction of the gold reserve for the two years ended 30 June 1933 to not less than 15 per cent. The reserve was to be increased, by graduated steps, to 25 per cent by 30 June 1935. In May 1932 a further amendment to the Commonwealth Bank Act provided that the reserve might be held 'in gold or in English sterling or partly in gold and partly in English sterling'. English sterling was defined as 'currency which is legal tender in the United Kingdom,

and included (a) balances standing to the credit of the Bank at the Bank of England or at any other of its bankers in London; (b) Bills of Exchange or advances secured by Bills of Exchange which (i) are payable in the United Kingdom in currency which is legal tender in the United Kingdom; (ii) will mature in not more than three months, and the security for the payment of which bills is, in the opinion of the Bank, satisfactory; and (c) Treasury Bills or other securities of the United Kingdom which will mature in not more than three months'.

The statutory reserve against the Note Issue was abolished by the *Commonwealth Bank Act* 1945 which provided that the assets of the Note Issue Department should be held in gold, on deposit with any bank, or in securities of the Government of the United Kingdom or of the Commonwealth or a State. This provision was continued in the *Reserve Bank Act* 1959.

Australian notes in circulation

Particulars of the average values of notes in circulation for the years 1960-61 to 1964-65 are given in the following table.

AUSTRALIAN NOTES IN CIRCULATION, JUNE 1961 TO 1965
(\$'000)

Denomination	Last Wednesday in June—				
	1961	1962	1963	1964	1965
10s.	24,118	25,150	26,276	27,550	28,396
£1	135,682	135,880	138,104	141,290	143,308
£5	372,326	379,584	386,136	390,728	392,980

£1,000	7,798	7,680	8,224	5,656	164
<i>Held by banks</i>	110,918	117,280	125,938	133,710	138,783
<i>Held by public</i>	728,306	738,286	743,506	736,600	723,631
Total	839,224	855,566	869,444	870,310	862,414

Reserve Bank—Note Issue Department

The following statement shows particulars of liabilities and assets of the Note Issue Department of the Reserve Bank as at 30 June 1964 and 1965.

RESERVE BANK OF AUSTRALIA: NOTE ISSUE DEPARTMENT
LIABILITIES AND ASSETS, 30 JUNE 1964 AND 1965
(\$ million)

Liabilities	1964	1965	Assets	1964	1965
Notes on issue(a)	856.1	862.4	Gold and balances held abroad (including money at short call)	546.2	381.1
Special reserve—			Other overseas securities	77.1	174.1
Premium on gold sold	9.5	9.5	Government securities (including Commonwealth Treasury bills)	263.3	337.8
Other liabilities(a)	21.1	21.3	Other assets	0.1	0.2
Total	886.7	893.2	Total	886.7	893.2

(a) Notes of a denomination not exceeding one pound which have been on issue for more than twenty years and notes of a denomination exceeding one pound which have been on issue for more than forty years are not included in the item Notes on issue but are included in the item Other liabilities.

Until June 1951 all profits of the Note Issue Department, with the exception of \$4,000,000 and \$2,400,000 paid to the capital accounts of the Rural Credits Department and Mortgage Bank Department respectively, were paid to the Commonwealth Consolidated Revenue Fund. For the years 1951-52 to 1955-56 the profits were distributed as follows: (a) \$1,000,000 per annum to the capital accounts of the Commonwealth Trading Bank (prior to 3 December 1953 the General Banking Division of the Commonwealth Bank) and the several departments of the Commonwealth Bank, distributed two-sevenths each to the Commonwealth Trading Bank, Mortgage Bank Department and Industrial Finance Department and one-seventh to the Rural Credits Department, and (b) the balance to the Commonwealth Consolidated Revenue Fund. Since 1955-56 the profits have been paid to the Commonwealth Consolidated Revenue Fund. Profits of the Note Issue Department in 1964-65 amounted to \$30,520,000.

Rates of exchange

In the following table the par of exchange (based on par values agreed with the International Monetary Fund) and average telegraphic transfer selling rates of exchange for Sydney on a number of overseas countries are shown. Generally, the averages, which are averages of daily quotations, are based on rates quoted by the Commonwealth Trading Bank. Where these were not available, rates used by the Department of Customs and Excise in converting import values to \$A for purposes of calculating customs duty are shown.

OVERSEA EXCHANGE RATES: PAR OF EXCHANGE AND AVERAGE TELEGRAPHIC TRANSFER SELLING RATES FOR SYDNEY ON OVERSEA COUNTRIES, 1964-65

Country	Basis of quotation	Australian decimal currency equivalents		Country	Basis of quotation	Australian decimal currency equivalents

VOLUME OF MONEY

The information in the following table is compiled by the Reserve Bank of Australia.

VOLUME OF MONEY: AUSTRALIA, JUNE 1961 TO 1965

(Source: Reserve Bank of Australia)

(\$ million)

June—	Notes and coin in hands of public	Deposits of public with all cheque-paying banks(a)		Deposits with all savings banks(b)	Total volume of money
		Current	Fixed		
1961	797	2,496	870	3,138	7,301
1962	810	2,569	1,039	3,428	7,845
1963	818	2,646	1,147	3,906	8,517
1964	815	2,917	1,380	4,444	9,556
1965	814	2,977	1,688	4,858	10,337

(a) Excludes Government and inter-bank deposits, but includes deposits of the public with the Reserve Bank. (b) Interpolated 'weekly average' based on end of month figures.

BANKING

Royal Commission on Monetary and Banking Systems

A Royal Commission was appointed by the Commonwealth Government in November 1935 to inquire into the monetary and banking systems in operation in Australia and to report whether any, and if so what, alterations were desirable in the interests of the people of Australia as a whole, and the manner in which any such alterations should be effected. The Commission presented its report on 15 July 1937 and a summary of the recommendations appears in Year Book No. 31, page 1010.

Commonwealth banking legislation.

Under Section 51 of the Commonwealth Constitution the Commonwealth Parliament has power to legislate with respect to 'Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money.' The principal Commonwealth Acts at present in force relating to banking are as follows.

(a) The *Reserve Bank Act* 1959-1965 provides for the constitution and management of the Reserve Bank of Australia and the management of the Australian note issue.

(b) The *Banking Act* 1959-1965 provides for the regulation of banking and for the protection of the currency and the public credit of the Commonwealth. This Act, which replaced the *Banking Act* 1945-1953, was first assented to on 23 April 1959 and came into operation on 14 January 1960 as the *Banking Act* 1959. It was amended by the *Banking Act* 1965 in order to make certain changes required by the change to decimal currency. It applies to all banks, including savings banks, operating in Australia or the Territories of the Commonwealth except State banks trading in their own State. The objects of the Act are: (i) to provide a legal framework uniform throughout Australia for regulating the banking system; (ii) to safeguard depositors of the banks from loss; (iii) to provide for the co-ordination of banking policy under the direction of the Reserve Bank; (iv) to control the volume of credit in circulation and bank interest rates; (v) to mobilize and to provide machinery for the control of the foreign exchange and gold resources of the Australian economy. A summary of the main provisions of the *Banking Act* 1959 is given in Year Book No. 46, pages 759-60.

(c) The *Commonwealth Banks Act* 1959-1965 provides for the constitution and management of the Commonwealth Banking Corporation, Commonwealth Trading Bank of Australia, Commonwealth Savings Bank of Australia, and Commonwealth Development Bank of Australia.

The Commonwealth Banking Corporation came into being on 14 January 1960. It is the controlling body for the Commonwealth Trading Bank, Commonwealth Savings Bank and Commonwealth Development Bank. Under the *Banking Act* 1959-1965 the Corporation and its constituent banks are subject to the same central banking controls as are the private trading banks.

The Board of the Corporation consists of the Managing Director of the Corporation, the Deputy Managing Director, the Secretary to the Treasury, and eight other members appointed by the Governor-General of whom one is Chairman and another Deputy Chairman. In addition, there is an Executive Committee of the Board for each of the three separate banks. These Executive Committees are appointed by the Treasurer, after consultation with the Board, and are charged with taking such action as is necessary to ensure that effect is given by the respective banks to the policies laid down for them and to any directions given by the Board in relation to their affairs. Under the Board the Corporation is managed by the Managing Director and the Deputy Managing Director. Each of the three constituent banks of the Corporation has its own statutory functions and responsibilities and its separate identity within the framework of the Corporation. Each bank is managed by a General Manager under the Managing Director of the Corporation.

On pages 686-7 details are given of the assets and liabilities of the Commonwealth Development Bank. Details for the Commonwealth Savings Bank are shown on pages 707-9. Details for the Commonwealth Trading Bank are included in statistics of cheque-paying banks—Major Trading Banks, on pages 688-94.

State banking legislation

The State Acts under which the various banks are incorporated differ. While some of the older banks were incorporated by special Act or Charter, e.g. the Bank of New South Wales by Act of Council 1817, the Bank of Adelaide by Act of the South Australian Parliament, and the Bank of New Zealand by Act of the General Assembly of New Zealand, most of the banks are incorporated under a Companies Act of the States or the United Kingdom. This is also the case with those banks which were reconstructed after the financial crisis of 1893. State banks, constituted under State Acts, transacting general banking business are The Rural Bank of New

South Wales, the State Bank of South Australia, and The Rural and Industries Bank of Western Australia. State savings banks, constituted under State Acts, transacting savings bank business are The State Savings Bank of Victoria and The Savings Bank of South Australia (see pages 706-15).

Presentation of banking statistics

Because of the different purposes they serve in the Australian financial system, Australian banks have been divided for statistical purposes into the following four groups and a separate series is presented for each.

- (i) *The Reserve Bank of Australia.* Statistics of the Central Banking Business, the Note Issue Department, and the Rural Credits Department are shown separately (see pages 684-5).
- (ii) *The Commonwealth Development Bank of Australia.* The prime purpose of this Bank is to assist in the development of worthwhile enterprises in the field of both primary and secondary industries which would otherwise be unable to obtain the necessary finance on reasonable and suitable terms and conditions. (See pages 686-7.)
- (iii) *Cheque-paying Banks. Major Trading Banks.* These comprise the Commonwealth Trading Bank, Australia and New Zealand Bank Ltd., The Bank of Adelaide, Bank of New South Wales, The Commercial Bank of Australia Ltd., The Commercial Banking Company of Sydney Ltd., The English, Scottish and Australian Bank Ltd., The National Bank of Australasia Ltd. (See pages 687-705.)

All cheque-paying Banks. These comprise the major trading banks and the following banks—the Bank of China, Bank of New Zealand, The Brisbane Permanent Building and Banking Co. Ltd., Comptoir National d'Escompte de Paris, the General Bank Department of the Rural Bank of New South Wales, the General Banking Department of the State Bank of South Australia, and the Rural Department of the Rural and Industries Bank of Western Australia. (See pages 687 and 693-7.)

Australian cheque-paying banks (see pages 688-94) comprises all cheque-paying banks except the Bank of China, Bank of New Zealand and Comptoir National d'Escompte de Paris.

- (iv) *Savings Banks.* Savings banks operating at 30 June 1965 were—the Commonwealth Savings Bank, the Australia and New Zealand Savings Bank Ltd., the Bank of New South Wales Savings Bank Ltd., and The National Bank Savings Bank Ltd. (in all States and Territories within and without Australia); The Bank of Adelaide Savings Bank Ltd. (all States except Tasmania); The Commercial Savings Bank of Australia Ltd. and the E.S. & A. Savings Bank Ltd. (in all States and Territories within Australia); the C.B.C. Savings Bank Ltd. (in all States and in the Australian Capital Territory); The State Savings Bank of Victoria, The Savings Bank of South Australia, the Savings Bank Division of The Rural and Industries Bank of Western Australia, and the two trustee banks, The Hobart Savings Bank and Launceston Bank for Savings. (See pages 706-15.)

Reserve Bank of Australia

The Reserve Bank of Australia, established under the *Reserve Bank Act* 1959, which came into operation on 14 January 1960, continued in existence the body corporate known as the Commonwealth Bank of Australia. An account of the progress and development of that bank is given in earlier issues of the Year Book (see No. 37, pages 570-2, and No. 45, pages 735-7).

The general functions of the Reserve Bank are set out in Section 10 of the *Reserve Bank Act* 1959-1965, which states:

'It is the duty of the Board, within the limits of its powers, to ensure that the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia and that the powers of the Bank under this Act, the *Banking Act* 1959, and regulations under that Act are exercised in such a manner as, in the opinion of the Board, will best contribute to,

- (a) the stability of the currency of Australia;
- (b) the maintenance of full employment in Australia; and
- (c) the economic prosperity and welfare of the people of Australia.'

In addition to its functions as a Central Bank, the Bank controls the Australian note issue through a Note Issue Department, provides special banking facilities through the Rural Credits Department, and acts as banker to the Commonwealth and some of the States.

Prior to its reconstitution as the Reserve Bank, the Commonwealth Bank also provided general banking facilities through a General Banking Division up to 3 December 1953, when that business was taken over by the Commonwealth Trading Bank, and special banking facilities through the Mortgage Bank and Industrial Finance Departments. In addition, the Board of the Commonwealth Bank was responsible for the policy and administration of the Commonwealth Trading Bank and Commonwealth Savings Bank. On 14 January 1960, on its reconstitution as the Reserve Bank, the Mortgage Bank and Industrial Finance Departments were amalgamated to form the Commonwealth Development Bank, and that institution, together with the Commonwealth Trading Bank and the Commonwealth Savings Bank, was placed under the control of the Commonwealth Banking Corporation, an organization established under the *Commonwealth Banks Act* 1959 and entirely separate from the Reserve Bank.

Management

The Commonwealth Bank was managed between 1911 and 1924 by a Governor, from 1924 to August 1945 by a Board of Directors, from August 1945 to August 1951 by a Governor assisted by an Advisory Council, and since August 1951 by a Board of Directors.

Under the provisions of the *Reserve Bank Act* 1959–1965 the policy of the Reserve Bank is determined by a Board consisting of the Governor (Chairman), the Deputy Governor, the Secretary to the Treasury, and seven other members appointed by the Governor-General. The Bank is managed by the Governor, who acts in accordance with the policy of the Board and with any directions of the Board. The Bank is required to inform the Government of the monetary and banking policy of the Board. In the event of a disagreement between the Government and the Board as to whether the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia, the Governor-General, acting with the advice of the Executive Council, may determine the policy to be adopted by the Bank.

Central banking business

Under the powers it possessed under the *Commonwealth Bank Act* 1911–1943 and under its war-time powers under the National Security Regulations the Commonwealth Bank gradually assumed the functions of a Central Bank. Part III. of the *Commonwealth Bank Act* 1945 formally constituted the Bank as a Central Bank and granted the necessary powers to carry on the business of a Central Bank, and these powers were carried through into the present Act constituting the Reserve Bank. Under the provisions of the *Reserve Bank Act* 1959–1965 the capital for the Central Banking Business is the capital of the Commonwealth Bank for Central Banking purposes immediately prior to 14 January 1960 and such other sums as are transferred from the Reserve Bank Reserve Fund. The profits of the Bank are distributed as follows: (a) such sums as the Treasurer, after consultation with the Bank, determines shall be placed to the credit of the Reserve Bank Reserve Fund and (b) the remainder shall be paid to the Commonwealth.

Note Issue Department

The Note Issue Department, established in 1920 when the control of the Australian note issue was transferred from the Commonwealth Treasury to the Commonwealth Bank, was maintained in the same form under the *Reserve Bank Act* 1959. The Reserve Bank may, through this Department, issue, re-issue and cancel Australian notes. Under the *Reserve Bank Act* 1959–1965 the profits of the Note Issue Department are paid to the Commonwealth.

Rural Credits Department

The Rural Credits Department, established in 1925 for the purpose of making short-term credit available for the orderly marketing of primary produce, was continued in the same form under the *Reserve Bank Act* 1959. The Reserve Bank may, through this Department, make advances upon the security of primary produce placed under the legal control of the Bank, or other security associated with the production or marketing of primary produce to co-operative associations or marketing boards formed under the laws of the Commonwealth or a State or Territory of the Commonwealth or other bodies specified by proclamation. The period of the advance shall not exceed one year. Under the provisions of the *Reserve Bank Act* 1959–1965 the capital of the Rural Credits Department is the capital of the Rural Credits Department of the Commonwealth Bank immediately prior to 14 January 1960, and \$4,000,000 provided by the Reserve Bank. The profits of the Rural Credits Department are dealt with as follows: (a) one half to the credit of the Rural Credits Department Reserve Fund and (b) one half to the credit of the Rural Credits Development Fund.

Reserve Bank liabilities and assets—all Departments

Liabilities and assets of each Department of the Reserve Bank at 30 June 1961 to 1965 are shown in the following table.

Commonwealth Development Bank of Australia

The Commonwealth Development Bank of Australia was established by the *Commonwealth Banks Act* 1959 and commenced operations on 14 January 1960. It was formed basically from an amalgamation of the Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank. Under the Act the Bank is authorized to provide assistance for the development of worthwhile enterprises in the fields of primary and secondary industries which would otherwise be unable to obtain the necessary finance on reasonable and suitable terms and conditions. The Commonwealth Development Bank is managed by a General Manager under the Managing Director of the Commonwealth Banking Corporation, and its policy is determined by the Board of that Corporation. The capital of the Development Bank consists of the capital of the Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank immediately prior to 14 January 1960, \$10,000,000 provided by the Reserve Bank, \$20,000,000 provided by the Commonwealth Government in the 1961-62 Budget and \$10,000,000 in the 1963-64 Budget, and such other sums as are provided from the Commonwealth Development Bank Reserve Fund. The net profits of the Bank are paid to the Commonwealth Development Bank Reserve Fund.

Liabilities and assets

The liabilities and assets of the Commonwealth Development Bank at 30 June 1961 to 1965 are shown in the following tables.

COMMONWEALTH DEVELOPMENT BANK OF AUSTRALIA: LIABILITIES
30 JUNE 1961 TO 1965
(\$ million)

30 June—	Capital	Reserve fund	Balances due to other banks	Deposits, bills payable, all other liabilities	Total

Profit and loss

The profit and loss of the Commonwealth Development Bank for the years 1960-61 to 1964-65, is shown in the following table. The net profit was appropriated to the Commonwealth Development Bank Reserve Fund.

COMMONWEALTH DEVELOPMENT BANK OF AUSTRALIA
PROFIT AND LOSS, 1960-61 TO 1964-65
(\$ million)

Year	Discount and interest earned, etc.(a)	Expenses (b)	Taxes and payments in lieu of taxes	Net Profit (c)
1960-61 .	4.6	3.3	..	1.2
1961-62 .	5.2	3.8	..	1.4
1962-63 .	5.6	3.8	..	1.8
1963-64 .	6.1	4.1	..	1.9
1964-65 .	7.2	5.0	0.1	2.1

(a) Discount and interest earned, net exchange commissions and other items (including transfers from contingencies accounts)—after deducting interest paid and accrued on deposits, rebate on bills current at balance date, amounts written off assets, and losses on realization of assets and transfers to the credit of contingencies accounts (out of which accounts provision for all bad and doubtful debts has been made).
(b) Includes proportion of expenses of Commonwealth Banking Corporation attributable to the Development Bank. (c) Appropriated to Commonwealth Development Bank Reserve Fund.

Cheque-paying banks**Banks transacting business in Australia**

At 30 June 1965 the fifteen banks operating in Australia transacted all classes of banking business at 4,440 branches and 1,769 agencies. The major trading banks have branches throughout Australia. The Rural Bank of New South Wales, the State Bank of South Australia, and The Rural and Industries Bank of Western Australia, being State Government banks, have branches only in their respective States. The Brisbane Permanent Building and Banking Co. Ltd. transacts business only in Brisbane. The remaining three banks are branches of overseas banks.

(a) Discount and interest earned, net exchange, commissions and other items (including transfers from contingencies accounts) after deducting interest paid and accrued on deposits, rebate on bills current at balance date, amounts written off assets and losses on realization of assets, and transfers to the credit of contingencies accounts (out of which accounts provision for all bad and doubtful debts has been made). (b) Includes directors' fees. (c) Excludes accumulated profits and loss accounts. (d) Dividends paid or payable out of profits earned during the year. (e) Commonwealth of Australia. (f) Calculated at the net rate of the United Kingdom Income Tax payable by the bank (after taking double taxation relief into account) on the gross amount of dividends, viz.: Australia and New Zealand Bank Ltd., 4s. 1d. in the £stg on \$A4,638,480; The English, Scottish and Australian Bank Ltd., 4s. 11d. in the £stg on \$A1,757,000; United Kingdom Income Tax Relief to shareholders is limited to this rate. In addition to the taxes stated above the banks deducted the following further sums of United Kingdom Income Tax in accordance with the provisions of the Finance (No. 2) Act 1945, which authorizes deductions of tax from dividends at the full standard rate of United Kingdom Income Tax (8s. 3d. in the £stg); Australia and New Zealand Bank Ltd., \$A1,000,172; and the English, Scottish and Australian Bank Ltd., \$A292,838. (g) Gross dividend before deductions of United Kingdom Income Tax at standard rate (see footnote (f)). The gross return to shareholders based on the sum of United Kingdom Income Taxes payable by the bank and recouped from shareholders and the net dividend was: Australia and New Zealand Bank Ltd., 9.41 per cent.; The English, Scottish and Australian Bank Ltd., 8.333 per cent. The net return to shareholders based on the net dividend was: Australia and New Zealand Bank Ltd., 7.95 per cent. and the English, Scottish and Australian Bank Ltd., 5.875 per cent. (h) Four per cent on Preference shares and 10 per cent on Ordinary shares. (i) Not available. (j) Earnings represent gross earnings; expenses include interest paid, management expenses and provisions for contingencies. (k) Includes profit and loss on account of Savings Bank business.

All cheque-paying banks—average liabilities and assets within Australia

Particulars of the average liabilities and assets *within Australia* for all cheque-paying banks in Australia for the month of June 1965 are shown in the following tables. The details in these tables relate only to liabilities and assets within Australia and include the overseas banks, the Bank of China, Bank of New Zealand and Comptoir National d'Escompte de Paris. The tables on pages 688–92, Australian cheque-paying banks, relate to liabilities and assets both inside and outside Australia and exclude the overseas banks.

(a) Based on deposits and assets within Australia and excludes London Funds. (b) Prior to July 1962, seasonal securities. (c) Excludes loans to authorized dealers in short-term money market.

The following table shows, for each State and Territory, the proportion of non-interest bearing deposits to total deposits with the Major Trading Banks and with all cheque-paying banks for the month of June 1961 to 1965. The ratios are based on the average deposits for the month of June in the years shown.

Major Trading Banks—classification of bank advances within Australia

Classifications of bank advances of the Major Trading Banks outstanding for each State at 14 July 1965 and for Australia at July 1962 to 1965 are shown in the following tables.

Resident borrowers cover institutions (including branches of overseas institutions) engaged in business in Australia and persons permanently residing in Australia. Non-resident borrowers cover all other persons and institutions incorporated abroad, which, though represented, do not carry on business in Australia.

Advances to resident borrowers have been classified as business advances, advances to public authorities, personal advances, and advances to non-profit organizations.

Business advances have been further classified to the main industry of the borrower and include advances to partnerships, companies and other institutions engaged in business in Australia, advances to persons actively engaged in business on their own behalf if the advance is mainly for business purposes, advances to mutual, co-operative and benefit societies which distribute their profits or surpluses (if any) to members by way of dividends, rebates on charges for goods and services, or increased benefits.

Advances to public authorities cover advances to local and semi-governmental authorities including separately constituted government business undertakings but not the Commonwealth or State Governments. Personal advances cover advances to persons for purposes other than carrying on a business. Advances to non-profit organizations cover advances to organizations which are not carried on for the purpose of making a profit or gain to individual members, any income of the organization being used for the purposes of the organization or for the benefit of the community.

(c) The combined deposits of these two groups are distributed over the industries above.

Major Trading Banks—new and increased lending commitments and overdraft limits

Particulars of new and increased lending commitments and overdraft limits of the Major Trading Banks are shown hereunder. The figures represent gross new lending commitments of banks and do not take account of cancellations and reductions of existing limits. Figures for cancellations and reductions of existing limits can be obtained from this series (after deducting term loan component and adjusting the weekly averages to a monthly basis) in conjunction with that of overdraft limits shown in the following table. However, these derived figures should be regarded as an approximation only, since there are unavoidable differences in the basis of compilation of the two series.

(a) Excludes commitments in respect of temporary advances to woolbuyers. (b) Excludes limits in respect of temporary advances to woolbuyers and term loans. (c) Year ended second Wednesday of July.

The following table shows new and increased lending commitments in respect of the Major Trading Banks to selected industrial groups for January 1964 to July 1965. The classification is an abridgement of that used for bank advances (see page 697).

The table indicates the sources of demand for new lending. If taken in conjunction with the classification of overdraft limits outstanding (see below), it also shows the approximate rate of cancellations and reductions of limits in the main industrial groups.

(a) Excludes commitments in respect of temporary advances to woolbuyers.

The following table shows the classification of overdraft limits outstanding in respect of the Major Trading Banks for July 1962 to July 1965. The classification is similar to that used for advances (see page 697). The table shows the trend of net new lending classified by industry. If used in conjunction with the classification of bank advances, it shows the range of limits usage by industry, and if used in conjunction with the classification of new and increased lending commitments (see above), it shows the approximate rate of cancellations and reductions of limits by industry.

6 per cent	17.9	22.3	12.3	6.7
More than 6 per cent but less than 6½ per cent	4.7	7.6	6.9	9.1
6½ per cent	18.0	29.0	21.4	10.0
More than 6½ per cent but less than 7 per cent	3.4	..	4.9	17.1
7 per cent	20.0	..	26.7	10.7
More than 7 per cent and up to 7½ per cent	27.1
Total	100.0	100.0	100.0	100.0

(a) Excludes term loans.

NOTE.—On 17 November 1960 the maximum rate chargeable on advances was 7 per cent, but the average rate of interest on all advances was not to exceed 6 per cent. The maximum average rate requirement was discontinued on 13 April 1962. The maximum rate chargeable on advances was reduced from 7 per cent per annum to 6½ per cent per annum on 1 April 1963, and was raised to 7 per cent per annum on 27 April 1964 and to 7½ per cent per annum on 10 March 1965.

The following table shows the proportions of total fixed deposits at each rate of interest at the end of June 1961 to 1965.

MAJOR TRADING BANKS: FIXED DEPOSITS(a), BY RATE OF INTEREST
JUNE 1961 TO 1965

(Source: Reserve Bank of Australia)

(Proportion at each rate to total—per cent)

At 30 June . . .	4½	4½	4½	4½

Cheque-paying banks—debits to customers' accounts

Statistics of debits to customers' accounts have been collected since September 1945. Generally they represent the total of all cheques drawn by the customers of the banks. In the following table the average weekly debits to customers' accounts of all cheque-paying banks (including the Rural Credits Department of the Reserve Bank and the Commonwealth Development Bank) are shown for each State for the years 1960-61 to 1964-65. In this table debits to accounts of Australian Governments in capital cities are excluded, as they are subject to abnormal influences and are not uniform for each State.

CHEQUE-PAYING BANKS: AVERAGE WEEKLY DEBITS TO CUSTOMERS' ACCOUNTS, STATES AND TERRITORIES, 1960-61 TO 1964-65

(Excluding debits to Commonwealth and State Government accounts in capital cities)

(\$ million)

Trading bank charges

In October 1962 the trading banks instituted a system of charges on current accounts, and abolished the interstate exchange rates obtaining prior to this date. Details of interstate exchange rates prior to October 1962 may be found in Year Book No. 48, page 785. Charges on current account comprise a basic maintenance fee, a ledger activity fee and a cheque collection fee, each calculated on a quarterly basis and debited as a composite item to accounts four times a year. Details of these charges are shown on page 706.

Quarterly charge

Basic maintenance current account. Fifty cents quarterly (non-rebated).

Ledger activity fee. Up to $\frac{1}{2}$ folio (20 entries), 25 cents; over $\frac{1}{2}$ folio to 1 folio, 75 cents; over 1 folio to 2 folios, \$2; over 2 folios to 3 folios, \$4.50; over 3 folios to 4 folios, \$7; over 4 folios to 5 folios, \$9.50; over 5 folios to 6 folios, \$12; over 6 folios to 7 folios, \$14; over 7 folios to 15 folios, \$14, plus \$1.75 per folio or part thereof exceeding 7; over 15 folios to 35 folios, \$28, plus \$1.50 per folio or part thereof exceeding 15; over 35 folios, \$58, plus \$1 per folio or part thereof exceeding 35. Rebates will be allowed for minimum quarterly credit balances as follows: \$600, 1 free folio; \$1,200, 2 free folios; \$2,000, 3 free folios; \$3,200, 4 free folios; \$5,000, 5 free folios; thereafter 1 additional free folio for each \$1,000 minimum credit balance. Where rebates are applicable the number of free folios will be deducted before the activity fee is calculated.

Collection fee on cheques, etc., deposited. Up to 20 cheques per quarter, free; 21 to 100, 50 cents, plus 25 cents per 10 cheques or part thereof exceeding 20; 101 to 500, \$2.50, plus \$1.25 per each 50 or part thereof exceeding 100; 501 to 1,000, \$12.50, plus \$2.50 for each 100 or part thereof exceeding 500; 1,001 to 10,000, \$25, plus \$12 per each 500 or part thereof exceeding 1,000; 10,001 to 50,000, \$240 plus \$15 per each 1,000 or part thereof exceeding 10,000; 50,001 to 100,000, \$850 plus \$50 per each 5,000, or part thereof exceeding 50,000; 100,001 to 150,000, \$1,350, plus \$80 per each 10,000 or part thereof exceeding 100,000; over 150,000, \$1,750, plus \$60 per each 20,000 or part thereof exceeding 150,000.

Savings banks**Savings banks in Australia**

For information on the origin of savings banks in Australia and the facilities currently available, see Year Book No. 46, page 779 and earlier issues.

All savings banks, including trustee savings banks, but not State savings banks, are subject to the *Banking Act* 1959-1965. Details of this Act and the special provisions applying to savings banks are given in Year Book No. 46, pages 759-60.

Commonwealth Savings Bank. The Commonwealth Savings Bank of Australia was established as a separate institution on 9 June 1928, having functioned previously as a department of the Commonwealth Bank (for particulars of the origin of the Savings Bank Department and the extension of its services see Year Book No. 46, page 782, and earlier issues). It has since then operated independently, publishing its own balance-sheets and profit and loss accounts. The *Commonwealth Bank Act* 1927, which provided for the establishment of the Commonwealth Savings Bank as a separate institution, provided for a Commission of three members to manage the savings bank. This Commission was never appointed, and the *Commonwealth Bank Act* 1945 placed the control of the Commonwealth Savings Bank under the Governor of the Commonwealth Bank. Under the provisions of the *Commonwealth Banks Act* 1959-1961, which came into operation on 14 January 1960, the Commonwealth Savings Bank was maintained in the same form, but was placed under the control of the Commonwealth Banking Corporation (see also page 681).

State savings banks. State savings banks at present operating (with date of establishment shown in parentheses) are: The State Savings Bank of Victoria (1841); The Savings Bank of South Australia (1848); the Savings Bank Division of The Rural and Industries Bank of Western Australia (1956).

Trustee savings banks. Two trustee savings banks, The Hobart Savings Bank and Launceston Bank for Savings, operate within Tasmania. These banks commenced business in 1845 and 1835 respectively.

Private savings banks. The Bank of New South Wales Savings Bank Ltd., the Australia and New Zealand Savings Bank Ltd., and the C.B.C. Savings Bank Ltd. commenced business in 1956, the E.S. & A. Savings Bank Ltd. in 1961, The Bank of Adelaide Savings Bank Ltd., The National Bank Savings Bank Ltd., and The Commercial Savings Bank of Australia Ltd. in 1962.

Branches and agencies

Savings banks. The numbers of branches and agencies of the various savings banks in Australia at 30 June 1965 are given in the following table.

SAVINGS BANKS: NUMBER OF BRANCHES AND AGENCIES, 30 JUNE 1965

Bank	Branches	Agencies
Commonwealth Savings Bank	897	8,049
Australia and New Zealand Savings Bank Ltd.	561	712

(a) Private savings banks at last Wednesday in June, Launceston Bank for Savings at last Monday in June, other savings banks at end of June.

Savings banks—cheque accounts

At most savings banks cheque accounts are available to non-profit organizations such as friendly, co-operative and charitable societies. Similar facilities are also available to other depositors at The State Savings Bank of Victoria and The Savings Bank of South Australia. Details of the transactions on these accounts during the year ended June 1965 (excluding The Savings Bank of South Australia), together with the number of operative accounts and the amount on deposit at the end of June 1965, were as follows: deposits during the year, \$1,301.9 million; withdrawals during the year, \$1,296.3 million; interest added during the year, \$2.5 million; amount on deposit at end of year, \$130.3 million; number of operative accounts at the end of year, 290,756. These figures are included in the statistics in previous paragraphs.

School savings banks

With the object of encouraging principles of thrift among children, agencies of the savings banks have been established at most of the schools throughout Australia. Particulars of operative accounts within Australia at the end of June 1961 to 1965 appear below.

SCHOOL SAVINGS BANKS: AUSTRALIA, JUNE 1961 TO 1965

End of June(a)—	Number of school agencies	Number of operative accounts	Deposits	Deposits per operative account
		'000	\$'000	\$
1961 . . .	9,225	1,166	17,317	14.86
1962 . . .	9,444	1,219	18,449	15.13
1963 . . .	9,551	1,255	19,331	15.41
1964 . . .	9,878	1,294	20,374	15.75
1965 . . .	9,544	1,364	22,055	16.16

(a) See footnote (a) to table above.

Savings banks—assets

The assets within Australia of all savings banks at the end of June 1964 and 1965 are shown in the following table. In the table on pages 708-9 assets are shown at balance-sheet date which are not in June for some banks. In addition, the table on pages 708-9 excludes statistics for the Savings Bank Division of the Rural and Industries Bank of Western Australia, which are included in the table below.

SAVINGS BANKS: ASSETS WITHIN AUSTRALIA(a), JUNE 1964 AND 1965
(\$ million)

	End of June(b)—	
	1964	1965
Coin, bullion and Australian notes	10.1	10.8
Deposits with Reserve Bank	430.2	430.3
Deposits in Australia with trading banks	123.1	117.5
Australian public securities—		
Commonwealth and States (including Treasury bills and Treasury notes)	1,994.3	2,066.1
Local government and semi-governmental authorities	955.6	1,092.3
Other securities	3.4	5.1
Loans to authorized dealers in the short-term money market	34.2	28.8
Cheques and bills of other banks and balances with and due from other banks	0.6	0.4
Loans, advances and bills discounted—		
Housing	997.8	1,185.2
Other	96.0	131.7
Bank premises, furniture and sites	57.2	63.0
Bills receivable and all other assets	15.4	19.0
Total	4,717.9	5,150.3

(a) Includes assets in Papua, New Guinea and Norfolk Island.
page 712.

(b) See footnote (b) to first table on

Savings banks—classification of depositors' balances

The classification of deposits published by savings banks does not permit a fully detailed analysis for Australia as a whole, but the classification at 30 June 1961 to 1965 of the combined deposits for The State Savings Bank of Victoria and The Savings Bank of South Australia is shown below.

STATE SAVINGS BANKS: CLASSIFICATION OF DEPOSITS
30 JUNE 1961 TO 1965
(Per cent)

30 June—	Up to \$2,000	Over \$2,000
1961	59.66	40.34
1962	57.31	42.69
1963	54.41	45.59
1964	51.89	48.11
1965	50.86	49.14

Savings banks—rates of interest on deposits

The following table shows the rates of interest allowed by savings banks at 30 June 1961 to 1965.

SAVINGS BANKS: INTEREST RATES ON DEPOSITS(a), 30 JUNE 1961 TO 1965
(Per cent per annum)

Size of account	30 June—				
	1961	1962	1963	1964	1965
Ordinary accounts(b)—					
Up to \$2,000	3½	3½	3	3½	3½
\$2,001 to \$3,000	3½	3½	3	3½	3½
\$3,001 to \$4,000	3½	3½	3	3½	3½
\$4,001 to \$5,000	3½	3½	3	3½	3½
\$5,001 to \$6,000	3½	3	3½	3½
Friendly and other society accounts—					
Up to \$4,000	3½	3½	3	3½	3½
\$4,001 to \$5,000	3½	3½	3	3½	3½
\$5,001 to \$6,000	1½	3½	3	3½	3½
\$6,001 and over	1½	2	1½	1½	2

(a) Rates allowed by the Commonwealth Savings Bank, private savings banks and The State Savings Bank of Victoria. Trustee savings banks and The Savings Bank of South Australia allow slightly higher rates of interest. (b) No interest is payable on amounts in excess of the maximum amount shown.

Finance companies

Information relating to the lending operations of finance companies in Australia is given in the following tables. A comprehensive account of the scope of these statistics and fuller details of the transactions of finance companies may be found in the annual bulletin *Finance Companies—July 1964 to October 1965* and in the monthly statements *Finance Companies: Australia*. For the purpose of these statistics finance companies are defined as companies which are engaged mainly in providing to the general public (businesses as well as persons in their private capacity) credit facilities of the following types: hire purchase and instalment credit for retail sales, wholesale hire purchase, other consumer and commercial loans, and factoring. The finance companies covered in these statistics, in so far as they provide instalment credit for retail sales, are also included in the statistics of 'Instalment Credit for Retail Sales' (see pages 735-9).

In general, companies which are engaged both in financing activities and other activities come within the scope of these statistics, provided that the major portion of their assets consists of financial assets of the types listed above and/or a major proportion of their income is derived from such assets. Companies are excluded if the major proportion of their balances outstanding consists of agreements written for the purpose of financing their own sales. Companies which are engaged mainly in financing, in any way, the operations of related companies ('related' as defined in the Companies Act) are also excluded from these statistics. Unincorporated finance businesses are excluded from these statistics. Also excluded are the following classes of financial and quasi-financial institutions: banks; life insurance companies; fire, marine and general insurance companies; short-term money market dealers; pastoral finance companies; investment companies; unit trusts; land trusts; mutual funds and management companies for the foregoing trusts and funds; pension and superannuation funds; building and friendly societies including credit unions.

Summary definitions of the categories into which finance agreements have been classified and of the items of data given in the tables are as follows.

Instalment credit for retail sales. This category is defined in the same way as in the Instalment Credit for Retail Sales section, page 735. It covers the operations of all types of instalment credit schemes undertaken by finance companies which relate primarily to the financing of retail sales of goods.

Wholesale hire purchase. This term is adopted in accordance with finance company usage although not all the transactions covered by this category are strictly hire purchase contracts. The category relates mainly to the financing of motor vehicle dealers' stocks held under bailment or floor plan schemes but includes also finance in respect of other trading stock.

Other consumer and commercial loans. This broad term is used to cover the following three categories.

Personal loans. Includes loans to persons other than loans classified to the categories instalment credit for retail sales, mortgage loans or commercial loans.

Mortgage loans. Includes all loans, for any purpose, to businesses or persons, which are secured over houses, home units (whether new or existing) and residential land.

Commercial loans. Includes all loans and advances to businesses not included elsewhere in these statistics. Loans on the security of existing finance agreements are also included in this item.

Factoring. The term 'factoring' is defined for the purpose of these statistics as comprising loans on the security of 'trade' debts (i.e. debts due to businesses for goods and services supplied to other businesses for use in their business or for resale), trade debts purchased, and inventory finance (i.e. finance for trading stocks, other than that included under wholesale hire purchase).

Amount financed. Amount financed is the actual amount of cash provided. It excludes interest, insurance, hiring, and other charges and initial deposits.

Balances outstanding. Balances outstanding represent the amounts owing on all finance agreements entered into prior to the end of the relevant period as shown in the books of the companies concerned. Accounting practice with respect to inclusion in balances outstanding of unmatured charges, interest and insurance differs as between finance companies and between types of finance agreements. Because of this, separate details of balances outstanding are given in the tables for those contracts for which balances outstanding are recorded including such charges, and for those contracts for which balances outstanding are recorded excluding such charges. It is not practicable to adjust either to a common basis. However, the total balances for all contracts are shown in the tables below to provide a broad overall measure. Movements in the 'all contracts' series may be affected by changes in the proportions of the two components of the series to the total.

Collections and other liquidations of balances. This item covers cash collections of capital repayments, hiring charges, interest and insurance, and also other liquidations such as bad debts written off, rebates for early payouts and proceeds of repossessions. For the reasons stated above, separate details of collections and other liquidations are given for contracts recorded including charges, etc., and contracts recorded excluding charges, etc.

Summary of transactions by finance businesses

The following table gives a summary of the amount financed, collections and other liquidations and balances outstanding in Australia for the year 1964-65.

FINANCE COMPANIES: SUMMARY, AUSTRALIA, 1964-65
(\$ million)

Period	Amount financed during period	Collections and other liquidations during period			Balances outstanding at end of period		
		Con- tracts in- cluding charges	Con- tracts ex- cluding charges	Total, all con- tracts	Con- tracts in- cluding charges	Con- tracts ex- cluding charges	Total, all con- tracts (a)
Year—							
1964-65	1,752.4	1,021.2	873.1	1,894.3	1,461.4	321.2	1,782.6

September	153.3	81.7	70.3	152.0	1,370.9	303.6	1,674.5
October	143.8	82.9	66.9	149.9	1,389.4	305.1	1,694.5
November	147.0	80.9	69.2	150.1	1,405.9	311.9	1,717.7
December	160.0	89.1	78.8	167.9	1,426.4	313.5	1,739.9
1965—							
January	131.2	76.8	64.5	141.3	1,435.3	318.9	1,754.4
February	127.8	83.4	64.3	147.7	1,438.7	320.5	1,759.2
March	157.8	99.7	75.7	175.4	1,445.3	326.6	1,771.9
April	149.1	84.8	78.6	163.4	1,453.4	330.8	1,784.2
May	152.2	84.8	83.3	168.1	1,462.6	330.6	1,793.3
June	148.9	93.9	90.1	184.0	1,461.4	321.2	1,782.6

(a) Amounts shown in this column are intended to provide a broad overall measurement of total balances outstanding. Movements in this series may be affected by changes in the proportions of the two components of the series to the total.

Amount financed, by type of agreement

The following table shows the separate amount financed, for each type of agreement, that is, instalment credit for retail sales, wholesale hire purchase, personal loans, mortgage loans, commercial loans and factoring, in Australia during the year 1964-65.

**FINANCE COMPANIES: AMOUNT FINANCED, BY TYPE OF AGREEMENT
AUSTRALIA, 1964-65
(\$ million)**

(a) Includes Australian Capital Territory. (b) Includes Northern Territory.

The information given above relates to business written or recorded by finance companies (or branches of finance companies) operating in each State, but does not necessarily indicate that the funds so provided are for use within that State. The extent to which funds may be raised in one State for use in another State is not known. However, agreements (particularly commercial loans) arranged with a finance company by a head office of an interstate business could be of this nature.

INSURANCE

Legislation

Section 51 of the Commonwealth Constitution confers the necessary powers on the Commonwealth Parliament to legislate with respect to 'insurance other than State insurance; also State insurance extending beyond the limits of the State concerned'. Commonwealth legislation includes the *Marine Insurance Act* 1909 defining the limits of marine insurance and regulating the terms of contracts, etc., the *Insurance Act* 1932-1960 requiring the lodgment of deposits by insurance companies, and the *Life Insurance Act* 1945-1965 generally regulating life insurance business in Australia. The *Marine Insurance Act* 1909 and the *Insurance Act* 1932-1960 have limited application, and, except for life insurance business, which is regulated by the *Life Insurance Act* 1945-1965, insurance business is conducted almost entirely under State laws.

Insurance Act 1932-1960

Companies, persons or associations of persons carrying on insurance business in Australia or in any Territory of Australia are required to lodge a deposit with the Commonwealth Treasurer. Money deposited is invested by the Treasurer in prescribed securities selected by the depositor, and all interest is paid to depositors. Deposits remain as security against liability to policy holders, and are available to satisfy judgments obtained in respect of policies. Deposits held by States on 1 February 1932 could, however, remain with the States subject to the conditions embodied in the laws of the States, and depositors to the extent of the value of these deposits were exempt from liability to make deposits under the Commonwealth Act.

The following are not regarded as insurance business under the Act: staff superannuation schemes; schemes of religious organizations solely for insurance of their property; friendly society, union and association schemes involving superannuation or insurance benefits to employees.

This Act does not apply to State insurance within the limits of the State concerned, and, under the *Life Insurance Act* 1945-1965, ceased to apply to life insurance business.

Life Insurance Act 1945-1965

The objects of this Act are: (a) to replace all State legislation on the subject of life insurance, except that relating to the life insurance operations of State Government insurance offices within the State concerned, and to provide uniform legislation for the whole of Australia; (b) to appoint an Insurance Commissioner to exercise active supervision of the activities of life insurance companies, with a view to securing the greatest possible protection for policy holders; (c) to set up adequate machinery for dealing with any company that fails to maintain a required minimum standard of solvency. The Act came into operation on 20 June 1946. A summary of the provisions of the Act is given in Year Book No. 37, pages 595-7.

Deposits under Insurance Acts

Deposits lodged under the Insurance Acts at 30 June 1965 totalled \$31.5 million, comprising \$4.0 million held by the Commonwealth in respect of life insurance, and \$27.4 million held by the Commonwealth and \$20,060 held by the State of New South Wales in respect of other forms of insurance. The deposits consisted of Commonwealth Government securities \$19.1 million, United Kingdom Government securities \$1.4 million, fixed deposits \$0.3 million, bank guarantees and undertakings \$7.9 million, corporation debentures and stock \$0.8 million, and titles and mortgages \$2.0 million.

Life insurance

Since 1947 returns lodged under the *Life Insurance Act* 1945-1965 have been used to compile life insurance statistics. Except where otherwise indicated, the figures in the succeeding paragraphs refer only to Australian business. Business in the Territories of Papua and New Guinea is, however, included in the Australian figures. The information shown has been compiled from returns of life insurance business submitted in the financial years which ended during the year stated.

Offices transacting business

The number of offices which transacted life insurance business in Australia during 1964 was 43, including 12 oversea companies. Of the 31 Australian offices, 6 are purely mutual, including one which transacts general business in respect of which share capital is used, 23 are public companies, and 2 are State Government institutions. Of the total, 30 transacted ordinary business only and the remainder both ordinary and industrial business. Where possible, ordinary, industrial and superannuation business have been kept separate in the following tables.

Australian business—policies in existence

In the following tables details are given of policies on the registers in each State and the Australian Capital Territory and for Australia.

(b) See footnote (a).

Liabilities and assets

The liabilities of the Australian offices consist mainly of their insurance funds, but in the case of public companies there is a further liability on account of the shareholders' capital. The assets consist chiefly of government and municipal securities, mortgages, loans on policies, landed and house property, etc. Loans on personal security are granted by very few of the Australian offices. Separate details of liabilities in respect of Australian business are not available.

Total liabilities and assets. In the two tables which follow the details of liabilities and assets relate to all business (Australian and overseas) of Australian companies, the life insurance business of the two State Government offices, and the Australian business only of the twelve overseas companies operating in Australia. For various reasons several offices do not attempt the dissection of liabilities and assets according to type of business, and, therefore, the figures in the following tables relate to all types of business combined.

LIFE INSURANCE: TOTAL LIABILITIES, 1964
(\$ million)

	Life insurance business	Other classes of business	Total liabilities

(a) Life insurance and other classes of business.

Loans

In the following table details are given of new loans paid over by life insurance companies during each of the years ended 31 December 1961 to 1965. The information has been compiled from monthly returns furnished by each company. New loans paid over by the Government Insurance Office of New South Wales and the Queensland State Government Insurance Office are not included. Advances of premiums are also excluded.

(a) State or Territory of location of mortgage, registration of policy, or residence of borrower. (b) Includes Papua and New Guinea. (c) Includes the Northern Territory.

Fire, marine and general insurance

The following statistics, which are in respect of the Australian business of companies operating in Australia and State Government insurance offices, conform to the following definitions and should be interpreted in accordance therewith.

- Premiums represent the full amount receivable in respect of policies issued and renewed in the year, less returns, rebates and bonuses paid or credited to policy-holders during the year. They are not adjusted to provide for premiums unearned at the end of the year and consequently the amounts differ from 'earned premium income' appropriate to the year. When business is increasing, as in recent years, premiums receivable (as shown in the statistics) are greater than 'earned premium income' appropriate to the year. The converse applies when business is declining.
- Claims or losses include provision for outstanding claims and represent claims or losses incurred in the year. Salvage and other amounts recoverable have been deducted.
- Contributions to fire brigades, commission and agents' charges, and expenses of management represent mainly charges paid during the year.
- Taxation represents mainly payments made during the year, and includes income tax, pay-roll tax, licence fees, stamp duty (where paid by the company), etc. Income tax paid during the year is based on the income of earlier years.

The figures relate to selected items of statistics and are not construable as 'Profit and Loss' statements or 'Revenue Accounts'.

In cases where the business is underwritten in one State and the risk is situated in another, the business is included in the State in which the policy was issued.

During 1964-65 revenue from premiums amounted to \$551.4 million, and that from net interest on investments, etc. to \$31.2 million, a total of \$582.6 million. Expenditure on claims amounted to \$354.5 million, contributions to fire brigades \$13.1 million, commission and agents' charges \$50.7 million, expenses of management \$88.7 million, and taxation \$14.8 million, a total of \$521.8 million.

Premiums and claims

The following tables show the aggregate premium income less returns, rebates and bonuses, and claims or losses less amounts recoverable, for each State and for all classes of insurance other than life for the years 1960-61 to 1964-65.

The Export Payments Insurance Corporation

The Export Payments Insurance Corporation was established under the *Export Payments Insurance Corporation Act 1956* to provide exporters with insurance against risks associated with overseas trade which are not usually acceptable to commercial insurers. The Corporation commenced business in 1957. Where the Corporation is not in a position to accept business on its commercial account it may be authorized under its statute to provide insurance facilities on the Commonwealth Government's account in the national interest. See also the chapter Oversea Transactions, page 404.

INSTALMENT CREDIT FOR RETAIL SALES

Information relating to instalment credit for retail sales in Australia is given in the following tables. Information in more detail may be found in the annual bulletin *Insurance and Other Private Finance* and in the monthly and quarterly statements relating to instalment credit for retail sales issued by this Bureau (see beginning of chapter).

The statistics cover operations of all types of instalment credit schemes which relate primarily to the financing of retail sales of goods, whether the credit is advanced by a retail business or by a non-retail finance business. In general, the term 'instalment credit' is defined as relating to schemes in which repayment is made by regular pre-determined instalments. Types of schemes covered include hire purchase, time payment, budget account, and personal loan schemes which relate primarily to the financing of retail sales of goods. In these statistics the term 'retail sales' relates not only to retail sales by retail establishments coming within the scope of the Censuses of Retail Establishments conducted periodically by this Bureau, but includes also other sales of goods to final purchasers (e.g. plant and machinery).

Figures for amounts financed *exclude* interest, hiring charges, insurance, etc. Figures for balances outstanding and collections *include* interest, hiring charges, insurance, etc. Details are not available of these charges or of other items (e.g. rebates allowed for early payments, late payment charges, bad debts written off) which affect the reconciliation of the three main instalment credit series—amount financed, collections, and balances outstanding.

Statistics of amounts financed are classified by type of goods, defined as follows: *motor vehicles* (new and used separately)—motor cars and motor cycles, commercial vehicles, tractors, caravans, trailers, motor parts and accessories, etc.; *plant and machinery*—farm machinery and implements, earth-moving equipment, aircraft, industrial plant and machinery, business machines and equipment (including commercial refrigeration equipment), etc.; *household and personal goods*—furniture, furnishings and floor coverings, domestic refrigerators, electrical goods, radios, television, musical instruments, bicycles, motor mowers, clothing, etc.

Further explanatory detail on these series may be found in the bulletin and statements referred to on page 735.

Total instalment credit, by type of business

The following table gives separate particulars of the instalment credit transactions of retail businesses and non-retail finance businesses for the years 1960-61 to 1964-65.

INSTALMENT CREDIT FOR RETAIL SALES, BY TYPE OF BUSINESS: AMOUNT FINANCED, BY COMMODITY GROUP, COLLECTIONS, AND BALANCES OUTSTANDING, AUSTRALIA, 1960-61 TO 1964-65 (\$ million)

(a) Includes Australian Capital Territory.

(b) Includes Northern Territory.

NEW CAPITAL RAISINGS BY COMPANIES IN AUSTRALIA

Information relating to capital raised by companies in Australia is given in the following tables. More detailed information may be found in the annual bulletin *Insurance and Other Private Finance* and in quarterly bulletins dealing with capital raisings (see beginning of chapter).

The statistics (the collection of which commenced in July 1954) relate to capital raised by companies through issues of shares, and in the case of companies listed on stock exchanges, through the issue of debentures, notes and similar securities and the acceptance of deposits, and in the case of unlisted companies, by way of loans secured over the entire assets of the company. Capital obtained by way of bank overdraft or bank loans, trade credit, temporary advances, and loans secured over part only of the assets of the company is not included. Totally unsecured loans are included in the case of listed companies, but are excluded in the case of unlisted companies.

Separate statistics are given for listed and unlisted companies. Listed companies are companies incorporated in Australia or the Australian territories and listed on one or more of the Australian stock exchanges. All other companies incorporated in Australia, including subsidiaries of listed companies, are classified as unlisted companies. Companies incorporated overseas, whether listed on an Australian stock exchange or not, are excluded from the statistics of share issues. However, subsidiaries of overseas companies, if incorporated in Australia, are included in the statistics of share issues. The statistics of new capital raised through issues of debentures, notes, etc., and the acceptance of deposits, include, in addition to capital raised by companies incorporated in Australia (including subsidiaries of overseas companies), capital raised in this way from Australian sources by overseas public companies through their Australian offices.

The following are explanatory notes relating to some of the items shown in the tables.

New money. This is the net amount of cash transferred from the investing public to the companies. For this purpose the 'investing public' includes banks and life insurance companies (except when subscribing to issues by associated companies) and government and private superannuation funds, but excludes other government agencies. Subscriptions by associated companies, whether local or overseas, are excluded. In the tables which follow the amount of new money is obtained by deducting from the total cash raised the 'amount not involving a net transfer of funds from the investing public'.

Amounts not involving new money. These amounts include cash subscriptions received by issuing companies from associated companies. Such subscriptions represent inter-company transfers only, and do not involve a receipt of funds from the 'investing public'. Also included are amounts which, although subscribed by the 'investing public' (i.e. subscribers other than 'associated companies'), are not retained by the issuing company or its associates, but are used to redeem shares, debentures or unsecured notes, etc. or are used to purchase from individuals existing shares, debentures, etc. in other companies, including existing shares, etc. in associated and subsidiary companies. The funds used in this way are thus returned to another section of the 'investing public' and do not represent a *net* transfer of cash from the 'investing public' to the companies. (Besides these purchases of existing shares, etc. from individuals, purchases of existing shares, etc. from companies other than associates of the issuing company might also be included in this item, but the amounts involved are small and separate details have not been collected.)

Companies listed on Stock Exchanges

Details of new capital raised through issues of shares, debentures, or registered notes, or through accepting deposits are given in the following table for each of the years 1960-61 to 1964-65.

LISTED AUSTRALIAN COMPANIES(a): NEW CAPITAL RAISED THROUGH ISSUES OF SHARES, DEBENTURES, OR REGISTERED NOTES, ETC.(b), OR ACCEPTING DEPOSITS(c), 1960-61 TO 1964-65

(\$ million)

Year	Share capital						Debentures, registered notes and deposits		
	Value of issues commenced	Non-cash issues commenced (d)	Cash issues commenced	Cash raised during period (e)	Amounts not involving new money	New money	Total amount raised (f)	Amounts not involving new money (f)	New money
1960-61	527.2	254.6	272.6	254.4	57.4	197.0	870.6	629.8	240.8
1961-62	383.0	145.8	237.2	189.8	37.4	152.4	762.4	563.2	199.2
1962-63	276.5	144.2	132.2	150.2	45.5	104.7	839.2	609.3	229.9
1963-64	260.1	119.0	141.1	169.2	42.8	126.4	907.7	745.5	162.2
1964-65	393.5	136.6	257.0	208.6	60.9	147.6	1,075.5	905.7	169.8

(a) Includes companies incorporated in the Australian Territories. (b) Includes convertible notes. (c) Deposits accepted by banks, life insurance companies, pastoral companies and building societies, and loans to authorized dealers in the short-term money market are not included. (d) Includes bonus issues, conversion issues, issues in exchange for existing shares, etc. (e) Amounts paid up on issues commenced during the year plus calls on issues commenced in earlier years. (f) Includes conversions, renewals, etc.

Companies not listed on Stock Exchanges

Details of new capital raised by unlisted companies through issues of shares and loans secured by charges over the companies' entire assets are given in the following table for each of the years 1960-61 to 1964-65.

UNLISTED COMPANIES(a): NEW CAPITAL RAISED THROUGH ISSUES OF SHARES AND LOANS SECURED BY CHARGES OVER THE COMPANIES' ENTIRE ASSETS, 1960-61 TO 1964-65

(\$ million)

Year	Share capital						Loans secured by charges over the companies' entire assets		
	Value of issues commenced	Non-cash issues commenced (b)	Cash issues commenced	Cash raised during period (c)	Amounts not involving new money	New money	Total amount raised (d)	Amounts not involving new money (d)	New money
1960-61	667.0	416.6	250.4	242.0	172.2	69.8	49.2	30.6	18.6
1961-62	503.6	268.6	235.0	216.6	161.8	54.8	48.0	34.2	13.8
1962-63	412.6	218.7	193.9	204.8	159.1	45.7	58.8	45.4	13.3
1963-64	432.3	222.5	209.9	211.6	163.2	48.4	68.7	46.1	22.6
1964-65	563.5	303.1	260.5	233.9	182.2	51.7	65.3	40.1	25.2

(a) Excludes companies incorporated in the Northern Territory and Australian External Territories for 1962-63 and previous years, but includes Northern Territory incorporations for 1963-64 and subsequent years. (b) Includes bonus issues, conversion issues, issues in exchange for existing shares, etc. (c) Amounts paid up on issues commenced during year plus calls on issues commenced in previous years. (d) Includes conversions, renewals, etc.

Listed and unlisted companies—new money raised, classified by industry group

A summary of new money raised by listed and unlisted companies during each of the years 1960-61 to 1964-65, as shown in the preceding tables, is given below, together with a classification by industry groups of the amounts raised.

LISTED AND UNLISTED COMPANIES: NEW MONEY RAISED, BY INDUSTRY GROUP, 1960-61 TO 1964-65
(\$ million)

Year	Companies listed on stock exchanges			Companies not listed on stock exchanges			Grand total
	Share capital (a)	Debentures, registered notes and deposits (b)	Total	Share capital (a)	Secured loans (c)	Total	
Manufacturing—

1963-64	126.4	162.2	288.6	48.4	22.6	71.0	359.6
1964-65	147.6	169.8	317.4	51.7	25.2	76.9	394.3

(a) Includes preference shares. (b) Excludes deposits accepted by banks, insurance companies, pastoral companies and building societies, and loans to authorized dealers in the short-term money market. (c) Includes only loans which are secured by charges over the company's entire assets. (d) Small share issues of less than \$2,000 for which returns have not been collected have not been included in the industrial classification but are included in All industries.

UNIT TRUSTS, LAND TRUSTS AND MUTUAL FUNDS

Statistics relating to operations in Australia of unit trusts, land trusts and mutual funds have been collected quarterly since March 1961 and are shown in the following tables. The figures do not include details of superannuation funds conducted by unit trusts management companies.

Transactions of trusts and funds

Particulars of cash transactions in trust units and fund shares and of purchases and sales of investments by trusts and funds are given in the following table.

**TRUSTS AND FUNDS: TRANSACTIONS, YEARS 1961-62 TO 1964-65
AND QUARTERS SEPTEMBER 1964 TO DECEMBER 1965**

(\$ million)

Period	Cash transactions— trust units and fund shares		Purchases and sales of investments(a)	
	Total amount received (b)	Total amount paid (c)	Purchases (d)	Sales (e)
Year—				
1961-62	34.9	13.9	23.3	7.0
1962-63	31.7	14.0	27.4	9.7
1963-64	44.9	20.4	35.2	10.6
1964-65	36.0	22.6	31.3	18.8
Quarter—				
September 1964 .	10.2	6.5	8.8	5.0
December 1964 .	10.5	6.9	9.3	6.4
March 1965 . . .	6.8	5.4	6.4	4.8
June 1965	8.5	4.0	6.8	2.7
September 1965 .	6.1	3.1	7.0	4.8
December 1965 .	6.8	5.1	5.1	4.3

(a) Commonwealth Government, local and semi-governmental authority, securities, shares, debentures, unsecured notes, loans, deposits on term or notice of three months or longer, land and buildings, etc. (b) For trust units and fund shares issued. Includes re-issues and new issues. Includes fees and expenses. (c) For trust units and fund shares repurchased. Includes those units and fund shares intended for re-issue. (d) Payments for assets acquired during period. Includes brokerage and stamp duty. (e) Receipts for assets sold or redeemed during period. Excludes brokerage and stamp duty.

Analysis of purchases and sales of investments

Details of purchases and sales of investments by trusts and funds for the years 1961-62 to 1964-65 are given in the following table.

**TRUSTS AND FUNDS: ANALYSIS OF PURCHASES AND SALES OF
INVESTMENTS, 1961-62 TO 1964-65**
(\$ million)

Year	Shares (incl. preference shares)	Debentures, unsecured notes, deposits (a)	Cw/ith Govt, local and semi-govt authority securities	Other (b)	Total
Purchases—					
1961-62	18.3	2.8	0.1	2.2	23.3
1962-63	19.1	5.2	0.1	3.0	27.4
1963-64	25.0	6.8	0.1	3.2	35.2
1964-65	19.3	6.1	0.1	6.0	31.3
Sales—					
1961-62	5.4	0.4	0.4	0.8	7.0
1962-63	6.4	0.7	0.7	1.9	9.7
1963-64	7.7	1.9	0.1	0.9	10.6
1964-65	13.7	2.7	0.1	2.3	18.8

(a) Excludes cash on hand and at bank, loans to authorized dealers in the short-term money market, and other deposits under three months term or notice. (b) Includes land and buildings, mortgages on land and buildings, and other investments.

Market value of trusts and funds, and cash and short-term deposits of trusts and funds

The total market value of trusts and funds and the cash and short-term deposits of trusts and funds are shown in the following table.

**TRUSTS AND FUNDS: TOTAL MARKET VALUE AND CASH
AND SHORT-TERM DEPOSITS, JUNE 1961 TO DECEMBER 1965**
(\$ million)

At—	Total market value of trusts and funds(a)	Cash and short-term deposits		
		Cash(b)	Short-term deposits(c)	Total
30 June 1961	168.0	1.2	6.4	7.6
30 June 1962	183.6	1.1	7.2	8.3
30 June 1963	207.7	2.1	5.7	7.8
30 June 1964	249.8	1.6	6.4	8.0
30 September 1964	251.1	1.6	6.7	8.3
31 December 1964	252.7	1.9	6.6	8.6
31 March 1965	230.5	1.5	5.4	6.9
30 June 1965	222.2	2.0	5.6	7.6
30 September 1965	225.1	2.2	5.8	8.0
31 December 1965	229.3	2.4	5.7	8.0

(a) Includes value of land trusts at valuation. (b) Includes cash on hand and at bank. (c) Includes loans to authorized dealers in the short-term money market and other deposits under three months term or notice.

PASTORAL FINANCE COMPANIES**Rural advances**

The following table is derived from returns supplied to the Reserve Bank by major pastoral finance companies and shows the total rural advances outstanding at the end of June 1960 to 1964 and of subsequent quarters to December 1965.

**PASTORAL FINANCE COMPANIES: RURAL ADVANCES(a), STATES
JUNE 1960 TO DECEMBER 1965**

(Source: Reserve Bank of Australia)
(\$ million)

End of—	New South Wales	Victoria	Queensland	South Australia	Western Australia and Tasmania	Total
June 1960	59.3	35.3	48.7	29.8	30.8	203.9
„ 1961	59.7	39.9	46.8	34.8	31.8	212.9
„ 1962	58.8	32.9	48.6	34.8	33.0	208.0
„ 1963	61.4	35.6	49.9	33.1	33.8	213.7
„ 1964	64.1	39.0	51.9	36.3	37.1	228.3
September 1964	72.7	47.0	55.7	38.1	40.6	254.1

 (b) Excludes Commonwealth Government securities.

RURAL DEBT

Major sources of credit for rural purposes include banks, Commonwealth and State government financial agencies, pastoral finance companies, and life insurance companies. The following table shows the estimated rural debt to these lenders.

ESTIMATED RURAL DEBT TO SPECIFIED LENDERS
30 JUNE 1961 TO 1965

(Source: Reserve Bank of Australia)

(\$ million)

Lender	30 June—				
	1961	1962	1963	1964	1965
Major trading banks	451	479	495	514	584
Ex-service settlement	114	118	113	108	104
Other government incl. State banks and and State savings banks	146	159	169	191	216
Pastoral finance companies	213	208	214	228	258
Commonwealth Development Bank	21	34	45	55	72
Life insurance companies	48	51	52	56	66
Total	993	1,049	1,088	1,152	1,300

In addition, credit is supplied to the rural sector by finance companies, merchants, co-operative producer organizations, and by private lenders and investors, the most noteworthy of these last-mentioned sources involving family arrangements and property vendors. No data are currently available on the extent of the outstanding debt by the rural sector to these sources.

SHORT-TERM MONEY MARKET

For some years prior to 1959 leading stockbrokers had been actively engaged in the acceptance of short-term funds against the security of government securities, but their operations were limited by the absence of suitable short-term securities and their liquidity requirements. In February 1959 the Commonwealth Bank (now the Reserve Bank) gave official status to the market by announcing that under certain conditions it would act as lender of last resort to authorized dealers in the short-term money market.

The form of organization at March 1965 consisted of nine companies whose functions were:

- (i) to accept loans overnight, at call or for fixed periods, in minimum amounts of \$50,000 and to invest these funds in Commonwealth Government securities with currencies not exceeding three years and, since March 1965, in commercial bills that had been accepted or endorsed by a trading bank; and
- (ii) to engage as traders in the buying and selling of these specific classes of securities.

Dealers are required to have a minimum paid-up capital of \$400,000 and a level of shareholders' funds sufficient to permit the lodgment of 'margins' with the Reserve Bank, in the form of Commonwealth Government securities, as general backing for their operations. These securities lodged as margins are required to be, on market values, equivalent to at least:

- (a) one-half per cent of the dealer's holding of Treasury Notes;
- (b) one per cent of the dealer's holding of Commonwealth Government securities and commercial bills maturing within one year;
- (c) two per cent of the dealer's holding of Commonwealth Government securities maturing within one to two years; and
- (d) four per cent of the dealer's holding of Commonwealth Government securities maturing within two to three years.

The total amount of loans a dealer may accept is determined by the Reserve Bank in relation to the level of the dealer's shareholders' funds. Under the lender of last resort arrangements the dealer may borrow from the Reserve Bank against the lodgment of securities.

Selected assets and liabilities of authorized dealers and rates of interest on loans accepted

In the following table details of selected assets and liabilities of authorized dealers and the interest rates on loans accepted by dealers are given for June 1960 to 1964 and for each month January to December 1965.

All other lenders(b)	12.0	15.7
Total	337.3	302.2

(a) Compiled from returns supplied by authorized dealers in the short-term money market. Liabilities to Reserve Bank as lender of last resort are excluded.
(b) Includes marketing boards and trustee companies.

FRIENDLY SOCIETIES, REGISTERED BUILDING SOCIETIES AND CO-OPERATIVE SOCIETIES

Friendly societies

The total membership of friendly societies in Australia is about 430,000, but as certain benefits such as medical attendance and free medicines, and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must be more than doubled to arrive at an estimate of the number of persons who receive some direct benefit from these societies, even when due allowance is made for young and unmarried members. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its proposed rules conform to the law, and that the scale of contribution is sufficient to provide the promised benefits. Societies are obliged to forward to the Registrar annual returns about their membership and their finances, and reports are published in most of the States dealing with the returns received.

Societies, members and revenue

The following table sets out the number of societies, members, etc., revenue and expenditure, and funds of registered societies for the year. More detailed information is available in the bulletin *Insurance and Other Private Finance*, and issue No. 3, 1964-65, contains particulars for the year 1963-64.

(b) Includes the Australian Capital Territory. (c) Year 1964.

Registered building societies

Summary

During 1962-63 and 1963-64 returns were received from 2,838 and 3,162 societies respectively, but the information was not exhaustive, as particulars regarding a number of organizations were not included. In the following table general information is given relating to the societies in each State for the year 1963-64 and to the combined States for 1962-63. More detailed information is available in the mimeographed bulletin *Registered Building Societies*. Issue No. 3 contains information for the year 1964-65.

Tasmania	18,126	1,714	19,840	15,888
Total	815,396	29,176	844,572	761,960

(a) See footnote (a) to table above. (b) Includes advances on mortgage of terminating societies which are on a gross basis. Net advances may be derived by subtracting borrowing members' funds. See table above.

Co-operative societies

Co-operative societies are divided into three classes: (i) those engaged in the manufacture and marketing of primary products and trade requirements; (ii) those engaged in retailing general household requirements; and (iii) those engaged in activities covered by both classes (i) and (ii). The first class may be described briefly as Producers' Co-operative Societies and the second as Consumers' Co-operative Societies. The particulars given for New South Wales relate to societies registered under the Co-operation Act, 1923-1954. A summary of the business of all co-operative societies for the years 1963-64 or 1964 for all States except Western Australia is given in the following tables. Separate particulars for each of the three types of co-operative societies are given in the annual bulletin *Insurance and Other Private Finance*, and issue No. 3, 1964-65 contains details for 1963-64.

LOTTERIES AND BETTING

Lotteries

State Governments operate lotteries in New South Wales, Queensland and Western Australia. Tattersall Lotteries are operated under government licence in Victoria and also sell tickets under government licence in Tasmania and New Zealand. The statistics of sales of tickets and prizes for Victoria include sales and allotments of prizes in Tasmania and New Zealand by Tattersall of Victoria. Tasmanian Lotteries were operated under government licence until 30 September 1961, when they surrendered their licence. In general, revenue derived by the State Governments from these lotteries is used directly or indirectly to provide funds for expenditure on hospitals, charities, etc. For information as to the origin, purpose and method of payment of proceeds or taxes to State revenues see Year Book No. 46, page 808 and earlier issues.

Details of ticket sales, prizes allotted, and taxes paid and other net contributions to State Government revenues, relating to lotteries drawn during each of the years 1960-61 to 1964-65, are given in the following table.

**LOTTERIES: VALUE OF TICKET SALES, PRIZES ALLOTTED, TAXES PAID

PENSION AND SUPERANNUATION SCHEMES

**Government, local government and semi-governmental pension and
superannuation schemes**

The Commonwealth and all State Governments have established pension and superannuation schemes for their employees. These schemes are operated through funds to which both the Governments and their employees make contributions. Employees of local government and semi-governmental authorities are covered either by the Commonwealth and State Government schemes or by a separate scheme of the authority which is operated either through a separately constituted fund or through a life insurance office.

Schemes operated through separately constituted funds

The following table gives particulars of schemes operated through separately constituted funds.

**GOVERNMENT, LOCAL GOVERNMENT AND SEMI-GOVERNMENTAL PENSION
AND SUPERANNUATION SCHEMES OPERATED THROUGH SEPARATELY
CONSTITUTED FUNDS, 1963-64**

(a) Operating in all States except South Australia.

Private superannuation, pension and retiring allowance schemes

Details of the results of a survey of private superannuation, pension and retiring allowance schemes conducted by private businesses for the benefit of their employees during the year ended June 1963 or the accounting period nearest that year and of similar surveys conducted in 1960-61 and 1961-62 are published in Year Book No. 51 (pages 898-900).

PROBATES AND LETTERS OF ADMINISTRATION

The following table gives some particulars of the number and value of estates of deceased persons in each State for the latest year for which information is available. Owing to differences in legislation in the various States the figures are not entirely comparable.

PROBATES AND LETTERS OF ADMINISTRATION: STATES

	New South Wales 1964-65 (a)	Victoria 1964	Queens- land 1963-64	South Australia 1964	Western Australia 1964-65	Tas- mania 1965 (b)

(a) Total estates of deceased persons assessed for death duty. (b) Estates dealt with by the Taxation Department.

CHAPTER 21

PUBLIC FINANCE

The subject of public finance is dealt with in this chapter under the two major divisions of Commonwealth Finance and State Finance. The close financial relations between the Commonwealth and States, however, particularly since the Financial Agreement has been in operation, demand also a combination of these two divisions under the heading of Commonwealth and State Finance. Under the Financial Agreement the Commonwealth assumed the liability to bondholders for the States' Securities existing at the date of the Agreement and now arranges for all borrowings for and on behalf of the Commonwealth or any State and for all conversions, renewals, redemptions and consolidations of such securities. In view of this it is convenient to deal with the Commonwealth and State Government Securities on Issue in a separate division of this chapter (page 799). The subject of income taxes is also dealt with in a separate division at the end of this chapter (page 814).

For further detailed information on the subjects covered by this chapter see the annual bulletins *Commonwealth Finance*; *State, Territory and Local Government Authorities' Finance and Government Securities*; and *Commonwealth Taxation Assessments*. Current information in summarized form is contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics* and the *Digest of Current Economic Statistics*.

COMMONWEALTH FINANCE

Financial provisions of the Constitution

The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are contained in Sections 81 to 105A of the Commonwealth Constitution (see pages 16–19 of this Year Book). Two other sections which have a most important bearing on questions of Commonwealth finance are Sections 69 and 51.

Section 69 provides for the transfer from the States to the Commonwealth of certain specified departments, and Section 51, in outlining the powers of the Commonwealth Parliament, implies the transfer or creation of other departments. Sections 87 and 96 deal with the financial relations between the Commonwealth and the States. These matters have been treated in previous issues of the Year Book, and on pages 763–71 of this issue a summary is given of the present provisions for Commonwealth financial assistance to the States.

The *Audit Act* 1901–1961 lays down the procedure which must be followed in accounting for the receipt and disbursement of public funds. The general administration of Commonwealth finances is the responsibility of the Treasurer of the Commonwealth.

Commonwealth Public Account

Nature of account

The Commonwealth Public Account includes the Consolidated Revenue Fund, the Trust Fund and the Loan Fund. Ordinary revenues from taxation and other sources are paid into the Consolidated Revenue Fund, from which the main expenditures are for defence, war and repatriation services, social services, payments to the States, Commonwealth business undertakings (mostly postal, telephone and telegraph), and administration. The Trust Fund covers special transactions outside the ordinary operations of departmental expenditures, such as pension funds and moneys held for expenditure by the Commonwealth at some future time. The Loan Fund receives its funds from the sale of Commonwealth securities, and expenditures from the Fund are made in accordance with the purpose of issue of each loan. The main disbursements from the Loan Fund are to the States, either by way of distribution of the proceeds of loans raised by the Commonwealth on their behalf or in accordance with the provisions of the Commonwealth and State Housing Agreements, and the remaining disbursements are for Commonwealth purposes such as defence or war service land settlement.

Summary of receipts and expenditure

A summary of transactions on the Commonwealth Public Account for 1964–65 and the four preceding years is given in the table which follows. The transactions are recorded on a cash basis.

COMMONWEALTH PUBLIC ACCOUNT: SUMMARY OF TRANSACTIONS
1960-61 TO 1964-65

(\$ million)

	1960-61	1961-62	1962-63	1963-64 (b)	1964-65

Cash balances	-1.6	10.0	-1.1	-0.9	-3.6
Total borrowings, etc.	45.9	345.0	422.4	395.8	156.7

(a) Excludes payments to Loan Consolidation and Investment Reserve: 1960-61, \$285.1m; 1961-62, \$44.3m; 1962-63, \$52.8m; 1963-64, \$29.8m; and 1964-65, \$222.7m. (b) Comparisons between the figures for 1962-63 and 1963-64 are affected by accounting changes which had the effect of increasing both expenditures and receipts by \$44.0m. In particular, receipts of business undertakings were increased by \$2.6m and other revenue by \$41.5m. On the expenditure side, defence services were increased by \$13.0m, war service land settlement by \$9.2m, departmental running expenses, etc., by \$18.2m, repatriation services by \$1.0m, and expenditure by business undertakings by \$2.6m. The revised accounting arrangements also involved minor changes as between certain items of expenditure, including most of those previously mentioned. (c) Redemptions of special bonds, previously deducted from proceeds of special bonds, are now included under redemptions. (d) Oversea 'refinancing' operations, previously treated as conversions, are now treated as adding to both loan proceeds and redemptions where they involved receipts into Loan Fund and expenditures from Loan Fund. (e) In 1964-65 \$100m Treasury bills were funded so that there was a net reduction of \$62m in the Treasury bill issue during that year.

Minus sign (-) denotes decrease.

All Commonwealth funds: summary of receipts and expenditure

The following table represents a reclassification of Commonwealth Government receipts and expenditure in a national accounts form. It includes the Commonwealth Government components (with slight re-arrangement) of Tables 57 and 60 in *Australian National Accounts, National Income and Expenditure 1948-49 to 1964-65*. Advances to semi-governmental business undertakings are included in 'Other advances', but grants to other semi-governmental bodies (National Capital Development Commission, Australian National University, Stevedoring Industry Authority, etc.) are classified according to the final expenditure of the authority concerned.

ALL COMMONWEALTH FUNDS: RECEIPTS AND EXPENDITURE, 1960-61 TO 1964-65

(a) This table includes the Commonwealth Government component of Tables 66 and 75 in *Australian National Accounts, National Income and Expenditure 1948-49 to 1964-65* together with net expenditure on stocks.

Main components of Commonwealth expenditure

The tables on pages 761-71 supply details of some of the main components of total expenditure of the Commonwealth Government.

Subsidies

The following table shows details of Commonwealth expenditure from all funds on assistance to primary producers, subsidies and bounties for the years 1960-61 to 1964-65. Expenditure on special relief such as drought, frost, flood, and bush fire, etc., is not included here (included as cash benefits to persons in tables, pages 762-3), nor is expenditure from the proceeds of certain taxes on primary products and profits from marketing schemes, which have been paid to trust

funds for the purpose of price or other stabilization schemes or for distribution to producers (see page 781). Payments to the States for cattle tick control, dairy industry extension and agricultural advisory services are not included under this heading, but included under the heading Grants to the States (see pages 764-6). Further information relating to assistance to primary producers is given in the chapter Rural Industry. Details of price stabilization subsidies and of various forms of assistance to primary producers for earlier years are given on pages 414 and 1014-15, respectively, of Year Book No. 38.

ALL COMMONWEALTH FUNDS: EXPENDITURE ON SUBSIDIES
1960-61 TO 1964-65

Further information concerning items in the two preceding tables is given in the appropriate chapters of this Year Book.

Payments to or for the States

An outline of the provisions of the Constitution providing for the Commonwealth to make payments to the States, and of the systems which followed, is given in earlier issues of the Year Book (see No. 37, pages 633 to 638). A distinction is made in this Year Book between (a) direct Commonwealth financial assistance to the States in the form of grants to provide revenue for general and specific purposes and (b) those forms of assistance for developmental and other specific purposes which include, in part or in total, payments made in the form of repayable advances. Some information about the more important or most recent of these forms of financial assistance is given on pages 769-71, but for greater detail on these and other forms of financial assistance see Year Book No. 51, pages 921-4 and earlier issues. Further information is available also in the chapters of this issue dealing with the respective subjects.

Grants. The following three tables show particulars of the amounts paid to the States as grants for the purposes referred to in (a) above.

The figures in the table above represent gross advances, and take no account of repayments made by the States.

Contributions under Financial Agreement. Details of the Financial Agreement between the Commonwealth and the States are given in Year Book No. 37, pages 685–90. Under this Agreement the Commonwealth undertook to contribute £7,584,912 (\$15,169,824) per annum towards interest payable on the State loan securities for a period of 58 years from 1 July 1927. This amount is distributed among the States as follows: New South Wales, £2,917,411 (\$5,834,822); Victoria, £2,127,159 (\$4,254,318); Queensland, £1,096,235 (\$2,192,470); South Australia, £703,816 (\$1,407,632); Western Australia, £473,432 (\$946,864); Tasmania, £266,859 (\$533,718). These amounts are equal to the sums paid by the Commonwealth to each State in the year 1926–27 at the rate of 25s. (\$2.50) per head of population, the rate at which the Commonwealth had contributed annually to the States since 1 July 1910 as compensation for the States relinquishing, after federation, the right to levy customs and excise duties.

In addition, under the Financial Agreement the Commonwealth agreed to make certain contributions to the National Debt Sinking Fund for redemption of State loan securities. Details of these are given on pages 813–14 of this chapter.

Special grants to the States. The Constitution provides in Section 96 for the granting of special financial assistance to the States. The Commonwealth Grants Commission inquires into and reports upon claims made by any State for a grant of financial assistance and any matters relevant thereto. The recommendations of the Commission in respect of the years 1961–62 to 1965–66 are shown in their two parts in the following table. One part is the Commission's estimate of the indispensable need of the claimant State for the year in which the payment is to be made after allowing a sufficient margin for safety. The other part is an adjustment of this estimate for an earlier year after an examination of the audited accounts for that year. Thus the grants for 1965–66 include an estimate of the indispensable need of the claimant State for 1965–66 and an adjustment to the estimated grant for 1963–64.

(a) Adjustment to estimated grant paid two years previously.

Financial assistance grants. The *States Grants Act* 1959 repealed the *States Grants (Tax Reimbursement) Acts* of 1946, 1947 and 1948, and provided for payment of financial assistance to the States in 1959–60 amounting to £244,500,000 (\$489,000,000) to be distributed among the States as follows: New South Wales, £83,450,000 (\$166,900,000); Victoria, £60,625,000 (\$121,250,000); Queensland, £36,375,000 (\$72,750,000); South Australia, £27,675,000 (\$55,350,000); Western Australia, £25,462,000 (\$50,924,000); Tasmania, £10,913,000 (\$21,826,000). In the years to 1964–65 the financial assistance grant payable to each State has been determined by increasing its grant for 1959–60 in accordance with a formula which takes into account movements in population in each State and the increases (if any) in the level of average wages per person employed as shown in returns submitted under the *Pay-roll Tax Assessment Act* 1941–1963.

Additional financial assistance grants. The *States Grants (Additional Assistance) Act* 1958 provided for the payment of £5,000,000 (\$10,000,000) from the Consolidated Revenue Fund for financial assistance to the States. During 1961–62, 1962–63, and 1963–64 additional assistance grants of £10,000,000 (\$20,000,000), £17,500,000 (\$35,000,000) and £20,000,000 (\$40,000,000), respectively, were provided for the States on a non-repayable basis under the authority of the *States Grants (Additional Assistance) Acts* 1962 and 1963 for expenditure on employment-giving activities, mainly in the works field.

Grants for road construction. Details of the *Main Roads Development Act* 1923–1925, *Federal Aid Roads Acts* 1926, 1931 and 1936, *Federal Aid Roads and Works Act* 1937, *Commonwealth Aid Roads and Works Act* 1947–1949, *Commonwealth Aid Roads Act* 1950, *Commonwealth Aid Roads Act* 1954, *Commonwealth Aid Roads (Special Assistance) Act* 1957, and *Commonwealth Aid Roads Act* 1959 are given in earlier issues of the Year Book (see No. 38, pages 787–8, No. 41, page 62, No. 46, page 838, and No. 51, page 922) and in the annual bulletin *Commonwealth Finance*. A new scheme of Commonwealth assistance to the States for roads was established by the *Commonwealth Aid Roads Act* 1964. Under this Act, which is to operate for a period of five years from 1 July 1964, the Commonwealth has undertaken to make available up to £375,000,000 (\$750,000,000) to the States for the construction, reconstruction, maintenance and repair of roads. Of this amount, a total of £330,000,000 (\$660,000,000) will be paid to the States as basic grants for roads over five years. The basic grants are fixed annual amounts which rise progressively by £2,000,000 (\$4,000,000) a year from £62,000,000 (\$124,000,000) in 1964–65 to £70,000,000 (\$140,000,000) in 1968–69. In each year the grants will be distributed between the States on the basis of 5 per cent of the total to Tasmania and the balance shared between the other five States, one-third in proportion to their respective populations at the date of the last preceding Census, one-third in proportion to their respective areas, and one-third in proportion to the respective number of motor vehicles registered in these States at 31 December preceding the year of payment. The balance of up to £45,000,000 (\$90,000,000) over the five years will be made available to the States as matching assistance for roads. The total amounts of matching assistance increases by £3,000,000 (\$6,000,000) a year from £3,000,000 (\$6,000,000) in 1964–65 to £15,000,000 (\$30,000,000) in 1968–69.

Reimbursement under Tuberculosis Act 1948. The *Tuberculosis Act* 1948 provided for the reimbursement by the Commonwealth of capital and maintenance expenditure incurred by the States in the provision of facilities for the diagnosis, treatment and control of tuberculosis. Re-imbursements from the National Welfare Fund of maintenance expenditure on tuberculosis hospitals are classified as cash benefits under Health and Welfare expenditure, and they equal the amounts by which such expenditures of the States in any financial year exceed those for the year 1947–48. As from 1 July 1948 the States have also been reimbursed from annual appropriations of the Department of Health for all their capital expenditure on buildings, furnishings, equipment and plant.

States Grants (Mental Institutions) Act 1955. This Act provides for financial assistance to the States for capital expenditure on mental institutions to a maximum amount of £10,000,000 (\$20,000,000). Each State is entitled to one-third of expenditure made on or after 1 July 1955 on buildings or equipment of a mental institution.

Education. Payments to the States for universities were first introduced in 1951–52 under the *States Grants (Universities) Act* 1951 and were continued under similar *States Grants (Universities Acts* 1953, 1955, 1956, 1957, 1958, and 1960. Details of these Acts are given in earlier issues of the Year Book (see No. 51, page 923). The *Universities (Financial Assistance) Act* 1963 as amended in 1965 provides for financial assistance to the States, for universities, of £65,300,000 (\$130,600,000) over the three calendar years 1964, 1965 and 1966. (See also the chapter Education, Cultural Activities, and Research, pages 610–13.)

The *States Grants (Science Laboratories and Technical Training) Act* 1964 and the *States Grants (Science Laboratories) Act* 1965 provide for grants during 1964–65 to 1967–68 inclusive for improving science teaching in both government and non-government secondary schools.

Grants for buildings and equipment for use in technical training in schools and colleges conducted by States only are provided for under the *State Grants (Science Laboratories and Technical Training) Act 1964* and the *States Grants (Technical Training) Act 1965*.

Railway projects. Under the *Railway Standardization (South Australia) Agreement Act 1949* the Commonwealth is providing funds for the conversion of lines in the south-eastern division of the State as an initial step towards eventual standardization to 4' 8½" gauge. The State is to repay three-tenths of the cost of this work over a period of fifty years and is to bear the full cost of subsequent conversion from broad to standard gauge. Similar conditions apply to expenditures under the *Railway Equipment Agreement (South Australia) Act 1961*. Under the *Railway Standardization (New South Wales and Victoria) Agreement Act 1958* the Commonwealth provided funds for the construction of the standard gauge rail link between Albury and Melbourne on the basis that the States of Victoria and New South Wales will each bear fifteen per cent of the cost by instalments over a period of fifty years.

The total expenditure on railway standardization (the thirty per cent advances to the States and the seventy per cent grants to the States) is charged to the capital works and services vote of the Department of Shipping and Transport. Under the *Railway Agreement (Western Australia) Act 1961* the Commonwealth is providing financial assistance for the construction of a standard gauge railway from Kwinana to iron ore deposits at Koolyanobbing and to Kalgoorlie.

Cattle roads grants. The *Queensland Grant (Beef Cattle Roads) Act 1961* provided for a grant of £5,000,000 (\$10,000,000) to be paid to Queensland over the five-year period commencing 1 July 1961 for expenditure on approved roads for the transport of beef cattle. Under the *Western Australia Grant (Beef Cattle Roads) Act 1961* special grants were made to Western Australia for certain work on roads and bridges in the north of the State.

Western Australia—Northern development. The Commonwealth provides financial assistance of up to £5,000,000 (\$10,000,000) to the State of Western Australia under the *Western Australia Grant (Northern Development) Act 1958–1959* in respect of developmental expenditure by the State in the area of Western Australia north of the twentieth parallel of latitude during the period of five years commencing on 1 July 1958. Under the scheme Commonwealth assistance is provided in respect of projects, nominated by the State, which the Commonwealth is satisfied will contribute to the development of the area and which could not reasonably be expected to be carried out during the period of five years without the grant of Commonwealth assistance.

Brigalow lands. Under the *Brigalow Lands Agreement Act 1962* Commonwealth advances to the State of Queensland for specified works associated with the production of beef cattle and other primary products in the Fitzroy River Basin and the supply of beef for export were limited to £7,250,000 (\$14,500,000) during the period of five years ending 30 June 1967. Repayments over a twenty year period are to commence in 1968.

Flood mitigation, New South Wales. Commonwealth payments under the *New South Wales Grant (Flood Mitigation) Act 1964* are limited to £2,750,000 (\$5,500,000) in respect of flood mitigation works on the Macleay, Clarence, Richmond, Tweed, Shoalhaven, and Hunter Rivers. The Commonwealth grants will match State expenditure which, in turn, will be in a prescribed ratio to local authority expenditure on flood mitigation works.

Blowering Reservoir, New South Wales. The Blowering Reservoir is to be constructed at the expense of the State of New South Wales mainly by the Snowy Mountains Hydro-electric Authority, and the Commonwealth will finance half the cost in the form of repayable interest-bearing loans to that State.

Chowilla Reservoir, New South Wales. The Chowilla Reservoir is to be constructed as an approved work under the River Murray Waters Agreement, and the Commonwealth advances to New South Wales are to assist in the financing of that State's one-quarter contribution of the cost of construction.

Water resources investigations. Under the *States Grants (Water Resources) Act 1964* the Commonwealth is authorized to grant financial assistance to the States for the purpose of accelerating the States' programmes of measuring the discharge of rivers and investigating underground water resources. Grants to each State are related to that State's capital expenditure and the operational expenditure it incurs in carrying out its measurement and investigation programmes.

Development of Exmouth township, Western Australia. In 1964–65 the Commonwealth contributed an amount of \$380,000 to the Western Australia Government towards the cost of developing a township at Exmouth in connection with the United States Communications Base being established at North West Cape.

All Commonwealth funds: receipts

Commonwealth taxation

Taxation constitutes the main sources of Commonwealth revenue, accounting for 95.2 per cent in 1964-65. The following table shows details of taxation receipts from each source during the years 1960-61 to 1964-65.

ALL COMMONWEALTH FUNDS: TAXATION RECEIPTS, 1960-61 TO 1964-65

(\$'000)

Source of receipts	1960-61	1961-62	1962-63	1963-64	1964-65

Total	2,258	2,854	3,643	4,007	4,808

Other Commonwealth taxation

Taxes other than customs and excise duties, the various export charges, and some taxes on particular commodities are assessed and collected by the Commissioner of taxation. The Commissioner's organization comprises a head office in Canberra, an office in each State assessing the returns of taxpayers whose interests are restricted to that State, and a central office situated in Melbourne assessing taxpayers whose interests are in more than one State.

Details of the purposes and rates applicable to the main forms of Commonwealth taxation, excluding customs and excise, currently imposed and of current legislation are given in the following pages. Historical information is given in Year Book No. 51, pages 905-10, and in earlier issues. Taxes on income are treated separately on pages 814-25, and customs and excise duties are dealt with in the chapter Oversea Transactions. For detailed statistics relating to Commonwealth income taxes, estate duty, gift duty, and sales tax see the annual bulletin *Commonwealth Taxation Assessments*.

Sales tax. The general rate of tax levied on all goods other than those specified in the schedules to the *Sales Tax (Exemptions and Classifications) Act 1935-1964* was 12½ per cent and goods subject to special rates were taxed at the rates of 2½ and 25 per cent.

Particulars of the net amount of sales tax payable and the sales of taxable and exempt goods in each State for 1964-65 are given in the following table. The figures relate to sales during the period 1 July to 30 June. The figures for sales tax payable differ from those for net collections shown on page 772 because the latter include some adjustments in respect of earlier tax years and relate to tax payable on returns lodged during the year, which in general cover sales for the period June to May.

COMMONWEALTH SALES TAX AND AMOUNT OF SALES: STATES
AND TERRITORIES, 1964-65

(\$'000)

—	N.S.W. (a)	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.

Sales tax payable	145,360	110,541	47,613	33,417	21,993	5,991	315	365,232

(a) Includes Australian Capital Territory.

Sales of taxable and exempt goods and sales tax payable for Australia as a whole are shown in the following table for the years 1960-61 to 1964-65.

COMMONWEALTH SALES TAX AND AMOUNT OF SALES
AUSTRALIA, 1960-61 TO 1964-65

(\$ million)

Year of sale	Net sales on which sales tax was payable	Sales of exempt goods by registered persons	Total sales of taxable and exempt goods	Sales tax payable
1960-61	2,081	4,894	6,975	343
1961-62	2,100	4,832	6,931	297
1962-63	2,303	5,254	7,557	314
1963-64	2,393	6,116	8,509	329
1964-65	2,589	6,819	9,408	365

In the foregoing tables sales include goods transferred to stock for sale by retail, goods imported by persons other than registered taxpayers, and goods used in the business of the taxpayer. Exempt sales relate to goods exempted from sales tax under the *Sales Tax (Exemptions and Classifications) Act 1935-1964*. The figures shown do not represent the total sales of all commodities, as vendors trading only in exempt goods are not required to be registered, and consequently the volume of their sales is not included in the statistics above. In addition, non-taxable sales (i.e., goods sold by one registered taxpayer to another registered taxpayer) are excluded.

Pay-roll tax. From 1 September 1957 to the end of June 1965 pay-roll tax of 2½ per cent was payable by employers on all wages and salaries in excess of £200 (\$400) a week or £10,400 (\$20,800) per annum. Employers whose export sales have increased above the annual average of export sales effected during a base period of two years ended 30 June 1960 are entitled under the Commonwealth Government's export incentive scheme to a rebate of pay-roll tax of twelve and one-half times the percentage increase in export sales.

Estate duty. Under the *Estate Duty Assessment Act 1914-1963* estate duty is assessed on the net value of the estate less a statutory exemption determined in accordance with the following formula: (a) where the whole of the estate passes to the widow or widower, children (including adopted children, step-children and ex-nuptial children), or grand-children of the deceased, the sum of \$20,000 decreasing by £1 for every £4 (\$2 for every \$8) by which the value exceeds

\$20,000 and ceasing to apply at \$100,000; (b) where no part of the estate passes to the widow or widower, children or grand-children, the sum of \$10,000 decreasing by £1 for every £4 (\$2 for every \$8) by which the value exceeds \$10,000 and ceasing to apply at \$50,000; and (c) where only part of the estate passes to the widow or widower, children or grand-children, the statutory exemption is to be calculated proportionately under (a) and (b). Rebates of duty are provided on estates which become liable for duty on two or more occasions within a period of five years.

The rates of duty levied under the *Estate Duty Act 1914-1941* increase as the value of the estate for duty increases, as follows: £1 to £10,000 (\$2 to \$20,000), 3 per cent; £10,001 to £20,000 (\$20,001 to \$40,000), 3 per cent to 6 per cent; £20,001 to £120,000 (\$40,001 to \$240,000), 6 per cent to 26 per cent.; £120,001 to £500,000 (\$240,001 to \$1,000,000), 26 per cent to 27.9 per cent; £500,001 (\$1,000,001) and over, 27.9 per cent.

Particulars of the number and value of estates and duty assessed, for each of the assessment years 1959-60 to 1963-64, are given in the following table.

COMMONWEALTH ESTATE DUTY ASSESSMENTS, 1959-60 TO 1963-64

—	1959-60	1960-61	1961-62	1962-63	1963-64
Number of estates	13,978	14,196	16,449	16,634	17,658
Gross value assessed \$'000	467,120	489,952	558,764	588,306	633,552
Deductions \$'000	80,906	91,366	95,450	106,732	115,002
Statutory exemption \$'000	63,194	66,102	74,360	74,510	81,836
Dutiable value \$'000	323,020	332,482	388,954	407,064	436,714
Duty payable \$'000	28,232	31,178	34,328	37,988	39,840
Average dutiable value \$	23,110	23,420	23,646	24,472	24,732
Average duty per estate \$	2,020	2,196	2,086	2,284	2,256

Gift duty. The *Gift Duty Act 1941-1947* and the *Gift Duty Assessment Act 1941-1963* impose a gift duty on all gifts made after 29 October 1941. A gift has been defined as any disposition of property which is made otherwise than by will without adequate consideration in money or money's worth. There is a liability on both the donor and the donee to furnish a return, and both are jointly and severally liable for payment of the duty.

The following rates of duty are levied under the *Gift Duty Act 1941-1947* and relate to the total value of all gifts made by the donor within a period of eighteen months: not exceeding \$4,000, nil; \$4,001 to \$20,000, 3 per cent; \$20,001 to \$40,000, 3 per cent to 6 per cent; \$40,001 to \$240,000, 6 per cent to 26 per cent; \$240,001 to \$1,000,000, 26 per cent to 27.9 per cent; \$1,000,001 and over, 27.9 per cent. An amendment which operated from 3 June 1947, provides that gift duty shall not exceed half the amount by which the value of the gift exceeds \$4,000.

Wool tax. From 1 July 1964 to 30 June 1965, the wool tax rate was $1\frac{7}{8}$ per cent of the sale value of the wool. This rate was increased to 2 per cent from 1 July 1965. (See also the chapter Rural Industry.)

Wheat export charge and wheat tax. The *Wheat Export Charge Act 1963* repealed the *Wheat Export Charge Act 1958* and provided for an export charge on wheat and wheat products for the seasons 1963-64 to 1967-68 inclusive. The charge which may be levied is the excess of the export price over the cost of production or 1s. 6d. (\$0.15) per bushel, whichever is the less. Under the *Wheat Industry Stabilization Act 1963-1965*, to which the *Wheat Export Charge Act* is complementary, the Commonwealth Government guarantees a return to wheat-growers of the ascertained cost of production on up to 150 million bushels of wheat harvested each season exported from Australia. Collections from the wheat export charge are paid into the Wheat Price Stabilization Fund, out of which payments will be made to the Australian Wheat Board, when required, for the purpose of building up the average export price for any season to the guaranteed price. If the fund is exhausted, additional payments will be made from the Consolidated Revenue Fund. As the return from exports has been below the guaranteed price, there have been no collections of the wheat export charge since the 1956-57 (No. 20) Pool when \$3,178,000 was collected. The *Wheat Tax Act 1965* imposes a tax of three-tenths of a penny (0.25 cents) for each bushel of wheat delivered to the Wheat Board on or after 1 October 1965. (See also the chapter Rural Industry.)

Miscellaneous export charges. These consist of charges levied on exports of apples and pears (*Apple and Pear Export Charges Act 1938–1960*), canned fruits (*Canned Fruits Export Charges Act 1962–1963*), dairy produce (*Dairy Produce Export Charge Act 1924–1962*), dried fruits (*Dried Fruits Export Charges Act 1924–1929*), eggs (*Eggs Export Charges Act 1947*) and meat (*Meat Export Charges Act 1935–1954*), and on grapes used in the manufacture of wine (*Wine Grapes Charges Act 1929–1957*).

Stevedoring industry charge. The rate of charge between 1 April 1962 and the end of June 1965 was 3s. 4d. (33½ cents).

Tobacco charge. The rates of tobacco charge currently in force are as follows:

- (a) In respect of leaf sold to a manufacturer:
 - (i) one half cent per pound of leaf, payable by the grower or other persons who own the leaf immediately before sale, and
 - (ii) one cent per pound of leaf, payable by the manufacturer;
- (b) In respect of leaf grown and used by grower-manufacturers:
 - (i) where the manufacturer grows nine-tenths of the leaf used by him—one half cent per pound of leaf,
 - (ii) in other cases—one cent per pound of leaf.

(See also the chapter Rural Industry.)

Dairy produce and butterfat levies. The *Butterfat Levy Act 1965* superseded the *Dairy Produce Levy Act 1958* and provides for a maximum rate of 6s. (\$0.60) per hundredweight of butterfat content of dairy products and for the apportionment of the proceeds between overseas marketing (40 per cent), local promotion (40 per cent) and research (20 per cent) from the dairy produce levy. (See also the chapter Rural Industry.)

Canning fruit charge. Rates applied during 1964–65 were 5s. (\$0.50) per ton to 30 November 1964 and 7s. 6d. (\$0.75) per ton from 1 December 1964 to 30 June 1965. (See also the chapter Rural Industry.)

Honey levy. The current rate of levy on honey sold for domestic consumption in Australia is four-tenths of a cent per pound.

Livestock slaughter levy. The *Livestock Slaughter Act 1964–1965* imposed a levy on all cattle (over 200 lb. dressed weight), sheep and lambs slaughtered within Australia for human consumption. These levies operated from 1 August 1964 and replaced the charge imposed on meat exports and also subsumed the cattle slaughter levy for beef research purposes imposed in 1960 (see page 909 of Year Book No. 51). The rates of levy are not to exceed 75 cents for cattle of which a maximum of 20 cents is for beef research, and 7.5 cents for sheep or lambs, of which a maximum of 3.75 cents is for sheep or lamb research.

Commonwealth Consolidated Revenue Fund: expenditure

Details of expenditure from Consolidated Revenue

In the following table gross expenditure from Consolidated Revenue is classified by function and economic type, the classification being consistent with that used for tables on pages 759–60. As with grants to other Commonwealth authorities, transfers to trust funds are here classified as expenditure according to the nature of the respective trust funds. Further information on the expenditure of business undertakings and the Territories, and on other particular functions is included in the chapters Transport and Communication and The Territories of Australia and in the chapters dealing with the respective activities.

Redemption of Treasury bills				36,000	
Grand total	3,276,557	3,283,084	3,370,772	3,809,376	4,418,178

(a) Includes expenses of undertakings in Northern Territory and Australian Capital Territory.
 (b) Includes grants to Administration of Papua and New Guinea and grants under Colombo Plan, United Nations Technical Assistance Administration, etc. (c) Excludes loan management expenses included in other functions.

Minus sign (—) denotes the result of differences in timing between payments for, and deliveries of, defence equipment.

More detailed information on defence expenditure, on current and capital expenditure on goods and services, and on primary production research and sales promotion, etc. is given in the following tables.

Defence services expenditure

Details of the expenditure on defence services shown in the following table cover expenditure from Consolidated Revenue and Loan Funds by the service and associated departments, including the cost of maintaining forces in overseas posts. In recent years there has been no expenditure on defence services from Trust Funds. Re-allocation of items has caused revision to some of the figures which appeared in previous issues.

COMMONWEALTH CONSOLIDATED REVENUE FUND
EXPENDITURE ON DEFENCE, 1960-61 TO 1964-65

Current expenditure on goods and services

This table gives details of expenditure on items included under this general heading in the table on page 778, and in the main includes expenditure on administrative services and other activities (i.e. what might be termed 'running expenses') and therefore *excludes* expenditure on capital works (see table on page 781). Information on the functions of departments and the Acts administered by the Ministers of Departments may be found on pages 87-98 of Year Book No. 49.

Expenditure on primary production—research and sales promotion, export funds, etc.

Expenditure under this item is classified in the table on page 780 to development of resources and assistance to industry as it includes the proceeds of special industry taxes and profits from marketing schemes which are paid to trust funds or other authorities for the purposes of the industries concerned. Information relating to the taxes levied is given in the table on page 774. Some details of expenditure from the trust funds are included in the table on page 783. Details of expenditure from the Consolidated Revenue Fund during the last five years are given in the following table.

STATE FINANCE**Functions of State Governments**

In comparing the financial results of the States allowances must be made for the various functions discharged by the respective State Governments and for local conditions in each case. Direct comparisons of the revenue, expenditure and debt of the individual States are difficult, owing to the fact that functions which in one State are assumed by the central government are in another delegated to local government or semi-governmental bodies which are vested with certain defined borrowing powers and whose financial transactions are not included with those of the central government. Care is needed, therefore, in making comparisons, and the particulars contained in this chapter should be read with those contained in the chapter Local Government.

Accounts of State Governments

The various financial transactions of the States are in each case concerned mainly with one or other of three funds—the Consolidated Revenue Fund the Trust Fund and the Loan Fund.

All revenue (except certain items paid into special funds) collected by a State is paid into its *Consolidated Revenue Fund*, from which payments are made under authority of an annual Appropriation Act passed by the legislature, or by a permanent appropriation under a special Act. Figures relating to New South Wales represent the transactions of the Consolidated Revenue Fund and the business undertakings included in the annual budget papers. These undertakings are: railways, tramways and omnibuses, and Sydney Harbour Trust Section of the Maritime Services Board. Adjustments have been made to the Budget figures, however, in order to eliminate duplications caused by inter-fund payments. Particulars for all other States relate to the transactions of the Consolidated Revenue Fund.

The *Trust Fund* comprises all moneys held in trust by the Government and includes such items as superannuation funds, road funds, insurance companies' deposits, etc.

The *Loan Fund* is debited with all loan moneys raised for the State and credited with the expenditure therefrom on public works or other purposes.

Inter-relation of Commonwealth and State finances

A statement in some detail, covering the inter-relation of Commonwealth and State finances during the period from the inception of federation to the passing of the *Financial Agreement Act* 1928, was published in Year Book No. 22, pages 379-80. Changes in the financial relations between the Commonwealth and States since the passing of the Financial Agreement Act have been described in issues of the Year Book from year to year.

State Consolidated Revenue Fund expenditure

The principal heads of State expenditure from Consolidated Revenue Funds are: (a) interest, exchange and debt redemption charges in connection with debt; (b) working expenses of business undertakings; (c) education; (d) health and charitable expenditure; (e) justice; (f) police; (g) penal establishments; and (h) all other expenditure, including expenditure on public works, lands and surveys, agriculture and forestry, legislative and general administration, pensions, and miscellaneous.

The working expenses of railways and tramways are the largest item of State Government expenditure. In 1964-65 the working expenses of the railways, tramways and omnibuses were 22.6 per cent of the total expenditure from the State Consolidated Revenue Funds; education, 23.3 per cent; debt charges, 17.5 per cent; charitable, public health and hospitals, 13.3 per cent; and law, order and public safety, 5.9 per cent.

Total expenditure

The total expenditure from the Consolidated Revenue Funds of the several States and the expenditure per head of population during each of the years 1960-61 to 1964-65 are shown in the following table.

STATE CONSOLIDATED REVENUE FUND EXPENDITURE, 1960-61 TO 1964-65

State Consolidated Revenue Fund receipts

The principal sources of State revenue are: (a) taxation; (b) the business undertakings controlled by the State Governments; (c) sale of and rental from crown lands; (d) interest on advances; (e) payments by the Commonwealth Government under the Financial Agreements, Special Grants and Financial Assistance Acts, etc.; (f) Commonwealth National Welfare Fund payments; and (g) miscellaneous sources, comprising fines, fees, etc.

Of these sources, that yielding the largest revenue to the Consolidated Revenue Funds for the States as a whole in the year 1964-65 was Commonwealth payments under financial assistance and other grants (37.9 per cent of the total revenue). Next in magnitude was the group of business undertakings (28.9 per cent), the principal contributors being the Government railways and tramways, followed by taxation receipts (18.1 per cent). More than one-quarter of the total State taxation collections are not paid into Consolidated Revenue Funds, however, but into special funds (*see* pages 790 and 792). Of the remaining sources of revenue, interest (n.e.i.) constituted 4.3 per cent, land revenue 2.9 per cent, and National Welfare Fund payments 1.0 per cent.

Total receipts

The following table shows particulars of the total receipts and the receipts per head of population of the Consolidated Revenue Funds of the several States.

(a) See page 786. (b) Tasmanian transport services are under the separate control of semi-governmental authorities. (c) In all States certain taxation collections are not paid into Consolidated Revenue Fund. For total collections see next page. (d) Excludes Commonwealth payments paid to trust funds. (e) Includes payments under Financial Agreement, special grants, additional financial assistance, grants to universities, etc. (f) Consolidated Revenue Fund receipts only. Excludes payments to Trust Funds.

State receipts from taxation

In the tables on taxation collections in these paragraphs the collections have been grouped according to the nature of the tax rather than the method of collection. For example, stamp duties on betting tickets and bookmakers' licences have been included under Racing instead of under Stamp duties and Licences respectively.

Net taxation collections

The following tables show, for the year 1964-65, details of the collections by each State Government from the various types of tax in operation, irrespective of whether such moneys have been paid into the Consolidated Revenue Funds or not. For this reason the particulars hereunder differ from those shown in the tables relating to the Consolidated Revenue Funds and present a comprehensive statement of all taxation collections by the Government in each State.

**State Consolidated Revenue Fund receipts
from business undertakings**

A considerable proportion of State gross revenue is made up of receipts from business undertakings under the control of the Governments. The most important of these are railways and tramways, harbour works, water supply and sewerage, and electricity supply. In addition, State batteries for the treatment of auriferous ores in Western Australia and various minor revenue-producing services rendered by the Governments of all States are included. For the year 1964-65 the receipts from these sources was \$562,487,000 or 28.9 per cent of the receipts from all sources.

For further information on the finances of the various types of business undertakings in the States see the chapters Transport and Communication and Local Government of this Year Book.

Other State Consolidated Revenue Fund receipts

State land receipts

The receipts from the sale and rental of Crown lands have, with few exceptions, been treated from the earliest times as forming part of the Consolidated Revenue Funds, and have been applied to meet ordinary expenses. The following table shows the revenue from sales and rentals of Crown lands for the year 1964-65.

STATE CONSOLIDATED REVENUE FUND LAND RECEIPTS, BY SOURCE
1964-65
(\$'000)

Source	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Total
Sales	1,776	430	1,128	469	248	94	4,145
Conditional purchases	438	23	401	..	861
Rentals(a)	24,333	1,870	8,778	775	882	109	36,747
Forestry	2,972	5,153	2,577	1,499	12,200
Other	279	479	807	927	..	14	2,505
Total	29,798	7,933	10,713	2,193	4,107	1,715	56,458

(a) Includes mining royalties, rents, etc.

The total land receipts for all States for the years 1960-61 to 1964-65 respectively were: \$30,537,000, \$31,572,000, \$32,725,000, \$38,478,000, and \$56,458,000.

State receipts from Commonwealth grants

Commonwealth grants to the States represent a very large proportion of the States' receipts. In 1964-65 the total amount (excluding sundry minor items) paid to the Consolidated Revenue Funds of the States was \$737,362,000 (37.9 per cent). Details were as follows: contribution towards interest on States' debts under the Financial Agreement, \$15,170,000; special grants to the States of Western Australia and Tasmania, \$31,720,000; financial assistance, \$681,349,000; grants to universities, \$8,477,000; and other grants, \$646,000. In addition to these, the States receive a number of other grants which are paid to Trust Funds. The main items in this class are the contribution to the sinking fund on States' debts (\$16,646,000 in 1964-65) paid to the National Debt Sinking Fund, grants for Commonwealth Aid Roads (\$130,000,000 in 1964-65), and grants for universities (\$32,797,000 in 1964-65) paid to State Trust Funds. More detailed information concerning Commonwealth grants to the States is given on pages 763-6.

State receipts from Commonwealth National Welfare Fund

The States also receive payments from the Commonwealth in respect of hospital and pharmaceutical benefits, milk for school children, and reimbursement of maintenance expenditure on tuberculosis sanatoriums. These receipts are paid into Consolidated Revenue Funds or Trust Funds according to the varying accounting procedures in the States. In 1964-65 the total amount paid to State Consolidated Revenue Funds was \$19,150,000 (1.0 per cent). This amount was made up of hospital benefits, \$2,667,000; pharmaceutical benefits, \$4,495,000; milk for school children, \$2,881,000; tuberculosis—reimbursement of maintenance expenditure, \$8,447,000; other, \$660,000.

State surplus revenue

The following table shows for each of the years 1960-61 to 1964-65 the total amount and amount per head of population of the surplus or deficit of each State.

Minus sign (-) indicates deficit.

State Loan Funds

The principal purpose of State public borrowing is to assist in financing the development of the resources of the country, e.g. the establishment and operation of railway systems and electricity undertakings, construction of roads and water and sewerage works, and improvements to harbour and rivers.

Statements relating to 'gross' loan expenditure are shown on page 796. Gross expenditure represents the amounts disbursed during each year. Details of 'net' loan expenditure, i.e. gross expenditure less any credits to the Loan Fund during the year on account of repayments of advances to local governing bodies, settlers, etc., the sale of assets, and transfers from other funds, may be found in the annual bulletin *State, Territory and Local Government Authorities' Finance and Government Securities*. Such moneys are credited to the Loan Fund in the year of repayment irrespective of when the advance was made.

Gross loan expenditure

Particulars of gross loan expenditure on works, services, etc., are shown in the following tables.

STATE GROSS LOAN EXPENDITURE ON WORKS, SERVICES, ETC.: DETAILS
1964-65
(\$'000)

(a) Includes exchange, discounts and flotation expenses, revenue and general cash deficits. (b) From Consolidated Revenue Fund.

Minus sign (—) indicates excess of repayments to loan fund.

Information relating to the government securities on issue on behalf of the States is given in the division on Government Securities on Issue: Commonwealth and States (*see* page 799).

COMMONWEALTH AND STATE FINANCE

Consolidated Revenue Fund expenditure and receipts

The following table shows the aggregate expenditure and receipts of the Consolidated Revenue Funds of the Commonwealth and States for each of the years 1960-61 to 1964-65. In the table the combined Commonwealth and State totals have been adjusted to exclude major duplications, but the separate Commonwealth and State figures are as shown in other divisions of this chapter. The items excluded from the total figures are: payments made by the Commonwealth to the States and included in the State Consolidated Revenue Funds on account of financial assistance grants in 1960-61 to 1964-65, interest under the Financial Agreement, special grants, special financial assistance, grants to universities, cattle tick control, Tuberculosis Act capital expenditure, National Welfare Fund payments, and estimated payments of pay-roll tax by the States to the Commonwealth. There are other relatively minor payments for which adjustments have not been made, and the adjusted figures are therefore still slightly overstated.

COMMONWEALTH AND STATE CONSOLIDATED REVENUE FUND EXPENDITURE AND RECEIPTS, 1960-61 TO 1964-65

Year	Expenditure			Receipts		
	Common-wealth	States	Total	Common-wealth	States	Total

 (b) Includes arrears of State income taxes.

GOVERNMENT SECURITIES ON ISSUE: COMMONWEALTH AND STATES

For the following reasons, Government Securities on Issue, as set out in the tables in this division, may not be aggregated without adjustment to indicate what is sometimes described as the 'public debt' or 'net public debt' of the Commonwealth and State Governments. There are forms of debt not evidenced by the issue of securities. Again, some of the securities included in the tables are held by the Governments themselves. For example, a State Government may hold temporarily, or even for long periods, securities issued by the Commonwealth Government. The Commonwealth Government itself, through such institutions as the National Debt Commission, or through the Trust Funds, holds large investments in securities issued, either directly by itself or on behalf of the States. In addition, some of the securities issued on behalf of the States and held by the Commonwealth Government represent the proceeds of overseas loans, securities for which were issued directly by the Commonwealth Government. From the point of view of the aggregate net debt of the Commonwealth and the States, it would thus involve duplication if the sum of the securities on issue were to be regarded as representing the 'net public debt'.

Under the Financial Agreement between the Commonwealth and the States in 1927 the Commonwealth Government accepted responsibility for the securities of the State Governments then on issue, and was empowered to arrange for all future borrowings on behalf of the Commonwealth and the States and to issue Commonwealth securities for all money borrowed. The Commonwealth is reimbursed by the States for interest, exchange, etc., paid on their behalf, and the securities are redeemed from the National Debt Sinking Fund to which both the Commonwealth and State Governments make contributions.

In the statistical tables relating to Government securities, details of securities on issue, annual interest liability and average rate of interest liability, except on pages 803-5, are shown in the currencies in which they are repayable or payable respectively. Australian currency equivalents for overseas loans have been calculated using International Monetary Fund par rates of exchange (and the calculated equivalent for Swiss francs) ruling at 30 June in each year shown. Rates of exchange to \$A at 30 June 1965 were as follows: £Sterling, 0.4000; United States dollars, 1.1200; Canadian dollars, 1.2108; Swiss francs, 4.89775; Netherlands guilders, 4.0544; German Deutsche marks, 4.4800.

The full text of the original Financial Agreement between the Commonwealth and the States was given in Year Book No. 31, page 21, a summary of the original Agreement as affected by the subsequent Agreements in later issues up to No. 37 (see pages 685-90), and a summary of the main provisions in further issues up to No. 50 (see pages 952-3).

Government securities on issue: Commonwealth and States

Government securities on issue, annual interest payable and average rate of interest

In the following tables details are given of government securities on issue on account of the Commonwealth and States, annual interest payable and average rates of interest.

Government securities on issue at each rate of interest and according to earliest and latest years of maturity

For details of securities on issue for Commonwealth and State purposes at 30 June 1965 at each rate of interest and classified according to the earliest and latest years of maturity *see* the annual bulletin *State, Territory and Local Government Authorities' Finance and Government Securities*.

Short-term securities on issue

Particulars of the short-term securities (Treasury bills, Treasury notes and seasonal securities) of the Commonwealth and States in Australia at intervals from 30 June 1961 to 30 June 1965 are shown in the following table. These securities are included in the government securities on issue as shown elsewhere. No short-term securities have been raised overseas since September 1956, when all such securities held in London were expatriated to Australia.

GOVERNMENT SHORT-TERM SECURITIES ON ISSUE MATURING IN AUSTRALIA(a)
COMMONWEALTH AND STATES, 30 JUNE 1961 TO 30 JUNE 1965
(\$A'000)

Date	Commonwealth		States(b)	Total
	Treasury bills	Treasury notes		
30 June 1961	372,000	372,000
.. .. 1962	416,000	416,000
.. .. 1963	246,000	139,076	..	385,076
30 September 1963	256,000	205,868	6,000	467,868
31 December 1963	356,000	294,978	20,000	670,978
31 March 1964	306,000	297,028	12,000	615,028
30 June 1964	178,000	152,570	..	330,570
30 September 1964	242,000	183,996	10,000	435,996
31 December 1964	432,000	203,750	26,000	661,750
31 March 1965	80,000	394,846	24,000	498,846
30 June 1965	116,000	80,342	..	196,342

(a) Excludes overdrafts and internal Treasury bills. (b) Treasury bills.

The Treasury bill discount rate in Australia has remained at 1 per cent since 29 July 1952.

In 1962-63, daily issues of Treasury notes replaced those of seasonal securities which had, during the three previous financial years, all matured in the course of the same financial year in which they were issued. Treasury notes with a currency of thirteen weeks were issued in multiples of \$2,000 over the minimum subscription of \$10,000, and increases in value were subject to the usual income tax rebate of two shillings in the pound (ten cents in the dollar). In 1964-65 the issue prices of Treasury notes were 99.05 per cent from August to January, 99.025 per cent from January to April and 98.95 per cent from April to June, and the yields varied accordingly from 3.85 per cent to 3.95 per cent and 4.25 per cent.

Government securities on issue on account of the States; local government and semi-governmental authority securities on issue

In some States certain public utilities, such as tramways, water supply and sewerage, harbour services, etc., are controlled by boards or trusts, which in addition to receiving advances from the central government raise loans by borrowing on their own behalf, while in other States these services are controlled by the central government. Direct comparisons between States of the securities on issue on account of the several States should therefore be made with caution. The table following shows for 1959-60 to 1963-64 particulars of the securities on issue on account of the States, the securities on issue by local government and semi-governmental authorities, and the aggregates of these.

**GOVERNMENT SECURITIES ON ISSUE ON ACCOUNT OF THE STATES: LOCAL GOVERNMENT AND SEMI-GOVERNMENTAL AUTHORITY SECURITIES ON ISSUE

(a) Excludes amounts due to the central government. Includes bank overdrafts. (b) Oversea holdings have been converted to Australian currency at the rates of exchange current at 30 June of each year shown.

Commonwealth loan raisings

Under the Financial Agreement between the Commonwealth and the States the Commonwealth is responsible for raising all loan moneys required either by the Commonwealth or by the State Governments. Details of loan transactions given in this section relate, therefore, to all loans raised for the Commonwealth and the States.

New loans raised

Australia. The following table shows details of new loans raised in Australia by the Commonwealth during the three years 1962-63 to 1964-65.

COMMONWEALTH NEW LOANS(a) RAISED IN AUSTRALIA, 1962-63 TO 1964-65

July-June	..	52,190	3½-5½	1972	100	7,187	8,117	36,886

(a) Includes loans raised for redemption of Treasury bills, but excludes conversion loans, loans for redemption of debt maturing in London, short-term debt and certain miscellaneous debt (see page 811).
 (b) Special bonds open for continuous subscription redeemable at prices commencing at par and increasing to a premium of 3 per cent if held until maturity, 1966-72. Interest increases over period of currency.
 (c) Special issue. For details see following paragraph.

The loan of \$134,000,000 raised in June 1965 was for the purpose of fulfilling an undertaking given by the Commonwealth that the States would have access to loan funds for their works programmes up to the approved Loan Council borrowing programmes. These programmes

totalled \$510,000,000 in 1962-63, \$544,000,000 in 1963-64, and \$580,000,000 in 1964-65. The subscription to the special loan in 1964-65 came from the Loan Consolidation and Investment Reserve Trust Account.

Finance for the approved Loan Council programmes from 1962-63 to 1964-65 was provided from the following sources:

	1962-63 \$'000	1963-64 \$'000	1964-65 \$'000
Public loans, domestic raisings, etc.	406,294	508,782	424,092
Oversea loans and special Commonwealth assistance	102,706	35,218	155,908
Total	510,000	544,000	580,000

In addition to the new loans raised as shown in the table on the previous page and the redemption and conversion loans shown on page 809 there were other miscellaneous loan operations in Australia (*see* page 811).

London. A loan of £Stg 12,000,000, 5½ per cent interest, price of issue 98 per cent, maturing 1978, was raised in London during 1962-63 and a further loan of £Stg20,000,000, 5½ per cent interest, price of issue 98.5 per cent, maturing 1982, was raised in 1963-64.

New York. The following table gives details of the loans raised during the period 1962-63 to 1964-65.

(a) No account has been taken of the cost of issuing the conversion loans at a discount. Exchange calculated at \$A1 = £Stg 0.4000 (the International Monetary Fund par rate of exchange in the years shown).

New York. During 1946-47 four loans totalling \$US128,000,000 were raised in New York to redeem loans which became due for redemption or which the Commonwealth had the option of redeeming. No further loans were raised in New York for this purpose until December 1954. The loan raised in New York for this purpose in March 1957 amounted to \$US17,114,000, at 5 per cent interest, issued at par, maturing in 1972. No loans were raised for the purpose of redeeming loans which became due for redemption or which the Commonwealth had the option of redeeming during 1957-58 to 1960-61, or in 1962-63 and 1963-64. In 1961-62 a re-financing loan of \$US30,000,000 was raised at 5½ per cent interest, issued at 98.25 per cent, maturing in 1982.

Drawings from cash loans, for which Commonwealth notes were issued in New York between 1956 and 1964, were used to finance the purchase of aircraft and equipment by Qantas Empire Airways from November 1956, and to finance aircraft purchases by Trans-Australia Airlines from September 1958. At 30 June 1965 outstanding notes which are subject to interest rates varying between 4½ per cent and 5½ per cent and which are all repayable before 1 January 1974 amounted to \$US59,330,000.

International Bank for Reconstruction and Development loans

To provide dollar funds of the purchase of certain types of capital equipment and plant which were indispensable to the furtherance of development in Australia and which could be obtained only in the United States of America or Canada, the Commonwealth Government arranged five loans from the International Bank for Reconstruction and Development between August 1950 and December 1956, amounting to \$US308,500,000, repayable over periods of from ten to twenty-five years at rates of interest of from 4½ to 4¾ per cent. The proceeds of the latest of these loans were finally drawn in March 1959.

The capital equipment and plant purchased from the proceeds of these loans were made available to Commonwealth and State Government departments and agencies, and private firms and individuals for use in the development of Australian resources. The goods were imported and distributed through normal channels, and payment was made through the Australian banking system.

The loan on behalf of Qantas Empire Airways of \$US9,230,000 at 4¾ per cent maturing in 1966-87 was finally drawn at the end of July 1958, and in 1962-63, 1963-64 and 1964-65 respectively drawings of \$US31,851,000, \$US27,018,000 and \$US23,519,000 were made from the loan (at 5½ per cent maturing in 1966-87) raised for the purposes of the Snowy Mountains Hydro-electric Authority.

Drawings from International Bank loans have been made mainly in United States dollars and partly in Canadian dollars, Swiss francs and German Deutsche marks.

Swiss loans

To foster industrial development in Australia and to stimulate trade relations between the two countries, the Commonwealth Government arranged for the issue in Switzerland in November 1953, February 1955, March 1960, and March 1961 of four public loans each of 60,000,000 Swiss francs. The loans were underwritten by a Swiss banking group headed by the Swiss Bank Corporation, the Crédit Suisse and the Union Bank of Switzerland. Certain Swiss taxes connected with the issue and servicing of the loans were paid on an agreed basis by the Australian Government.

The first loan was for a period of fifteen years with an option on the part of the Commonwealth Government to repay the loan in full or in part after twelve years. The rate of interest was 4 per cent and the issue price 99. Bondholders have the option of requiring payment either in Australian pounds or in the foreign currency equivalent of Australian pounds.

The second loan was for a period of fifteen years with an option to redeem after ten years. The rate of interest was 3¾ per cent, issue price 99.50 per cent. Bonds and interest are payable only in Swiss francs. The third loan was for a period of fifteen years with an option to redeem after ten years. The rate of interest was 4½ per cent, issue price 99 per cent. The fourth loan was issued at par in March 1961, at the rate of 4½ per cent maturing in April 1976. Payments of interest and repayments of principal are to be made only in Swiss francs.

The loans were fully subscribed, and Swiss franc proceeds, after deducting borrowing expenses, were sold by the Commonwealth Government to the Reserve Bank in return for an equivalent amount of Australian currency.

Canadian loans

In October 1955, the Commonwealth Government arranged for the issue in Canada of a public loan of 15,000,000 Canadian dollars raised to assist Australia's development programme. The loan was for a period of fifteen years with an option on the part of the Australian Government to repay the loan in full or in part at any time prior to 1 November 1970. The rate of interest

was 4 per cent, payable half-yearly, and the issue price 98.50 per cent. A second loan, of 20,000,000 Canadian dollars, was raised in March 1961, on the security of the Commonwealth of Australia, 5½ per cent twenty-year bonds being issued at the rate of 98.50 per cent. Bonds and interest are payable in Canadian dollars in each case. The loans were fully subscribed, and the net Canadian dollar proceeds were sold to the Reserve Bank for Australian currency.

Netherlands loan

In 1961 the Commonwealth arranged for a public flotation in the Netherlands of a loan of 40,000,000 Netherlands guilders at par, with an interest rate of 5 per cent per annum. The proceeds were used to assist the loan programmes of the Commonwealth and States. The loan is to be repaid in fifteen annual instalments from 1967 to 1981, but, at the Commonwealth's option, an earlier redemption date may be negotiated on and after 15 December 1971.

Summary of loan transactions

The following table contains a summary of loan transactions on behalf of the Commonwealth and State Governments during the five years 1960-61 to 1964-65.

COMMONWEALTH LOAN TRANSACTIONS: SUMMARY, 1960-61 TO 1964-65

	1960-61	1961-62	1962-63	1963-64	1964-65
New loans(a) raised in—					
Australia . . . \$A'000	407,762	460,152	476,160	582,238	600,120

TAXES ON INCOME

A description of the development of income taxes in Australia appeared in Year Book No. 35, page 926. Since July 1942 the Commonwealth, under the uniform tax arrangement, has been the only authority imposing taxes on income.

The Income Tax and Social Services Contribution Assessment Act, 1936-1965, the *Income Tax and Social Services Contribution Acts 1964* and the *Income Tax and Social Services Contribution Regulations* deal with the assessment and imposition of Income Tax and Social Services Contribution. The second-mentioned Act is an annual measure, and its primary purpose is to declare the rates of tax and contribution payable for the financial year. Income Tax and Social Services Contribution is a combined levy commonly known as Income Tax.

Both individuals and companies are liable for income tax. Private companies are subject to tax on undistributed income in addition to the primary income tax levied on all companies.

The Income Tax (International Agreements) Act 1953-1965 gives the force of law to agreements between the Commonwealth and the Governments of the United Kingdom, Canada and New Zealand, and to a convention between the Government of the Commonwealth and the United States of America, for the avoidance of double taxation and the prevention of evasion of taxes on income.

Lodgment of returns and assessment of Income Tax

All persons with assessable income in excess of \$416 are required to lodge returns by 31 July each year (31 August for business incomes). The income tax payable is assessed, and assessment notices showing the amounts payable are issued during the year following the year of income. The approximate amount payable, however, has already been collected during the income year from employees by deductions from wages and from non-employees by a provisional tax. The amount shown on the assessment notice is therefore adjusted against the amount already paid and any difference either collected or refunded.

Pay-as-you-earn system

Salary and wage earners. Under this system salary and wage earners are subject to instalment deductions for payment of the tax at current rates from weekly (or fortnightly) earnings. Employers are required to make the deductions in accordance with a prescribed instalment scale. This scale shows the amount to be deducted according to the income and number of dependants of the employees. Under the group scheme of deduction, covering most employers of more than ten persons, the amount deducted is remitted to the Taxation Department within seven days of the close of the month in which the deduction is made.

Not later than 14 July each year employers are required to supply each employee with a group certificate showing amount earned and total deductions during the year ended 30 June. This certificate, together with the employee's return of income, is forwarded to the Taxation Department. If the tax assessed on the basis of the return is less than the amount shown on the group certificate, a refund is forwarded with his assessment, if not, the employee is required to pay the balance.

Under the stamp scheme used by employers other than group employers a stamp deduction sheet in two parts is used. Each four weeks the employer purchases stamps (also in two parts) for the amount of deductions made each pay day and sticks one part on each half of the sheet. At the end of the year the employer gives the employee one half of the sheet and sends the other half to the Taxation Department. The employee's half is then used in the same way as a group certificate.

Taxpayers with income other than salary or wages. These taxpayers pay provisional tax in respect of income other than salary and wages. Collection of tax for the current year is made at the same time as collection and assessment for the previous year are adjusted. The notice of assessment shows an amount of provisional tax for the current year. The provisional amount is an approximation to the tax which will be payable after the return of income for the current year has been lodged. It is ascertained by assuming that the income of the current year will be the same as that for the previous year (for which a return has already been lodged), but the rates for the current year are applied to the income and not the rates for the year in which it was derived. The assessment notice shows the provisional tax paid in the previous year as a credit against the tax assessed on the basis of the return for that year. On receipt of his assessment, the taxpayer may elect to substitute his own estimate of income for the current year and pay tax on the basis of this estimate. To protect the revenue, a penalty is imposed if the taxpayer elects to pay provisional tax on an estimate of income more than twenty per cent lower than the income of the previous year and he underestimates his income by more than twenty per cent. An employee with income of \$300 (\$200 prior to 1965-66) or more from sources other than salaries or wages is required to pay provisional tax in respect of that income.

Tax collected. During the collection years 1960-61 to 1964-65 net receipts (i.e. tax collected less refunds to taxpayers) from individual taxpayers was \$1,037.5m; \$1,074.7m; \$1,083.4m; \$1,272.2m and \$1,570.4m respectively. Of these amounts, instalments from salaries and wages in the respective years; accounted for \$642.8m (61.96 per cent), \$653.4m (60.80 per cent), \$684.4m (63.17 per cent), \$792.3m (62.28 per cent), and \$990.6m (63.08 per cent). The remainder came from direct cash payments from individual taxpayers.

Assessable income

As a general principle income assessable to income tax includes all income derived directly or indirectly from sources in Australia. Thus a non-resident is taxed on income derived in Australia, while a resident is, in general, not taxed on income (other than dividends) derived from overseas, if the income is taxed in the country in which it is derived.

The word income is used in its ordinary sense and includes certain receipts declared by the Assessment Act to be assessable income. Receipts such as gifts (other than gratuities received by an employee from his employer in the course of his employment), legacies, profits from the sale of property (unless acquired for the purpose of profit making), lottery wins, and most capital gains are not regarded as income and are not assessable.

Certain types of Australian income are exempt from tax in Australia, the more important being (i) pensions, child endowment and other payments under the *Social Services Act* 1947-1963 and the *Tuberculosis Act* 1948, (ii) income from gold-mining and uranium mining, (iii) twenty per cent of certain mining profits, (iv) dividends paid out of exempt mining profits, and (v) income received from a scholarship, bursary or other education allowance. No amount is included in assessable income on account of a house occupied by its owner.

Expenses incurred in gaining or producing assessable income or necessarily incurred in carrying on a business for that purpose are allowable deductions, except to the extent that such expenses are of a capital, private, or domestic nature, or are incurred in gaining or producing exempt income. Certain subscriptions to business associations and trade union dues are also allowable deductions.

Special deductions for both resident and non-resident taxpayers include such items as trading losses incurred over the previous seven years, bad debts, depreciation, rates and taxes on land which are annually assessed, gifts to certain institutions (e.g. scientific, charitable, benevolent, etc.) and one-third of amounts paid as calls to certain mining, prospecting, oil-prospecting, or afforestation companies operating in Australia. Resident taxpayers only are allowed a deduction from income of the full amount paid as calls and as application and allotment moneys to certain companies engaged in the search for oil in Australia and the Territory of Papua and New Guinea.

Residents of prescribed isolated areas subject to uncongenial climatic conditions and high costs of living are entitled to a zone allowance deduction. Two zones, A and B, have been prescribed and the boundaries are as defined in the Second Schedule, *Income Tax and Social Services Assessment Act 1936-1965*. The allowances are: Zone A, \$540 plus an amount equal to half the total deductions allowable to the taxpayer for the maintenance of dependants; and Zone B, \$90 plus an amount equal to one twelfth of the total deductions allowable to the taxpayer for the maintenance of dependants. Members of the defence forces serving in certain overseas localities for more than half the year of income are also entitled to a deduction of the same amount as residents of Zone A.

Income tax is levied on the taxable income remaining after making these deductions and the concessional deductions to which reference is made in the following paragraphs.

Concessional deductions

Concessional allowances for dependants, medical and dental expenses, life insurance and superannuation contributions, etc. are made by way of a deduction from income. The maximum deduction allowed for the income year 1965-66 for each dependant or for a housekeeper employed by the taxpayer is shown in the following table.

Dependant, etc. (resident)	Maximum deduction(a)
Spouse	\$ 286
Daughter-housekeeper(b)	286
Housekeeper(c)	286
Parent or parent-in-law	286
One child under 16 years of age	182
Other children under 16 years of age	130
Invalid relative(d)	182
Child 16 to 21 years receiving full-time education	182

(a) These deductions are allowed only if the dependant is a resident of Australia. If the dependant is maintained for part only of the year, a partial deduction is allowed. (b) Of a widower or widow. (c) Caring for a spouse in receipt of an invalid pension, or caring for children under 16 years of age of a widower or widow. (d) Child, step-child, brother or sister over 16 years of age.

When the dependant maintained derives separate income, the amount of the concessional deduction is reduced by \$2 for every \$2 by which the separate net income exceeds \$130. Separate net income includes age and invalid pensions but not child endowment. Scholarships are excluded except insofar as they relate to maintenance.

For the 1965-66 income year, medical expenses (less amounts recouped from hospital and medical funds) paid by a taxpayer who is a resident, in respect of himself or dependants, including children under twenty-one years of age, are allowed as a concessional deduction. Medical expenses include payments made to a legally qualified medical practitioner, nurse or chemist, or to a hospital, in respect of an illness or operation, payments for dental services, payments for therapeutic treatment and eye tests, expenditure on medical or surgical appliances, artificial limbs or eyes, hearing aids and spectacles, the remuneration of an attendant of a person who is blind or confined to a bed or invalid chair, and payments for the maintenance of a trained dog used for the guidance of a blind person.

Other concessional deductions allowed to resident taxpayers include: (i) payments of life insurance premiums and contributions to superannuation funds and friendly societies, not

exceeding an aggregate of \$800, (ii) payments to medical or hospital benefits funds, (iii) funeral expenses of a dependant not exceeding \$100, and (iv) expenditure incurred for the full-time education of children or dependants who are less than twenty-one years of age, with a maximum of \$300 for each child or dependant.

Effective exemption from tax

For the income years 1950-51 to 1962-63 taxpayers without dependants were exempt from income tax if their income did not exceed \$208. For 1963-64 to 1965-66 this exemption was \$416. The effect of the deductions for dependants was to exempt resident taxpayers up to the incomes shown hereunder.

RESIDENT TAXPAYERS: EFFECTIVE EXEMPTIONS FROM TAX (\\$)

Taxpayer with—	Income years		
	1953-54 to 1956-57	1957-58 to 1962-63	1963-64 to 1965-66
No dependants	208	208	416
Wife	468	494	702
Wife and one child	624	676	884
Wife and two children	728	806	1,014
Wife and three children	832	936	1,144
Wife and four children	936	1,066	1,274

For the 1965-66 income year an aged person (i.e. a man who has attained the age of sixty-five years or a woman who has attained the age of sixty years) is exempt from income tax if his or her net income (i.e. gross income less expenses of earning that income) does not exceed \$988. If the net income exceeds \$988 but does not exceed \$1,148 the tax cannot exceed nine-twentieths of the excess of the net income over \$988. An aged person who contributes to the maintenance of a spouse is exempt from tax if the combined net incomes of the taxpayer and the spouse do not exceed \$1,872. Where their combined incomes exceed \$1,872 the tax payable by the taxpayer (provided his net income does not exceed \$2,700) is limited to nine-twentieths of the excess of their combined net income over \$1,872.

Rates of income tax on individuals

The table on page 818 shows the rates of income tax for income years 1953-54 to 1965-66.

The minimum amount of income tax payable is \$1 and amounts payable and rebates are calculated to the nearest ten cents.

For primary producers the rate of income tax for the current year is determined by the average of the taxable incomes for the five years up to and including the current year. A taxpayer may elect not to have these averaging provisions applied to his assessment, but the election, once made, is irrevocable. The application of the averaging provisions is limited to that part of the taxable income which does not exceed \$8,000. When the taxable income does exceed \$8,000, the balance is taxed at ordinary rates applicable to that part. When the taxable income is less than \$8,000, the rate of tax for averaging purposes is limited to the rate on a taxable income of \$8,000.

The taxable income, including any abnormal receipts, of actors, artists, composers, inventors, etc., is taxed at the rate appropriate to the normal taxable income plus one-third of the abnormal receipts.

Interest on Commonwealth loans issued prior to 1 January 1940 is subject to the condition that it shall not be taxed at rates higher than those for 1930-31. Interest derived from bonds, debentures, stocks or other securities issued after 1 January 1940 by the Commonwealth, together with interest on certain State semi-governmental loans issued free of State income tax, is subject to a rebate of 10 cents for each \$1 included in the taxable income.

Company income taxes

For taxation purposes companies are divided into two main groups—private and public. Broadly, a private company is defined as a company in which all the issued shares are held by not more than twenty persons, or which is capable of being controlled by not more than seven persons, and which is not a company in which the public is substantially interested, or is a subsidiary of a public company. All other companies are regarded as public companies. Both private and public companies pay primary tax assessed on a taxable income ascertained on the same principles as for individuals. No such system of a 'pay-as-you-earn' is in operation in respect of companies.

Dividends received are assessable income; however, resident companies receive a rebate at the average rate on the amount of dividends included in the taxable income, while this rebate is not allowed to non-resident companies.

Rates of tax. A private company incurs liability for additional tax on its undistributed income if it fails to make a sufficient distribution of income within a specified period after the close of the year of income. The tax is levied on the undistributed amount which, for practical purposes, is the taxable income less—(a) primary income tax payable; (b) retention allowance (i.e. the proportion of the reduced distributable income which a company may retain without incurring liability for undistributed income tax); and (c) certain dividends paid by the company.

The rates of primary tax for all companies and additional tax for private companies applicable to income years 1952-53 to 1964-65 are shown in the following table.

RATES OF TAX: COMPANIES, 1952-53 TO 1964-65 INCOME YEARS
(Cents per \$)

Income year	Private company			Public company(a)	
	Up to \$10,000	On remainder of taxable income	Rate of additional tax on undistributed income	Up to \$10,000	On remainder of taxable income
1952-53 to 1954-55 . . .	20	30	50	30	35
1955-56	25	35	50	35	40
1956-57 to 1958-59 . . .	22½	32½	50	32½	37½
1959-60 to 1962-63 . . .	25	35	50	35	40
1963-64	27½	37½	50	37½	42½
1964-65	27½	37½	50	37½	42½

(a) Excludes co-operative, non-profit and life insurance. See text following for 1964-65 rates of tax for these companies.

For non-resident companies rate of tax (cents per dollar) on dividends only was: up to \$10,000 and remainder of taxable income respectively—1951-52 to 1954-55, 25 cents and 35 cents; 1955-56, 30 cents and 40 cents; 1956-57 to 1958-59, 27½ cents and 37½ cents; 1959-60 to 1962-63, 30 cents and 40 cents; 1963-64 and 1964-65, 32½ cents and 42½ cents.

For 1964-65, companies excluded from the preceding table were taxed at the following rates (cents per dollar): up to \$10,000 and remainder of taxable income respectively—co-operative, 32½ cents and 42½ cents; friendly society dispensaries (non-profit), 32½ cents and 32½ cents; other non-profit, 32½ cents and 42½ cents; mutual life insurance, 27½ cents and 37½ cents; other life insurance—mutual income, 27½ cents and 37½ cents, other income, 37½ cents and 42½ cents.

For the income years 1952-53 to 1957-58, 1958-59 to 1961-62, and 1962-63 to 1964-65 the retention allowance (see page 820) was the following proportion of the reduced distributable income.

RETENTION ALLOWANCE: PRIVATE COMPANIES
1952-53 TO 1964-65
(Per cent)

Reduced distributable income	1952-53 to 1957-58	1958-59 to 1961-62	1962-63 to 1964-65
First \$2,000 or part	50	50	..
Next \$2,000 „ „	40	40	..
Next \$2,000 „ „	35
Next \$2,000 „ „	30
First \$10,000 „ „	50
Next \$10,000 „ „	45
Balance	25	35	40

In addition to the foregoing proportions, 10 per cent of distributable income from property, except dividends from other private companies, is also allowed.

For the income years 1952-53 to 1964-65 the reduced distributable income was calculated by deducting from the taxable income the primary tax payable and the amount of all property income included in taxable income. The additional tax on undistributed income was imposed at a flat rate of 50 cents in the dollar on the undistributed amount.

Income tax assessments

1962-63 income year. The following tables show, for the 1962-63 income year, the number of taxpayers, income, and net income tax assessed for individuals and resident and non-resident companies. For further information of this nature see the annual bulletin *Commonwealth Taxation Assessments* issued by this Bureau.

COMMONWEALTH INCOME TAX ASSESSMENTS(a): TAXPAYERS, ACTUAL INCOME(b), TAXABLE INCOME(c) AND NET TAX ASSESSED—RESIDENT INDIVIDUALS, BY GRADE OF INCOME AND BY STATE, ETC., OF ASSESSMENT
(Income derived in the year 1962–63)

(a) Assessments in respect of 1962-63 incomes issued to 31 December 1964. Assessments issued after that date are not included. (b) Actual income is defined briefly as 'Gross income including exempt income less expenses incurred in gaining that income'. (c) Taxable income is the income remaining after deducting from assessable income all allowable deductions. (d) Excludes additional tax levied on the undistributed income of private companies.

Income tax on residents, by grade of income. Individual income taxes assessed on residents are distributed according to grades of actual income in the following table. The year shown in each case is the year of income of the taxpayer. Assessments issued after the normal assessing period are not included.

Dividend (withholding)	11,920	16,233	17,930	15,936	16,039
Total	1,614,534	1,656,300	1,621,181	1,874,484	2,295,607

(a) Excludes collections of arrears of State income taxes existing prior to the introduction of the uniform tax arrangement.

INCOME TAXES COLLECTED(a), 1960-61 TO 1964-65—continued

Tax	Collection year				
	1960-61	1961-62	1962-63	1963-64	1964-65

PERCENTAGES

Individuals—					
Instalments from salaries and wages	39.81	39.45	42.22	42.26	43.15
Direct cash payments	24.45	25.43	24.61	25.60	25.26
Companies	35.00	34.13	32.06	31.28	30.89
Superannuation funds	0.01	0.01
Dividend (withholding)	0.74	0.98	1.10	0.85	0.70
Total	100.00	100.00	100.00	100.00	100.00

(a) Excludes collections of arrears of State income taxes existing prior to the introduction of the uniform tax arrangement.

Income tax assessed. The amounts of income tax covered by statistical analyses of assessments for recent years are shown in the following table. The amounts are shown under the year of income of the taxpayer. Tax is usually paid by companies in the year following the year of income. Individuals pay tax in the year of income, but there is usually an adjustment in the following year. Tax assessed after the close of the normal assessing period is not included.

INCOME TAXES ASSESSED, 1958-59 TO 1962-63

(\$'000)

Tax	Income year—				
	1958-59	1959-60	1960-61	1961-62	1962-63
Individuals	756,438	852,952	973,402	956,974	1,056,060
Companies—					
Primary tax	463,220	585,712	552,954	536,336	599,972
Additional tax on undistributed income of private companies	2,548	2,920	2,602	1,976	1,532
Total	1,222,206	1,441,584	1,528,958	1,495,286	1,657,564

Refunds of revenue. Income tax collections, as previously shown, are net amounts after refunds of revenue made in the course of the year. Refunds are of two types—those charged to special appropriations under authority of the Income Tax and Social Services Contribution Assessment Act and those charged to special appropriations under authority of the Audit Act. Income tax instalment refunds, by far the greatest part of income tax refunds, are made when the instalments deducted during the year exceed the tax assessed on incomes for that year. Refunds made from special appropriations under section 37A of the Audit Act include refunds of moneys paid to the revenue in error, refunds of tax overpaid, refunds due to the amendment of assessments, etc. Refunds of income tax during the collection years 1960-61 to 1964-65 were: 1960-61, \$186,348,604; 1961-62, \$211,035,328; 1962-63, \$236,625,942; 1963-64, \$242,421,772; and 1964-65, \$264,366,042.

CHAPTER 22

LOCAL GOVERNMENT

This chapter includes, in addition to information on the operation of local government authorities, information on the operation of certain semi-governmental authorities. The latter information is not comprehensive for this type of authority, and is included partly because of the association of the functions performed with those of local government authorities, and partly for convenience in preparation. Particulars of the activities of other semi-governmental authorities, e.g. transport, electricity and gas, and banking undertakings, for which only some financial statistics are given in this chapter, are included in the chapters relevant to those subjects.

Coverage

Local government authorities

In each State of the Commonwealth there exists a system of local government whose powers and responsibilities are in general similar, and cover such matters as the construction and maintenance of roads, streets and bridges, water, sewerage and drainage systems, and health and sanitary services, the supervision of building, and the administration of regulations relating to items such as weights and measures, slaughtering, the registration of dogs, etc. In addition to these obligatory functions, there are also many which may be performed by a local government authority either with or without the consent of the ratepayers or the Governor-in-Council. These include transport facilities, electricity, gas, and other business undertakings, hospitals, charitable institutions, recreation grounds, parks, baths, libraries, museums, etc.

The system is based on the principle of a grant of specific powers by the State legislatures to the local authorities, their autonomy, however, being more or less limited by the provision for general supervision by a department of the central government or by the Governor-in-Council. Otherwise, within the scope of the Acts under which they are constituted or which they have to administer, they are responsible only to the ratepayers. While the broad pattern of local government throughout the States of Australia is similar, the range of activities, election of officers, methods of valuation and rating powers, etc. differ considerably.

The areas over which local government bodies exercise general control, numbering 902, are known in New South Wales as cities, municipalities and shires; in Victoria as cities, towns, boroughs and shires; in Queensland as cities, towns and shires; in South Australia as cities, corporate towns and district council areas; in Western Australia as cities, towns and shires; and in Tasmania as cities and municipalities. In New South Wales some local government authorities in an area have combined to provide services such as electricity, water, sewerage and drainage—e.g. the county councils. Within shires there are also some municipal units known as urban areas. Apart from the more thinly populated parts of New South Wales and South Australia, and the Commonwealth Territories (except for the City of Darwin), practically the whole of Australia comes within local government jurisdiction.

The financial statistics in the following section are classified under the headings of Ordinary Services and Business Undertakings. The former covers the obligatory and general functions referred to above. Business Undertakings include public utilities such as water supply, sewerage, electricity, gas, transport and hydraulic power undertakings, and other miscellaneous works such as abattoirs, quarries, ice works, cinemas, etc.

Semi-governmental authorities

In addition to local government authorities, a large number of authorities have been set up to control specific activities, which are often identical with some of those performed by either, or both, of the other classes of public authority—central government and local government—and a complete picture of any field of activity for a State or Australia as a whole cannot be obtained without reference to each class operating in that particular field. These semi-governmental authorities differ primarily from local government authorities in that their operations are restricted to the specific activity for which they were constituted—e.g. roads and bridges, water and sewerage, electricity and irrigation, harbours, or tramways, etc.—i.e. each dispenses a specific service throughout an area as distinct from the general services of the local authority. In the sections which deal with debt, roads and bridges, water supply and sewerage, harbours, and fire brigades particulars are included of the more important of these authorities which operate within the range covered by this chapter.

Roads, bridges, etc.

The construction and maintenance of roads, bridges and ferries are generally part of the functions of local authorities, but in each State there exists a central road authority or a government department whose duties relate to the construction, reconstruction and maintenance of 'main' and 'developmental' roads, the distribution of funds to local bodies, and the supervision and co-ordination of road construction and policy throughout the State. Owing to difficulty in obtaining complete particulars of receipts and expenditure of the various local governing bodies in respect of roads under their control, the details of receipts and expenditure given on pages 837-44 are those of central governments only, relating either to the supervisory board or commission in the State or to direct activities of a department. However, estimates of the aggregate net expenditure of all public authorities concerned with roads and bridges in Australia are given on page 846 of that section. On pages 829-30 some information is given of the revenue and expenditure of local government authorities in respect of roads.

Water supply and sewerage

In the cities of Sydney and Melbourne the control of water supply and sewerage is in the hands of special boards, while in Adelaide and Perth these services are under the direct supervision of government departments. In most of the other cities and towns the municipal councils or, in some cases, water trusts are the controlling bodies, which either construct the works out of their own resources or take them over after they have been constructed by the government.

Harbours

The majority of the harbours in Australia are managed by boards, the members of which are either elected by persons interested, or appointed by the government. In some instances, however, they are directly controlled by the government.

Fire brigades

In all the States the management of fire brigades is undertaken by boards. These boards usually comprise members elected by the councils of municipalities and insurance companies within the districts placed under their jurisdiction, and one or more members appointed by the government. Occasionally volunteer or country fire brigades are represented.

Local government authorities**New South Wales**

For purposes of local government the whole of the Eastern and Central land divisions and more than two-thirds of the sparsely populated Western division have been divided into cities, municipalities (most principal towns) and shires (mainly large rural areas, some of which include important towns). At the end of 1965 the area incorporated was 272,000 square miles, or nearly nine-tenths of the total area of the State. All local government authorities in the State are subject to the general provisions of the Local Government Act. Municipalities and shires may combine to form county councils for the establishment and conduct of services of joint benefit, e.g. electricity, water, gas, abattoirs. At 31 December 1965 there were fifty-three county councils, including the Sydney County Council.

Victoria

Local government is established throughout the State, the various divisions being termed cities, towns, boroughs, or shires. The only unincorporated areas are French Island (41,600 acres) in Westernport Bay, Lady Julia Percy Island (652 acres) off Port Fairy, Bass Strait Islands (966 acres), part of Gippsland Lakes (81,920 acres), and Tower Hill (1,460 acres) adjacent to the Borough of Kororoit. Melbourne and Geelong were incorporated under special statutes prior to the establishment of a general system of local government, but are now subject to several provisions of the Local Government Act.

Queensland

The whole of the State (except certain islands along the coast, the Dawson Valley Irrigation Area and the Somerset Dam Area) is incorporated into cities, towns and shires under '*The Local Authorities Act of 1902*' and its amendments.

South Australia

The settled portion of South Australia is incorporated, being mostly under municipal corporations in the larger cities and towns and district councils in the agricultural areas.

Western Australia

Local government is established throughout the State, the divisions being cities, towns and shires.

Tasmania

The whole State is divided into municipal districts, Hobart and Launceston being incorporated as cities under separate Acts.

Area, population, dwellings, and value of ratable property

The area, population, dwellings, and value of ratable property in the incorporated areas of each State are shown for the year 1963-64 in the following table. The valuations relate to ratable property only and exclude government and other non-ratable property, whose value in the aggregate is considerable. In some cases councils rate on annual value, or unimproved capital value, or improved capital value, or partly on each of these bases of valuation. The amounts stated are the totals for the areas rated according to each basis of valuation. In this table particulars of dwellings are in accordance with the definition used in the 1961 Census, and are compiled from information collected on the Census Schedules. For the purpose of the Census a dwelling was defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building. The term has, therefore, a very wide reference and includes, in addition to houses and flats, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution. Unoccupied dwellings include vacant dwellings available for sale and renting, 'week-end' and holiday dwellings, and other dwellings temporarily unoccupied on the night of the Census. Dwellings being built are not included.

CORRIGENDUM

page 828

add to text preceding table:

In the following table 'Metropolitan Areas' include the whole of some shires and municipalities *part only* of which is regarded as metropolitan for Census and other purposes. This is because the financial activity of such areas cannot be split between the 'metropolitan' and 'other' sections. The Areas should not be compared with Census Metropolitan Areas.

LOCAL GOVERNMENT AUTHORITIES: AREA, POPULATION, DWELLINGS, AND VALUE OF RATABLE PROPERTY, STATES, 1963-64—continued

(a) Year ended 30 June 1964. (b) Particulars of dwellings as at Census 30 June 1961. (c) Year ended 31 December 1963. (d) Year ended 30 September 1964. (e) Excludes Yallourn Works Area under the jurisdiction of the State Electricity Commission. (f) Includes City of Redcliffe and that part of Pine Rivers Shire within the Metropolitan Area of Brisbane but outside the Brisbane City Area.

Local government finances

The following tables show the latest available financial statistics for local government authorities. The figures relate to the year 1963-64 except for New South Wales, where they relate to the year 1963. For further detail on local government finances see *State, Territory and Local Government Authorities' Finance and Government Securities*, Bulletin No. 3, 1964-65, issued by this Bureau.

Ordinary services. In the returns of revenue and expenditure for 1963-64 in the following tables the proceeds from loans and expenditure thereof have been excluded. The financial operations of business undertakings controlled by the various local government authorities are given in the next paragraph. The profits resulting from the working of these undertakings, where taken into general revenue, have been included.

Local government and semi-governmental authorities' debt

Statistics of local government and semi-governmental debt for 1959-60 to 1963-64 are given in the following paragraph. The information covers all local government authorities and those semi-governmental authorities responsible for the provision of the following services.

New South Wales. Water Supply, Sewerage and Drainage, Electricity and Gas Supply, Fire Brigades, Banking, and Grain Elevators. County Councils are included among these authorities.

Victoria. Water Supply and Sewerage, Irrigation and Drainage, Harbours, Tramways, Electricity and Gas Supply, Fire Brigades, Marketing (Buying and Selling), Industry Assistance, Grain Elevators, and Housing.

Queensland. Water Supply and Sewerage, Irrigation and Drainage, Harbours, Electricity Supply, Fire Brigades, University, Hospitals and Ambulances, Marketing (Buying and Selling and Agency), and Industry Assistance.

South Australia. Irrigation and Drainage, Tramways, Electricity Supply, Fire Brigades, Hospitals and Ambulances, Marketing (Agency), Industry Assistance, Banking, Housing, and Miscellaneous.

Western Australia. Water Supply and Sewerage, Harbours, Transport, Electricity Supply, Fire Brigades, Hospitals, Marketing (Agency), Housing, University of Western Australia, and Miscellaneous.

Tasmania. Harbours, Electricity, Supply, Fire Brigades, Transport, Housing, and Water Supply.

A detailed list of the authorities included is shown in *State, Territory and Local Government Authorities' Finance and Government Securities*, Bulletin No. 3, 1964-65.

The following table provides a summary of new money loan raisings, provisions for debt redemption, debt outstanding and interest payable by local government and semi-governmental authorities for the year 1963-64. For greater detail see *State, Territory and Local Government Authorities' Finance and Government Securities*.

<i>Total debt(a)</i>	<i>1,195,992</i>	<i>1,779,487</i>	<i>278,400</i>	<i>418,965</i>	<i>262,078</i>	<i>279,536</i>	<i>4,214,458</i>
Maturing overseas(a)(b) . .	12,500	10,722	23,222
Annual interest payable(a) . .	n.a.	84,975	14,369	19,123	11,298	12,666	n.a.

(a) Includes debt or interest payable in London and New York. Debt in London is payable in £ sterling which have been converted at the I.M.F. rate of £Stg.1 to \$A2.50; New York debt is payable in U.S. dollars which have been converted at the I.M.F. rate of \$U.S.1.12 to \$A1. (b) Included in debt figures above.

In the table above and the following table debt includes all liabilities for which arrangements have been made for repayment over a period of one year or more, and net overdrafts. Interest capitalized and amounts due for the capital cost of assets or for services rendered which are to be repaid over a period of one year or more are included. Current liabilities, such as interest accrued (but not capitalized), trade creditors, amounts held in trust, and other debts which are to be repaid in less than one year are not included. Net overdraft is the gross overdraft of all funds less all bank credit balances (including fixed deposits) which do not form part of a sinking fund to repay a loan. New loans raised during the year include new loan liabilities incurred during the year, loans raised from the public to repay indebtedness to the Government, and interest capitalized. Loans raised and redeemed within the year, increases in overdrafts, and loans raised for conversion

or redemption of existing debt are excluded. Funds provided for redemption include instalments of principal repaid and amounts credited to sinking funds established for the purpose of repaying the debt on maturity. Amounts provided for redemption from loans raised for that purpose are excluded.

Roads and bridges

Commonwealth Government grants

The following table shows the allocation to the States under the several Commonwealth Aid Roads Acts for road construction, maintenance, repair and other works connected with transport for each of the years 1960-61 to 1964-65. After 1 July 1959, when the *Commonwealth Aid Roads Act* 1959 came into operation, the Commonwealth made separate provision for expenditure on strategic roads and the promotion of road safety practices. See also the chapter Public Finance, and Finance bulletins.

New South Wales

Main roads administration is organized as a separate department under the control of a Commissioner. The activities of the Department of Main Roads include works on main, developmental, secondary and tourist roads throughout the State, all roads in the unincorporated portion of the Western Division, and certain associated works, principally bridges and vehicular ferries, constructed and maintained from government funds. The Department of Main Roads co-operates with the municipal and shire councils in the work of constructing and maintaining the main roads system. Public roads may be proclaimed (*see* page 844) by the Governor as main roads on the recommendation of the Commissioner for Main Roads.

In the County of Cumberland, which for the purposes of the Main Roads Act is deemed to include the City of Blue Mountains and small sections of other councils' areas on the boundary of the County of Cumberland, the full cost of road and bridge construction is paid from the funds of the Department of Main Roads. The Councils contribute towards the cost at the rate of $\frac{1}{2}$ d. in the £ (equivalent to 0.2083 cents in the \$) on the unimproved value of ratable property or at a rate determined annually by the Commissioner of between ten per cent and fifteen per cent of Council's total rate income, whichever is the less. In the former case the rate payable in respect of lands used principally for primary production is one-half the rate levied on other lands. In country districts the Department meets the full cost of road and bridge works on State highways, the full cost of bridge construction works and three-quarters of the cost of road construction and road and bridge maintenance works on trunk roads, and three-quarters of the cost of bridge construction works and two-thirds of the cost of road construction and road and bridge maintenance works on ordinary main roads. The cost of constructing developmental roads and works is borne in full by the Department of Main Roads, but local Councils are required to maintain them in a satisfactory condition. The Department of Main Roads generally meets half the cost of works on secondary roads and on tourist roads.

Length of roads. The total length of proclaimed roads (*see* page 844) in New South Wales at 30 June 1965 was 25,650 miles classified as: State highways, 6,531 miles; trunk roads, 4,153 miles; ordinary main roads, 11,627 miles; secondary roads, 138 miles; developmental roads, 3,021 miles; and tourist roads, 180 miles. The length of main roads (highways, trunk and ordinary main roads) maintained by the Department of Main Roads at 30 June 1965 was 5,912 miles (26 per cent) while the length maintained by Councils was 16,399 miles (74 per cent). These figures exclude secondary, developmental and tourist roads, and unclassified roads in the Western Division of the State. In the area outside the County of Cumberland (the metropolis and adjoining areas) the proportions of main roads maintained by the Department and Councils respectively were: State highways, 74 per cent, 26 per cent; and trunk and ordinary main roads, 5 per cent, 95 per cent. Unclassified roads in the Western Division of the State, totalling 1,102 miles, were maintained by the Department, while developmental roads, totalling 3,021 miles, were maintained by Councils. In the County of Cumberland the proportions of main roads maintained by the Department and Councils respectively were: State highways, 98 per cent, 2 per cent; and ordinary main roads, 53 per cent, 47 per cent. Secondary roads totalling 138 miles were maintained by Councils. Of the 180 miles of tourist roads throughout the State, 157 miles (87 per cent) were maintained by Councils and 23 miles (13 per cent) by the Department. In 1963 the total length of all roads in New South Wales was estimated at 131,140 miles. The length of roads, according to their surface, were as follows: bitumen or concrete, 23,468 miles; gravel or stone, 45,513 miles; formed only, 28,660 miles; cleared only, 33,499 miles.

Department of Main Roads—operations. Progress has continued with the implementation of the Department's plan for main roads development in the County of Cumberland. Most of the Department's proposals have been incorporated in the County of Cumberland Planning Scheme approved by Parliament under the Local Government (Amendment) Act, 1951. The Department's proposals for the development of the main roads system in Newcastle and the surrounding

districts have been largely incorporated in the Northumberland County District Planning Scheme, and some sections of the system have been constructed. With some modifications, the Department's proposals for the planning of the main roads in the Wollongong-Port Kembla district have been incorporated in the planning scheme prepared by the Illawarra Planning Authority.

During 1964-65 seventy-six new bridges were constructed. In addition, sixty-eight concrete box culverts each having a waterway width of twenty feet or more were completed. Major bridge works under construction included eighteen steel and/or concrete bridges with an aggregate length of 12,441 feet.

Department of Main Roads—revenue and expenditure. The funds of the Department of Main Roads are derived principally from motor vehicle taxation, charges on heavy commercial goods vehicles under the Road Maintenance (Contribution) Act, 1958, grants under Commonwealth Aid Roads Act (see page 835 and the chapter Public Finance), other grants from the State or Commonwealth Governments, and proceeds of a levy on municipal and shire councils in the County of Cumberland in accordance with the Main Roads Act, 1924-1965. The State Government also makes repayable advances for Main Roads Department works, and since 1963 the Commissioner for Main Roads has had the power (with the approval of the Governor on the recommendation of the Treasurer) to borrow moneys.

(a) Excludes repayable advances by the State Government and private loans (\$1,150,000 in 1960-61, \$1,270,000 in 1961-62, \$1,780,000 in 1962-63, \$4,020,000 in 1963-64, and \$7,500,000 in 1964-65), and transfers from Sydney Harbour Bridge Account for Expressway construction (\$1,536,000 in 1960-61, \$3,644,000 in 1961-62, \$4,162,000 in 1962-63, \$3,078,000 in 1963-64, and \$2,360,000 in 1964-65). Expenditure from these amounts is fully reflected in Expenditure. (b) Excludes debt redemption (\$97,632 in 1960-61, \$106,150 in 1961-62, \$114,176 in 1962-63, \$123,992 in 1963-64, and \$137,280 in 1964-65) and repayment of government advances (\$800,000 in 1960-61, \$120,000 in 1962-63, \$120,000 in 1963-64, and \$1,020,000 in 1964-65). (c) Mainly purchase of assets not subject to annual depreciation charge. The purchase of other assets is omitted here because the depreciation charge for them is reflected each year in 'Roads and bridges'.

Figures shown on page 837 represent the aggregate revenue and expenditure of five funds—the County of Cumberland Main Roads General and Special Purposes Funds, the Country Main Roads General and Special Purposes Funds, and the Developmental Roads Fund.

Sydney Harbour Bridge. The Sydney Harbour Bridge was opened for traffic on 19 March 1932. The main span is 1,650 feet and clearance for shipping 170 feet from high water level. The deck, 160 feet wide, carries a roadway of eight traffic lanes and two railway tracks, and there is also a footway on each side. The capital cost of the bridge and associated roadways to 30 June 1965 was \$24,373,728, but this amount will be reduced slightly on completion of the disposal of the remaining surplus resumed property. The portion met from repayable loan funds, over \$21,000,000, is repayable from toll income. Income for 1964–65 amounted to \$4,166,000, including road tolls, \$3,796,000; railway passenger tolls, \$282,000; and omnibus passenger tolls, \$30,000. Expenditure amounted to \$2,264,000, including interest, exchange, flotation expenses, etc., \$854,160; sinking fund, \$307,840; maintenance, \$567,310. The accumulated surpluses of the Bridge Account have been used to finance conversion of tram tracks to roadway on, and the construction of expressway-type approaches to, the bridge. From 1957–58 to 1964–65 a total of \$2,233,332 was expended on tram track conversion and \$15,704,000 on the bridge expressway-type approaches. The account showed a deficiency of \$1,817,356 at 30 June 1965. During 1964–65, 37,242,852 road vehicles (excluding omnibuses and exempt vehicles), 25,817,813 rail travellers and 13,670,754 omnibus travellers crossed the bridge, contributing respectively 92 per cent, 7 per cent, and 1 per cent of the total toll revenue.

Victoria

With the object of improving the main roads of the State, the Country Roads Board was established by legislation passed in 1912. The principal duties of the Board are to determine which roads should be declared in the various classifications; to supervise the construction, reconstruction and maintenance of these roads; to inquire into the State's resources in road materials and the most effective methods of road construction and maintenance; and to recommend deviations in existing roads or the construction of new roads in order to facilitate communications or to improve the conditions of traffic.

Length of roads. The total length of roads declared (see page 844) by the Country Roads Board in Victoria at 30 June 1965 was 14,502 miles, classified as follows: State highways, 4,465 miles; main roads, 9,094 miles; by-pass roads, 37 miles; tourist roads, 445 miles; forest roads, 461 miles. The length of the surface sealed (bitumen or concrete) included in the foregoing mileage was 12,391 miles or 85 per cent of the total. It is estimated that, in addition to the 14,502 miles of classified roads, there were approximately 87,000 miles of unclassified roads at 30 June 1965. The latest detailed estimate of the total length of roads and streets in Victoria (as at 30 September 1964) provides the following information: bitumen or concrete, 25,022 miles; gravel or stone, 30,966 miles; formed only, 21,384 miles; cleared only, 23,024 miles; total, 100,396 miles.

Country Roads Board—operations. During 1964–65, 1,899 miles of declared roads under the Board's control were treated with bitumen. In addition, 1,033 miles of undeclared roads, for which the Board contributed funds, were similarly treated. The total length of bitumen treatment carried out in 1964–65 was 3,079 miles (including 147 miles for other authorities). Of the work on the roads under the Board's control in 1964–65, 645 miles related to State highways and by-pass roads. During 1964–65, 170 bridge projects of an estimated total value of \$4,728,000 were initiated. Of these, 116, estimated to cost \$1,768,400, were under municipal supervision.

Country Roads Board—receipts and payments. The funds of the Country Roads Board are derived principally from motor registration fees, two-thirds of additional registration fees (charged on initial registration or transfer), a proportion of drivers' licence fees, fines, payments by the Commonwealth Government under the Commonwealth Aid Roads Acts, road charges under the Commercial Goods Vehicles Act, and repayments by municipalities. As from 1 July 1964 proceeds from fines are paid to consolidated revenue, but an equivalent amount to replace them is made available to the Board from the loan fund. In addition, loans have been authorized from time to time under the Country Roads Acts for permanent works on main and developmental roads, State highways, tourists' roads, and forest roads, while the State Government has provided, free of repayment, loan moneys for restoration of flood and bush fire damage. During 1964–65 loan receipts and payments each amounted to \$762,000. The total loan expenditure to 30 June 1965 was \$32,946,596. This figure does not include loan expenditure from the Developmental Roads Loan Account, a fund which was created for the purpose of constructing and maintaining subsidiary or developmental roads. Loan money raised on this account was exhausted at 30 June 1937, the total expenditure at that date being \$12,851,516.

COUNTRY ROADS BOARD, VICTORIA: RECEIPTS AND PAYMENTS
1960-61 TO 1964-65
 (\$'000)

	1960-61	1961-62	1962-63	1963-64	1964-65

Statutory payment to Tourists' Resorts Fund	376	383	395	427	469
Administration and other	2,356	3,303	3,813	3,769	4,815
Total	45,159	48,082	47,378	56,758	58,525

(a) After deducting costs of collection. Prior to 1 January 1965 one half of the drivers' licence fees was credited to the funds of the Country Roads Board while the remaining half was credited to the Municipalities Assistance Fund. Since that date, of the total amount collected, one quarter is paid to the Country Roads Board, one quarter is paid to the Municipalities Assistance Fund, and one half is paid to Consolidated Revenue. (b) Excludes portion of Commonwealth Aid Roads Acts advances drawn by the Public Works Department for expenditure on wharfs, jetties, etc. (c) Includes \$1,000,000 Special Grant from Commonwealth Government. (d) Includes grant from Loan Fund, \$700,000, and temporary advance from Public Account, \$500,000.

Melbourne and Metropolitan Board of Works. Since assuming responsibility for carrying-out planning scheme proposals relating to metropolitan highways and bridges, a tentative construction programme of urgent highway works throughout the metropolitan area of Melbourne has been adopted. Expenditure on these projects up to 30 June 1965 was \$5,868,184.

Level crossings. In 1954-55 the Level Crossings Fund was created under the *Country Roads and Level Crossings Funds' Act* 1954 to finance (a) the elimination of level crossings or the provision of alternative routes to enable road traffic to avoid level crossings; (b) the provision of lights, signs, and lighting at, and the improvement of approaches to, level crossings; and (c) generally, the reduction of danger at level crossings. The Act provides for the payment into the Fund of one-third of all moneys received by way of additional motor registration fees and money provided under any other Act. The amount available for expenditure in 1964-65 was \$761,704, consisting entirely of receipts from owners' certificates. Expenditure from the Fund amounted to \$425,548, of which \$311,246 was incurred by the Railways Department and \$114,302 by the Country Roads Board, leaving a balance carried forward of \$733,972.

Queensland

The Department of Main Roads was constituted in February 1951, with the Commissioner of Main Roads as its permanent head. The duties of the Commissioner are to carry out surveys and investigations necessary to determine State highways, main, developmental, and secondary roads; and the responsibility for building and maintaining these declared roads is largely that of the Commissioner. Roads of purely local importance are constructed and maintained by local authorities. In many cases construction is financed by the State Government by means of Treasury loans. Other roads may be built by the Public Estate Improvement Branch of the Lands Department in order to open up areas of previously inaccessible or undeveloped country.

Length of roads. The total length of *declared roads* (see page 844) in Queensland at 30 June 1965 was 24,452 miles; comprising State highways, 6,323 miles; main roads, 5,199 miles; developmental roads, 4,373 miles; and secondary roads, 8,557 miles. By the amendments to the Main Roads Act published in the Government Gazette of 6 April 1959 mining access, farmers' and tourists roads became secondary roads, and the provisions relating to the declaration of tourist tracks were repealed. The *total length of roads and streets* in Queensland at 30 June 1965 was: bitumen or concrete, 14,039 miles; gravel or stone, 19,920 miles; formed only, 42,729 miles; cleared only, 43,624 miles; total, 120,312 miles.

Department of Main Roads—operations. During 1963–64 the Department completed 1,041 miles of roads, including new construction and stage construction. Bridges of all types to a length of 8,307 linear feet were constructed, bringing the total constructed by the Department at 30 June 1964 to 239,362 feet. In addition, at 30 June 1964, 8,859 feet were under construction.

Department of Main Roads—receipts and payments. The funds of the Department of Main Roads are obtained chiefly from motor vehicle registration and collections, fees, etc. under the Transport Acts, contributions under the Commonwealth Aid Roads Acts, and loans, grants and advances from the State Government. The total receipts and payments during each of the years 1959–60 to 1963–64 are shown below.

DEPARTMENT OF MAIN ROADS, QUEENSLAND: RECEIPTS AND PAYMENTS
1959–60 TO 1963–64
(\$'000)

	1959–60	1960–61	1961–62	1962–63	1963–64

Total	34,747	33,250	39,554	42,192	49,829

(a) Includes grants to local authorities for road purposes.

South Australia

The Highways and Local Government Department is administered by the Commissioner of Highways, who is empowered, subject to the approval of the Minister of Roads, to undertake the construction, maintenance and protection of the principal roads of the State, allocate grants to councils for roadworks and supervise the expenditure of these grants, and assist Councils to purchase road-making plant and to defray the cost of roadworks. In addition, the Commissioner advises Councils on technical questions concerning the construction, maintenance or repair of roads. Funds of the Department are derived mainly from the Highways Fund, into which are paid the proceeds from motor vehicle registration and drivers' licences (less cost of collection), appropriations from loan funds, repayments of advances made to Councils and contributions by the Municipal Tramways Trust, and from contributions under the Commonwealth Aid Roads Acts.

Length of roads. In South Australia there are only two classifications of roads. These are main roads proclaimed (*see* page 844) under the provisions of the Highways Act and all other roads, commonly designated district roads. At 30 June 1965 there were 8,156 miles of *proclaimed main roads* and approximately 79,794 miles of district roads, including roads and tracks outside local government areas, totalling 87,950 miles. *Total lengths of roads*, classified by surface, were estimated to be: bitumen or concrete, 7,973 miles; gravel or stone, 13,868 miles; formed only, 10,878 miles; unformed, 55,231 miles.

State Highways and Local Government Department receipts and payments. The following table shows particulars of receipts and payments, during the years 1960-61 to 1964-65, of funds controlled by the Highways and Local Government Department.

HIGHWAYS AND LOCAL GOVERNMENT DEPARTMENT, SOUTH AUSTRALIA
RECEIPTS AND PAYMENTS, 1960-61 TO 1964-65
(*\$'000*)

	1960-61	1961-62	1962-63	1963-64	1964-65
RECEIPTS					
Motor vehicles registration, licences, fees	8,223	8,586	9,074	9,978	12,075
Commonwealth Aid Roads Acts	10,256	11,505	12,400	13,337	14,903
Loans from State Government	180	400	580	950	..

Stores, plant, machinery, suspense accounts, etc.(c)	990	814	—144	538	909
Total	19,949	21,398	21,837	27,801	26,815

(a) Includes reimbursement works for Commonwealth Government. (b) Includes administration expenses. (c) Represents gross repayments less recoveries by charges to works on account of depreciation and materials used.

Minus sign (—) denotes decrease.

Western Australia

Work connected with road construction and maintenance and associated projects in Western Australia is undertaken by the State Government, through the Main Roads Department, and by local government authorities throughout the State. The Department operates under the *Main Roads Act, 1930-1961*, and is administered by a Commissioner of Main Roads responsible

to the Minister for Works. The Act makes provision for public roads in the categories of main roads, controlled-access roads and developmental roads (*see* page 844). An additional category, that of important secondary roads, is used by the Department in determining its works programme. Within its own district each local government authority is responsible for the provision and upkeep of roads other than those provided by the Main Roads Department. In addition, the local authority is required by the Main Roads Act to maintain any developmental road situated in its district.

Length of roads. The total length of constructed roads for which financial provision was made by the Main Roads Department at 30 June 1965 was: main roads, 3,463 miles, including five miles of controlled-access roads; important secondary roads, 7,989 miles; and developmental roads, 42,004 miles. In addition, there were seventy-four miles gazetted as controlled-access roadway as yet not constructed. The total length of roads and streets in Western Australia at 30 June 1965 was made up as follows: bitumen or concrete, 12,056 miles; gravel or stone, 22,243 miles; formed only, 44,798 miles; natural state (cleared only), 28,012 miles; total, 107,109 miles.

Main Roads Department—operations. During the year 1964–65 the activities of the Department included clearing, 2,148 miles; forming, 3,485 miles; gravelling, 2,096 miles; reconditioning, 7,952 miles; and stabilizing, 82 miles. In addition, 1,762 miles were primed and sealed (including widening). New and replacement bridges constructed totalled forty-two, while eleven bridges were widened.

Main Roads Department—receipts and payments. The funds of the Main Roads Department are derived principally from allocations made under the *Commonwealth Aid Roads Act* 1964. In addition, financial assistance was given by the Commonwealth Government to the extent of \$1,500,000 in 1964–65 for the improvement of roads used for the transport of beef cattle in the Kimberley District. The five-year period relating to these additional grants terminates on 30 June 1966 with a total amount of \$6,900,000 of Commonwealth funds matched by a corresponding State contribution. Other sources of income include one-half of the net amount of traffic fees collected in the Metropolitan Traffic Area and an allocation of Department of Transport funds. (Outside the Metropolitan Traffic Area motor vehicle licence fees are collected and retained by the local authorities with the provision that from the 1 January 1965 they are required to contribute to the Central Road Trust Fund the amount of their annual vehicle licence collections which exceeds that of the base year 1958–59. Such amount is reimbursed together with an addition of 75 per cent from Commonwealth matching grants.) During 1964–65 general loan funds to the extent of \$800,000 were allocated for expenditure by the Department. Receipts and payments for the years 1960–61 to 1964–65 are shown in the following table.

(a) For 1960-61 to 1963-64 includes amounts to be distributed to metropolitan and country local authorities early in the following year. (b) Excludes \$1,400,000 advance from State Treasury. (c) Excludes \$1,000,000 advance from State Treasury. (d) Includes administration and expenditure on hire and maintenance of road construction plant, etc., and on purchase of materials. (e) Excludes \$1,400,000 refund of advance from State Treasury. (f) Excludes \$1,000,000 refund of advance from State Treasury.

Tasmania

Under the *Road Construction (Transfer of Functions) Act 1951*, which came into operation on 1 July 1951 the control of the construction and maintenance of roads and certain road making plant was vested in the Minister for Lands and Works. Works authorized by the Minister in respect of roads classified as State highways, tourist, and developmental roads are constructed by the Department of Public Works and financed from the State Highways Trust Fund, into which are paid the proceeds from Commonwealth Aid Roads grants, motor vehicle registration fees and taxes, licence fees for drivers and public transport, and other moneys made available by Parliament. In addition, provision was made under the Road Construction (Transfer of Functions) Act for certain works authorized by the Transport Commission to be carried out and constructed by the Department. The expenditure by the Public Works Department during 1964-65 on the construction and maintenance of roads, tracks and bridges amounted to \$13,155,580, of which \$9,019,766 was charged to road funds, \$48,466 to revenue, \$3,996,450 to loan, and \$90,898 to other funds. Except in special cases, municipal councils bear the cost of maintaining country roads and a proportion of the cost of main and secondary roads.

Length of roads. The length of *classified roads* (see page 844) at 30 June 1965 was 2,244 miles, comprising State highways, 1,171 miles; main roads, 662 miles; secondary roads, 196 miles; tourist roads, 46 miles; and other roads, 169 miles. The mileages of sealed (bitumen or concrete) roads and their proportions to the respective totals were: State highways, 873 miles (75 per cent); main roads, 436 miles (66 per cent); secondary, tourist and other roads, 126 miles (31 per cent). The total length of classified sealed roads was 1,435 miles (64 per cent). The total length of local authorities roads at 30 June 1965 was 8,622 miles, comprising bitumen or concrete, 1,184 miles (14 per cent); gravel or stone, 6,124 miles (71 per cent); formed only or cleared only, 1,314 miles (15 per cent). Roads of other authorities (Hydro-Electric Commission, Forestry Commission and Closer Settlement Board) totalled 1,672 miles.

The *total length of all roads* in Tasmania at 30 June 1965 was 12,538 miles, comprising bitumen or concrete, 2,666 miles (21 per cent); gravel or stone, 8,552 miles (68 per cent); formed only or cleared only, 1,320 miles (11 per cent).

Combined road funds—receipts and payments. The table following shows particulars of the receipts and payments of the combined Road Funds for the years 1960-61 to 1964-65.

ROAD FUNDS, TASMANIA: RECEIPTS AND PAYMENTS, 1960-61 TO 1964-65
(\\$'000)

	1960-61	1961-62	1962-63	1963-64	1964-65

(a) Includes Commonwealth Employment Stimulation Grant (\$733,912 in 1961-62, \$507,554 in 1962-63, \$15,302 in 1963-64 and \$14,946 in 1964-65). (b) Includes grants under Commonwealth Employment Stimulation Grant (\$206,912 in 1961-62, and \$22,260 in 1962-63).

Summary of roads used for general traffic

Proclaimed or declared roads. The table hereunder is a summary of the roads proclaimed or declared under the Acts of the several States relative to the operations of the central road authorities, and shows the lengths of various classes proclaimed or declared as at 30 June 1965. The central road authority in each State assumes responsibility under the Act for the whole, or a proportion, of the cost of construction and/or maintenance of these roads, the extent varying from State to State and with the class and locality of the roads. Before proclamation of a main road, consideration is given, in general, to the following points: availability of funds; whether the road is, or will be, within one of several classes of main trunk routes; the value of the roads as connecting links between centres of population or business; whether the district is, or will be, sufficiently served by railways. Provision is also made in some States for the declaration of roads other than main roads. The absence of a particular class in any State does not necessarily imply that there are no roads within that State that might be so classified; the classes are restricted only to roads proclaimed or declared under the Acts. A further point to make is that, through various causes, e.g. insufficiency of funds, man-power or materials, etc. construction or maintenance may not keep pace with gazettals of mileages, and, therefore, the condition of a road may not match its status.

PROCLAIMED OR DECLARED ROADS: LENGTHS
STATES, 30 JUNE 1965
(Miles)

Class of road	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Total

(a) Metropolitan only. (b) Includes mining access roads, farmers' roads and tourist tracks.
(c) Maintenance of these roads is the responsibility of the several local authorities. (d) Forest roads and by-pass roads. (e) Gazetted as controlled access roadway but not constructed. (f) Subsidized roads.

Total roads. The following table represents an attempt to classify all the roads used for general traffic in Australia, at the latest dates available, according to States and Territories and to certain broad surface groups. The figures in the table for the States are obtained from the Deputy Commonwealth Statistician in each State, and are derived mainly from local government sources.

ALL ROADS USED FOR GENERAL TRAFFIC: LENGTHS
STATES AND TERRITORIES, 30 JUNE 1965
(Miles)

Surface of roads	N.S.W. (a)	Vic. (b)	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Total

(a) 30 June 1963. (b) 30 September 1964.

Aggregate net expenditure on roads and bridges in Australia

In most States there are three classes of authorities concerned with roads and bridges, the State Government, the central road authority and numerous local government bodies. The Commonwealth Government, in addition to the grants it makes to the States for road purposes, is concerned with roads in the Northern Territory and the Australian Capital Territory and roads of access to Commonwealth property in the various States. Some information relating to Commonwealth grants to the States for road purposes and particulars of the expenditure on roads and bridges by local government bodies and the central road authorities are given in preceding sections of this chapter.

Most of these authorities may expend money directly on road construction or indirectly by means of grants and payments to other authorities. These indirect payments, if included in an aggregate, would duplicate expenditure; this, together with the fact that some authorities are unable to supply separate information concerning their road expenditure, makes it difficult to compile precise statistics of aggregate expenditure on roads and bridges.

The information in the following table, which is partly estimated and which excludes the main indirect payments, provides an approximate measure of the aggregate net expenditure by the three classes of authorities mentioned above on roads and bridges in Australia during each of the years ended 30 June 1961 to 1965. Expenditure on roads by those authorities whose primary activity is directed towards functions other than roads, e.g. electricity, forestry, housing, etc. authorities, is not included. The figures cover expenditure on the construction, reconstruction and maintenance of roads and bridges, and direct administration but not debt charges. Because of the difficulties associated with the indirect payments mentioned above, it is not possible to give separate net details for each authority.

Water supply, sewerage and drainage

The information in this section relates primarily to the metropolitan areas and provincial cities and towns. For information on water supply and irrigation in rural areas see the chapter Water Conservation and Irrigation.

New South Wales

The two largest domestic water supply and sewerage systems are controlled by statutory boards, each consisting of a president and a vice-president appointed by the State Government, and five members elected by local councils. These are (a) the Metropolitan Water, Sewerage and Drainage Board, which administers the systems in the County of Cumberland, i.e. in Sydney and in the surrounding districts, and, in addition, has jurisdiction over territory extending along the South Coast beyond Wollongong to Lake Illawarra, Shellharbour and Kiama, and (b) the Hunter District Water Board serving the Newcastle-Maitland-Cessnock areas. At Broken Hill and Cobar similar boards include representatives of the mining companies. Other systems, apart from irrigation projects and water storage systems administered by the State Government, are controlled by county, municipal or shire councils.

Metropolitan and Hunter District water supply (to 30 June 1965). The storage reservoirs of the metropolitan system with a combined available capacity of 577,112 million gallons, drain catchment areas of 3,860 square miles (Warragamba, 3,480 square miles, Upper Nepean, 347 square miles, and Woronora, 33 square miles). The development of a water supply system on the Warragamba River was completed with the official opening of the Warragamba Dam in October 1960. This dam, constructed in concrete, has a storage capacity of 452,505 million gallons. Its safe net draught is estimated to be 285 million gallons a day. A hydro-electric power station at the dam generated 341 million kWh in 1963-64, and, because of dry conditions, only 146 million kWh in 1964-65. At 30 June 1965 there were 167 service reservoirs in use with a combined capacity of 657 million gallons. Rating for water for 1964-65 was 9d. in the £ (equivalent to 3.75 cents in the \$) of assessed annual value. For water in excess of the gallonage provided for in the rate (calculated at 30 cents per 1,000 gallons) the charge was 28 cents per 1,000 gallons.

The water supply of the *Hunter District system* is drawn principally from three sources: the Chichester Reservoir, with a storage capacity of about 5,000 million gallons and draining a catchment of seventy-six square miles, the Tomago Sandbeds, which extend northerly along the coast towards Port Stephens, and the Grahamstown Water Supply Scheme which is still being developed. Another source of supply, the Nelson Bay-Anna Bay Scheme, is also being developed. Service reservoirs and tanks distributed throughout the Water Supply District have a total storage capacity of 120 million gallons. Water rating for 1964-65 was 1s. 5½d. in the £ (equivalent to 7 2917 cents in the \$) on assessed annual value for occupied properties and 1s. 2½d. in the £ (equivalent to 6 0417 cents in the \$) for unoccupied properties. The price of water to domestic and industrial consumers is 28 cents per 1,000 gallons.

The following tables show, for the Metropolitan and Hunter District systems, the number of properties, the estimated population supplied, and other details.

**METROPOLITAN WATER SUPPLY(a), NEW SOUTH WALES
SERVICES, 1960-61 TO 1964-65**

Year	Improved properties for which water mains available	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of mains	Number of meters

(a) County of Cumberland, City of Greater Wollongong and Shellharbour and Kiama Municipalities.

**HUNTER DISTRICT WATER SUPPLY(a): SERVICES
1960-61 TO 1964-65**

Year	Properties supplied	Estimated population supplied	Average daily consumption	Total consumption for year	Average daily consumption		Length of mains
					Per property	Per head of estimated population	
			mill. gals.	mill. gals.	gallons	gallons	miles
1960-61	86,032	290,530	29.7	10,854	346	102	1,483
1961-62	87,792	296,502	31.7	11,555	361	107	1,512
1962-63	89,283	301,580	36.6	13,352	410	121	1,551
1963-64	91,616	309,609	36.4	13,336	398	118	1,590
1964-65	93,646	316,625	41.5	15,139	443	131	1,623

(a) Newcastle, Maitland and Cessnock areas.

Metropolitan and Hunter District sewerage and drainage system (to 30 June 1965). The metropolitan system serving Sydney and suburbs comprises three major sewerage systems and seven minor systems, consisting of six outfalls discharging directly into the Pacific Ocean and four treatment works. In addition, seven centres outside the metropolitan area (Camden, Campbelltown, St. Mary's, Port Kembla, Richmond, Warragamba township, and Wollongong) are served by local treatment works. Stormwater drainage channels under the control of the Metropolitan Water, Sewerage and Drainage Board at 30 June 1965 were 179 miles long. Sewerage rating for 1964-65 was 9½d. in the £ (equivalent to 3.9583 cents in the \$) of assessed annual value, and drainage rating 1½d. in the £ (equivalent to 0.5208 cents in the \$).

The main sewerage system of the *Hunter District* serves the City of Newcastle and discharges into the Pacific Ocean at Merewether Gulf. There are also local treatment works at Maitland, Cessnock and some of the outlying districts. Sewerage rates for 1964-65 were 1s. 0½d. in the £ (equivalent to 5.2083 cents in the \$) of assessed annual value of occupied lands and 9½d. in the £ (equivalent to 3.9583 cents in the \$) for unoccupied lands, and drainage rates (on certain areas served) 1½d. in the £ (equivalent to 0.625 cents in the \$).

The following table gives details of sewerage services and stormwater drains of the Metropolitan system.

METROPOLITAN SEWERAGE AND DRAINAGE^(a)
NEW SOUTH WALES: SERVICES, 1961 TO 1965

30 June—	Improved properties for which sewerage available	Estimated population served	Lengths of sewers	Length of stormwater channels
		'000	miles	miles
1961 . .	412,034	1,620	4,231	180
1962 . .	426,333	1,710	4,489	178
1963 . .	451,997	1,780	4,763	179
1964 . .	475,735	1,870	5,074	180
1965 . .	501,389	1,930	5,328	179

(a) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities.

At 30 June 1965, 68,764 premises had been connected to the Hunter District Water Board's sewerage system (Newcastle-Maitland-Cessnock areas). The total length of sewers under the Board's control was 976 miles, and the length of drains was 51 miles.

Metropolitan and Hunter District systems' finances. The following table shows the debt, revenue and expenditure of the Metropolitan Water, Sewerage and Drainage Board and the Hunter District Water Board for each of the services of water supply, sewerage and drainage during 1964-65, and for the three services combined for the years 1960-61 to 1964-65.

(a) Includes provision for renewals, long service leave, etc. (b) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities. (c) Newcastle-Maitland-Cessnock areas.

Local government country water supply and sewerage systems. At 31 December 1963 country water supply services were conducted or under construction by 50 municipalities, 86 shires and 5 county councils, and country sewerage services by 52 municipalities and 37 shires. The capital indebtedness of these schemes was \$75,735,674 at 31 December 1963, namely \$52,969,754 for water and \$22,765,920 for sewerage. Debt of the municipalities amounted to \$38,016,026, shires to \$27,515,930 and county councils to \$10,203,718. Government advances amounting to \$864,646 are included in these figures. Aggregate income and expenditure amounted to \$12,654,822 and \$9,970,736, respectively, in 1963.

Other country water supply and sewerage systems. The water supply and sewerage services for Broken Hill are operated by a statutory board, the Broken Hill Water Board. Its capital indebtedness at 31 December 1964 was \$7,135,396. In 1964 income (excluding subsidies, State Government, \$160,218 and mining companies, \$458,418) amounted to \$631,320 and expenditure (excluding debt redemption, \$330,494) amounted to \$909,082. The Cobar Water Board was constituted in February 1964. At 31 December 1964 its capital indebtedness was \$1,644,916. The following country water supply systems—South-West Tablelands, Junee and Fish River—are administered by the Department of Public Works. These supply water in bulk to municipalities and shires, the Railways Department and other large consumers. Only a small quantity is sold direct to private consumers. The capital indebtedness of these systems was \$14,977,908 at 31 December 1964. The Mulwala Water Supply and Sewerage Service was constructed as an urgent war-time work for the Commonwealth, and the Bethungra Water Supply System is administered by the Department of Public Works in conjunction with the Junee supply.

Victoria

Melbourne and Metropolitan Board of Works. The Board consists of a Chairman and fifty-one Commissioners elected to represent the municipalities which lie wholly or partly within the metropolitan area. The principal functions of the Board are: to control and manage the metropolitan water supply system; to provide the metropolitan area with an efficient main and general sewerage system; to deal with main drains and main drainage works; to control and manage the rivers, creeks and watercourses within the metropolitan area; and to carry out the functions of a permanent planning authority.

Metropolitan water supply. There are six storage reservoirs serving the metropolitan area—Yan Yean, 7,233 million gallons (available for consumption, 6,649 million gallons); Toorourrong, 60 million gallons; Maroondah, 6,289 million gallons (4,870 million gallons); O'Shannassy, 930 million gallons; Silvan, 8,853 million gallons (8,823 million gallons); and Upper Yarra, 45,400 million gallons (44,120 million gallons); total 68,765 million gallons (65,452 million gallons). Service reservoirs number thirty-seven, with a total capacity of 366 million gallons. The water rate levied by the Board in 1964-65 was 8d. in the £ (equivalent to 3.333 cents in the \$) on the net annual value of the properties served. The charge for water consumed in excess of the quantity which, at 20 cents per 1,000 gallons, would equal the assessed water rates on each property, was 20 cents per 1,000 gallons. The following table shows particulars of Melbourne metropolitan water supply services for the years 1960-61 to 1964-65.

MELBOURNE WATER SUPPLY: SERVICES, 1960-61 TO 1964-65

Year	Number of houses supplied	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of aqueducts, etc., mains and reticulation	Number of meters
					Per house	Per head of estimated population		
		'000	mill. gals.	mill. gals.	gallons	gallons	miles	
1960-61	510,078	1,836	152.9	55,822	300	83.3	5,245	392,396
1961-62	519,216	1,869	157.6	57,521	304	84.3	5,477	422,318
1962-63	547,123	1,981	151.3	55,225	277	76.4	5,622	460,866

1964-65	453,078	1,446	89.7	32,833	202.4	62.0	3,932	211
		1,491	93.6	34,152	206.5	62.8	4,113	218

The metropolitan sewerage system consists of the main system (serving an area of 96,159 acres) and five subsidiary systems—the Sunshine system (serving an area of 2,727 acres), the Laverton system (serving an area of 172 acres), the Kew system (serving an area of 112 acres), the South-eastern system (serving an area of 3,909 acres in Cheltenham, Parkdale, Mentone, and Mordialloc), Watsonia system (serving an area of 188 acres), and the Maribyrnong system (serving an area of 182 acres). The Metropolitan Sewerage Farm, 26,809 acres in extent and situated about twenty-four miles south-west of Melbourne beyond the township of Werribee, serves to purify and dispose of approximately ninety-eight per cent of the sewerage flow of the metropolis before its discharge into Port Philip Bay. The total capital cost (less depreciation) of the farm to 30 June 1965 was \$9,507,128. Revenue during 1964-65 amounted to \$478,406, cost of sewerage disposal to \$557,820, trading expenses to \$285,588, interest to \$505,168, and net cost of sewerage purification to \$870,170. These financial particulars are included in the sewerage items of the summary below.

Melbourne and Metropolitan Board of Works finances. The following table provides for the year 1964-65 a summary of the financial operations of the water supply, sewerage and drainage services conducted by the Melbourne and Metropolitan Board of Works, and of the combined services for the years 1960-61 to 1964-65.

MELBOURNE AND METROPOLITAN BOARD OF WORKS: FINANCES
1960-61 TO 1964-65
(\$'000)

Service, etc.	Capital cost of works and buildings at 30 June(a)	Revenue	Expenditure				Surplus (+) or deficit (-)
			Working expenses	Interest and exchange	Debt redemption	Total	
Water	138,708	12,160	3,924	7,180	..	11,104	+ 1,056
Sewerage	140,023	11,404	3,509	6,793	..	10,302	+ 1,102
Drainage	24,983	1,744	388	884	..	1,272	+ 471
General(b)	11,259	..	1,486	..	1,960	3,446	- 3,446
Total, 1964-65	314,972	25,307	9,308	14,856	1,960	26,124	- 817
1963-64	286,566	24,373	9,315	13,342	1,693	24,350	+ 23
1962-63	258,428	23,429	10,068	11,840	1,494	23,403	+ 26
1961-62	235,014	21,400	9,644	10,553	1,189	21,386	+ 14
1960-61	213,336	18,315	8,043	9,450	1,061	18,554	- 239

(a) Total loan indebtedness—1964-65, \$295,886,410. (b) Statutory and general expenditure not distributed over services.

State Rivers and Water Supply Commission. Water supply and conservation throughout Victoria (except for the area controlled by the Melbourne and Metropolitan Board of Works) is under the jurisdiction of the State Rivers and Water Supply Commission. The events leading to the establishment of the Commission, and its works in the spheres of irrigation, domestic and stock water supply to farms, drainage, flood protection and river improvements, have already been described in the chapter Water Conservation and Irrigation. This section is therefore confined to the Commission's functions in connection with urban water supply and sewerage.

Extra metropolitan water supply. At 30 June 1965 the Commission provided a reticulated water supply from its own works to 137 cities and towns having a combined population of 199,000 persons. The principal systems operated by the Commission serve part of the Mornington Peninsula—Dandenong area (about 77,000 people supplied); Bendigo, Castlemaine, etc. (57,000); and about 8,000 people in the Western District. In addition, 13,000 persons in a number of towns in the Bellarine Peninsula receive supply through a Commission-operated distributory system from headworks controlled by the Geelong Waterworks and Sewerage Trust. The Bendigo-Castlemaine supply also provides for the irrigation of 11,000 acres as well as urban requirements in the area. Outside these areas the Commission supplies mainly small towns in the north of the State in areas where it also supplies farms with water for irrigation or domestic and stock purposes. Capital expenditure by the Commission on urban water supply at 30 June 1965 was divided between the several systems as follows: Mornington Peninsula, \$21,400,000; Bendigo-Castlemaine, \$9,300,000; Bellarine Peninsula, \$2,350,000; Otway System (Western District), \$2,350,000; other, \$2,350,000; total, \$37,750,000. This expenditure is net of redemption payments. In addition to the towns supplied by the Commission there are approximately 604,000 people in 224 cities and towns throughout the State who get a reticulated water supply from works operated by local authorities.

All these authorities operate under the supervision of the State Rivers and Water Supply Commission, largely because the Government subsidizes their capital expenditure. Most new works are financed from Government loan funds, but the Geelong Trust and in recent years some other local authorities borrowed money privately. In most cases the local authority controls both headworks and distribution system, but several towns—serving in all about 50,000 people—draw their water from the State Rivers and Water Supply Commission and are concerned only with reticulation of the water. Together, therefore, the Commission and local authorities supply 361 urban centres containing more than 803,000 people. Very few towns of any importance are now without reticulated water supply. The following table presents the financial position in respect of town water supply at 30 June 1965.

TOWN WATER SUPPLY, VICTORIA: CAPITAL LIABILITY, 30 JUNE 1965
(\$'000)

	Water supply provided by—		
	Local authorities	State Rivers and Water Supply Commission	Total
Government advances	53,500	38,200	91,700
Less redemption	3,850	450	4,300
Government advances outstanding . .	49,650	37,750	87,400
Borne by State	9,150	17,250	26,400
Borne locally	40,500	20,500	61,000

In addition, nearly \$18,000,000 has been borrowed locally, mainly by the Geelong Waterworks and Sewerage Trust.

The proportion of loan capital borne by the State is much higher in the case of Commission undertakings than for towns supplied by local authorities. This is because most Commission undertakings have been developmental in nature. Besides meeting interest on capital borne by it, the State pays the difference between three per cent and the actual rate paid on practically all the capital carried locally. The total annual subsidy on country town water supply is currently about \$2,500,000.

Extra metropolitan sewerage systems. With the exception of the town of Eildon, whose sewerage system is controlled directly by the State Rivers and Water Supply Commission, the construction and management of sewerage works in Victoria's country cities and towns are the responsibility of local authorities supervised by the Commission. Except for the Geelong Waterworks and Sewerage Trust and the Latrobe Valley Water and Sewerage Board which have special Acts dealing with their activities, all sewerage authorities operate under the Sewerage

Districts Act. At 30 June 1965 there were fifty-six cities and towns with sewerage systems in operation. These contained about 520,000 persons, nearly one half of the total number of residents outside the metropolitan area.

Expenditure on sewerage in Victorian country towns at 30 June 1965 was approximately \$62,000,000, of which some \$47,000,000 had been advanced by private lenders. The annual State subsidy on country sewerage in Victoria is currently about \$1,200,000, provided mainly in the form of subsidies on interest rates paid along the same lines as for town water supply. Comparatively little capital is borne directly by the State.

Geelong Waterworks and Sewerage Trust. The Geelong Waterworks and Sewerage Trust was constituted in 1908 and reconstituted under the *Geelong Waterworks and Sewerage Act* 1909. It was further reconstituted in September 1950 to include a government nominee (Chairman), and provision was made for a commissioner to be elected by the ratepayers of the Shire of Corio, making a total of seven commissioners. The amount of loan money which may be raised is limited to \$24,000,000 for water supply undertakings and \$10,000,000 for sewerage undertakings. The population supplied is estimated by the Trust at 107,940 persons. This and other general information relates to 30 June 1965.

The *Geelong water supply scheme* comprises two systems for gathering and storing water, the water in both systems being brought over fifty miles to Geelong. There are seven storage reservoirs and eleven service basins whose total storage capacity is 13,292 million gallons. The length of water mains and reticulation is 550.4 miles. The total expenditure on water supply to 30 June 1965 was \$15,213,802. General fund expenditure for 1964-65 comprised \$408,412 for working expenses and \$816,902 for interest, redemption and reserves, while revenue amounted to \$1,236,976. The sinking fund appropriations at June 1965 amounted to \$840,134. The replacement and contingencies reserve amounted to \$919,872. There is a water rate of 1s. 7d. in the £ (equivalent to 7.9167 cents in the \$) (with minima of \$1 for vacant land and \$2 for tenements) on the net annual value of ratable properties.

The *Geelong sewerage scheme* consists of a main outfall sewer to the ocean and 302.7 miles of main and reticulation sewers. The sewerage area is 11,851 acres, and the number of buildings connected within the sewered areas is 25,531. The total expenditure on sewerage works to 30 June 1965 was \$6,271,202. The revenue in 1964-65 amounted to \$663,134, and the general fund expenditure comprised \$224,346 on working expenses and \$436,332 on interest, redemption and reserves. Sinking fund appropriations at 30 June 1965 were \$492,902. Replacement and contingencies reserve amounted to \$989,934. A general rate of 1s. 4d. in the £ (equivalent to 6.6667 cents in the \$) is levied on the net annual value of ratable properties.

Under the *Barwon River Improvement Act* 1939 a portion of the Barwon River is vested in the Geelong Waterworks and Sewerage Trust. General maintenance and improvements of the surrounding area is financed by the levying of an improvement rate of ½d. in the £ (equivalent to 0.2083 cents in the \$) on the net annual value of all lands within the Drainage Area. The revenue for 1964-65 amounted to \$23,920.

The Ballarat Water Commissioners and the Ballarat Sewerage Authority. The body known as the Ballarat Water Commissioners was constituted on 1 July 1880 and the Ballarat Sewerage Authority on 30 November 1920. The members of the Water Commissioners constitute the Sewerage Authority. General and financial information given herein relates to the year ended 31 December 1965.

The *Ballarat water supply district* comprises an area of about sixty-five square miles, containing a population of about 61,000. The total storage capacity of the seven reservoirs is 5,435 million gallons and the catchment area is 24,182 acres. The capital cost of construction of the waterworks was \$5,827,126 to 31 December 1965. The liabilities amounted to \$3,640,546 at 31 December 1965, including loans due to the Government totalling \$3,383,352. The revenue for the year 1965 was \$402,120. Working expenses during 1965 amounted to \$220,076 and interest and other charges to \$181,576. A water rate of 1s. 0d. in the £ (equivalent to 5 cents in the \$) on the net annual valuation is levied, with a minimum charge of \$3 per annum on any ratable property.

The *Ballarat sewerage district* comprises the City of Ballarat and parts of the Shires of Ballarat, Bungaree and Grenville and the Borough of Sebastopol. There are more than 188 miles of sewers. The capital cost of sewerage construction works to 31 December 1965 was \$4,101,674. Two hundred and sixty-two sewered areas had been declared as at 31 December 1965. Assessments in the sewerage district numbered 19,614, while those in sewered areas numbered 16,546. There were 14,596 buildings connected. The scheme is financed by debenture-issue loans from various financial institutions. The liabilities on account of loans secured for construction at 31 December 1965 amounted to \$3,610,992; redemption payments at that date totalled \$806,156. House connections financed by the Authority numbered 4,210. Revenue during 1965 amounted to \$414,622, and expenditure, which included \$238,780 for interest and redemption, was \$409,618. A sewerage rate of 1s. 4d. in the £ (equivalent to 6.6667 cents in the \$) on the net annual valuation is levied, with a minimum charge of \$6 on any ratable property.

Latrobe Valley Water and Sewerage Board. The Latrobe Valley Water and Sewerage Board was constituted on 1 July 1954. The Board consists of seven members, namely: two Government nominees (one of whom is Manager and also Board Chairman), three members elected by water supply, sewerage and river improvement authorities within the Latrobe Valley, and one representative each of the State Electricity Commission of Victoria and the Gas and Fuel Corporation of Victoria.

The Board is empowered to construct *water supply works within the Latrobe Valley*, but at present its main construction activities are confined to the central industrialized areas. Capital expenditure during 1964-65 totalled \$664,616 compared with \$630,906 in 1963-64. The total capital cost of construction of the waterworks was \$10,586,992 to 30 June 1965. Liabilities amounted to \$11,337,848, including loans due to the Government totalling \$11,127,040. Revenue for the year was \$717,730. Working expenses during 1964-65 amounted to \$533,490, including interest on loans amounting to \$325,182. The Board does not strike a rate, but supplies consumers, including local water supply authorities, by measure. The quantity supplied during the year ended 30 June 1965 was 9,700 million gallons.

The *Latrobe Valley sewerage system* consists of a main outfall sewer, about fifty-two miles in length. Wastes conveyed consist mainly of industrial wastes, such as paper wastes and gasification wastes, together with small quantities of domestic sewerage. The capital cost of the sewerage construction works to 30 June 1965 was \$5,671,714. Liabilities amounted to \$6,396,002, including loans due to the Government totalling \$5,798,080. Revenue in 1964-65 was \$275,484 and expenditure totalled \$305,230, including \$110,452 interest and other charges. No sewerage rate is levied, but a charge is made by measure for wastes both from industries and public authorities.

Other sewerage authorities. At 30 June 1965 seventy-eight other sewerage authorities had been constituted under the provisions of the Sewerage Districts Acts, and systems were in operation in fifty-three districts.

Queensland

Brisbane City Council (to 30 June 1965). This organization conducts the water supply and sewerage systems of the City of Brisbane, and also supplies, in bulk, the whole of the water used by the City of Ipswich and the major portion of that used by the City of Redcliffe. Redcliffe also supplements its supply from that of the Pine Rivers Shire Council.

Storage facilities for *Brisbane water supply* comprise the following (available capacities are shown in parentheses): Somerset Reservoir, 200,000 million gallons (55,000 million gallons); Lake Manchester, 5,806 million gallons (5,720 million gallons); Brisbane River, 543 million gallons (484 million gallons); Pure Water Reservoir, Holt's Hill, 8.3 million gallons (8.3 million gallons); Enoggera Reservoir, 1,000 million gallons (600 million gallons); Gold Creek Reservoir, 407 million gallons (400 million gallons). There are eighteen service reservoirs with a capacity of approximately 43 million gallons. The Somerset reservoir is a dual purpose project with a designed total holding capacity of 200,000 million gallons, 55,000 million gallons to be for water storage and 145,000 million gallons for flood mitigation. Water rating for the year ended 30 June 1965, was 3d. in the £ (equivalent to 1.25 cents in the \$) on the unimproved valuation of all ratable land, with a minimum charge of \$19 for the year for each assessment. The following table is a summary of operations of the complete Brisbane City Council system (Brisbane, Ipswich and Redcliffe) for the years 1960-61 to 1964-65.

BRISBANE WATER SUPPLY(a): SERVICES, 1960-61 TO 1964-65

Year	Services connected	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of trunk and reticulation mains
					Per service	Per head of estimated population	
			mill. gals.	mill. gals.	gallons	gallons	miles
1960-61	171,820	626,470	46.8	17,100	273	74.8	2,196
1961-62	178,279	649,970	45.3	16,538	254	69.7	2,284
1962-63	182,804	665,479	48.3	17,644	264	72.6	2,378
1963-64	187,502	683,223	51.2	18,684	273	74.9	2,390
1964-65	192,875	700,658	61.4	22,409	318	87.6	2,538

(a) Includes Ipswich and Redcliffe.

The sewage treatment works of the *Brisbane sewerage scheme* is situated at Luggage Point at the entrance to the Brisbane River. Sewerage rating for the year ended 30 June 1965 was 2½d. in the £ (equivalent to 1.0417 cents in the \$) on the unimproved valuation of each portion of land, with a minimum charge of \$20 for the year. The following table is a summary of operations of the Brisbane sewerage scheme for the years 1960-61 to 1964-65.

BRISBANE SEWERAGE: SERVICES, 1960-61 TO 1964-65

Year	Premises connected	Estimated population served	Total sewage pumped for the year	Length of main, branch, reticulation, etc. sewers
			mill. gals.	miles
1960-61	62,781	232,290	5,222	853
1961-62	67,407	249,406	5,808	906
1962-63	71,754	265,490	6,673	944
1963-64	75,964	281,067	6,959	1,042
1964-65	84,390	312,243	6,565	1,222

Brisbane City Council water supply and sewerage systems—finances. The following table shows particulars of the finances of the water supply and sewerage undertakings of the Brisbane City Council for the years 1960-61 to 1964-65.

BRISBANE WATER SUPPLY AND SEWERAGE: FINANCES, 1960-61 TO 1964-65
(\$'000)

Service and year	Gross capital cost to 30 June	Revenue	Expenditure			Surplus (+) or deficit(—)
			Working expenses	Interest, redemption, etc. charges	Total (a)

1964-65 . .	50,184	3,664	803	1,705	3,434	+ 230

(a) Total, including other expenditure.

Country towns. In addition to the City of Brisbane, there were at 30 June 1964, 195 cities and towns in Queensland provided with water supply systems controlled by municipal and shire councils. At 30 June 1964 there were forty-two cities or towns in addition to Brisbane with sewerage systems. The receipts (other than loan and loan subsidy) of water undertakings controlled by the cities and towns referred to above amounted to \$6,222,470 in 1963-64. Expenditure amounted to \$6,309,630, including \$2,807,692 for debt charges. In addition, expenditure from loans and loan subsidy amounted to \$4,698,638. Finances of sewerage undertakings are incorporated in council general funds and are not available separately.

South Australia

The water supply and sewerage systems in this State were constructed mainly, and are maintained, by the Engineering and Water Supply Department, under the control of the Minister of Works. Works controlled by the Department are the Adelaide, Barossa, Beetaloo, Bundaleer, Moorook, Tod River, Warren, Yorke Peninsula and other country water districts systems, the Morgan-Whyalla water supply system, the metropolitan and country sewerage systems, the Metropolitan Flood Waters Scheme, and works on the River Murray constructed under the River Murray Waters Agreement. Several water supply schemes on the Murray River are operated by the Department of Lands in conjunction with its irrigation works, and supplies to Woomera and Leigh Creek coalfield are controlled by the operating authorities. The following tables show particulars of metropolitan and country waterworks combined.

WATERWORKS, SOUTH AUSTRALIA: SERVICES, 1960-61 TO 1964-65

Year	Assessments(a)		Area of districts supplied (a)	Capacity of reservoirs, tanks, etc.	Length of mains	Number of meters
	Number	Annual value				
		\$'000	'000 acres	mill. gals.	miles	
1960-61 . . .	319,108	81,187	13,119	35,405	9,292	232,072
1961-62 . . .	338,636	85,404	13,154	45,106	9,634	247,972
1962-63 . . .	357,342	92,737	13,287	45,062	9,996	262,571

1964-65 . . .	189,205	11,955	8,475	7,694	16,169	4,214

(a) After deduction of depreciation. (b) Includes debt redemption.

Adelaide waterworks. At 30 June 1965 the Adelaide waterworks supplied a district of 216,352 acres. The capacity of reservoirs and storage tanks was 24,217 million gallons and there were 3,333 miles of mains. Water is also drawn from the 11,300 million gallon reservoir at South Para in the Barossa Water District. The Mannum-Adelaide pipeline conveys water from the River Murray to Adelaide at a rate of up to 66 million gallons a day. Water is delivered to the River Torrens or, by further pumping, to the River Onkaparinga. With further development, the main will operate as a closed system connected to the metropolitan reticulation. The pipeline supplements the Warren system and other country areas.

ADELAIDE WATERWORKS: FINANCES, 1960-61 TO 1964-65
(\\$'000)

Year	Invested capital at 30 June (a)	Revenue	Expenditure			Surplus (+) or deficit (—)
			Working expenses (b)	Interest	Total	
1960-61 . .	70,158	5,917	3,463	2,436	5,899	+ 18

1964-65 . .	92,872	8,417	4,222	3,907	8,129	+ 289

(a) After deduction of depreciation. (b) Includes debt redemption.

Adelaide metropolitan sewerage system. The Adelaide metropolitan sewerage system, comprising the Adelaide, Glenelg, Port Adelaide and Salisbury-Elizabeth areas of 153 square miles in all, includes a sewage farm, and treatment works at Glenelg and Port Adelaide. Construction of a large treatment works at Bolivar is in progress to supersede the sewage farm and carry out increased load due to metropolitan expansion. Financial and other particulars for 1960-61 to 1964-65 are shown hereunder.

ADELAIDE METROPOLITAN SEWERAGE: SUMMARY
1960-61 TO 1964-65

Year	Length of sewers	Number of connections	Invested capital at 30 June (a)	Revenue	Expenditure			Surplus
					Working expenses (b)	Interest	Total	
	miles		\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
1960-61 . .	1,598	173,753	26,753	4,121	1,776	958	2,734	1,387

Country sewerage schemes. Sewerage schemes are operating at Port Lincoln, Naracoorte, Nangwarry, Mount Burr, Myponga, and Angaston. At Port Lincoln the sewers discharge to an ocean outfall, and treatment works are used on the other systems. There are 141 miles of sewers and 3,563 connections in the country systems. A sewerage scheme for Mount Gambier is under construction.

Country water supply. Water districts systems at 30 June 1965 comprised an area of 13,308,147 acres. Supply came from reservoirs having a total capacity of 20,851 million gallons, from the River Murray, and from underground sources. Apart from local supplies, water from the River Murray comes from branches of the Mannum-Adelaide main and from the Morgan-Whyalla main. The principal areas of underground supplies are in the south-east of the State, where water from the Murray Basin can be had at moderate depths or from lakes, and from sand beds on Eyre Peninsula. In the year 1964-65 supplies made to Mount Gambier, Naracoorte and other towns amounted to 1,030 million gallons, and the Uley-Wanilla, Lincoln and Poldia Basins contributed 618 million gallons to the Tod River Water District.

COUNTRY WATERWORKS, SOUTH AUSTRALIA: FINANCES
1960-61 TO 1964-65
 (\$'000)

Year	Invested capital at 30 June (a)	Revenue	Expenditure			Deficit
			Working expenses (b)	Interest	Total

(a) After deduction of depreciation.

(b) Includes debt redemption.

Morgan-Whyalla water supply scheme. This scheme, which has 223 miles of main, was officially opened on 31 March 1944, the capital invested to 30 June 1965 being \$24,067,200. Particulars of the scheme, where applicable, are included in the tables of the combined waterworks, page 855. Apart from supplying Whyalla, the main has been used to allow expansion of reservoir supplies in the northern agricultural area of the State, and to meet new demands caused by industrial growth at Whyalla duplication of the main is under way. During 1964-65 water used from the scheme amounted to 4,066 million gallons.

Western Australia

The principal water supply systems of Western Australia are under the control of two State authorities, the Metropolitan Water Supply, Sewerage, and Drainage Board and the Department of Public Works and Water Supply. The Metropolitan Water Supply, Sewerage, and Drainage Board is constituted under the provisions of the *Metropolitan Water Supply, Sewerage, and Drainage Act, 1909-1963* and consists of seven members appointed by the Governor. The area which constitutes the territory administered by the Board extends from Perth southward to Kwinana and Serpentine, northward to Sorrento, and eastward to Greenmount. The Department of Public Works and Water Supply controls the Goldfields and Agricultural Water Supply and the Great Southern Towns Water Supply as well as ninety-two local water supplies (*see also* the chapter Water Conservation and Irrigation, pages 185-6). Five independent town schemes are controlled by local Water Boards in country areas, and individual water supplies serve railways timber mill towns, isolated mines, pastoral properties, stock routes, and agricultural areas, mainly from dams, tanks, wells, and bores.

Metropolitan water supply, sewerage and drainage. The sources of the metropolitan water supply are Serpentine Reservoir and Serpentine Pipehead Reservoir, Canning Reservoir, Wungong Brook Diversion Weir, Churchman Brook Reservoir, and Victoria Reservoir. The supply from these sources is supplemented as necessary from a pipeline link with Mundaring Weir and from a number of artesian bores. The amount of bore water used, however, is now rarely more than 10 per cent of the total metropolitan consumption and is usually considerably less. The largest of these sources are the Serpentine Reservoir and the Canning Reservoir. Serpentine Reservoir is constructed of rolled earth fill, and the embankment rises 171 feet above the stream bed, the length at the crest being 1,390 feet. Its capacity is 39,000 million gallons, and the area of the catchment is 245 square miles. Canning Reservoir, with an estimated catchment area of 302 square miles, has a storage capacity of 20,550 million gallons retained by a concrete wall 218 feet high and 1,534 feet long at the crest. Water from storages on the Darling Range is conveyed to service reservoirs which serve an area of approximately 1,270 square miles, including the whole of the metropolitan area. To meet the peak demand during the summer months, supplies from these sources are supplemented from a system of artesian bores which can provide a daily maximum of 13 million gallons.

The following table shows particulars of the *metropolitan water supply services* for 1960-61 to 1964-65.

**METROPOLITAN WATER SUPPLY, WESTERN AUSTRALIA
SERVICES, 1960-61 TO 1964-65**

Year	Number of services (a)	Estimated population supplied (a)	Average daily consumption	Total consumption for year	Average daily consumption		Length of mains	Number of meters
					Per service (b)	Per head of estimated population (b)		
1960-61	133,647	446,000	mill. gals. 49.3	mill. gals. 18,015	gallons 374	gallons 112.3	miles 2,137	103,969
1961-62	137,960	460,730	50.6	18,492	373	111.6	2,179	116,610
1962-63	142,246	476,000	47.1	17,214	336	100.5	2,278	123,364
1963-64	149,033	491,740	53.2	19,454	362	109.7	2,411	130,480
1964-65	154,051	508,010	55.7	20,339	367	111.7	2,526	135,471

(a) Figures relate to 30 June.

(b) Calculated from averages for the year.

Water rating for 1964-65 was 1s. in the £ (equivalent to 5 cents in the \$) on annual valuation on land used for residential purposes and 1s. 6d. in the £ (equivalent to 7.5 cents in the \$) on annual valuation on land not so used.

Some particulars of the *metropolitan sewerage and main drainage services* for 1960-61 to 1964-65 are shown below.

**METROPOLITAN SEWERAGE AND MAIN DRAINAGE
WESTERN AUSTRALIA: SERVICES
1960-61 TO 1964-65**

Year	Services	Estimated population served	Length of sewers	Length of main drains
			miles	miles
1960-61	66,664	264,000	724	72
1961-62	67,378	239,110	736	77
1962-63	68,223	240,700	751	81
1963-64	68,958	241,700	769	94
1964-65	69,553	242,340	777	100

Sewerage rating for 1964-65 was 1s. 9d. in the £ (equivalent to 8.75 cents in the \$) on annual valuation, while metropolitan main drainage rating was 4d. in the £ (equivalent to 1.6667 cents in the \$).

Metropolitan Water Supply, Sewerage and Drainage Board—finances. The following table shows particulars of the finances of the Western Australian Metropolitan Water Supply, Sewerage and Drainage Board.

Country water supplies. Information concerning country water supplies is included in the chapter Water Conservation and Irrigation (see pages 185-6).

Tasmania

Waterworks. At the end of 1964-65 there were ninety-six municipally operated waterworks in Tasmania. The capacity of the reservoirs was 2,293 million gallons, the estimated population served was 304,550, and the number of properties served was 97,149. A regional scheme is operated as a State concern, supplying bulk water to the municipalities of Evandale, George Town, Lilydale, St. Leonards, and Westbury. In addition, this same scheme supplies water direct to industry situated near the Tamar River. The overall control of water supply in the greater Hobart area, comprising the municipalities of Hobart, Clarence, Glenorchy, and Kingborough, is now vested in the Metropolitan Water Board, but the municipalities retain primary responsibility for reticulation. The Board has undertaken the construction of a new bulk supply, with an ultimate daily capacity of 20 million gallons. This scheme is now virtually complete, and the anticipated total cost is \$5,140,000. During 1964-65 the metropolitan water supply was extended to serve the towns of Cambridge, Midway Point and Sorell. Provision has also been made for a second stage of the extension to serve the towns of Rokeby, Lauderdale and Seven Mile Beach. The initial estimate for the cost of these extensions was \$1,329,600.

Sewerage. At the end of 1964-65 there were twenty-one municipal sewerage schemes in operation in Tasmania. They served an estimated population of 202,000 and the number of tenements served was 54,300.

Northern Territory

Information relating to water supply in the Northern Territory may be found in the chapter Water Conservation and Irrigation (see pages 188-9).

Australian Capital Territory

The water supply, sewerage and drainage systems in the Australian Capital Territory are under the control of the Commonwealth Department of Works. The sources of the water supply are: Cotter Dam (capacity 967 million gallons) and Bendora Dam (2,360 million gallons). Eight pumps are capable of pumping approximately 27 million gallons daily. The total population served in

the Australian Capital Territory, which during 1964-65 consumed 4,800 million gallons of water, was 89,210 (at 30 June 1965). In addition, the Canberra water supply system supplied 373 million gallons of water to Queanbeyan, New South Wales. The total number of water meters at 30 June 1965 was 19,781 and the total length of water lines was 377 miles. The sewerage system for Canberra and suburbs consists of a treatment works, 295 miles of sewerage reticulation and 6½ miles of rising mains (at 30 June 1965). There were also 298 miles of stormwater sewers.

Harbour boards and trusts

The number and net tonnage of vessels which entered the major ports in each State during the years 1963-64 and 1964-65 are shown in the chapter Transport and Communication (*see* page 450). Particulars of oversea and interstate cargo discharged and shipped during 1964-65 are shown on page 451 of the same chapter.

New South Wales

Maritime Services Board of New South Wales. The Maritime Services Board of New South Wales is a corporate body of seven Commissioners comprising three full-time members and four part-time members representing shipping and other maritime interests. The Board was constituted on 1 February 1936, under the Maritime Services Act, 1935, to co-ordinate the port and navigation services of the State, which had previously been administered by the Sydney Harbour Trust and by the State Department of Navigation. The Board exercises general control over intra-state shipping, including the survey and certification of vessels, the licensing of harbour craft, and the examination and issue of certificates to officers. It is responsible for the provision of pilotage services, lights, beacons, buoys, and other port facilities, imposes and collects rates and charges on goods and vessels, and is vested with the general control and management of the navigable waters and ports within the State. At the ports of Sydney, Newcastle and Botany Bay the Board is also responsible for the provision of adequate wharfage and channels and carries out all construction, maintenance and dredging work. All revenue earned by the Board at the ports of Sydney, Newcastle and Botany Bay, with the exception of that earned from pilotage and navigational services, is credited to the Maritime Services Board Fund, and all revenue expenditure incurred at the three ports is drawn from that Fund. The following table shows particulars of the finances of the Board in respect of the ports of Sydney, Newcastle and Botany Bay.

MARITIME SERVICES BOARD FUND: FINANCES OF THE PORTS OF SYDNEY, NEWCASTLE AND BOTANY BAY, 1960-61 TO 1964-65
(\$'000)

Year	Revenue				Expenditure(a)			Surplus
	Wharfage and transhipment rates	Tonnage rates and berthing charges	Other charges	Total	Administration and maintenance	Interest, debt redemption, exchange, etc.	Total	
1960-61 .	6,261	1,263	1,855	9,379	5,130	4,162	9,293	87
1961-62 .	9,308	1,399	2,585	13,293	7,513	5,714	13,228	65
1962-63 .	9,693	1,581	2,438	13,712	7,543	6,056	13,599	113
1963-64 .	10,838	1,755	2,933	15,526	7,864	7,567	15,431	95
1964-65 .	11,594	1,858	3,565	17,017	9,109	7,835	16,945	72

(a) Excludes capital expenditure but includes transfers to the Renewals Fund Reserve Account(\$2,050,000 in 1960-61, \$2,750,000 in 1961-62, \$3,091,000 in 1962-63, \$4,778,000 in 1963-64, and \$5,080,000 in 1964-65.)

Port of Sydney. The entrance to Sydney Harbour, the principal port of New South Wales, is nearly a mile wide, and the depth of its navigable channel is not less than 80 feet. Between the entrance, known as 'The Heads', and the Harbour proper, a distance of four miles, there are two separate channels, each 700 feet wide, the Western Channel not less than forty-two feet deep (low water ordinary spring tide) and the Eastern Channel forty-two feet deep. The foreshores, which have been reduced by reclamations, are 152 miles in length, and the total area of the port is 13,600 acres, or twenty-one square miles, of which about one-half has a depth of thirty feet or more at low water ordinary spring tide. The mean range of tides is 3 feet 6 inches.

The wharves are situated close to the business centre of the city, about four or five miles from the Heads. At 30 June 1965 there was one dolphin berth 550 feet long, and ninety-three effective commercial cargo berths with a total length of 47,471 feet, controlled by the Board.

Accommodation for harbour craft amounts to 2,395 feet, while the length of other berths, including oil and private wharves, totals 22,615 feet. Depth of water at wharves is up to thirty-six feet. Special facilities for the storage and handling of products such as wheat, wool, coal, etc. are provided, and modern plant has been installed for replenishing ships' bunkers with oil or coal. Docking facilities are available for the largest vessel afloat. The Captain Cook Graving Dock ranks among the largest graving docks in the world, being 1,139 feet by 147 feet $7\frac{1}{2}$ inches with a depth of 45 feet 2 inches over the sill at high water. There are also several smaller dry docks and floating docks in the port.

Port of Newcastle. As from 1 May 1961 the Maritime Services Board of New South Wales became the single authority for the port of Newcastle. An Advisory Committee consisting of eight members, appointed by the Governor, assists the Board in matters associated with the operation of the port. It is primarily a coal-loading port, and the proximity to the coal fields has led to the establishment of important industries, including iron and steel works, in the district. Facilities are available for the shipment of wool, wheat and frozen meat, and a wharf is available for timber.

The area used by shipping is about 570 acres, excluding the entrance to the harbour and the inner basin, which together cover an area of 162 acres. The width of the harbour at the entrance is 1,200 feet, and the navigable channel, with a depth of twenty-six feet at low water, is 350 feet wide. Work is now in hand to increase the depth to thirty-six feet for a width of 500 feet. Wharfage accommodation amounts to approximately 16,000 feet, including about 2,600 feet of privately owned wharfage. There are also two dolphin berths available for tie-up purposes. A floating dock of 15,000 tons capacity is available at the port.

Botany Bay. The Maritime Services Board of New South Wales is the administrative and controlling authority. The port is primarily a discharging centre for the oil refinery at Kurnell, near Sydney, and two berths are available as well as tanker mooring buoys. The entrance to the Bay is approximately one and a quarter miles wide, with a minimum depth of about thirty-six feet in the dredged swinging basin.

Port Kembla. As from 3 May 1948 the Maritime Services Board assumed the administration and navigational control of Port Kembla, which had previously been administered by the New South Wales Department of Public Works. This Department, however, continues to be the constructing authority in respect of works, dredging and maintenance. An Advisory Committee consisting of nine members, appointed by the Governor, has been formed to assist the Board in the operation of the port. It has an area of approximately 340 acres, with depths ranging from twenty to fifty feet (low water ordinary spring tide), and wharfage accommodation totalling 8,000 feet has been provided for large ocean-going vessels. No cargo sheds are available, as the nature of trade at the port does not call for the provision of sheltered storage accommodation at the berths. It is the port of the southern coalfields and for the expanding industrial area in and about Wollongong. The developmental programme for Port Kembla includes the construction of an inner harbour to provide wharfage for the steelworks in addition to modern general cargo berths; a coal loading plant capable of loading at the rate of 2,000 tons per hour is now available. Present accommodation is 1,900 feet of wharfage, with thirty-six feet (low water ordinary spring tide) of water alongside. Width in the entrance to the inner harbour basin is 400 feet.

Other ports. In addition to the ports of Sydney, Newcastle, Port Kembla, and Botany Bay, the Board controls twenty-nine outports along the coastline of 609 miles. The shipping trade of these outports is relatively small.

Port charges. The port charges payable in respect of shipping and ships' cargoes in New South Wales are imposed by the Commonwealth Government in terms of the Lighthouses Act and the Navigation Act, and by the State authorities under the Navigation Act of New South Wales, the Harbour and Tonnage Rates Act, and the Sydney Harbour Trust Act. Since 1 February 1936 the State enactments have been administered by the Maritime Services Board. The gross collections by the State authorities amounted to \$22,865,196 in 1964-65. This figure includes the revenue for the ports of Sydney, Newcastle and Botany Bay (see table on page 860) and State navigation service collections, \$5,848,380 (1964-65).

Victoria

Melbourne Harbor Trust. Information regarding the origin and constitution of this Trust, which controls the port of Melbourne, appears in Official Year Book No. 12, pages 970-2. The port of Melbourne comes under the control of the Melbourne Harbor Trust Commissioners, an independent autonomous statutory organization, with a full-time Chairman and five part-time Commissioners with specialized knowledge of the requirements of exporters, primary producers, shipowners, importers, and of all aspects of port labour. The area of water and land under the control of the Trust is ten and a half square miles, with sheds available for cargo in transit totalling 22,928 feet in length and covering an area of about forty-three acres. Three of the

largest transit sheds on the Australian coast are now in operation at Appleton Dock. The sheds are 600 feet long by 150 feet wide, each with a cargo stacking area of 81,000 square feet. The berths are used for the general cargo trade and have both rail and crane facilities and modern amenities for port workers. The total length of wharves, piers and jetties in the port is 61,550 feet, covering an area of about fifty-nine acres with 56,940 feet of effective berthing space.

During 1965 major reconstruction and modernization of several cargo berths in the Port including 1-4 Victoria Dock and 19 South Wharf was concluded. Construction of a new shipping control centre seventy-four feet above ground level, with radar and visual observation of the entire port area, was continued. The specifications and design for the construction of a 250-ton dual purpose floating crane were finalized and tenders called for the building of the crane. A modernization programme costing \$720,000 was undertaken on the main overseas passenger terminal at Station Pier. The depth of water (low water ordinary spring tide) from the main channels to the principal wharves is thirty-one to thirty-nine feet. The following table shows particulars of the financial operations of the Trust.

MELBOURNE HARBOR TRUST: FINANCES, 1961 TO 1965
(\$'000)

Year	Gross loan indebtedness at 31 December	Revenue		Expenditure				Surplus (+) or deficit (-)
		Wharfage and tonnage rates	Total	Administration and maintenance	Interest, debt redemption, exchange, etc.	General reserve, depreciation, renewals and insurance account	Total	
1961	28,481	4,607	7,583	5,422	1,821	408	7,652	- 69
1962	29,750	4,883	7,958	5,176	1,788	969	7,932	+ 26
1963	29,835	5,459	8,969	5,411	1,898	1,546	8,855	+114
1964	29,773	7,145	11,312	6,687	2,632	1,812	11,132	+181
1965	30,473	7,058	11,434	6,450	2,393	2,382	11,226	+208

Geelong Harbor Trust. The Geelong Harbor Trust, constituted in 1905, is under the control of three Commissioners appointed from time to time by the Governor-in-Council. At the end of 1965 there were eighteen effective berths in the port, plus two berths at the Commonwealth Explosives Pier, Point Wilson, owned and operated by the Commonwealth. Point Henry Pier, a 4,000 feet alumina discharging structure, was officially opened on 13 April 1966, and Corio Quay South No. 1, a new general cargo and meat loading berth, is expected to come into operation by late 1966. The construction of a modern dry bulk berth with an initial discharge rate of 1,000 tons per hour will commence in 1966, but the four seven and half ton cranes to operate on this berth have in the meantime commenced to operate on the adjacent Kings Wharf. Eight berths have a depth of thirty-six feet at low water, while all other berths (except Commonwealth Explosives Pier, Point Wilson and Point Henry Pier, thirty feet) have a depth of thirty-two feet at low water. Revenue for the year 1964 was \$3,102,766 and expenditure from revenue totalled \$1,740,288. At 31 December 1964 the value of the Trust's fixed assets was \$20,090,408 and loans outstanding amounted to \$7,185,212.

Portland Harbor Trust. Construction of an all-weather deep-sea port of three berths with a low water depth of thirty-six feet was completed to operational standards in 1960. A new oil tanker berth was brought into commission during 1963, from which petroleum products are pumped to bulk terminals at North Portland, and the completion of a bulk grain terminal now provides in-transit storage for one million bushels of grain awaiting overseas shipment. The Trust has now embarked on a new construction programme to provide additional bulk berth, designed primarily for the discharge of phosphate rock, sulphur and other chemicals. Operating revenue for the year ended 30 June 1965 was \$257,568 and revenue expenditure was \$233,846. The value of the Trust's fixed assets, less depreciation, was \$15,705,420 at 30 June 1965, and loans and advances outstanding amounted to \$16,393,156.

Queensland

The ports of Queensland, except Brisbane and certain minor ports, are administered by Harbour Boards with members representing the towns and districts served by the ports. Brisbane and the minor ports are controlled by the State Treasury through the Department of Harbours and Marine, which supervises the engineering activities of the other ports.

Brisbane. Brisbane accommodates comfortably, in its dredged and improved river, the largest vessels in the Australian trade. The main centres for shipping, although further downstream than formerly because of the increasing size of vessels, are still within easy access of the city. Adequate dry-docking facilities are available. The finances of Brisbane Harbour for the years 1959-60 to 1963-64 are shown below.

BRISBANE HARBOUR: FINANCES, 1959-60 TO 1963-64
(\$'000)

Year	Loan indebtedness at 30 June	Receipts		Payments	
		Harbour dues	Total	Working expenses(a)	Total
1959-60 .	5,024	1,544	2,118	1,462	1,906

1961-62 .	5,432	1,484	2,168	1,256	1,698
1962-63 .	5,296	1,640	2,514	1,774	2,146
1963-64 .	5,032	1,858	2,500	3,346	3,838

(a) Excludes interest and redemption included in total.

In addition to Brisbane harbour, the Department of Harbours and Marine also controls the Brisbane Dry Dock, the Cairncross Dock, and nine smaller harbours not administered by harbour boards.

Harbour Boards. Harbour boards control the ports of Bowen, Bundaberg, Cairns, Gladstone, Mackay, Rockhampton, and Townsville. Finances for each port for the year ended 30 June 1964 are shown below, together with a summary for the years ended 30 June 1960 to 1964.

HARBOUR BOARDS, QUEENSLAND: FINANCES, 1959-60 TO 1963-64
(\$'000)

Harbour board	Loan indebtedness at 30 June	Revenue		Expenditure (excluding loan)		Surplus(+) or deficit(-)
		Wharfage and harbour dues	Total	Working expenses	Total (including interest and redemption) (a)	
Bowen	535	23	28	19	28	..
Bundaberg	6,226	573	887	239	813	+ 74
Cairns	5,328	441	744	239	758	- 14
Gladstone	2,266	176	517	65	473	+ 45
Mackay	4,228	361	1,091	364	965	+127

(a) Includes expenditure on capital works from accumulated revenue.

South Australia

The South Australian Harbors Board. All South Australian harbours are controlled by the South Australian Harbors Board, which consists of three Commissioners appointed by the Governor for a period of five years and eligible for re-appointment. The Board is responsible to the Minister of Marine for the discharge of its duties and functions. The most important

ports are the five deep-sea ports of Port Adelaide, Port Pirie, Wallaroo, Port Lincoln, and Thevenard. At a few ports the wharves or jetties are privately controlled, the principal of these being at Whyalla, Ardrossan and Rapid Bay, all of which are controlled by the Broken Hill Pty. Co. Ltd. Port Augusta is controlled by the Commonwealth Railways on behalf of the Commonwealth Government. Maximum depths of water (low water) at the wharves of the main ports range from twenty-seven feet at Port Pirie to thirty-five feet at Port Adelaide (Outer Harbor). The following table shows the finances of the Board for 1960-61 to 1964-65.

THE SOUTH AUSTRALIAN HARBORS BOARD: FINANCES
1960-61 TO 1964-65
(\$'000)

Year	Capital at 30 June (a)	Revenue	Expenditure from revenue			Surplus
			Working expenses	Interest	Total	
1960-61 .	34,864	5,429	3,369	1,317	4,686	744
1961-62 .	37,112	5,153	3,353	1,402	4,755	399
1962-63 .	38,968	5,098	3,344	1,531	4,876	222

(a) State Treasurer's funds and reserve employed.

Western Australia

Fremantle Port Authority. The Port of Fremantle is operated and controlled by a body corporate administered by a Board of five Commissioners appointed triennially by the Governor. The port covers an extensive water area of some 180 square miles and comprises an inner and an outer harbour. The inner harbour includes eighteen deep-water land-backed berths, providing 703,850 square feet of covered storage space and 11,148 feet of wharf berth accommodation. All inner harbour berths are dredged to a low water depth of thirty-six feet. The outer harbour includes three main anchorages, Gage Roads, Owen Anchorage and Cockburn Sound. Deep-water jetties, including the oil refinery jetty in Cockburn Sound, are available in the outer harbour. Ocean-going deep draft ships enter the Sound by means of channels dredged through Success and Parmelia Banks to a low water depth of thirty-eight feet and a bottom width of 500 feet. In the outer harbour there are three tanker berths each with a low water depth of forty-four feet at the Kwinana oil refinery, one berth at the nearby steelworks jetty with a low water depth of thirty feet, and one berth at the alumina works jetty with a low water depth of forty feet. There are also special berths for the off-loading of cattle and the handling of explosives. Gross earnings for 1964-65 amounted to \$7,334,376, working expenses to \$5,673,740, interest charges on loan capital \$703,828, sinking fund contributions \$190,396, and capital and other funds employed totalled \$18,138,468.

Albany Harbour Board. The Albany Harbour is controlled by a board of five members appointed by the Government. The depth of water in the entrance channel is thirty-three feet, at one arm of the jetty thirty-one feet and at the other arm thirty-three feet. In the approaches to wharf berths the depth is thirty-three feet. Wharf accommodation consists of 1,115 feet, and in addition the Deepwater Jetty has 2,500 feet of accommodation. Gross earnings for the year 1964-65 amounted to \$350,174, working expenses \$155,278, interest and sinking fund charges \$199,666, and capital account totalled \$3,828,084.

Bunbury Harbour Board. The Bunbury Harbour is controlled by a board of five members appointed by the Government. The depth of water in the harbour is thirty feet and berthing accommodation is 4,300 feet. Gross earnings for the year 1964-65 amounted to \$532,826, working expenses \$327,814, interest on loan capital \$288,128, and capital account totalled \$6,195,300.

Other ports. The following ports are controlled by the State Government Harbour and Light Department: Broome, Busselton, Carnarvon, Dampier, Derby, Esperance, Exmouth, Geraldton, Onslow, Point Samson, Port Hedland, Wyndham, and Yampi.

Tasmania

There are eight marine boards and one harbour trust in Tasmania. The marine boards control the ports of Hobart, Launceston, Stanley (Circular Head), Burnie and Wynyard (Table Cape), Devonport and Ulverstone, Strahan, Currie (King Island), and Whitemark (Flinders

Island), and the harbour trust controls the port of Smithton. Hobart, Launceston, Burnie, and Devonport are the principal ports of Tasmania. In addition to their interstate and intra-state traffic, there is also considerable overseas shipping. Depths of water at wharves vary, in general, between sixteen and forty feet.

The following table shows particulars of the finances for each port for 1964-65.

MARINE BOARDS AND HARBOUR TRUST, TASMANIA: FINANCES, 1964-65
('\$000)

Authority	Loan indebtedness at 30 June (a)	Receipts (revenue account)		Expenditure (revenue account)		Surplus(+) or deficit(-)
		Wharfage charges	Total	Loan charges	Total	
Hobart . . .	2,700	741	1,505	289	1,486	+ 18
Launceston . . .	2,783	595	1,587	220	1,451	+135
Devonport . . .	3,886	560	857	313	1,023	-166
Burnie . . .	7,473	566	1,001	448	948	+ 53
Circular Head . . .	143	14	31	19	31	+ 1
King Island . . .	81	25	32	6	28	+ 5
Strahan . . .	29	27	34	4	33	+ 1
Flinders Island . . .	4	12	14	2	12	+ 2
Smithton	1	..	3	- 2
Total . . .	17,099	2,542	5,062	1,302	5,015	+ 47

(a) The total of new loans raised during 1964-65 was \$2,842,000, of which Launceston raised \$650,000, Devonport \$600,000, Burnie \$1,574,000, and King Island \$18,000.

Fire brigades

New South Wales

A Board of Fire Commissioners, consisting of five members, one appointed by the State Government (President) and one each representing insurance companies, local government authorities, volunteer firemen, and permanent firemen, operates under the Fire Brigades Act, 1909-1958, and 157 fire districts had been constituted at the end of 1964. The cost of maintenance of fire brigades is borne in proportions of local councils and the Government each one-eighth, and the insurance companies three-quarters. The Board's borrowing power is limited to \$2,000,000.

At 31 December 1964 the authorized strength of the Fire Brigade throughout the fire districts of New South Wales was 421 officers and 1,296 permanent and 2,676 volunteer firemen. Corresponding figures for the Sydney Fire District were 344, 1,151 and 292. The revenue for the year 1964 was \$7,539,320, made up as follows: from the Government, \$933,840; municipal and shires, \$933,840; fire insurance companies and firms, \$5,603,040; and from other sources, \$68,600. The disbursements for the year were \$7,986,912. The Board of Fire Commissioners provides the fire protection services for Canberra, in the Australian Capital Territory, and the cost of these services is reimbursed by the Commonwealth Government.

Under the Bush Fires Act, 1949-1963 a Bush Fire Fighting Fund exists from which finance is provided for the prevention and fighting of bush fires. Contributions to the Fund by the Government, councils and insurance companies are in the proportion of one quarter, one quarter and one-half, respectively. At 30 June 1965 Volunteer Brigades equipped by means of this fund numbered 2,500 with an active membership of about 150,000 persons. The approved expenditure from the Fund for equipment, up to 30 June 1966, amounted to \$6,823,754.

Victoria

In Victoria, fire brigades are controlled by the Metropolitan Fire Brigades Board consisting of ten members, including an employees' representative, and the Country Fire Authority also consisting of ten members.

Metropolitan Fire Brigades Board. The Metropolitan Fire Brigades Board receives contributions from the municipalities and the insurance companies in the proportion of one-third and two-thirds respectively. On 30 June 1965 the Board had under its control forty-five stations, 1,051 permanent staff, 233 special service and clerical, etc. staff, and twelve part-time firemen. The total receipts for 1964-65 were \$5,051,498, comprising contributions \$4,263,914, receipts for services \$487,420, and interest and sundries \$300,164. The expenditure was \$4,886,864.

Country Fire Authority. This authority is responsible for the prevention and suppression of fires in the 'country area of Victoria', which embraces the whole of the State outside the Metropolitan Fire District, excluding State forests and certain Crown lands. The country area has been divided into twenty-five fire control regions, four of which (Ballarat, Bendigo, Geelong and the Dandenong, Chelsea and Frankston areas) are wholly urban and the remainder mixed urban and rural. The Country Fire Authority receives contributions in the proportion of two-thirds from insurance companies and one-third from the Treasury. At 30 June 1965 the Country Fire Authority Act applied to 199 insurance companies and 205 urban and 1,043 rural fire brigades. The effective registered strength of the brigades was 111,599 members. Income for the year 1964-65 amounted to \$1,773,268. Total expenditure other than loan amounted to \$1,604,430.

Queensland

Fire Districts are constituted under the Acts of 1920-1956. For each district, there must be a Fire Brigades Board consisting of seven members, and the cost of maintenance of each brigade is proportioned as follows: Treasury one-seventh, insurance companies five-sevenths, and local authorities one-seventh. The insurance companies' contribution is paid to the State Government and thence to fire brigades.

At 30 June 1964 there were eighty-three Fire Brigade Boards. The number of stations was 155 and full-time staff numbered 916, including 24 administrative, 205 officers and 687 firemen. Volunteers numbered 123. Part-time staff numbered 1,195, including 86 administrative, 125 officers and 984 firemen. The total revenue for the year 1963-64 was \$3,366,500, received mainly from the following sources: Government \$454,588, local authorities \$454,588, insurance companies \$2,272,930. Loan receipts (Government and other) were \$1,063,904. The total expenditure for the year was \$3,243,140, the chief items being salaries and wages \$2,304,796, and interest and redemption of loans \$360,716.

South Australia

The Fire Brigades Act, 1936-1958 provides for a board of five members, and the expenses and maintenance of brigades are defrayed in the proportion of two-ninths by the Treasury, five-ninths by insurance companies and two-ninths by the municipalities concerned. When the Treasury proportion exceeds its statutory contribution of approximately \$26,000, the excess is borne five-sevenths by insurance companies and two-sevenths by the municipalities. At 30 June 1965 there were altogether thirty-seven fire brigade stations, of which thirteen were metropolitan and twenty-four country.

The strength of the permanent staff at 30 June 1965, was 416, including 290 officers and men, 92 country auxiliary firemen and 34 other employees (including maintenance workers). The total revenue for the year 1964-65 was \$1,239,990, including contributions of \$1,025,442 made up as follows: insurance companies \$617,038, Treasury \$161,590 and municipalities \$246,814. The Treasury contribution includes an additional grant of \$135,750.

Western Australia

By the provisions of the *Fire Brigades Act, 1942-1964* certain local government areas are constituted fire districts under the control of the Western Australian Fire Brigades Board. There were fifty-one fire districts at 30 September 1965. The contribution to the Board is made in the proportion of 16 per cent from the Government, 20 per cent from local government authorities, and 64 per cent from insurance companies. The number of local government authorities and insurance companies who contributed numbered sixty-nine and 168 respectively. The brigades, throughout the State, controlled by the Western Australian Fire Brigades Board at 30 September 1965 numbered sixty-seven, with a staff of 1,539, including 307 permanent officers and firemen and 1,232 volunteer brigade officers and firemen. The revenue for the year ended 30 September 1965 was \$1,557,742 and the expenditure \$1,581,328.

Under the *Bush Fires Act, 1954-1964* a Bush Fires Board, consisting of thirteen members, six of whom are nominated by the Country Shire Councils Association, was set up to advise the Minister for Lands on bush fire control. The Act also provides for the registration of bush fire control officers, who numbered 2,004 at 30 June 1965, and the establishment of bush fire brigades, 861 at 30 June 1965. Many individual brigades are large organizations with numerous self-contained sections.

Tasmania

The *Fire Brigades Act* 1945 provided for the creation of the Fire Brigades Commission of Tasmania to co-ordinate the activities of existing fire brigade boards, while leaving the responsibility for individual control and management with the boards. The Commission consists of two persons nominated by the Minister, one person elected by the City or Municipal Councils' representatives and three persons elected by the insurance representatives of the Fire Brigades Boards. Contributions towards the cost of operations are on the basis of one quarter each from the treasury and the municipalities and one half from the insurance companies concerned. The cost for the year 1964-65 amounted to \$516,738. There were, at 30 June 1965, twenty-three boards controlling thirty-six stations, and their aggregate staffs numbered 564, including 127 permanent officers, 367 part-time firemen, including officers, and 70 volunteers.

CHAPTER 23

RURAL INDUSTRY

This chapter is divided into five major parts:

- Introduction, dealing with general rural activity in Australia;
- The soils of Australia, a special feature in this issue;
- Agricultural production;
- Pastoral production; and
- Other rural industries, which includes the dairying, poultry and bee industries.

For greater detail on the subjects dealt with in this chapter see the annual bulletins *Rural Industries, Non-Rural Primary Industries and Value of Production*, and *Secondary Industries* (regarding butter, cheese, etc., factories) issued by this Bureau. Current information on commodities produced is obtainable in the *Quarterly Summary of Australian Statistics*, *Monthly Review of Business Statistics*, *Monthly Bulletin of Production Statistics*, and *Digest of Current Economic Statistics* (monthly). The series of bulletins *Classification of Rural Holdings by Size and Type of Activity*, 1959-60 shows particulars of rural holdings classified by size, nature and area of crops, and numbers of livestock, and also according to main type of activity. The mimeographed annual *Report on Food Production and the Apparent Consumption of Foodstuffs and Nutrients in Australia* contains details of the production and utilization of foodstuffs. The following mimeographed publications also contain considerable detail on the particular subjects dealt with.

General. *Value of Production and Indexes of Price and Quantum of Farm Production* (annual), *Value of Primary Production (Preliminary Statement)* (annual), *Farm Machinery on Rural Holdings* (annual), *Tractors on Rural Holdings*, 31 March 1963 (detailed information), *New Tractors: Receipts, Sales and Stocks* (quarterly), and *New Agricultural Machinery* (quarterly).

Agricultural production. *Rural Land Use and Crop Production* (annual), *Agricultural Statistics (Preliminary Statement)* (annual), *The Wheat Industry* (two a year), *The Fruit Growing Industry* (annual), and *Fruit Statistics (Preliminary Statement)* (annual).

Pastoral production. *Livestock Statistics* (annual), *Livestock Numbers* (annual), *The Meat Industry* (monthly), *Wool Production* (annual), and *Wool Production and Utilization* (annual).

Other rural production. *The Dairying Industry* (monthly and half-yearly), *Livestock Statistics* (annual), *Livestock Numbers* (annual), *Manufacturing Industries No. 20.—Bacon Curing and No. 21.—Butter, Cheese and Condensed, Concentrated, etc., Milk* (annual), *Production Summaries No. 36.—Preserved Milk Products and No. 55.—Butter and Cheese* (monthly), and *Bee-farming* (annual).

Values of Australian oversea trade shown throughout this chapter are expressed as \$A f.o.b. port of shipment.

Throughout this chapter yearly periods for area and production of crops relate to years ended 31 March. Other periods in respect of e.g. factory and trade statistics relate to years ended 30 June.

INTRODUCTION: RURAL ACTIVITY

Number and area of rural holdings

Number and area

A holding in Australia has been defined by statisticians on a more or less uniform basis, and discrepancies which exist are not of sufficient importance to prevent comparisons. For the purpose of these statistics a holding has been defined as land of one acre or more in extent used in the production of agricultural produce or for the raising of livestock and the production of livestock products.

There are considerable fluctuations from time to time in the numbers of very small holdings, and it is very difficult to determine in some cases whether or not they are rural holdings within the definition. In addition, in the very dry parts, such as the far west of New South Wales and Queensland and the remoter parts of South Australia and Western Australia, there are large areas of marginal lands sporadically occupied for extensive grazing under short-term lease or other arrangement, and the areas so occupied tend to fluctuate with the seasons. Similarly, there are rugged areas in the mountain country of some States which are also occasionally occupied.

**RURAL HOLDINGS: NUMBER AND AREA, STATES AND TERRITORIES
1960-61 TO 1964-65**

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

Land utilization of rural holdings

The following table shows the purposes for which the land on the rural holdings referred to in the preceding paragraph was used.

**RURAL HOLDINGS: LAND UTILIZATION, 1960-61 TO 1964-65
(⁰000 acres)**

Year	Area used for crops(a)	Land lying fallow(b)	Area under sown grasses and clovers(c)	Balance of holdings (d)	Total area of holdings
1960-61	27,101	7,438	35,589	1,086,674	1,156,802
1961-62	27,907	8,049	39,063	1,097,416	1,172,435
1962-63	30,056	8,719	40,991	1,097,879	1,177,645
1963-64	29,948	8,510	44,211	1,101,837	1,184,506
1964-65—					
New South Wales	10,000	2,223	11,074	148,851	172,148
Victoria	5,019	2,484	14,830	15,511	37,844
Queensland	3,874	691	3,438	369,007	377,010
South Australia	5,831	1,231	5,673	144,220	156,955
Western Australia	7,289	1,757	10,427	249,080	268,553
Tasmania	227	79	1,610	4,504	6,420
Northern Territory	4	..	15	171,463	171,482
Australian Capital Territory	7	1	92	258	358
Australia	32,251	8,466	47,159	1,102,894	1,190,770

(a) Excludes (i) duplication on account of area double cropped, except for New South Wales and South Australia, and (ii) clovers and grasses cut for hay and seed which have been included in Area under sown grasses and clovers, and differs therefore from crop area figures shown later in this chapter. (b) Excludes short or summer fallow. (c) Includes paspalum. (d) Used for grazing, lying idle, etc.

Classification by size and type of activity

Some of the information obtained from the 1959-60 Agricultural and Pastoral Census was classified by size of principal characteristics (area of holdings, area of sown grasses and clovers, area of selected crops, and numbers of livestock). In addition, all holdings were classified according to type of activity. Tables showing this information, for statistical divisions and States, and an outline of the methods used have been published in a series of bulletins *Classification of Rural Holdings by Size and Type of Activity, 1959-60*. Similar information on size classification for each State was published in a series of bulletins for the year 1955-56.

Employment on rural holdings**Persons engaged**

The following table shows, for each State except Victoria, the recorded number of males working on rural holdings. Particulars for females are not available except for New South Wales. Additional particulars relating to the number of males employed in agriculture up to 1941-42 are shown in Year Book No. 36, page 852, and previous issues. Similar details for later years are not available.

MALES(a) ENGAGED ON RURAL HOLDINGS: STATES AND TERRITORIES
31 MARCH 1965

Males engaged	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.(b)	A.C.T.	Aust.
Permanent—									
Owners, lesses or share-farmers	63,100	(c)	44,546	23,136	20,569	7,651	211	158	n.a.
Relatives of owner, lessee or share-farmer over 14 years of age, not receiving wages or salary	2,690		2,958	1,207	1,232	20	15	5	
Employees, including managers and relatives working for wages or salary	28,776		18,619	8,247	8,502	4,075	645	162	
<i>Total permanent males</i>	94,566		66,123	32,590	30,303	11,746	871	325	
Temporary	22,198		10,206	10,984	2,797	5,993	1,323	27	
Total males	116,764		76,329	43,574	33,100	17,739	2,194	352	

(a) Details for females not available except for New South Wales. (b) Includes 1,125 male full-blood Aboriginals employed as temporary employees. (c) Not available; subject to investigation.

Information regarding the number of persons working full-time on rural holdings in Australia at 31 March of years to 1958 appears in Year Book No. 50, page 987, and in earlier Year Books. Data for subsequent years are the subject of investigation and are not available at this stage.

Salaries and wages paid

Particulars of salaries and wages paid to employees (including amounts paid to contractors) working full-time on rural holdings are shown below for the year 1964-65. Data for New South Wales and Victoria, and hence Australia, are not available.

EMPLOYEES ON RURAL HOLDINGS: SALARIES AND WAGES PAID(a)
STATES AND TERRITORIES, 1964-65

Technical aspects of rural industry

Farm machinery on rural holdings

The history of the development of large-scale field crops and sown pastures in Australia is essentially also the history of the mechanization of the rural industries. This may be divided into four phases.

The first phase extended from initial settlement to the mid-nineteenth century, when agriculture was primarily local and non-commercial, and confined by hand methods to small areas and low production per farm worker.

The invention of an effective wheat stripper in South Australia in 1843 and the extension of its use into Victoria and New South Wales, however, greatly increased the area which could be harvested in a season. This initiated the second phase, which continued with the development of stump-jump implements in the 1870's and the scrub roller and mullenizer in the 1890's. These later developments made possible an extension of the wheat belt into the drier mallee lands of Victoria and South Australia. By the turn of the century machinery had thus been developed to conduct all cropping operations on an extensive basis.

The third major change in farm machinery followed the 1914-18 War, when tractor power became increasingly available in a variety of models and sizes. The increase in numbers of tractors on rural holdings and higher operating speeds led in turn to new and improved types of farm machinery drawn by tractors. These trends were interrupted by the economic depression of the 1930's.

After the 1939-45 War there was a widespread expansion of labour-saving machinery and devices in all sectors of rural industry. Clearing methods were extended with the bulldozer, log, chain, and hi-ball units, and cultivation was improved by means of large disc ploughs and disc harrows, and seeding and harvesting machinery. These methods were extended to crops for which methods involving greater use of manual labour had previously been employed. Milking machines

almost entirely replaced hand milking on dairy farms, and labour-saving machinery was introduced into farm and station development and maintenance operations. These operations included fencing, bulk transport of grain and fodder, pasture treatment, fodder conservation, and pasture improvement.

The tables following show data for the principal types of farm machinery on rural holdings in the several States and Territories at 31 March 1965 and throughout Australia for a series of years. A more detailed analysis of tractors on rural holdings according to horse-power, type of fuel used, and age of tractor was published in the Statistical Bulletin *Tractors on Rural Holdings—Australia*, 31 March 1963, issued on 11 May 1965.

(a) Details for all States are collected at triennial intervals only. (b) Particulars of ploughs only were collected in 1961 and details (excluding Northern Territory, which reported 154 ploughs of all types) are as follows: mouldboard ploughs, 103,403; disc ploughs (including disc cultivators), 173,205; ploughs of all other types (chisel, stubble, mulch, blade, etc.), 46,841. (c) Rotary hoes, all types. (d) Incomplete; excludes tractor-drawn rotary hoes and rotary tillers in Queensland. (e) Incomplete; particulars for Victoria not available. (f) Incomplete; particulars for the Australian Capital Territory not available. (g) Incomplete; particulars for the Northern Territory not available.

THE SOILS OF AUSTRALIA*

Nature and development of Australian soils

The soils of Australia constitute one of her greatest natural resources. Spread over a continent of nearly 3,000,000 square miles, of which approximately one-third lies within the tropics, they include soils developed on a wide range of rock types and under climatic conditions varying from the alpine zones of south-eastern Australia and Tasmania, through the Mediterranean zones of southern and south-western Australia and the wet and dry tropics of Queensland, to the very low rainfall areas of the centre.

* The following report on the soils of Australia was specially prepared for this issue of the Year Book by officers of the Soils Division of the Commonwealth Scientific and Industrial Research Organization. A soil map of Australia and illustrations are included on plates 47 to 51 between pages 896 and 897.

Australia provides two features which distinguish it from the continents of the Northern Hemisphere, where the scientific study of soil developed and where most investigations have been made. In the first place, the biological components of the environment in which Australian soils developed were widely different from those encountered elsewhere. The dominance of eucalypt and acacia species in the vegetation, the absence of modern herbivores from the native fauna, and the fact that the Aboriginal Australian did not cultivate the soil mean that, since British settlement commenced 177 years ago, the soils have been progressively exposed to biotic influences widely different from those under which they formed, and with which they were approximately in equilibrium. That the soils are changing or have changed under the impact of these new factors is often obvious, and the extent to which they are eroding shows that new equilibria have not yet been achieved.

In the second place, the great proportion of Europe and of North America were stripped of their former soils by the ice-sheets of the Pleistocene age, and soil formation started anew on fresh rock surfaces or on the deposits of fluvo-glacial transport about 10,000 years ago. By contrast, in Australia, apart from the very small areas that were glaciated in the south-east and Tasmania, or the much larger areas of Pleistocene and Recent alluvia, the soils have been formed on land surfaces that have been continually exposed to weathering, probably since the late Tertiary age. Ancient and deeply weathered profiles† are consequently a widely distributed feature of the Australian landscape. They dominate the soil pattern in many areas, and by virtue of the intense weathering to which they have been subjected they pose problems in plant nutrition that are not encountered in younger soils. The nature and distribution of the present day soils in many areas is consequently closely related to the geomorphology, which reflects the manner in which the land surface has been sculptured by erosion and deposition.

The result depends on whether the land surface maintains its ancient form, or whether it has subsequently been dissected. When little or no dissection is occurring, the soils of the old land surface remain, strongly leached and deeply weathered, and in the drier regions quite out of harmony with the present climate. In this category are the arid red earths of the centre, the soils of the Cobar peneplain in New South Wales and the broad divide north of Clermont in western Queensland.

Where dissection is occurring, the influence of the old land surface is most marked where weathering had produced a laterite. Laterite profiles have a massive or concretionary horizon‡ in which oxides of iron and aluminium are concentrated, overlying a kaolinized zone which is commonly bleached—the so-called pallid zone, which in turn overlies an horizon which is largely kaolinized, although still maintaining the form of the parent rock. If the old top soil is still present, it will be white or light-coloured sand or loam on acid rocks such as granite, or red, friable and granular clay on basic rocks such as basalt. Since the depth to unweathered rock commonly exceeds 70 feet and may reach 175 feet, the surface soil found at present depends largely on which horizon of the laterite has formed its base, and on the extent to which other horizons have contributed. As a result, a characteristic pattern of soils is associated with the lateritic residuals. Agricultural development of these soils has not been possible until comparatively recently because of extreme deficiencies of phosphorus, potassium and nitrogen, and widespread deficiencies of the minor elements copper, zinc, molybdenum, and manganese.

Agricultural development of Australian soils

In general, the productivity of Australian soils is largely determined by the moisture supply. On only about ten per cent of the continent is natural rainfall sufficient, or excessive, for plant growth for nine to twelve months of the year, and some of this falls or drains on to soils too steep and stony, or too elevated and cold. However, many swamps and fens and several areas of excessively wet podsollic and rendzina soils have been rendered highly productive by drainage and the use of appropriate fertilizers.

Where moisture is continuously or seasonally abundant, but not excessive, in the southern parts of the continent, productivity is governed largely by the almost universal need for phosphatic fertilizer. There is also a widespread need for sulphur, which has often been masked by the large content of gypsum present in the form of superphosphate that has been used. The need for potassium is increasing. In these regions the yields of crops and sown pastures are normally increased severalfold by the use of superphosphate, aided as necessary by trace elements. On several soils a large increase with the use of fertilizers is also obtained in plantations of *Pinus radiata* and other tree species.

Where similar moisture conditions occur in tropical and sub-tropical areas, as in coastal Queensland and northern New South Wales, the pattern of production is dominated by sugarcane, but sown pastures are increasing in importance. Here phosphatic, potassic and nitrogenous fertilizers are used, and yields are high. In areas of rather lower rainfall, cane production is assisted by irrigation.

† A section through the soil showing the different horizons (see ‡ below) or layers which extend downwards from the surface to the parent material.

‡ Plane of stratification assumed to have been once horizontal and continuous.

Where seasonal rainfall is of shorter duration and not so reliable, as in much of the wheat-growing area, the rhythm of agricultural production is synchronized with this. In general, yields of crops and the carrying capacity of the associated pastures in the rotation are dependent on the use of superphosphate, except in some areas of black earths in southern Queensland and northern New South Wales.

Because of low and unreliable rainfall, no arable agriculture or sown pasture production is possible over much the greater part of Australia. In these arid to semi-arid regions pastoral activities at low carrying capacity are all that can be expected. Production is so limited by low soil moisture that there would appear to be no economic place for fertilizers. The surface and underground water resources of the area are so low or so saline that little development of irrigation is possible.

Types of Australian soils

Stony and shallow soils

A large part of the Northern Territory and of the northern part of Western Australia, exceeding 400,000 square miles in area, is covered by rocky country almost devoid of soil. Such soil as occurs is usually shallow, leached and mildly acid, and of generally low fertility. It is probably incapable of development and provides only sparse grazing for cattle.

Soils of the alpine and perhumid zones

These soils include the high moor peats and alpine humus soils of the Australian Alps and Tasmanian highlands and the peaty podsoles of the cold perhumid western region of Tasmania. The characteristics common to them are highly organic surface horizons, extreme acidity, and excessive moisture supply. No form of arable agriculture is undertaken, not only because of the above-mentioned properties, but also because of their unsuitable climate and rugged terrain. To a large extent the soils are mixed with much exposed rock and are themselves often excessively stony.

Of these soils the alpine humus soils are forested in part, and some timber is extracted. However, the commonest form of land use on all of them has been the seasonal grazing of sheep and cattle, stock being moved on to them in late spring and removed to lower and more hospitable areas in autumn. Because of their abundant rainfall and seasonal snow cover both the Australian Alps and the Tasmanian highlands have progressively become the scene of major engineering enterprises connected with water storage. The objectives are the development of electric power and the regulated supply of water for irrigation of lands outside the mountain regions themselves. These projects have brought a re-appraisal of the long-term value of seasonal grazing and its effects on the alpine vegetation. These arise from ancillary practices such as burning to stimulate new growth of greater palatability to stock. As a consequence there has been some erosion damage to the landscape. Engineering works themselves, such as roads and channels, have also brought problems of landscape stability in their train. Techniques to combat these are being developed. Meanwhile there is a trend towards the stricter control or elimination of the transhumance, or seasonal moving, of stock in an effort to conserve the alpine areas for their most valuable long-term national use, the conservation and regulation of water.

Soils of the humid zones

Leached soils. Under this heading are grouped the acid soils of the moderately humid regions where, because of perennially or seasonally abundant moisture, sown pastures and arable agriculture are widespread. These soils also carry the bulk of the useful natural forests of Australia and include the majority of the areas devoted to plantations of exotic and indigenous species. The *acid swamp soils* with their more or less peaty surfaces, although restricted in area, are widely exploited with the aid of artificial drainage. Together with much smaller areas of neutral to alkaline fen peats, they are devoted mainly to sown pastures and vegetable production. They reach their highest level of productivity in the drained and irrigated swamps of the lower Murray Valley, where carrying capacity exceeds a milking cow to the acre.

Podsoles, usually sandy, have a bleached subsoil overlying an organic and ferruginous pan. This pan may be so indurated that root penetration is difficult and temporary water-tables form above it. The most extensive areas of these soils are on the coastal plains of south-western Australia, southern Queensland, New South Wales, and the large sand islands of the southern Queensland coast. Their coarse texture and poverty in all nutrients has caused them to be neglected until recently. In Queensland, with heavy use of fertilizers, it is possible to develop good pastures. In southern Australia plantations of the exotic trees *Pinus radiata* and *Pinus pinaster* give responses to zinc, phosphorus and nitrogen.

The *podsollic soils*, formed on finer textured or less siliceous rocks, have a clay subsoil beneath sandy to loam surface soils. These soils are more widespread than the podsolis, and are generally less acid. Practically universal responses to superphosphate, and very frequent responses to one or more of the trace elements, copper, zinc, molybdenum, and boron, have been obtained. The most extensive use of the podsollic soils has been for pastures based on subterranean clover, usually top-dressed annually with superphosphate. This form of land use has increased stock carrying capacity severalfold and built up soil fertility to the stage where increasing use is being made of arable crops, such as potatoes and cereals, to take advantage of the enhanced nitrogen status. After a protracted period of use, the podsollic soils exhibit an uneven incidence of potassium deficiency, but the correction of this is straightforward once it has been recognized. These soils are used for horticultural purposes, particularly for pome fruits, and for forest plantations, especially of *Pinus radiata*. In more northerly areas some sugar cane is grown on them.

Krasnozems, deep friable red clay soils, often strongly acid, are found mainly on the volcanic rocks which have a scattered distribution in the eastern States. The krasnozems were originally densely forested, but, with little proper exploitation of their timber resources, these soils were rapidly cleared and converted to intensive forms of agriculture ranging from perennial pastures and temperate fodder crops, vegetable and grain crops in southern areas, to sugar, maize, peanuts, and some sown pastures in tropical and sub-tropical localities. The initial fertility of the soils has declined rather rapidly, and they have a restricted response to superphosphate due to a high rate of reversion of phosphorus to less available forms. They respond widely to molybdenum, and, over increasing areas, to potassium. Despite their limitations, however, including a somewhat difficult fertilizer economy, these soils retain their position amongst the most productive in Australia.

Red earths and yellow earths are associated with old land surfaces, sometimes forming divides, sometimes prominent mesas and sometimes broad terraces. They have brown, grey or red brown surface horizons merging into red or yellow, massive, but porous, subsoils, mainly acid at the surface and normally becoming more acid with depth. They are of low inherent fertility, markedly deficient in phosphorus, nitrogen and trace elements, but responding well to good management. Where they are located favourably in relation to markets, a wide range of crops is grown on them, e.g. tropical fruit and vegetables near Brisbane, and sugar cane in coastal country.

The *chocolate soils* occur mainly on basalt on the tablelands of New South Wales. They are brown soils with a friable clay surface horizon overlying a tighter clay subsoil, with floaters of parent rock throughout. Only moderately acid on the surface and becoming neutral with depth, they present few problems, respond readily to fertilizers, and are intensively farmed for perennial pastures and such vegetable crops as potatoes and peas.

Soils on calcareous materials. Shallow, neutral to alkaline soils resting on limestones can be either red—terra rossas—or black—rendzinas. The terra rossas are variable in texture, but the rendzinas are generally well structured clay soils, some having seasonally rising and falling groundwater.

The only extensive occurrence of rendzinas is in the south-east of South Australia, where they occupy the wet calcareous floors of long swales between ridges of ancient stranded coastal dunes. These soils have been extensively drained and developed, and are now mostly devoted to pastures. They respond to superphosphate and, variably, to the trace elements copper, zinc and manganese.

Terra rossas, which are well drained shallow soils, are often so stony or intruded by so much outcropping limestone that their usefulness is frequently very limited. The largest aggregate area is on the better drained positions in association with rendzinas in the south-east of South Australia. They are most frequently used for pastures, either natural or sown, and, where deeper, for vines and stone fruits.

Soils of the seasonally humid zones

In these climatic zones the rainfall is sharply seasonal, with a winter incidence in the south and a summer incidence in the north. In the latter it is also erratic. The soils fall into five main groups, the red-brown earths, black earths (or chernozems), solodic soils, red and yellow earths, and lateritic podsollic soils.

The *red-brown earths* have developed commonly on slates, shales and granites and on areas of old alluvium that are now above the level of modern floods. They have brown to grey brown, loam to sandy-loam, surface soil overlying a reddish-brown clay subsoil. The surface soil is mildly acid, but the acidity diminishes with depth and concretions of calcium carbonate are present in the deeper layers. The organic matter is concentrated in the surface soil, and where this has been lost by erosion fertility falls. The soils are well supplied with potassium, calcium and magnesium, but are always deficient in phosphorus and nitrogen. They are widely used for cereal production in the winter rainfall regions of southern Australia, and in New South Wales and Victoria have been extensively irrigated for pasture and horticultural production.

The *black earths* or *chernozems* are black or dark brown in colour and clay in texture, with a good granular structure in the surface soil which becomes cloddy and massive in the deeper layers. They are usually slightly acid to neutral in the surface, becoming neutral to alkaline with depth, with an horizon of calcium carbonate concretions at varying levels from eight inches to three feet below the surface. These occur on either side of the Eastern Divide from central Queensland to Tasmania. Those in northern New South Wales and Queensland have areas where the surface soil is alkaline. All Australian soils in this group differ from their counterparts in Europe and north America in containing less organic matter, which falls with diminishing rainfall and increasing temperatures, and they are usually heavier in texture. On drying out these soils crack widely and deeply, and on wetting become very sticky. Prior to cultivation they show gilgai (see page 878) micro-relief. These are the most fertile arable soils in Australia, and are unique in the high levels of available phosphate they contain. They are also relatively rich in nitrogen, and, unlike the red-brown earths, the organic matter is distributed through the top two or three feet of soil. The addition of sulphur as fertilizer is sometimes necessary, and responses to zinc are obtained. Where they are formed on alluvium or on parent materials low in phosphorus they may also respond to phosphate. Rotations in the northern summer rainfall areas are more varied than in the south, and include wheat, sorghum and lucerne, linseed, safflower, millet, and maize. Many farmers grow wheat continuously for several years, using a short summer fallow to conserve the summer rainfall for the winter growing crop. Only a small part of these soils is irrigated, but this includes the high producing cotton growing areas irrigated from the Namoi River. Arable development of these soils was originally restricted because cultivation is only possible over a very narrow moisture range, and consequently only became an economic possibility with the use of tractors sufficiently powerful to complete the necessary cultivation in the limited time available.

The *euchrozems* of northern New South Wales and Queensland are formed on the deeply weathered lower horizons of ancient laterites formed on basalt. They have a friable dark brownish red clay loam at the surface, merging into blocky structured orange to orange-yellow clay, with decomposing basalt at depths of four feet or deeper. They differ from the chernozems mainly in containing more free ferric oxide, and they do not crack so widely. Agriculturally their properties are similar to the chernozems but they are generally lower in available phosphate, although they respond well to superphosphate.

The *solodic* and *solodized-solonetz* soils occur in all States and are particularly extensive in the sub-coastal regions of Queensland, where they form the bulk of the spear-grass country. They have commonly formed on old alluvial deposits and on a wide range of rocks. The soils have a grey sandy to loamy surface, moderately to strongly acid in reaction, sharply differentiated from a mottled yellow, brown, orange, and grey dense clay subsoil. The subsoil may exhibit a strong prismatic structure with well-marked flat topped columns at the junction with the surface soil. Usually in the lower horizons the acidity falls, and in some cases calcareous concretions are present. In their natural state these soils are very infertile, and are deficient in nitrogen and phosphorus as well as trace elements. Although commonly containing concretionary calcium carbonate in the deep subsoil, the calcium levels of the surface soil are often so low as to be deficient for such shallow rooting plants as the introduced pasture species. Deficiencies of potassium occur in many areas, and molybdenum deficiency is widespread. Their development, which has so far only been undertaken in limited areas, requires the rectification of these deficiencies and the introduction of a suitable legume.

The *lateritic podsolic* soils have light coloured sandy horizons over a concretionary ironstone horizon over mottled or white leached clay. They are mildly to strongly acid throughout and are strongly weathered and leached. They usually occur on ancient lateritic land surfaces. Extensive areas of these soils occur in north Australia, in south-western Western Australia and in South Australia. In the natural state they carry heath vegetation and low mallee. They are extremely deficient in phosphorus and nitrogen, as well as in trace elements. However, clearing costs are low, and in the winter rainfall areas of Western Australia very considerable areas of these soils are now being developed for improved pastures, with blue lupin or subterranean clover as the pioneer crop.

Soils of the semi-arid zones

The major soils of the semi-arid zones include the highly calcareous solonized brown soils restricted to southern Australia, the massive structured, variably calcareous and gypseous grey and brown soils of heavy texture, and the red earths of the old land surfaces.

The *solonized brown* soils lie largely in a zone of low rainfall, approximately 9 to 15 inches per annum of unreliable, winter incidence. They are deep sandy to shallow loamy soils overlying deep rubbly and powdery calcareous clay subsoils, and are neutral to alkaline at the surface, becoming more alkaline with depth. Their landscape is frequently characterized by a parallel east-west dune system. These soils make up a large part of the low yielding wheat lands of southern Australia. They are farmed on a wide rotation, comprising volunteer pasture-fallow-wheat, in which superphosphate is used solely with the wheat. Sheep graze the pastures. These

soils, especially the sands, are very susceptible to wind erosion, and much effort is now devoted to the stabilization of the once cleared and cultivated dunes. The common plant for reclamation is cereal rye. Where the solonized brown soils lie adjacent to the Murray River they are widely irrigated, especially for horticultural production, principally of grapes and citrus fruits. Under skilled management they are very productive, but are liable to rising groundwater and secondary salinity problems where drainage is inadequate.

The *grey and brown soils of heavy texture* are uniform clays, ranging from grey to brown and becoming mottled with depth. They are slightly acid, neutral or slightly alkaline at the surface, becoming moderately to strongly alkaline with depth. Gypsum is often present in the subsoils, and excessive salinity may occasionally be a problem. They occur on alluvial deposits of Pleistocene and Recent age as well as on contemporary alluvium, and on sedimentary rocks of varying ages, in a great arc from the south-east of South Australia through eastern Australia to the Barkly Tableland in the Northern Territory, with smaller outliers in the Kimberleys. In Queensland and northern New South Wales considerable areas carry a tall scrub of brigalow (*Acacia harpophylla*). Where this occurs on old alluvium more than half the soils show the unusual feature of having a neutral to alkaline surface soil overlying a strongly acid subsoil. They are generally of moderate fertility, but the phosphorus contents are very variable. On the wetter fringe, as in the Wimmera district of Victoria and the Namoi and Macquarie regions of New South Wales, these soils are used for wheat growing. In Queensland, with moisture conservation by bare fallowing, a wide range of summer and winter crops can be grown. Elsewhere they make up a high proportion of the better natural pasture lands used for cattle and sheep grazing. Where they occur in the irrigation areas of the Murrumbidgee and Murray rivers in New South Wales and Victoria their low infiltration rate poses some difficulties in the irrigation of pastures but makes them particularly suitable for rice. Most of the soils are gilgaied (*see below*) to some degree, and strongly so on the wetter fringes.

Red earths associated with old land surfaces are widely distributed throughout the semi-arid areas, and constitute a major component of the wool-producing lands of south-west Queensland and north-west New South Wales, as well as larger areas of the Northern Territory. They are usually covered with scrub and are practically unused for agriculture. They are generally devoted to sheep and cattle grazing.

Soils of the arid zones

The soils of the arid zones fall into three broad categories:

- (a) those that are coarse-textured enough to be moved by wind action—the desert sandhills and desert sand plains;
- (b) those that resist wind action—the arid red earths, the desert loams and the stony desert soils; and
- (c) the calcareous desert soils of the Nullarbor Plain.

The *desert sandhill country* is covered by long parallel sand ridges separated by inter-dune corridors ranging from 25 feet to a half a mile wide. In general the whole surface from dune crest to swale is covered by deep sandy soils, mildly acid throughout, usually bright red brown. The desert sandplains have similar soils on a very gently undulating landscape. These areas carry spinifex and some shrubs and are mainly useless for grazing. At slightly higher rainfalls on the South Australian-New South Wales border the inter-dune corridors are covered with grey clay or loam of varying depth and covered with roughly octagonal cracks in their normal dry state. After the occasional rain storms these areas are briefly flooded. The dune corridors carry grass, but over considerable areas the flanks of the dunes carry a scrub of drought resistant shrubs with mulga (*Acacia aneura*) as the principal component.

The finer textured soils, the *arid red earths*, the *desert loams* and the *stony desert soils* differ in texture from each other and in the degree of profile development, but are all red-brown to brown in colour. They make up a large proportion of the country utilized for grazing. The vegetation includes grasses and edible shrubs such as mulga on the arid red earths and shrub steppe on the desert loams. The stony desert soils carry a layer of stones on their surface and are almost treeless.

The *calcareous desert soils* are shallow powdery calcareous soils, sedentary on limestone. They are covered by a shrub steppe and are particularly susceptible to wind and water erosion, especially where their vegetative cover has been reduced by overgrazing.

The gilgai phenomena

This feature, which is widely developed throughout the heavier soils, consists of small-scale undulations of the land, the alternate hummocks and hollows of which show some degree of regularity. They have been called variously 'gilgai', 'crab-hole', 'melon-hole', and 'Bay of Biscay country'. Considerable differences in magnitude and form of the undulations occur, and since the different names are not applied consistently to any one form, the term 'gilgai' is now used for

all manifestations. They all show a characteristic swelling pattern on wetting, the subsoil swelling more than the topsoil. Originally described in Australia, this phenomena has subsequently been recognized in many other countries where a suitable combination of soil and climate exists.

Soil improvement and conservation

Fertilizers

In the early days of settlement in Australia the principles of scientific cultivation were little understood. It was common for the land to be cropped continuously until the natural fertility was almost exhausted. More scientific methods have been adopted in recent decades, much of the improvement in this regard being due to the assistance and guidance offered to farmers by various State and Commonwealth departments and authorities.

Fertilizer is generally applied to pastures at the time of sowing, and periodical (usually annual) top-dressings are carried out afterwards to keep the pastures in good condition. The introduction of the modern seed-drill, acting also as a fertilizer distributor, has greatly facilitated the use of artificial manures, and much land formerly regarded as useless for cultivation has now been brought into production. With the rapid increase in the area of sown pastures, particularly since the 1939-45 War, large quantities of artificial fertilizers have been used. In addition, increasing areas of native pastures have been top-dressed. The use of aircraft for the distribution of fertilizers has increased greatly in recent years (*see* page 880) and, in particular, has enabled the fertilizing of some areas which would otherwise be inaccessible. In 1964-65 pastures (sown and native) accounted for over 60 per cent of both the total area fertilized and the total quantity of fertilizer used.

The Australian output of prepared fertilizers is derived chiefly from imported rock phosphate. Complete information regarding local production of fertilizers is not available. The number of firms engaged in the manufacture of chemical fertilizers in Australia for the year 1964-65 was 48 made up as follows: New South Wales, 12; Victoria, 6; Queensland, 5; South Australia, 9; Western Australia, 8; and Tasmania, 8. The production of superphosphate in Australia during 1964-65 amounted to 3,702,960 tons.

Information regarding the area treated with artificial fertilizers and the quantity of artificial fertilizers (superphosphate, bonedust, nitrates, etc.) used in each State during the 1964-65 season is given in the following table.

AREA FERTILIZED AND QUANTITY OF ARTIFICIAL FERTILIZERS USED
STATES AND TERRITORIES, 1964-65

State or Territory	Crops			Pastures			Total

The chief sources of Australia's supplies of rock phosphate are Nauru, Christmas Island (Indian Ocean) and the Gilbert and Ellice Islands. Sodium nitrate is obtained chiefly from Chile.

The imports of artificial fertilizers during the five years ended 1964-65 are shown in the following table.

ARTIFICIAL FERTILIZERS: IMPORTS INTO AUSTRALIA, 1960-61 TO 1964-65

Fertilizer	1960-61	1961-62	1962-63	1963-64	1964-65

Exports of fertilizers (practically all of which were manufactured locally) amounted to 2,040 tons valued at \$176,682 in 1964-65 compared with 4,794 tons valued at \$269,190 in 1963-64.

Aerial agriculture

During recent years increasing use has been made of aircraft for top-dressing and seeding, for spraying and dusting of crops and pastures, and for pest and vermin extermination.

For 1956-57 (the first year for which data are available) the total area treated was 1,466,000 acres; in 1964-65 the total was 16,640,000 acres, more than eleven times as great. The following table shows details of area treated and materials used for each State for the five years ended 31 March 1965.

NOTE. The information contained in this table was collected by the Department of Civil Aviation.

Pasture improvement

An article on pasture improvement, which includes notes on indigenous and introduced species of grasses and which traces the development of pasture research in Australia, appears on pages 1001-2 of Year Book No. 49.

Soil conservation

Year Book No. 49 contains an article (pages 1003-4) on soil conservation which deals with the following matters: land use and soil erosion, agents of erosion, prevention and control, and the activities of various Commonwealth and State authorities which promote and co-ordinate research into the problems of soil erosion and the initiation of preventive measures.

AGRICULTURAL PRODUCTION

In general, statistics in this chapter relating to agricultural production are derived from 'census' returns supplied by approximately 250,000 farmers who utilize one acre or more of land for agricultural or pastoral purposes. The latest figures available are those for the year 1964-65. The returns are collected on a substantially uniform basis in all States at 31 March each year, and relate mainly to crops sown in the previous twelve months. Where harvests are not completed by March (e.g. potatoes), provision is made in some States for a special collection after the harvest is completed and in others for the inclusion of the total estimated yield expected from the complete harvest. In cases where additional data are available from marketing authorities or other sources these are used in conjunction with the 'census' returns. The statistics published in this chapter are therefore shown in 'agricultural' years. For most purposes there will be little error involved in considering them as applying to years ended 30 June.

For more detailed information on period covered and details of the weights and measures used in recording production of agricultural commodities see introductory notes to the bulletin *Rural Industries*.

Progress, assistance and control

Early development

The coastal districts of southern Australia are characterized to a large degree by leached soils of low fertility, with limited areas suitable for intensive crop cultivation. This, combined with an unfamiliar climate and problems associated with the clearance of scrub-land, severely checked early attempts to establish crops. A brief reference to these attempts at cultivation by the first settlers in New South Wales and to the discovery of suitable agricultural land on the Parramatta and Hawkesbury Rivers prior to the year 1813 and west of the Blue Mountains thereafter is contained in early issues of the Year Book. (See No. 22, page 670.)

In an *Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797* Governor Hunter gives the acreage of crops as follows: wheat, 3,361 acres; maize, 1,527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres. The following details of crops were collected in 1808: wheat, 6,874 acres; maize, 3,389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 37 acres.

By the year 1850 the area of crops had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres. The bulk of the arable land in this part of the colony was devoted to the extensive grazing of sheep.

The gold discoveries of 1851 (at Bathurst in New South Wales and later at Ballarat and Bendigo in Victoria) had at first a very disturbing effect on agricultural progress. The area of crops declined from 491,000 acres in 1850 to 458,000 acres in 1854, as landowners and rural labourers joined in the various gold rushes. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia exceeded a million acres. There was still a shortage of rural labour, and the increased acreage was due largely to the increasing mechanization of crop operations.

Progress of cultivation

The following table shows the area of crops in each of the States and Territories of Australia at ten-yearly intervals since 1860-61 and during each of the ten seasons 1955-56 to 1964-65. Plate 52 in this chapter shows the area of crops in Australia from 1900-01 onward.

The progress of agriculture was practically uninterrupted from 1860–61 to 1915–16, when, as the result of a special effort to increase wheat production during the 1914–18 War, 18.5 million acres were cultivated in Australia. There was a temporary setback in later war years, but after the end of the war the area continued to expand and increased steadily to the record area of 25.2 million acres in 1930–31. In the following years the slump in wheat prices seriously depressed incomes in the agricultural industry, and the area of crops decreased to just under 20 million acres in 1935–36.

By 1938–39 the industry was recovering from the depression, and the total area under cultivation reached the high level of 23.5 million acres. Thereafter, as a result of war-time manpower shortages and shipping difficulties, the area declined to less than 16 million acres in 1943–44. After that year production gradually increased again until, in 1947–48, 22.5 million acres were sown to crops. This upward trend was reversed after 1948–49, largely because many primary producers transferred from wheat to wool production as a result of the high prices of wool. After 1951–52, however, when the area sown was 20.0 million acres, the area under crops increased steadily except for 1956–57, when excessively wet conditions caused reductions in the area sown to wheat. Subsequent to that year the area of all crops has shown an upward trend (except for a slight decrease in 1963–64), and in 1964–65 a record level of 34.7 million acres was reached. As the area under wheat in Australia constitutes a large proportion of the total area cropped (51 per cent during the five years ended 1964–65), fluctuations in the former have been largely responsible for year to year variation in total crop area.

The Australian Agricultural Council

The influence of governmental and semi-governmental authorities on Australian rural industry is most apparent in the fields of guaranteed prices, subsidies and controlled marketing. Many of these aspects of intervention at the national level take place indirectly through the Australian Agricultural Council. This is a permanent organization which was formed following a conference of Commonwealth and State Ministers on agricultural and marketing matters, held at Canberra in December 1934. The Council consists of the Commonwealth Ministers for Primary Industry and Territories and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principal functions of the Council are: the promotion of the welfare and development of agricultural industries generally; the exchange of information on agricultural production and marketing; the improvement of the quality of agricultural products and the maintenance of high grade standards; to ensure, as far as possible, balance between production and available markets; and organized marketing.

In addition, a permanent Standing Committee on Agriculture was formed to advise the Council, to secure co-operation and co-ordination in agricultural research, to advise State and Commonwealth Governments on the initiation and development of agricultural research, and to secure co-operation between all Governments in respect of quarantine measures against pests and diseases of plants and animals.

The Standing Committee on Agriculture comprises the permanent heads of the State Departments of Agriculture, the Secretary, Department of Primary Industry, and a representative each from the Commonwealth Departments of the Treasury, Health, Trade and Industry, and Territories, and from the Commonwealth Scientific and Industrial Research Organization.

Bounties paid to producers

Direct financial assistance to primary producers by the Commonwealth Government takes the form of bounties, subsidies and other financial assistance. One of the most important is the Cotton Bounty. The *Cotton Bounty Act* 1951–1958 providing for payment of a bounty on seed cotton of a grade higher than 'strict good ordinary' expired on 31 December 1963. Under the *Raw Cotton Bounty Act* 1963 which came into effect from 1 January 1964 to operate for a period of five years, the Commonwealth will pay a bounty on raw cotton produced and sold for use in Australia. The level of bounty is 13.437 cents per lb. for Middling 1-in. White raw cotton with premiums and discounts for grades and staple lengths above and below Middling 1-in. White. There is a ceiling on bounty payments of \$4,000,000 in any one year.

Other financial assistance

Other forms of assistance to producers include payments for cattle tick control, the Commonwealth Dairy Industry Extension Grant, Commonwealth Extension Services Grant, flood, drought and bush fire relief, fisheries research, and farm mechanization research.

Over recent years legislative research schemes, financed by matching contributions from the Commonwealth and industry and/or States, have been initiated in regard to wheat, wool, tobacco, dairy produce, beef cattle, and wine. Non-legislative schemes, on a similar financial basis, have

been operative in relation to brown rot, Australian plague locusts, tractor testing, apple and pear spray residue research, aerial seeding research, barley research, banana research, and fruit fly research. For further information on these matters, *see* pages 763-71, 773-4 and 781-2.

Agricultural training and research

Agricultural colleges have been established in all States except Tasmania. The primary function of these colleges is the training of students in the various phases of agriculture and livestock husbandry. Students are required to undertake a considerable amount of practical work in addition to lectures and theory. A secondary function of the colleges is agricultural re-research and experimentation. To a lesser degree, they carry out extension work in the form of public field days. Upon graduation, students receive diplomas in agriculture, dairying, etc., according to the course undertaken.

Experimental farms have been set up by State Departments of Agriculture in all States. They are concerned primarily with agricultural research and experimentation, each farm concentrating on problems specific to the region in which it is located. The results of the work undertaken are passed on to farmers at field days which are held at regular intervals, through publication in various agricultural or scientific journals, and through the agricultural extension services of the State Departments of Agriculture.

The Commonwealth Scientific and Industrial Research Organization has field stations in many parts of Australia, and sometimes undertakes research jointly with the appropriate State authorities. It also has regional laboratories in several States, conducting research into agronomic and livestock problems as they occur in each particular region (*see also* the chapter Education, Cultural Activities and Research). The State Departments of Agriculture study problems of particular significance within their own boundaries. In addition, the universities carry out valuable work in their laboratories and on their experimental farms.

Distribution, production and value of crops

Distribution of crops

The wide range of climatic and soil conditions over the agricultural regions of Australia has resulted in a diversity of crops being grown throughout the Commonwealth. Generally, cereal crops (excluding rice and sorghum) are grown in all States over wide areas, while industrial crops are confined to specific locations in a few States. The following was the distribution in the 1964-65 season.

AREA OF CROPS: STATES AND TERRITORIES, 1964-65

Indexes of quantum and price of agricultural production

Indexes of quantum and price of agricultural production are shown in the following table. The quantum indexes relate to gross output of farm products valued at constant prices. The quantities of each farm product produced each year have been re-valued at the unit gross value for the period 1936-37 to 1938-39. The price indexes relate to average 'prices' of farm products realized at the principal markets of Australia. Average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed weights. Further details on weights used, etc. are to be found in the chapter Miscellaneous.

**INDEXES OF QUANTUM^(a) AND PRICE OF AGRICULTURAL
PRODUCTION, 1960-61 TO 1964-65**

(Base: Average three years ended June, 1939 = 100)

^(a) Indexes of value at constant prices, i.e. quantities revalued at average unit values of the base years (1936-37 to 1938-39).

Wheat

Wheat is grown on a large scale in all States except Tasmania, and is the most important crop in Australia in terms of area, production and exports. The present limits of the wheat belt have been established after considerable fluctuation over the last four decades. In January 1934 a Royal Commission was appointed to inquire into and report upon the economic condition of the growing, handling and marketing of wheat, and the manufacturing, distributing and selling of flour and bread. The Report of this Royal Commission provides an authoritative description of all aspects of the industry up to that time.

Wheat marketing and research

Two of the aspects of governmental and semi-governmental assistance and control which have contributed to the development of the industry are the organization of oversea marketing and of research.

As a large proportion of the Australian wheat crop is normally exported, the marketing of wheat plays an important part in the industry. The Australian Wheat Board was constituted in September 1939, under National Security (Wheat Acquisition) Regulations, to purchase, sell, or dispose of wheat or wheat products, and to manage and control all matters connected with the handling, storage, protection, shipment, etc. of wheat acquired, and such other matters as were necessary to give effect to the regulations. Details of the operations of the Australian Wheat Board and the Wheat Stabilization Board in licensing wheat grown during the seasons 1941-42 to 1948-49 will be found in Year Book No. 38, pages 940-1, and a detailed survey of legislation relating to stabilization of the wheat industry, including controls exercised during the 1914-18 and 1939-45 Wars and legislation establishing the Wheat Stabilization Plan in 1948, is given in the Appendix to Year Book No. 37, pages 1295-9.

The Wheat Stabilization Board ceased to function on 31 December 1948, and under the *Wheat Industry Stabilization Act* 1948 the Australian Wheat Board was reconstituted for five years to administer the first stabilization plan and was given powers similar to those held under the National Security Regulations. The new Board commenced to function on 18 December 1948. The Board has been continued in existence by the *Wheat Industry Stabilization Acts* 1954, 1958 and 1963 for the purpose of administering the second, third and fourth five-year stabilization plans. Details of the more recent plans were published in Year Book No. 40, pages 841 and 842 (1947-48 to 1952-53 Plan), No. 44, page 861 (1953-54 to 1957-58), and No. 48, pages 903 and 904 (1958-59 to 1962-63).

Fourth Post-war Wheat Industry Stabilization Plan. Following negotiations during 1962 and 1963, the fourth post-war Wheat Industry Stabilization Plan was enacted by the Commonwealth and States towards the end of 1963. The new plan operates on very much the same lines as the previous ones. However, there are some important changes in detail in the main features of the plan which are set out below.

The plan operates for five years. It commenced with the 1963-64 wheat crop and will end with the marketing of the 1967-68 crop.

The *Wheat Export Charge Act* 1963 repealed the *Wheat Export Charge Act* 1958 and provided for an export charge on wheat and wheat products for the seasons 1963-64 to 1967-68 inclusive. The charge which may be levied is the excess of the export price over the cost of production or 1s. 6d. (15 cents) per bushel, whichever is the less. The Commonwealth guaranteed a return of 14s. 5d. (\$1.44) a bushel bulk basis f.o.r. ports to growers on up to 150 million bushels (previously 100 million bushels) of wheat exported from the crop in the first year of the plan. The guaranteed return of 14s. 5d. (\$1.44) was based on the findings of a survey of the economic structure of the wheat industry conducted by the Bureau of Agricultural Economics. It is subject to adjustment in each of the following years of the plan in accordance with the movements in costs based on a cost index established from the survey. The guaranteed return for the third year of the plan (1965-66 season) is \$1.52 a bushel. The ceiling of the stabilization fund is established at \$60 million; any excess beyond this figure is returned to growers on the 'first-in, first-out' principle. Collections from the wheat export charge are paid into the Wheat Prices Stabilization Fund, out of which payments will be made to the Australian Wheat Board, when required, for the purpose of building up the average export price for any season to the guaranteed price. When the average export realizations fall below the guaranteed return the deficiency is made up first by drawing upon the stabilization fund in respect of up to 150 million bushels of wheat from each crop. If the fund is exhausted, additional payments will be made from the Consolidated Revenue Fund. As the return from exports has been below the guaranteed price, there have been no collections of the wheat export charge since the 1956-57 (No. 20) pool when £1,589,000 (\$3,178,000) was collected.

The Australian Wheat Board is retained as the sole constituted authority for the marketing of wheat within Australia and for the marketing of wheat and flour for export from Australia for the period of the plan.

The home consumption base price for 1963-64, the first year of the new plan, was established at 14s. 5d. (\$1.44) a bushel, bulk basis, f.o.r. ports plus 2d. (1.7 cents) per bushel loading to cover the cost of transporting wheat to Tasmania as outlined below. There is provision in the plan for annual adjustments in the following years in accordance with the guaranteed price as outlined above. The home consumption price for the 1965-66 season is \$1.52 a bushel plus 1.7 cents a bushel to cover freight on wheat to Tasmania.

Provision is made for a loading on the price of all wheat sold for consumption in Australia to the extent necessary to cover the cost of transporting wheat from the mainland to Tasmania in each season of the plan.

A premium is paid from export realizations on wheat grown in Western Australia and exported from that State, in recognition of the natural freight advantage enjoyed by Western Australia owing to its proximity to the principal overseas markets for wheat. The premium is the amount of the actual freight advantage enjoyed by Western Australia up to a maximum of 3d. (2.5 cents) a bushel.

The cost of production of wheat for the first season of the current Wheat Stabilization Plan, 1963-64, was fixed at 14s. 5d. (\$1.44) a bushel by the legislation. The guaranteed price for the season 1963-64 was therefore 14s. 5d. (\$1.44) a bushel, while the home consumption price was 14s. 7d. (\$1.46) a bushel (*see* p. 891). The guaranteed price for 1963-64 was a reduction of 1s. 5d. (14 cents) a bushel compared with the guaranteed price of 15s. 10d. (\$1.58) for the 1962-63 season, the last year of the previous wheat stabilization plan. The cost of production and guaranteed price for the 1965-66 season have been established at \$1.52 a bushel.

F.A.Q. standard of wheat

Sales and shipments of grain in bulk overseas are generally made on a 'fair average quality' (f.a.q.) basis. Samples of wheat are obtained each year from the different wheat districts and mixed to give a representative sample of the whole crop in each State. From this representative sample the f.a.q. weight for each State is determined by the use of the Schopper 1-litre scale chondrometer. This standard is used as a basis for sales of each crop and it varies from year to year and from State to State. F.a.q. is an Australian term, and the method of selling differs from that of other countries, which sell according to sample, or (as in Canada) according to grades which are fixed and do not vary from year to year. The f.a.q. method does not, however, take protein quantity and quality into account, and it gives no indication therefore of the baking strength of the resulting flour.

There are two classifications of Australian wheat in addition to the f.a.q. standard, namely, 'semi-hard' and 'premium'. The former applies to wheat segregated as such in New South Wales and South Australia, and the latter to higher-protein wheat of northern New South Wales and Queensland of a guaranteed minimum protein content. Both wheats sell at a premium above f.a.q. The f.a.q. weight of a bushel of wheat in each of the four main wheat-producing States for the 1964-65 season's crop was as follows: New South Wales, north (predominantly semi-hard), 64½ lb., south and west (predominantly soft), 64½ lb.; Victoria, 64 lb.; South Australia, semi-hard, 63 lb., soft, 62½ lb.; and Western Australia, 64½ lb.

Bulk handling and storage of wheat

A detailed description of the bulk handling system, including its advantages and disadvantages compared with other methods of handling, appears on pages 954-8 of Year Book No. 39.

New South Wales, Victoria and Western Australia have operated bulk handling systems for a number of years, and in more recent years other States have also introduced bulk systems. The bodies concerned with the administration of bulk handling in the various States are: Grain Elevators Board of New South Wales, Victorian Grain Elevators Board, State Wheat Board (Queensland), South Australian Co-operative Bulk Handling Ltd., Co-operative Bulk Handling Ltd. (Western Australia), and the Tasmanian Grain Elevators Board.

The table below sets out the bulk handling capacities of the several States for the years 1961 to 1965.

WHEAT: TOTAL CAPACITY OF BULK HANDLING FACILITIES^(a)
STATES, 30 NOVEMBER 1961 TO 1965
 ('000 bushels)

State	1961	1962	1963	1964	1965
New South Wales	75,270	79,486	87,046	93,727	104,852
Victoria ^(b)	72,808	76,969	86,253	90,247	97,132
Queensland	7,486	9,525	11,081	13,178	15,956
South Australia	17,380	23,220	28,370	35,483	39,685
Western Australia	97,356	98,734	99,535	115,438	128,175
Tasmania	960	960	960	960	1,060
Australia	271,260	288,894	313,245	349,033	386,860

^(a) Includes terminals, sub-terminals, country installations, and temporary storage.
 in southern New South Wales operated by the Victorian Grain Elevators Board.

^(b) Includes storage

Particulars of the operation of the bulk handling and storage systems in each State are set out on pages 916 and 917 of Year Book No. 48.

International wheat agreement

Details of the first and second International Wheat Agreements operative from 1 August 1949, to 31 July 1953 and from 1 August 1953 to 31 July 1956, respectively, were published in Year Book No. 42 (*see* pages 840-1) and previous issues. Details of the third and fourth International Wheat Agreements which covered the period from 1 August 1956 to 31 July 1959 and 1 August 1959 to 31 July 1962 were published in Year Books Nos. 43 (page 836) and 48 (page 906), respectively.

A fifth International Wheat Agreement, ratified by the required number of wheat exporting and importing countries, came into force on 1 August 1962. This was intended to cover the three-year period from 1 August 1962, to 31 July 1965, but at a special meeting held in February 1965 the International Wheat Council adopted the text of a protocol providing for the prolongation of the Agreement, without amendment, to 31 July 1966. The council stated that it recognized the need for the maintenance of institutional arrangements to provide for continuing international co-operation in wheat matters, and that, following its decision to recommend a one-year extension of the existing agreement, it had given immediate consideration to preparatory work designed to ensure effective arrangements to follow the expiry of the term of the protocol. The Agreement has now been extended by protocol for a further year to 31 July 1967.

The current Agreement, negotiated at an international conference convened by the United Nations, continues the basic arrangements covered by previous Agreements. It seeks to obtain an element of stability in world wheat marketing by providing that a significant proportion of wheat entering international trade will be bought and sold at prices within a prescribed price range. The maximum and minimum prices fixed under the Agreement are expressed in terms of 'Canadian currency per bushel, at the parity of the Canadian dollar determined for the purposes of the International Monetary Fund as at 1 March 1949'. Member exporting countries compete to supply at prices within the prescribed range, which is from 202.5 cents (Canadian) or about 182.9 cents (Australian) to 162.5 cents (Canadian), or about 145.0 cents (Australian) per bushel. The maximum of the range is based on the price of Canada's No. 1 Northern Manitoba wheat in bulk in store at Fort William/Port Arthur. The minimum f.o.b. price for each exporter is the equivalent of the c. and f. price in the United Kingdom of the minimum price of Canada's No. 1 Northern Manitoba wheat in bulk in store at Fort William/Port Arthur, using currently prevailing transportation costs and exchange rates and making such allowance for differences in quality as may be agreed between the exporting and importing countries concerned.

Member importing countries have undertaken to buy each year from member exporting countries a stated percentage of their total commercial requirements at prices within the agreed range. For their part, exporting countries are obliged to make wheat available for purchase by importing countries in any crop year at prices within the price range in quantities sufficient to satisfy the commercial requirements of those countries; if the price goes to the maximum, exporters have undertaken to make available, at that maximum price, specified (datum) quantities based on their past trading record with member importers.

The current Agreement empowers the International Wheat Council to make an annual review of the world wheat situation, including the international implications of national policies in respect of wheat production, stocks and marketing, and the disposal of wheat surpluses on non-commercial terms.

Provision has also been made for the right of appeal against excessive discounts from the minimum price on the basis of differences in quality between the basic wheat—Canada's No. 1 Northern Manitoba wheat—and the wheat supplied by other member importing countries.

Member countries of the fifth International Wheat Agreement are as follows.

Exporters. Argentina, Australia, Canada, France, Italy, Mexico, Spain, Sweden, Union of Soviet Socialist Republics, and United States of America.

Importers. Austria, Belgium and Luxembourg, Brazil, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Federal Republic of Germany, Finland, Greece, Guatemala, Iceland, India, Indonesia, Ireland, Israel, Japan, Liberia, Libya, the Netherlands, New Zealand, Nigeria, Norway, Peru, Philippines, Portugal, Republic of Korea, Saudi Arabia, Sierra Leone, South Africa, Southern Rhodesia, Switzerland, Tunisia, United Arab Republic, United Kingdom, Vatican City, Venezuela, and Western Samoa.

Research into the wheat industry

The extension and growth of the wheat industry in the past has been made possible to a large extent through research into new varieties of seed, crop rotation and fertilizer treatments by governmental, university and private research organizations. In recent years there has been a growing awareness of the value of this research, and funds are being raised by a direct levy on the growers' returns.

The *Wheat Tax Act* 1957 imposed a tax of one farthing (0.208 cents) for each bushel of wheat—

- (a) which was delivered to the Wheat Board on or after the first day of October 1956 and before the date of commencement of the Act, or
- (b) which was delivered to the Wheat Board on or after that date.

The Act was amended in October 1965 to become the *Wheat Tax Act* 1965, to provide for an increase in the rate of taxation from one farthing to three-tenths of a penny (0.25 cents) for each bushel of wheat delivered to the Board on or after 1 October 1965. The *Wheat Research Act* 1957 provided for the establishment of a Wheat Research Trust Account to receive moneys payable under the *Wheat Act* 1957, and for the setting up of a Wheat Industry Research Council to direct the expenditure of moneys from that account for research, etc. to benefit the wheat industry. This money, contributed by the growers, is being spent by the Wheat Industry Research Committees set up in the wheat-growing States. These Committees, which consist of representatives of wheatgrowers, universities and State Departments of Agriculture, also received a total of £284,000 (\$568,000) under the provisions of the *Wheat Acquisition (Undistributed Moneys) Act* 1958.

The Commonwealth Government has undertaken to supply additional funds for research (with a maximum of \$1 for \$1 against the growers' contribution) and has set up the Wheat Industry Research Council to make recommendations on the appropriate expenditure of the Commonwealth contribution. The Council, at its inaugural meeting in February 1958, considered that possible avenues of research would include the breeding of better varieties, cereal chemistry, soil fertility, mechanization, the industry's cost structure, and marketing problems. To the end of June 1965 the Council and the State Committees had spent \$6,017,142, including grants to the Commonwealth Scientific and Industrial Research Organization, State Departments of Agriculture, universities, and agricultural colleges.

Wheat farms: number and classification by activity

Particulars of the number of farms growing twenty acres and upwards of wheat for grain during each of the years 1960-61 to 1964-65 are shown in the following table. A farm worked on the share system or as a partnership is included as one holding only.

NUMBER OF FARMS GROWING TWENTY ACRES AND UPWARDS
OF WHEAT FOR GRAIN: STATES AND A.C.T., 1960-61 TO 1964-65

State or Territory	1960-61	1961-62	1962-63	1963-64	1964-65
New South Wales	16,959	17,489	18,286	17,753	18,537
Victoria	10,625	11,648	12,166	11,370	11,981
Queensland	4,257	4,483	5,095	4,927	5,236
South Australia	8,913	9,434	9,881	9,902	9,657
Western Australia	8,614	8,722	8,966	8,983	8,779
Tasmania	121	222	243	251	255
Australian Capital Territory	14	25	27	29	20
Australia	49,503	52,023	54,664	53,215	54,465

There is in Australia a widespread combination of wheat growing with other rural activities. This is illustrated, for the 1959-60 season, by a table on pages 1016 and 1017 of Year Book No. 49.

Varieties of wheat sown

The breeding of wheat suitable to local conditions has long been established in Australia. Farrer (1845-1905) did invaluable work in pioneering this field, and the results of his labour and the continued efforts of those who have followed him have proved of immense benefit to the industry. Their efforts have resulted in the development of disease-resistant varieties, better average yields, and a greater uniformity of sample, with which have accrued certain marketing advantages, as well as an improvement in the quality of wheat grown. More than 1,000 different varieties of Australian wheats have been catalogued by the Commonwealth Scientific and Industrial Research Organization, but the number of principal varieties grown in any one season is restricted to about forty-five.

The principal varieties of wheat sown and the percentage of each to the total area sown in the five main wheat-producing States of Australia in 1964-65 were as follows: New South Wales, Heron (19.8), Falcon (11.2), Olympic (10.5); Victoria, Insignia (51.9), Pinnacle (18.7), Olympic

(17.9); Queensland, Spica (37.6), Gala (15.2), Mengavi (12.6); South Australia, Insignia (39.8), Gabo (16.1), Heron (11.6); and Western Australia, Gabo (30.0), Insignia (17.2), Insignia 49 (12.6). A detailed table of wheat varieties sown appears in the annual bulletin *The Wheat Industry*, No. 108, published in February 1966.

Wheat area, production and yield per acre

Prominent factors in the early development of the wheat industry were the increase in population following the discovery of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress, but its subsequent recovery was assisted by the invention of mechanical appliances, the use of superphosphates as an aid to production, and the introduction of new and more suitable varieties of wheat for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion.

The area, production and yield per acre of wheat for grain in each State are shown below for the years 1960-61 to 1964-65 in comparison with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

WHEAT FOR GRAIN: AREA, PRODUCTION AND YIELD PER ACRE STATES AND A.C.T., 1936-37 TO 1964-65

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.

(a) 60 lb. per bushel.

A graph showing the area sown to wheat for grain in Australia since 1900-1 appears on plate 52 of this Year Book, and a map showing the distribution of areas growing wheat for grain throughout Australia in 1962-63 appears on page 1013 of Year Book No. 50. Similar maps showing the distribution of wheat areas in 1924-25, 1938-39, 1947-48, and 1954-55 appeared respectively in Year Books No. 22, page 695, No. 34, page 451, No. 39, pages 977-8, and No. 43, page 883.

Apart from the variations in the area sown, the size of the wheat harvest in Australia is determined largely by the nature of the season, resulting in considerable year-to-year fluctuations in production. The main wheat-producing States of Australia are New South Wales, Victoria, South Australia, and Western Australia. Queensland production normally approaches local demands, but Tasmania imports wheat from the mainland to satisfy its needs, though it exports flour made from local wheat which is particularly suitable for biscuits.

Production of wheat in 1964-65, 368,789,000 bushels, was a record, exceeding the previous record harvest of 1963-64 by 40,877,000 bushels (12 per cent). Compared with the previous season, the highest absolute increases were recorded in New South Wales, 29,011,000 bushels (24 per cent) and Western Australia, 10,731,000 bushels (21 per cent). New South Wales, Victoria and Queensland had record harvests.

Short-term variations in yield per acre are due chiefly to seasonal influences. The yield per acre in 1964-65 (20.6 bushels) was the second highest recorded. A record yield of 20.7 bushels was obtained in 1958-59.

The following table shows the average area, production and yield per acre for decennial periods since 1861 together with similar details for the latest season, 1964-65. Repeated cropping and short rotations (mainly in the eastern States) are believed to have led to the decline in yield to 1900, while fallowing and the widespread use of artificial fertilizers contributed to the increased yields in the decade following. The increase in yield since 1950 has been generally ascribed to the impact of improved pastures and ley-farming (broadly, the alternation of crops and pastures) upon soil fertility in wheat-growing areas.

WHEAT FOR GRAIN: AVERAGE AREA AND PRODUCTION, AUSTRALIA, 1861 TO 1964-65

Price of wheat

The prices charged by the Australian Wheat Board for wheat sold to millers for gristing into flour for consumption in Australia and for wheat sold as stock feed were as follows: year ended 30 November 1962, 15s. 10d. (\$1.58); 1963, 15s. 11½d. (\$1.60); 1964, 14s. 7d. (\$1.46); 1965, 14s. 8d. (\$1.47), and 1966, \$1.53. These prices include a loading to meet freight charges incurred on wheat shipped to Tasmania (1d. in 1962; 1½d. in 1963; 2d. in 1964; 1d. in 1965; and 1.7c in 1966).

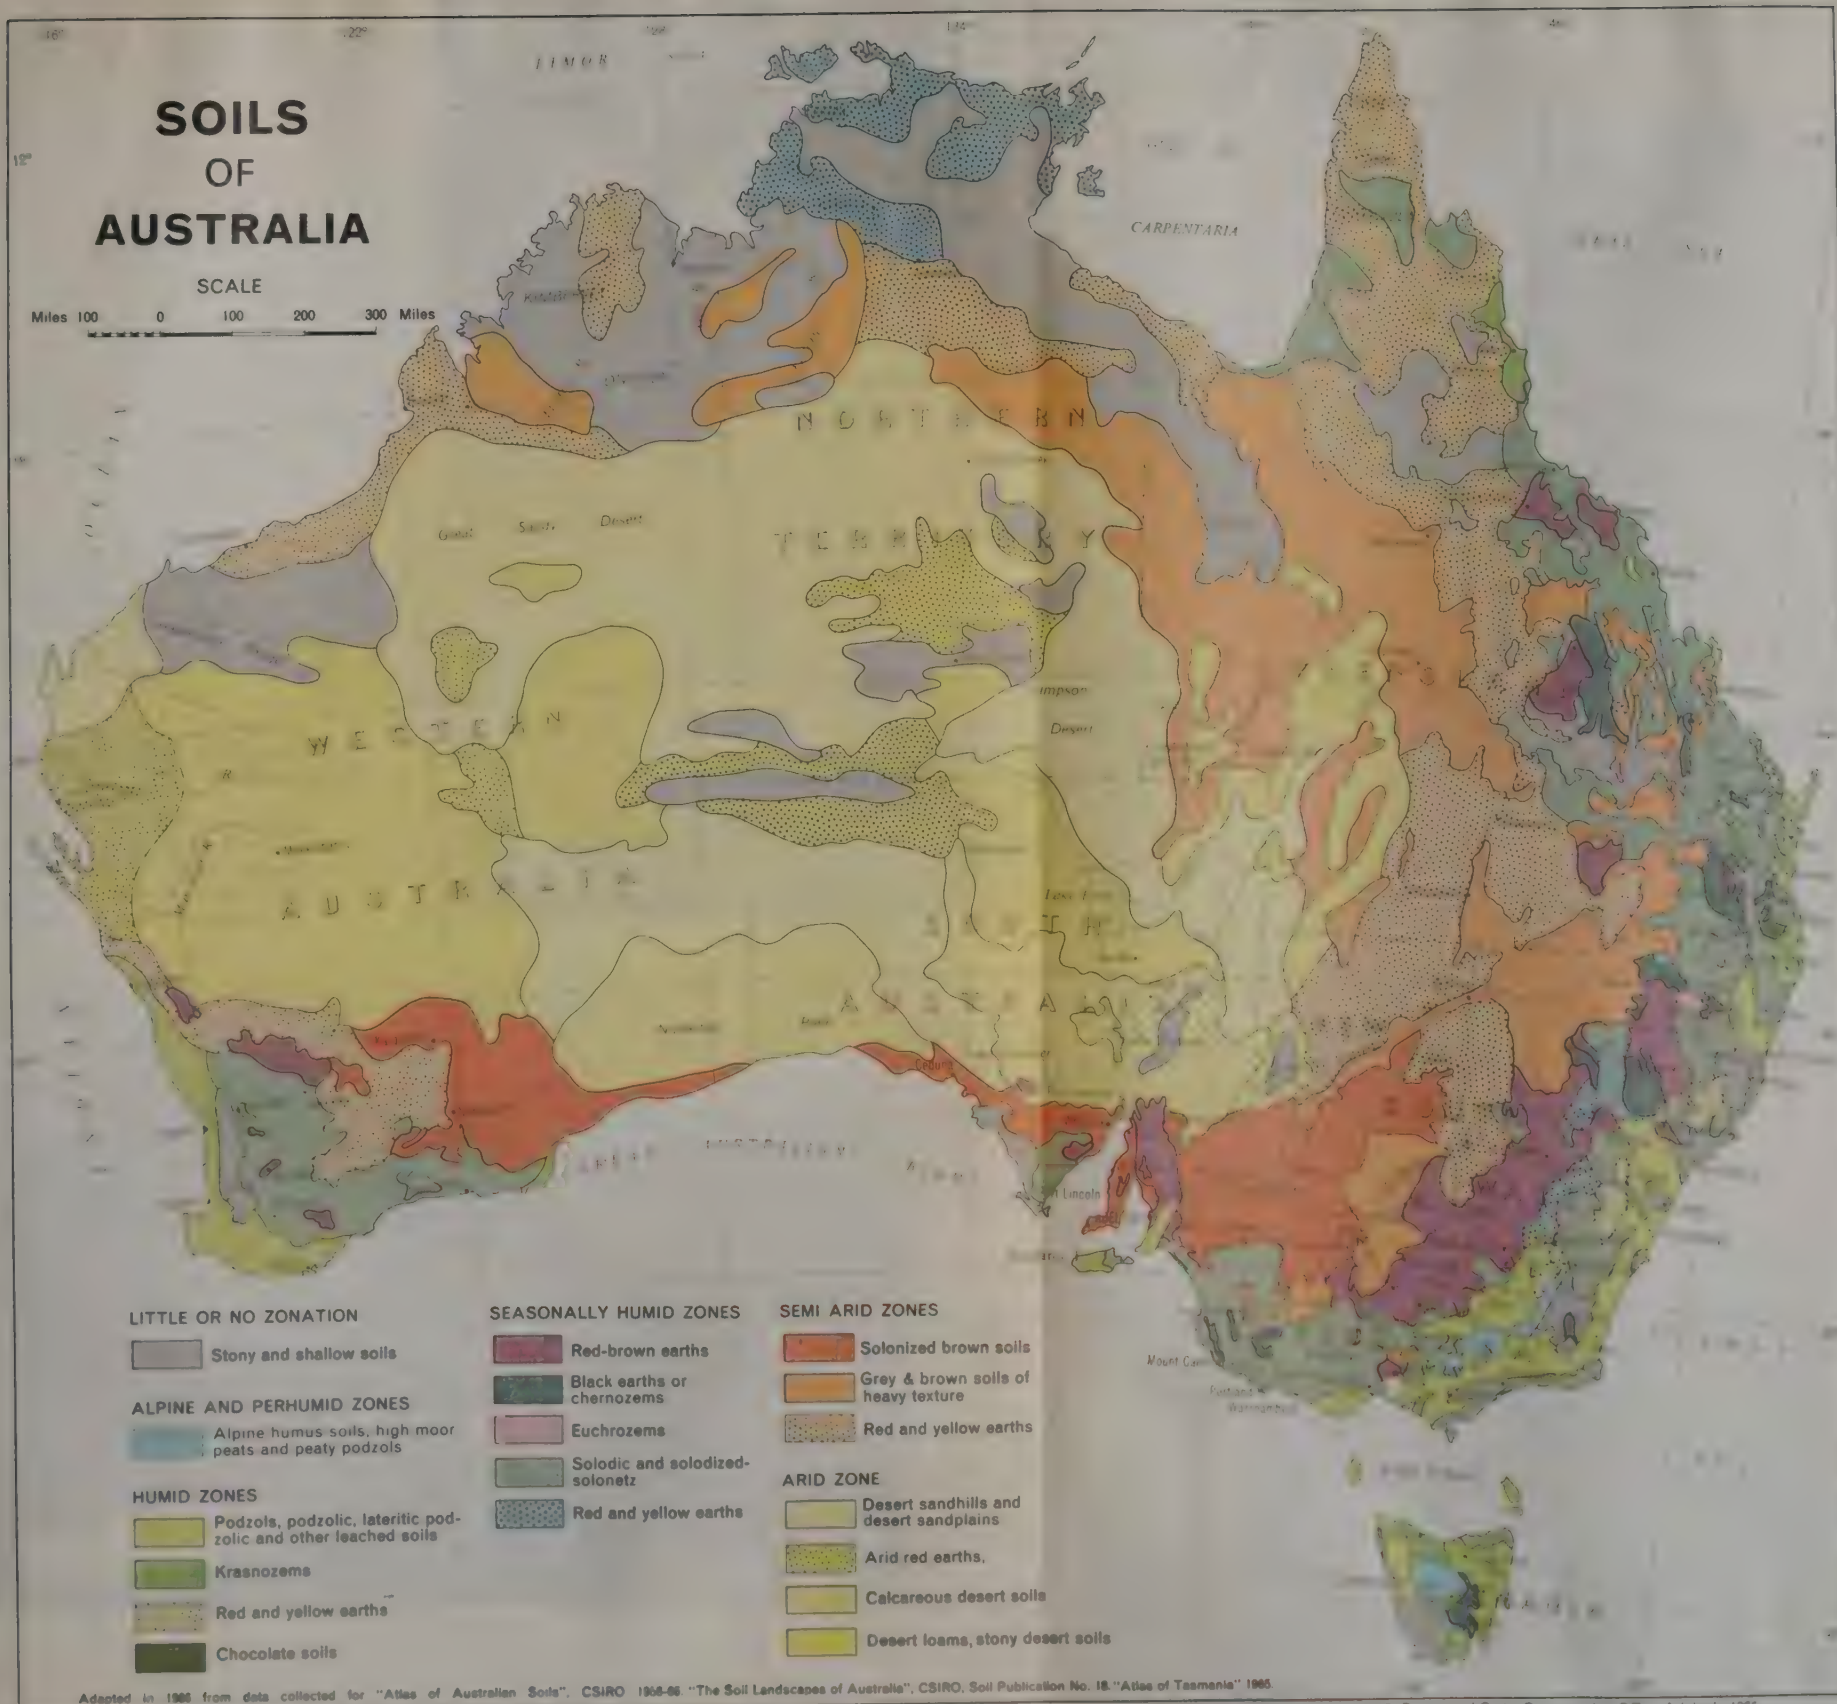

The Wheat Board's monthly basic export selling prices for f.a.q. bulk wheat f.o.b. basis, both for wheat sold under the International Wheat Agreement and for 'free' wheat sold on the open market, fell in the following ranges: season ended 31 July 1962, 13s. 10d. to 14s. 10½d. (\$1.38 to \$1.49); 1963, 14s. 2d. to 14s. 10½d. (\$1.42 to \$1.49); 1964, 14s. 4d. to 15s. 10d. (\$1.43 to \$1.58); and 1965, \$1.35 to \$1.52. Actual selling prices have been lower than the basic prices in some cases, particularly where other exporting countries enjoy a geographical freight advantage.

The 1959 International Wheat Agreement set the maximum price at 200 cents (Canadian) a bushel and the minimum at 150 cents (Canadian) for f.a.q. wheat sold under the Agreement. Under the current 1962 Agreement operative from 1 August 1962 (see page 893) the agreed price range is between 202.5 cents (Canadian) and 162.5 cents (Canadian). Directly converted into Australian currency these limits are approximately 182.9 cents and 145.0 cents a bushel respectively.

SOILS OF AUSTRALIA

SCALE

Miles 100 0 100 200 300 Miles

Adapted in 1966 from data collected for "Atlas of Australian Soils", CSIRO 1964-66. "The Soil Landscapes of Australia", CSIRO, Soil Publication No. 18. "Atlas of Tasmania" 1965.

Cartography by M. C. Coulls.

Prepared in CSIRO Division of Soils Cartographic Office Adelaide 1966.

Figure 1. Scrub woodland of Wandoo and Jarrah growing on the indurated zone of an ancient laterite at Hoddy's Well in the Darling Ranges near Perth, W.A. Note the depth of the strongly leached pallid zone.

Figure 2. Horticultural development in a valley in the Darling Ranges near Perth, W.A.

The effect of the soil changes associated with extent to which the laterite has been eroded is reflected in the variation in growth of the citrus in centre of the picture.

Figure 1. Mount Arapiles in Western Victoria overlooks a typical portion of the Wimmera District where wheat-growing with ancillary sheep grazing is the principal primary industry. The soils of the district are grey and brown soils of heavy texture. Their use for wheat-growing depends on fallowing for some months prior to seeding so as to store moisture from the previous rainfall for the use of the wheat crop in the following year. The high proportion of fallow land evident in the photograph reflects the almost universal adoption of this rotation system.

Figure 2. This oblique aerial photograph taken south of Alice Springs in the Northern Territory illustrates the topographic character of much of the more rugged pastoral country in the arid zone of Australia. The rocky hills of very prominent strike and dip shown by the photograph are being worn down largely by water erosion, and the relative proportions of useful land covered by soil and of the virtually useless rocky country are determined by the extent to which this process of denudation has proceeded. The hills shed a large part of their rainfall on to the adjoining areas covered by soil and so increase its productivity.

Details of export prices of wheat in previous years, including those received for wheat sold under the terms of the 1949-1953 International Wheat Agreement, are given in Year Book No. 40, pages 849-50, and in the statistical bulletin *The Wheat Industry, Australia*, No. 99, March 1961, and in previous issues of these publications.

Value of the wheat crop

The estimated gross value of the wheat crop in each State and in Australia during the season 1964-65 and the value per acre are shown below.

WHEAT FOR GRAIN: VALUE OF CROPS(a), STATES AND A.C.T., 1964-65

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.
Aggregate value	\$'000	212,479	109,396	32,157	74,550	88,557	486	77	517,702
Value per acre	\$	36.89	33.81	31.36	27.34	17.19	28.92	36.77	28.89

(a) Gross value of total crop, including wheat used for seed and for stock feed on farms. Also includes payment of \$18,069,000 by the Commonwealth Government.

Production and disposal of wheat in Australia

In the following tables details are given of Australian Wheat Board transactions and of total production and disposal of wheat during each of the years ended 30 November 1961 to 1965. (For particulars of production and yield from 1935-36 see plate 53.)

AUSTRALIAN WHEAT BOARD WHEAT RECEIVED, STATES, 1960-61 TO 1964-65 HARVESTS (⁰000 bushels)

Pool	Harvest	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.

Stocks of wheat (including flour in terms of wheat) held by the Australian Wheat Board in each State at 30 November for the years 1961 to 1965 are shown in the following table. These data relate to stocks held at mills, sidings, ports, and depots as recorded by the Australian Wheat Board.

AUSTRALIAN WHEAT BOARD: STOCKS(a) OF WHEAT (INCLUDING FLOUR IN TERMS OF WHEAT), STATES, 30 NOVEMBER 1961 TO 1965 (⁰000 bushels)(b)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
1961 . . .	7,701	8,780	965	3,122	3,338	452	24,358
1962 . . .	5,574	6,021	1,333	1,831	2,449	491	17,699
1963 . . .	10,879	7,000	775	1,775	2,221	625	23,275
1964 . . .	7,340	7,490	806	3,048	1,257	472	20,413
1965 . . .	15,265	3,716	862	2,602	1,556	381	24,382

(a) Held at mills, sidings, ports and depots. Excludes new season's wheat received from growers prior to 30 November of years shown. (b) One short ton (2,000 lb.) of flour is taken as being equivalent to 46.3 bushels of wheat.

Particulars of the disposal of wheat during the years ended 30 November 1961 to 1965, as recorded by the Australian Wheat Board, are shown in the following table.

AUSTRALIAN WHEAT BOARD: DISPOSAL OF WHEAT, 1961 TO 1965

('000 bushels)

	Year ended 30 November—				
	1961	1962	1963	1964	1965
Exported as wheat	202,027	152,818	203,703	221,530	243,725
Exported as flour(a)	29,438	25,123	24,903	31,797	23,318
Sold for local consumption as flour	39,814	40,736	40,389	42,954	44,160
Sold for other purposes	15,107	11,635	10,791	13,658	30,556

(a) Includes wheat equivalent of manufactured wheat products exported.

A summary of *all* transactions in wheat for Australia, as distinct from those recorded for the Wheat Board above, appears in the following table.

WHEAT: PRODUCTION AND DISPOSAL, AUSTRALIA, 1961 TO 1965

(f) Subject to additional \$18,069,000 provided by the Commonwealth Government and payment of \$722,000 to Wheat Industry Research Fund.

Details of earlier pools will be found in previous issues of the Year Book.

Imports of wheat

Wheat and flour have been imported in substantial quantities on three occasions since 1900; in 1902-3 the wheat harvest was only 12,378,000 bushels, and wheat and flour equivalent to 12,468,000 bushels of wheat were imported. An equivalent of 7,279,000 bushels was imported in 1914-15 to supplement the yield of 25 million bushels produced in that season. Owing to drought conditions in 1957-58 wheat supplies were insufficient for local requirements and, as a result, 1,485,000 bushels were imported from Canada in 1958. No wheat has since been imported.

Exports of wheat and flour

Statistics in the following three tables are for years ended 30 June and relate to the exports of *Australian produce only*.

WHEAT AND FLOUR: EXPORTS, AUSTRALIA, 1960-61 TO 1964-65

Year	Quantity				Value		
	Wheat	Flour		Total (in terms of wheat)	Wheat	Flour(a)	Total
		As flour (a)	In terms of wheat (b)				
	'000 bushels	short tons	'000 bushels	'000 bushels	\$A.'000 f.o.b.	\$A.'000 f.o.b.	\$A.'000 f.o.b.

(a) Includes Singapore.

World area and production of wheat

The figures in the following table of the world area and production of wheat by principal countries and by continents have been compiled from the statistics published by the International Wheat Council. Harvests in the northern hemisphere occur in the first of the two years mentioned in each column heading, and in the southern hemisphere at the end of that year and the beginning of the next. Harvests of the northern hemisphere countries are thus combined with those of the southern hemisphere which immediately follow; e.g. in 1964-65 the Canadian harvest occurred from August to September 1964 and the Australian harvest from September 1964 to February 1965.

(b) International Wheat Council estimate.

Principal wheat exporting and importing countries

The following table shows world exports of wheat and wheat flour (in terms of wheat) by the major wheat exporting countries, according to continents and countries of primary destination, based on statistics recently published by the International Wheat Council. While Australia's production of wheat averages about four per cent of the world's total, its exports account for a much higher proportion of the total quantities shipped. In 1964-65, for example, Australia's share of world wheat exports amounted to fourteen per cent.

(a) Excludes U.S.S.R., details for which are shown separately.

The above particulars are based on customs clearances of the exporting countries, and relate to years ended 30 June. There is a small difference between Australian exports as shown and those on pages 899-900 since a slightly different factor was used by the International Wheat Council to convert flour to wheat equivalent.

Oats

This cereal is widely grown in all agricultural areas which have autumn, winter, and spring rainfall; it is tolerant of wet conditions and heavy soils. It has excellent feed value and produces a higher yielding crop than other winter cereals. It needs less cultivation, but requires ample fertilizer. Oats has a variety of uses—as a pasture plant when rough sown into stubble or heavy clover pastures, as silage if cut before maturity, as a hay crop when mown and baled or cut for chaff, or as a grain when stripped (the stubble then being grazed off). The grain is sold on a 'fair average quality' basis through voluntary pools in Victoria, South Australia and Western Australia.

Oats area, production and yield per acre

Oats is usually next in importance to wheat among the grain crops cultivated in Australia. However, while wheat grown for grain in 1964-65 accounted for 52 per cent of the area of all crops, oats grown for grain represented only 10 per cent. The area, production and yield per acre of oats in each State are shown below for the years 1960-61 to 1964-65 in comparison with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

(a) 40 lb. per bushel.

Graphs showing the area sown to oats and production of oats in Australia appear on pages 993 and 995 of Year Book No. 49, and a map showing the distribution of areas growing oats for grain throughout Australia in 1962-63 appears on page 1015 of Year Book No. 50. The area sown to oats from 1900-01 is shown in plate 52.

In 1964-65 the production of oats was 70,043,000 bushels, 16,862,000 bushels (19 per cent) below the record harvest of 86,905,000 bushels in 1958-59. The yield per acre in 1964-65 was 20.0 bushels, compared with the record yield of 21.9 bushels per acre established in 1958-59. The lowest yield recorded was 4.4 bushels per acre in the abnormally dry season of 1944-45.

Value of oat crop

The average wholesale price in the Melbourne market for oats of good milling quality was 7s. 8d. (\$0.77) a bushel in 1964-65, compared with 7s. 6d. (\$0.75) in 1963-64. The estimated gross value of the oat crop in each State for the 1964-65 season and the value per acre were as follows.

OATS: VALUE OF CROP, STATES AND A.C.T., 1964-65

—		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.
Aggregate value	\$'000	18,766	16,237	1,005	5,044	9,888	478	31	51,449
Value per acre	\$	22.07	16.80	18.12	11.37	8.58	17.02	20.85	14.71

Exports of oats

The production of oats in Australia is sufficient to allow for an export trade which fluctuates with the incentive offered by overseas prices. The quantities and values of Australian-produced oats exported from Australia during the years 1960-61 to 1964-65 are shown below.

OATS: EXPORTS, AUSTRALIA, 1960-61 TO 1964-65

—		1960-61	1961-62	1962-63	1963-64	1964-65
Quantity	'000 bus.	19,005	19,064	17,744	16,673	20,161
Value	\$A'000 f.o.b.	13,707	14,957	14,152	12,623	15,616

In 1964-65 the principal countries of destination were the Federal Republic of Germany (9,946,000 bushels), China (Mainland) (2,311,000 bushels), Poland (1,283,000 bushels), the Netherlands (1,227,000 bushels), and Italy (1,151,000 bushels). Imports of oats into Australia are not recorded separately.

Oatmeal and other oat products

In 1964-65 the production of oatmeal was 12,517 tons for porridge and 26,810 tons for other purposes. This was equivalent to about 4,405,000 bushels of oats.

World production of oats

The world production of oats for the year 1964, according to figures issued by the United States Department of Agriculture, amounted to 2,910 million bushels, harvested from 75.8 million acres, resulting in an average yield of 38.4 bushels an acre. This compared with an estimated production in the previous year of 3,180 million bushels from an area of 78.4 million acres and an average yield of 40.6 bushels an acre.

Barley

This cereal contains two main groups of varieties, 2-row and 6-row. The former is generally, but not exclusively, preferred for malting purposes. Barley was formerly stubble-sown, but is now grown principally on pasture land worked up early in the year of sowing. In this way it forms an important phase in the rotation of the land. Like oats, it may also be sown for fodder production or for grain. When sown for fodder, sowing may take place either early or late in the season, as it has a short growing period. It may thus provide grazing or fodder supplies when other sources are not available. Barley grain may be crushed to meal for stock (especially pigs) or sold for malting.

Crops sown for malting purposes require well-worked, weed-free paddocks of even soil, and are thus restricted to specific districts. The main barley-growing areas in Australia are situated in South Australia (Murray-Mallee, Eyre and Yorke Peninsulas), but considerable quantities are grown also in New South Wales, Victoria, Queensland, and Western Australia.

Barley boards

The bulk of the barley crop in the various States is acquired and marketed by grower-controlled boards. Pooled returns from sales are distributed to growers at standard rates for the individual grades and varieties delivered. The Victorian and South Australian crops are marketed by the Australian Barley Board (a joint board established by the two State Governments), and the Queensland and Western Australian Barley Boards handle the crops of their respective States. Particulars of the proportion of barley production which was received by the Australian Barley Board (for Victoria and South Australia), together with details of quantity sold, advances and total payments to growers, are presented below.

**AUSTRALIAN BARLEY BOARD: BARLEY RECEIVED, SOLD, ETC.
1960-61 TO 1964-65**

Pool	Quantity received	Quantity sold(a)	Total advances made per bushel on 2-row No. 1 Grade less freight	Total net payments to growers
	'000 bushels	'000 bushels	\$	\$'000
No. 22 (1960-61 Crop)	44,624	44,680	0.9272	33,978
„ 23 (1961-62 „)	20,081	20,059	1.1607	19,414
„ 24 (1962-63 „)	17,195	17,285	1.1563	16,666
„ 25 (1963-64 „)	23,145	23,204	1.1862	22,446
„ 26 (1964-65 „)	25,465	25,267	b 1.1000	22,714

(a) Includes surplus or shortage in out-turn, except for No. 26 Pool for which the surplus has not yet been ascertained. (b) As at 31 January 1966. At that date it was estimated that the amount still to be paid to growers was 7.754 cents per bushel.

Barley area, production and yield per acre

There was a substantial increase in the area of barley sown for grain (particularly in Western Australia and Queensland) in the years up to 1960-61, and in that year the area sown reached the record level of 2,830,000 acres. However, the area sown in 1964-65, 2,064,000 acres, was 27 per cent less than the area in 1960-61. The production of barley for grain in 1964-65, 49,315,000 bushels, although 14 per cent more than production in 1963-64, was 27 per cent less than the record production of 67,970,000 bushels in 1960-61. The area, production and yield per acre of barley for grain in the several States for the years 1960-61 to 1964-65, compared with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table. Separate details for 2-row and 6-row varieties are shown for all States for 1964-65.

(a) 50 lb. per bushel.

For Australia, 80 per cent of the area of barley for grain in 1964-65 was sown with 2-row barley, while the remainder consisted of 6-row varieties. The proportion, however, varied considerably in the several States. The utilization of barley during the season ended November 1965 was as follows: exports, 16,360,000 bushels; malting and distilling, 13,000,000 bushels; pearl barley, 148,000 bushels; seed, 3,000,000 bushels.

The following table sets out the acreage and production of 2- and 6-row barley in Australia during the seasons 1960-61 to 1964-65 and the averages for the three years ended 1938-39, 1948-49 and 1958-59.

**BARLEY FOR GRAIN, 2- AND 6-ROW: AREA AND PRODUCTION
AUSTRALIA, 1936-37 TO 1964-65**

Period	Area (^{'000} acres)			Production (^{'000} bushels)(a)			Yield per acre (bushels)(a)

(a) 50 lb. per bushel. (b) Excludes Tasmania.

A graph showing the production of barley in Australia since 1935-36 appears on page 995 of Year Book No. 49, and a map showing the distribution of barley growing areas throughout Australia in 1962-63 appears on page 1014 of Year Book No. 50.

Value of barley crop

The average wholesale price for 2-row English malting barley in the Melbourne market was 14s. 8d. (\$1.47) a bushel in 1964-65, compared with 15s. 1d. (\$1.51) in 1963-64. The estimated gross value of the barley crop in each State for the 1964-65 season and the value per acre are shown in the following table.

BARLEY FOR GRAIN: VALUE OF CROP, STATES, 1964-65

—		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
Aggregate value.	\$'000	8,294	4,828	7,688	30,135	3,939	736	55,620
Value per acre	\$	34.71	25.83	34.12	27.53	13.02	47.55	26.95

Exports of barley

South Australia was the principal exporting State in 1964-65, and Japan, Italy, the Netherlands, the United Kingdom, and the Federal Republic of Germany were the principal countries to which barley was shipped. Particulars of exports of Australian produced barley for the years 1960-61 to 1964-65 are shown in the following table.

BARLEY: EXPORTS, AUSTRALIA, 1960-61 TO 1964-65

—		1960-61	1961-62	1962-63	1963-64	1964-65
Quantity	'000 bus.	33,900	31,435	10,322	17,756	16,281
Value	\$.A.'000 f.o.b.	28,657	29,908	10,458	18,298	18,002

In addition to exports of barley grain, there are also exports of Australian pearl and Scotch barley, the total for 1964-65 amounting to 496,424 lb., valued at \$17,032, the main country of consignment being Malaysia. Imports of barley into Australia are not recorded separately, but are considered to be negligible.

Barley malt

Details of the quantity of grain used and the production of barley malt in the years 1960-61 to 1964-65 are given in the following table.

BARLEY MALT: GRAIN USED AND MALT PRODUCED, AUSTRALIA
1960-61 TO 1964-65

—		1960-61	1961-62	1962-63	1963-64	1964-65
Grain used	'000 bus.(a)	9,090	10,445	10,229	12,036	11,802
Malt produced	'000 bus.(b)	9,015	10,207	10,429	11,988	12,127

(a) 50 lb. per bushel.

(b) 40 lb. per bushel.

Since 1952-53 the production of malt in Australia has been sufficient to meet local requirements and to provide a margin for export. Exports of Australian produce amounting to 4,076,000 bushels (value \$7,808,000) and 4,058,000 bushels (value \$7,842,000) were recorded in 1963-64 and 1964-65 respectively.

World production of barley

In comparison with the barley production of other countries that of Australia is extremely small. The main producers in 1964 were the Union of Socialist Soviet Republics, the United States of America and the United Kingdom. China is also normally a major producer, but details for 1964 are not available. Australian production in that year was approximately 1 per cent of the world total.

According to estimates made by the United States Department of Agriculture, world production of barley in the year 1964 amounted to 4,080 million bushels harvested from 156.8 million acres, equivalent to a yield per acre of 26.0 bushels. This compared with the production of 4,075 million bushels in the previous year from 162.1 million acres, and a yield per acre of 25.1 bushels.

Sorghum

Grain sorghum is a summer-growing annual palatable to stock, and more drought- and frost-resistant than maize. It requires a summer rainfall. The growing of this crop for grain on an extensive scale is a comparatively recent development in Australia, and, as with other cereals, operations are highly mechanized.

The climatic conditions of Queensland and northern New South Wales are particularly suited to the growing of sorghum, and development has so far been restricted mainly to these areas, more particularly to Queensland. The grain produced is fed to livestock and has become an important source for supplementing other coarse grains for this purpose. Other sorghums are grown in Australia mainly as green fodder, hay and silage (sweet sorghums and Sudan grass) and for the production of brush for broom manufacture (broom millet). In Queensland the growing of grain sorghum is concentrated in the Burnett, Dawson-Callide areas and in the central highlands. In New South Wales the north western slopes and Murrumbidgee Irrigation Area are the main areas. This crop is also suitable for the semi-tropical areas of the Northern Territory and the Kimberleys.

Particulars of the area and production of sorghum grown for grain in recent years are given in the following table.

**GRAIN SORGHUM: AREA, PRODUCTION AND YIELD PER ACRE, STATES
1960-61 TO 1964-65**

Year	Area			Production(a)			Yield per acre(a)

1960-61 .	41,145	213,761	255,109	577	5,418	5,996	14.0	25.3	23.5
1961-62 .	70,134	292,397	362,666	1,308	8,054	9,361	18.6	27.5	25.8
1962-63 .	80,255	311,068	391,334	1,891	8,361	10,252	23.6	26.9	26.2
1963-64 .	61,203	303,857	365,708	1,269	6,612	7,889	20.7	21.8	21.6
1964-65 .	51,699	292,769	345,737	1,270	5,883	7,164	24.6	20.1	20.7

(a) 60 lb. per bushel. Production in New South Wales and Queensland harvested from crop sown in previous year. (b) Includes small areas sown and quantities produced in other States.

Maize

Like sorghum, maize is a summer cereal demanding specific soil and climatic conditions. For grain, it is grown almost entirely in the south-east and Atherton Tablelands of Queensland and the north coast and northern tablelands of New South Wales. On the Atherton Tablelands in Queensland, and generally in New South Wales and Victoria, it provides a stock feed for dairy cattle, fat stock and pigs. In times of drought it is used also as a sheep feed. In all States except South Australia, however, this crop is grown to some extent for green fodder and silage, particularly in connection with the dairying industry. There is practically no difference between grain and fodder varieties.

There has been a considerable increase in recent years in the growing of maize from hybrid strains of seed. Varieties have been developed which are capable of producing yields per acre considerably in excess of the older open pollinated types. The expansion in areas sown to hybrid maize has led to a parallel development in the specialized industry of growing hybrid strains for seed.

Maize area, production and yield per acre

The area, production and yield per acre of maize for grain in each State for the years 1960-61 to 1964-65 compared with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are given in the following table. Separate details for hybrid and other varieties are shown for all States except Western Australia for 1964-65.

(a) Not available for publication. (b) Incomplete. (c) Included in Other maize. (d) 56 lb. per bushel. Production in New South Wales and Queensland harvested from crop sown in previous year.

The average yield for Australia for the five-year period ended 1964-65 was 33.5 bushels per acre. Among principal producing countries, the United States of America averaged 62.1 bushels per acre and the U.S.S.R. 28.6 bushels for 1964.

Value of maize crop

The average wholesale price of maize in the Melbourne market in 1964-65 was 18s. 11d. (\$1.89) a bushel compared with 18s. 9d. (\$1.88) in 1963-64. The estimated gross value of the crop in each State for the 1964-65 season and the value per acre were as follows.

MAIZE FOR GRAIN: VALUE OF CROP, STATES, 1964-65

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
Aggregate value . . . \$'000	2,949	213	6,837	9,999
Value per acre . . . \$	70.79	90.52	40.62	47.09

Exports of maize and maize products

Exports of Australian-produced maize for the years 1960-61 to 1964-65 are shown hereunder.

MAIZE: EXPORTS, AUSTRALIA, 1960-61 TO 1964-65

	1960-61	1961-62	1962-63	1963-64	1964-65
Quantity '000 bus.	3	2	552	14	20
Value \$A'000 f.o.b.	8	6	480	27	42

The increase in exports of maize in 1962-63 was due principally to the shipment of 474,000 bushels to Japan, a country to which there had been no previous exports. Imports of maize into Australia are not recorded separately, but are considered to be negligible.

World production of maize

According to figures issued by the United States Department of Agriculture, world production of maize in the year 1964 amounted to 7,735 million bushels, harvested from 244 million acres, giving an average yield per acre of 31.7 bushels. This compared with production in the previous year of 8,030 million bushels from 245 million acres, and an average yield of 32.7 bushels per acre.

The United States of America is the most important maize-producing country in the world, and during the three years ended 1964 the area sown to maize in that country averaged 58 million acres or 24 per cent. of the world total. During the same period production averaged 3,759 million bushels or 49 per cent. of the world total.

Rice

The principal rice-growing areas of the world are confined almost entirely to Asia, although limited quantities are grown in other countries. In Australia rice was first cultivated at the Yanco Experimental Farm in New South Wales, but it was not grown commercially until 1924-25, when 16,240 bushels were produced from 153 acres. Favoured by high average yields and protected by tariff, rice culture made rapid progress in the Murrumbidgee Irrigation Area until local requirements were met and a surplus became available for export. The acreage sown in this area is controlled, as the quantity of water available is limited.

Until recent years rice-growing in Australia was practically confined to the Murrumbidgee Irrigation Area in New South Wales. However, there is now some experimental rice-growing in Western Australia and the Northern Territory, but particulars are not available for publication. Small quantities have also been produced in Queensland in some years. The bulk of Australia's exports of rice in 1964-65 was shipped to Papua and New Guinea, the Pacific Islands and the United Kingdom. Details relating to area, production, and Australian-produced exports for the years 1960-61 to 1964-65 are shown in the following table.

RICE: AREA, PRODUCTION AND EXPORTS, AUSTRALIA(a)
1960-61 TO 1964-65

Year	No. of holdings growing rice(b)	Area	Production (paddy rice)		Average yield (paddy) per acre	Exports(c)	
			Quantity	Gross value(d)		Un-cleaned	Cleaned
		acres	'000 bushels (e)	\$'000	bushels (e)	cwt.	cwt.
1960-61	787	46,117	6,001	8,250	130.1	359,440	876,175
1961-62	878	50,185	7,045	7,664	140.4	280,540	748,920
1962-63	956	54,929	7,129	7,676	129.8	239,820	905,580
1963-64	1,033	59,398	7,455	7,912	125.5	198,820	918,340
1964-65	1,074	61,617	8,030	8,529	130.3	216,240	1,058,080

(a) Particulars of area and production for Western Australia and the Northern Territory are not available for publication, and are excluded. (b) Twenty acres or more in area. (c) Imports into Australia are not recorded separately, but are considered to be negligible. (d) Excludes the value of straw. (e) 42 lb. per bushel.

Fodder crops

Hay

Because of the comparatively unreliable nature of rainfall in Australian agricultural and pastoral areas, hay as a fodder crop occupies a position of importance. In 1964-65 hay represented 8 per cent of the total area of crops. Up to 1946-47 hay, in terms of area, was second only to wheat for grain, but in more recent years it has been supplanted by green fodder (for feeding-off) and oats for grain. Hay is generally considered to include cereal hay, meadow hay and lucerne hay. Cereal crops cut early for hay contain a higher level of protein than those cut late.

In most European countries hay is made almost entirely from meadow pastures, but in Australia a very large proportion is made from cereals and lucerne, the hay being stored loose, in sheaves or baled. Because of its bulk, hay is usually produced for individual or local use, except in times of drought, when large inter-regional transfers may take place. Meadow hay requires greater care in preparation than cereal hay. Baling must be spaced carefully behind mowing to ensure that the bales are dry enough to prevent moulding, but not so dry as to result in excessive leaf loss. The leaves contain the bulk of the protein. Lucerne hay requires similar attention.

The area, production and yield per acre of hay of all kinds in the several States during the years 1960-61 to 1964-65 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown below.

Plate 52 shows the area under hay since 1900-01.

Information regarding areas cut for hay and varieties grown in 1964-65 is given in the following table.

**HAY: AREA OF VARIOUS KINDS GROWN, STATES AND TERRITORIES
1964-65
(Acres)**

State or Territory	Oaten	Lucerne	Wheaten	Other	Total
New South Wales	65,832	179,877	61,529	292,583	599,821
Victoria	163,101	80,391	23,221	1,039,653	1,306,366
Queensland	5,896	57,759	3,410	15,354	82,419
South Australia	110,128	43,631	39,777	120,782	314,318
Western Australia	120,993	1,570	38,869	143,178	304,610
Tasmania	13,575	1,151	233	165,297	180,256
Northern Territory	1,280	1,280
Australian Capital Territory	461	1,390	114	1,504	3,469
Australia	479,986	365,769	167,153	1,779,631	2,792,539

For all States and the Territories combined, the proportions of the areas sown to the principal kinds of hay in 1964-65 were 17.2 per cent for oaten, 13.1 per cent for lucerne, 6.0 per cent for wheaten, and 63.7 per cent for other hay.

The following table shows the estimated gross value, and the value per acre, of the hay crop of the several States for the 1964-65 season.

HAY: VALUE OF CROP, STATES AND A.C.T., 1964-65

—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.
Aggregate value . \$'000	25,400	44,063	7,265	8,336	9,287	4,654	154	(a)99,209
Value per acre . \$	42.35	33.73	88.15	26.52	30.49	25.82	44.39	35.53

(a) Includes \$50,000 in the Northern Territory.

Farm stocks of hay

Particulars of stocks of hay held on farms at 31 March for the years 1961 to 1965 are given in the table below.

**STOCKS OF HAY HELD ON FARMS, STATES AND A.C.T.
1961 TO 1965
(Tons)**

At 31 March—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.(a)
1961 .	1,704,486	2,640,249	155,209	648,267	258,859	327,696	12,338	5,747,104
1962 .	1,775,977	1,847,725	231,335	496,564	254,377	305,108	12,241	4,923,327
1963 .	1,609,639	2,197,725	194,948	470,202	273,500	333,650	6,896	5,086,560
1964 .	1,610,063	1,911,475	179,422	547,354	274,812	276,650	5,085	4,804,861
1965 .	1,586,969	2,402,299	145,737	614,451	275,948	414,415	7,606	5,447,425

(a) Excludes the Northern Territory, for which particulars are not available.

Under normal conditions, hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not figure largely among Australian exports. During 1964-65 exports amounting to 4,174 tons, valued at \$171,434, were made, principally to Malaysia, Kuwait and Hong Kong. There were no imports of hay in 1964-65.

Green fodder

Considerable areas are devoted to the growing of green fodder, usually as an adjunct to cereal operations or as a minor crop in irrigation areas. The areas recorded in respect of green fodder include areas of crops cut for feeding to live stock as green fodder or ensilage, together

with areas fed off to stock as green forage. Statistics of green fodder exclude areas which may have been sown with the intention of harvesting for grain, but which, owing to adverse conditions, showed no promise of producing grain or even hay and were fed off to livestock. The principal crops cut for green fodder are oats, wheat and lucerne, while small quantities of barley, sorghum, maize, rye, and sugar cane are also used in this way. In 1964-65 the area under green fodder (5,613,527 acres) consisted of lucerne (2,424,815 acres), oats (2,321,730 acres), wheat (173,348 acres), barley (139,345 acres), sorghum (120,853 acres), maize (28,779 acres), rye (21,471 acres), sugar cane (2,404 acres), and other crops (380,782 acres). Particulars concerning the area of green fodder in the several States during each of the years 1960-61 to 1964-65 are given in the following table.

GREEN FODDER: AREA, STATES AND TERRITORIES, 1960-61 TO 1964-65
(’000 acres)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1960-61	1,691	431	875	744	606	60	..	1	4,408
1961-62	1,830	539	865	787	622	57	1	1	4,702
1962-63	1,900	478	912	928	668	65	..	1	4,952
1963-64	1,974	431	1,011	972	417	71	..	1	4,877
1964-65	2,397	454	1,111	1,135	446	67	1	1	5,614

In the 1964-65 season green fodder ranked second to wheat in area of crops throughout Australia. A graph showing the area sown to green fodder appears on plate 52. The value of these crops is variously estimated in the several States, but the Australian total, excluding Western Australia, may be taken as approximately \$21,000,000 for the 1963-64 season and \$25,000,000 for the 1964-65 season.

Ensilage

Ensilage is produced from herbage compacted tightly to exclude air and kept from contact with air and extraneous moisture to avoid moulding. Fermentation results in a dark mass of high protein and lactic acid content. Molasses may be added to hasten fermentation. Ensilage may be stored in pits or stacks or in constructed silos.

The several State Governments devote a considerable amount of attention to the education of the farming community with regard to the value of ensilage. Monetary aid is afforded in the erection of silos, and expert advice is supplied in connection with the design of the silos and the cutting and packing of the ensilage. Information regarding production and farm stocks of ensilage for the years ended 31 March 1961 to 1965 is given in the following table.

ENSILAGE: PRODUCTION AND FARM STOCKS, STATES AND A.C.T.
1960-61 TO 1964-65

(Tons)

Sugar cane

The growing of sugar cane is restricted to those coastal areas in Queensland and northern New South Wales which have suitable climatic and soil conditions. Considerable areas in more southern coastal districts of New South Wales previously devoted to this crop are now used for dairying owing to the uncertainty of rainfall.

The Bureau of Sugar Experiment Stations in Queensland and the Colonial Sugar Refining Company Limited render useful service to the sugar industry by advocating and demonstrating better methods of cultivation and the more scientific use of fertilizers, lime, etc., and by producing and distributing improved varieties of cane. In common with these two organizations, Sugar Research Ltd., of Mackay, undertakes technological research in raw sugar milling practices.

Sugar agreements and marketing arrangements in Australia

In Year Book No. 37, pages 940-1, a summary is given of the agreement operating between the Commonwealth and Queensland Governments in respect of the sugar industry in Australia. Briefly, the agreement places an embargo on sugar importations and fixes the price of sugar consumed in Australia. The current agreement is for the period from 1 September 1961 to 31 August 1967. The Commonwealth Government appointed a Committee of Enquiry in 1960 to investigate all facets of the sugar and canned fruits industries. The Committee presented its report, publication of which was restricted to a summary of conclusions and recommendations, in 1961. There was no variation of the consequent agreement.

Production of sugar is regulated under the terms of the agreement. At the mill level control is exerted by means of seasonal 'mill peaks' in respect of Queensland mills and a proportionate allowance for New South Wales mills. The combined total equals the estimated requirements of the domestic and export markets. Farm production is regulated according to the limit on the mill which the farm supplies. Up to the end of 1961 exports were limited by the export quota provisions of the International Sugar Agreement, but these provisions have not been operative since then (*see below*).

The Queensland Government acquires the whole of the sugar production of that State and of New South Wales by legislation and private agreement respectively. The net proceeds of all sugar sold are pooled and a uniform price paid to mills. In 1963 a Queensland Government Committee of Enquiry recommended that the industry should expand production to 2.26 million tons (of 94 net titre sugar) by 1965-66, of which New South Wales might produce 132,000 tons. This recommendation has been implemented, although seasonal conditions have so far prevented the attainment of the target.

International Sugar Agreement

The International Sugar Agreement of 1937 was superseded by the International Sugar Agreements of 1953 and 1958. Details of the 1937 and 1953 Agreements were given in Year Books No. 40, pages 881-2, and No. 48, page 936, respectively. The 1958 Agreement, which came into operation on 1 January 1959, established basic export quotas for exporting countries. The British Commonwealth was allocated a total quota, the distribution of which remained a matter for internal arrangement by the countries and territories concerned (*see below*). The Australian quota for 1960 and 1961 was approximately 651,000 tons per annum.

The quota and price provisions of the International Sugar Agreement were subject to review before 31 December 1961. A conference in Geneva in 1961 failed to reach agreement on quota provisions for 1962 and 1963. The conference adjourned with a resolution that it be reconvened if circumstances became favourable for an agreement on quotas. The principal practical effect of the adjournment of the 1961 conference was that former export limitations on participating exporting countries, including Australia, did not apply until such time as agreement on this question was again reached at a resumed session of that conference or at a newly convened conference.

The question of convening a United Nations conference to consider re-introduction of an agreement with quota provisions was deferred at a meeting of the International Sugar Council in April 1963. The 1958 Agreement, in its restricted form, was extended by protocol until 31 December 1965.

A United Nations conference was convened at Geneva in September 1965. The conference did not negotiate a new Agreement but extended the 1958 Agreement, in its currently restricted form, until 31 December 1966. Arrangements for a second session of the conference are being negotiated.

British Commonwealth Sugar Agreement

On 1 January 1953 the British Commonwealth Sugar Agreement became effective. This agreement, which has been extended to 1973, provides for Australia to export to preferential markets a maximum of 600,000 tons per annum. Of the 600,000 tons, 335,000 tons are purchased by the United Kingdom Government at a regularly negotiated price and the balance is sold at world market prices plus tariff preferences where applicable. The negotiated price of £Stg.42 a ton bulk f.o.b. and stowed payable for Australian raws in 1965 has been increased to £Stg.43 10s. a ton for 1966, 1967 and 1968.

Fruit Industry Sugar Concession Committee and sugar rebates

The Fruit Industry Sugar Concession Committee was established by agreement between the Commonwealth and Queensland Governments and administers a fund contributed by the Queensland Government on behalf of the sugar industry.

Until 15 May 1960 a rebate of £2 4s. (\$4.40) a ton of refined sugar used in processing approved fruit products was paid to Australian manufacturers, provided they bought the fresh fruit at prices not lower than those declared by the Committee as reasonable. This was increased to £5 (\$10) a ton from 16 May 1960.

An export sugar rebate is also paid by the Committee to exporters of approved fruit products to ensure that manufacturers do not pay higher prices for the Australian sugar content than the price for which the cheapest imported sugar could be landed duty free in Australia. The Queensland Government is responsible for payment of a similar rebate to exporters of other approved products. Payment of the export sugar rebate in respect of approved fruit products has been made conditional upon such fruit having been purchased at not less than the prices (if any) which the Committee has declared to be reasonable at the time of purchase.

Under the Sugar Agreement for 1961-67 the Queensland Government contributes to the fund \$528,000 annually, reimburses the Committee for the actual expenditure on export sugar rebates, and, by a supplementary agreement operating from 1 September 1962, pays the Committee an additional sum equal to the amount payable by way of domestic sugar rebate in respect of the products exported. Any money remaining in the fund after the payment of rebates and administrative expenses may be used by the Committee for the promotion of the use and sale of fruit products, or for research for the purpose of increasing the yield per acre of Australian fruit, or of obtaining information regarding Australian fresh marketable fruits.

Bulk handling of sugar

The total conversion of the Australian sugar industry to bulk handling and mechanized loading and unloading of raw sugar has now been accomplished, except for the operation of a bagging station specially provided at Townsville to meet the needs of a few oversea customers. Terminals for the bulk loading of sugar were opened at Mackay in 1957, at Lucinda and Bundaberg in 1958, at Townsville in 1959, at Mourilyan in 1960, and at Cairns in 1964. A second storage shed at Bundaberg, a third shed at Mackay and second sheds at Lucinda and Townsville have been opened subsequently. The comparatively small New South Wales sugar industry was converted to bulk handling in 1954. Bulk receiving facilities are in operation at all Australian refineries.

Area of sugar cane

A brief outline of the development of the industry was included in earlier issues of the Year Book (see No. 38, page 985). The area of sugar cane in Australia for the seasons 1960-61 to 1964-65 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table. The areas shown in the table do not include the small acreage cut for green fodder, which in 1964-65 amounted to 2,404 acres. The whole area planted is not cut for crushing during any one season, there being always a considerable amount of young and 'stand-over' cane as well as a small quantity required for plants.

SUGAR CANE: AREA(a), STATES, 1936-37 TO 1964-65

(Acres)

(a) Excludes areas cut for green fodder.

Production of cane and sugar

The production of sugar cane in 1964-65 was at the record level of 15.1 million tons, which was 18.3 per cent above the previous record production in 1962-63. A graph showing the production of sugar appears on page 995 of Year Book No. 49.

In the following table production data relating to cane and raw sugar are shown for the seasons 1960-61 to 1964-65 together with averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

**SUGAR CANE: PRODUCTION OF CANE AND RAW SUGAR, STATES
1936-37 TO 1964-65**

(a) Raw sugar at 94 net titre.

Owing to climatic variations the crop in New South Wales matures in from twenty to twenty-four months, whereas in Queensland a period of from twelve to sixteen months is sufficient. The average yields of cane and sugar per acre for the years 1960-61 to 1964-65 and for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown below. Allowance should be made in interpreting these figures for the disparity in maturing periods noted above.

1964-65 . . .	— 6.6	1,880.0	1,308.1	24.2	554.3	110.4

(a) Includes allowance for estimated sugar content of imported foodstuffs. (b) Includes sugar content of manufactured products exported. (c) Includes refining losses and quantities used in golden syrup and treacle. (d) Includes sugar content of manufactured products consumed.

The quantity of refined sugar used in factories in 1964-65 amounted to 359,690 tons compared with 339,507 tons in 1963-64 and 351,973 tons in 1962-63. Particulars of sugar used in establishments not classified as factories are not available, and consequently these quantities are deficient to that extent. In 1964-65 consumption by factories engaged in the production of jams, jellies and preserved and dried fruit amounted to 72,809 tons, by those producing confectionery, ice cream, etc. to 69,632 tons, by breweries to 49,415 tons, and by factories producing aerated waters, cordials, etc. to 56,226 tons.

Sugar by-products

Industrial chemicals, together with large quantities of molasses, are produced as by-products in sugar mills. Further, during the period 1939 to 1960 building boards were made from the residue of crushed fibre after removal of the sugar content from sugar cane. These boards possessed high insulating and sound absorbing properties which made them particularly suitable for use in walls and ceilings. Early in the period referred to the boards were manufactured almost entirely from crushed fibre residue, the remaining component being non-millable pine, but gradually the pine content was increased until by 1960 fibre residue was no longer being used. The main purpose for which crushed cane fibre residue is now used is furnace fuel in sugar mills.

Sugar prices and returns

The prices of sugar in Australia from 1960 to 1964 (as determined under the Sugar Agreement in Australia—see page 914) and details of net returns for raw sugar from 1960-61 to 1964-65, are shown in the following tables.

SUGAR: PRICES IN AUSTRALIA, 1960 TO 1964

Year	Raw sugar, 94 net titre			Refined sugar		
	Average return per ton received by millers and growers for—			Date of determination	Wholesale price to retailer per ton	Retail price, capital cities per lb.
	Home con- sumption	Exports(a)	Whole crop (a)			
	\$	\$	\$		\$	\$
1960 . . .	125.05	79.95	98.21	14.5.56 to 15.5.60	164.10	0.08
1961 . . .	124.95	75.50	96.43	16.5.60	180.52	0.09
1962 . . .	125.10	82.18	95.98			
1963 . . .	122.00	131.22	127.97			
1964 . . .	120.75	83.89	95.78			

(a) Includes 'excess' sugar.

RAW SUGAR(a): NET RETURNS, AUSTRALIA, 1960-61 TO 1964-65
(Source: The Queensland Sugar Board)

Year	Proportion exported	Net value of exports per ton	Average price per ton for whole crop	Estimated value of crop
	per cent	\$	\$	\$'000
1960-61	59.53	79.95	98.21	135,738
1961-62	57.66	75.50	96.43	133,306
1962-63	67.85	82.18	95.98	177,496
1963-64	64.70	131.22	127.97	220,520
1964-65	67.76	83.89	95.78	186,728

(a) 94 net titre.

The estimated value of the raw sugar produced has been based upon details taken from the audited accounts of the Queensland Sugar Board. The values stated comprise the gross receipts from sales in Australia and overseas, less refining costs, freight, administrative charges, etc., and export charges, but including concessions to the fruit industry and other rebates which in 1964-65 amounted to \$2,652,000. The value thus obtained represents the net market value of all raw sugar sold, which, less the rebates, is divided between the growers and millers in the approximate proportions of 70 per cent and 30 per cent respectively.

Exports of sugar

Particulars of the exports of Australian-produced cane sugar (raw and refined) for each year from 1960-61 to 1964-65 are as follows.

RAW AND REFINED SUGAR: EXPORTS, AUSTRALIA, 1960-61 TO 1964-65

—	1960-61	1961-62	1962-63	1963-64	1964-65
Quantity tons	796,499	843,537	1,145,966	1,116,190	1,269,163
Value \$A'000 f.o.b.	70,144	67,790	91,042	156,512	112,685

Tobacco

This summer-growing annual requires a temperate to tropical climate, adequate soil moisture and a frost-free period of approximately five months. These requirements necessarily restrict its growth to particular areas. These include the Mareeba area (northern Queensland), the neighbourhood of Texas (Queensland and New South Wales border) and near Myrtleford (Victoria). The best quality Australian tobaccos are grown in Queensland. In Australia flue-curing is the main method of drying used.

Marketing

Between 9 May 1941 and 24 September 1948 all leaf was under the direct control of the Australian Tobacco Board, and prices were paid on leaf appraisal. Subsequently the Board was disbanded, and sales have been by open auction through the Tobacco Leaf Marketing Board (Queensland and northern New South Wales) and the Victorian Tobacco Growers Association Ltd. (southern New South Wales and Victoria). In 1964 the Victorian Tobacco Leaf Marketing Board was set up to market the portion of the crop that was formerly sold by the Victorian Tobacco Growers Association Ltd., and in 1965 a Board was established in New South Wales. However, the actual physical handling of New South Wales leaf at auction will continue to be carried out by the Queensland and Victorian authorities.

A stabilization plan for the tobacco growing industry has been agreed between Commonwealth and State Governments. The plan, which will operate initially for four years, commenced with the 1965 selling season. It provides broadly for the establishment of an annual marketing quota of 26 million pounds (green weight) of leaf to be sold under an agreed grade and price schedule providing for an average minimum price, based on a normal crop fall-out, of 104 cents a pound. The overall marketing quota is divided among tobacco producing States, and the State quotas are in turn divided among individual growers.

The plan is administered by the Australian Tobacco Board, constituted under the *Tobacco Marketing Act* 1965 and representative of the Commonwealth, tobacco producing States, growers, and manufacturers.

Central Tobacco Advisory Committee

The Australian Agricultural Council formed the Standing Advisory Committee on Tobacco during 1950. This Committee consisted of representatives of tobacco growers, tobacco manufacturers and the Commonwealth and State Governments. Its main functions were to review the industry and make recommendations on its problems. The Committee was reconstituted by the Agricultural Council during 1952-53. The terms of reference of this committee are given in Year Book No. 47, page 935.

In 1955 the Committee formulated a programme for increased research and advisory activities. The capital costs of establishing this programme were estimated at £168,000 (\$336,000), of which the Commonwealth Government and tobacco manufacturers each agreed to contribute half. Annual contributions are made to a fund by the Commonwealth and State Governments and tobacco growers and manufacturers. A Tobacco Industry Trust Account was established under the *Tobacco Industry Act* 1955 to receive these contributions. The contributions from growers and manufacturers are obtained under the Tobacco Charges Assessment Act and the Tobacco Charges Acts, whose purpose is to provide funds to be used in research and otherwise with a view to fostering and expanding the Australian tobacco industry. This programme commenced in 1956, and since then £1,448,286 (\$2,896,572) has been paid to State and Commonwealth departments for expenditure on tobacco research and extension. The allocation for 1964-65 was £288,738 (\$577,476). As from 1 July 1964 the annual Commonwealth contribution has been increased to one half of approved expenditure from the Tobacco Industry Trust Account; it now incorporates the Tobacco Extension Grant of \$48,000 per annum. In 1961 a Research Sub-Committee was established to review annually scientific programmes and finance in relation to the Tobacco Industry Trust Account and make recommendations to the Central Tobacco Advisory Committee.

Other assistance and research

Details of the recommendations by the Tobacco Inquiry Committee and grants periodically approved by the Commonwealth Government up to 30 June 1953 are given in Year Book No. 40, pages 895-6, and in previous issues.

The Commonwealth Scientific and Industrial Research Organization and the State Departments of Agriculture in the tobacco growing States are carrying out investigations into a wide range of problems involving fundamental research, plant breeding, variety trials, irrigation, disease and pest control, fertilizers, crop rotation, and cultural practices.

Tobacco factories

Manufacturers of Australian cigarettes and tobacco are granted a lower rate of duty on imported tobacco leaf, provided it is blended with a prescribed minimum percentage of Australian leaf. These percentages were increased from 3 per cent for cigarettes and 5 per cent for tobacco in November 1946 to 43 per cent and 40 per cent respectively from 1 July 1962. The percentage applicable to both cigarettes and tobacco from 1 July 1963 was 40 per cent and from 1 July 1964, 41.5 per cent. The rate was increased quarterly from 1 April 1965 to 1 January 1966, from which date onwards it has been set at 50 per cent for both cigarettes and tobacco.

In 1964-65 the quantity of cured leaf used in tobacco factories in Australia amounted to 52 million lb., of which 22 million lb. was of local origin. The balance was imported, chiefly from the United States of America and Rhodesia.

Tobacco area and production

The area of tobacco in 1964-65 was 10.5 per cent below the record area established in 1962-63. Production at 25,839,000 lb. was 24.8 per cent below the record established in 1963-64.

In the following table particulars of the area and production of tobacco are given by States for each of the seasons 1960-61 to 1964-65, together with averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

TOBACCO: AREA AND PRODUCTION, STATES AND N.T., 1936-37 TO 1964-65

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.

1962-63 . . .	2,885	9,447	14,787	..	29	27,148
1963-64 . . .	2,652	14,459	17,231	34,342
1964-65 . . .	2,356	12,080	10,675	25,111

Imports and exports of tobacco

Imports of tobacco and tobacco manufactures into Australia during 1964-65 were valued at \$24.9 million. This included 28.3 million lb. of unmanufactured tobacco valued at \$18.6 million. Exports of tobacco and tobacco manufactures during 1964-65 were valued at \$1,924,616, including Australian produce, \$1,624,294.

Cotton

This annual shrub requires a hot climate and inter-row weed control. Lint (long fibres) is extracted from the seed cotton in the ginneries and is used for yarn. The residue, consisting of linters (short fibres), kernels and hulls (outer seed coat), is treated in oil mills. From linters and kernels are produced such items as short-fibred cotton, cotton seed oil for human consumption and industrial purposes, and meal cakes for stock feed. The hulls may be used as fuel.

The production of cotton in Australia was formerly restricted mainly to the coastal river valleys of Queensland. In recent years, however, the Namoi River area of New South Wales has emerged as the predominant growing area, while smaller quantities are grown in the Murrumbidgee Irrigation Area. The Ord River district in Western Australia is also becoming an increasingly important cotton producer. The extension of areas of cotton under irrigation in these regions has resulted in greatly increased yields.

Cotton bounty

For particulars of the *Cotton Bounty Act* 1951 and amendments of 1952, 1955 and 1957, see page 1044 of Year Book No. 49. Under the *Raw Cotton Bounty Act* 1963 the Commonwealth pays a bounty on raw cotton produced and sold for use in Australia at the rate of 13.4375 cents per lb. for Middling 1" White, with premiums and discounts on grades and staples above and below, up to a maximum of \$4 million in any one year. The bounty is for a period of five years from 1 January 1964.

Cotton area and production

The area under cultivation and the production in Australia for the years 1960-61 to 1964-65 are shown on page 921.

COTTON: AREA AND PRODUCTION, AUSTRALIA(a), 1960-61 TO 1964-65

Year	Area sown	Production of cotton(b)			Average yield per acre sown	
		Unginned		Ginned	Unginned	Ginned
		Quantity	Gross value			
	acres	'000 lb.	\$'000	'000 lb.	lb.	lb.
1960-61 . . .	37,048	15,544	1,834	5,540	420	150
1961-62 . . .	28,844	10,948	1,294	3,830	380	133
1962-63 . . .	37,689	15,762	1,876	5,403	418	143
1963-64 . . .	40,938	18,223	2,212	6,570	445	160
1964-65 . . .	37,922	63,009	7,685	17,286	1,662	455

(a) Incomplete; excludes small quantities produced in Victoria, for which particulars are not available for publication. (b) Harvested from crop sown in the previous year.

Consumption of raw cotton

The following table shows details of the availability and actual consumption of raw cotton in Australian factories during each of the five years ended 1964-65. Additional information about the cotton spinning and weaving industries is to be found in the chapter Manufacturing Industry.

RAW COTTON: PRODUCTION, IMPORTS AND CONSUMPTION
AUSTRALIA, 1960-61 TO 1964-65
('000 lb.)

Year	Production	Imports	Total	Consumption of raw cotton
1960-61 .	5,540	41,842	47,382	43,359
1961-62 .	3,830	37,735	41,565	46,517
1962-63 .	5,403	42,543	47,946	51,870
1963-64 .	6,570	56,663	63,233	62,588
1964-65 .	17,286	55,474	72,760	73,404

Peanuts

Peanuts, or groundnuts, are a sub-tropical legume (and hence summer growers), the pods of which mature beneath the surface of the soil. They thus require well drained, light textured soils. At harvest the plant is pulled, wind-rowed, field-cured for two to four weeks, and then threshed to recover the pods. The main products of the industry are nuts, peanut oil, oil cake, and synthetic protein fibre.

The production of peanuts in Australia is confined mainly to Queensland, although small quantities are grown in New South Wales, the Northern Territory and, in some years, Western Australia. Details of the area and production of peanuts are given in the table on page 922 for the years 1960-61 to 1964-65.

PEANUTS: AREA AND PRODUCTION, STATES AND N.T., 1960-61 TO 1964-65

Year	Area (acres)				Production (cwt.)			
	N.S.W.	Qld	N.T.	Aust.(a)	N.S.W.	Qld	N.T.	Aust.(a)
1960-61 . . .	788	41,659	335	42,782	9,578	446,215	1,215	457,008
1961-62 . . .	573	33,131	307	34,011	6,003	292,267	1,343	299,613
1962-63 . . .	395	35,552	(b)	c 35,947	4,258	315,144	(b)	c 319,402
1963-64 . . .	478	44,482	(b)	c 44,960	4,744	455,982	(b)	c 460,726
1964-65 . . .	400	45,554	(b)	c 45,954	4,746	202,369	(b)	c 207,115

(a) Excludes Western Australia, for which details are not available for publication. (b) Not available for publication. (c) Incomplete; excludes Northern Territory.

The gross value of the 1964-65 crop was \$2,204,000 which was approximately \$2,314,000 less than in 1963-64. All production is consumed in Australia. In recent years considerable quantities of peanut kernels have been imported. Total supplies available for consumption in Australia in 1964-65 were 21,400 tons (in shell equivalent), after allowing for a decrease of 800 tons in stock held by the Peanut Marketing Board and exports of 100 tons of peanut products. Supplies were made up of 18,400 tons from Australian production received into store by the Board and 2,300 tons imported.

Flax

Flax for fibre

This crop has a winter-growing season in Australia. The whole plant, after harvesting, is retted and scutched at local mills to recover the linen fibre and tow. The seeds may be sold to oil mills and the refuse used for stock feed.

FLAX FOR FIBRE: AREA AND PRODUCTION
STATES, 1960-61 TO 1964-65

Year	Victoria	W.A.	Australia
Area (acres)—			
1960-61 . . .	430	736	1,166

1960-61 . . .	592	1,176	1,768
1961-62 . . .	514	183	697
1962-63 . . .	648	2,152	2,800
1963-64	318	318
1964-65	1,388	1,388

Flax for linseed

Fibre varieties are uneconomic for seed production, and prior to 1948-49 the growing of flax for linseed oil had not been developed extensively in Australia. Since then, however, action has been taken to develop this industry, the ultimate objective being the production of sufficient linseed to meet Australia's total oil requirements. The main producing areas are the Darling Downs in Queensland, the wheat belt of New South Wales and the western and north-eastern districts of Victoria.

The question of assistance to the industry was investigated by the Commonwealth Tariff Board in 1953, and its conclusions are contained in its Report on *Linseed and Linseed Products* dated 23 October 1953.

FLAX FOR LINSEED: AREA AND PRODUCTION, STATES, 1960-61 TO 1964-65

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Aust.
Area (acres)—						
1960-61	11,823	6,179	75,088	2,115	483	95,688
1961-62	7,266	17,711	34,390	1,513	1,253	62,133
1962-63	11,493	25,232	58,493	1,220	626	97,064
1963-64	15,335	16,240	83,336	1,002	1,588	117,501
1964-65	23,769	9,953	97,092	898	2,135	133,847
Production (tons of linseed)—						
1960-61	1,870	1,013	10,394	218	70	13,565
1961-62	856	6,093	5,187	275	178	12,589
1962-63	2,634	8,180	14,477	290	136	25,717
1963-64	3,722	4,758	20,342	283	411	29,516
1964-65	8,761	2,671	34,175	426	567	46,600

Hops

Hops are grown from perennial rootstocks over deep, well-drained soils in localities sheltered from the wind. The hop-bearing vine shoots are carried upon wire and coir trellises, from which they are later harvested, principally by hand. The green hops are kiln-dried and bleached with sulphur dioxide fumes, following which the cured hops are pressed into bales.

Hop growing in Australia is confined to the Derwent, Huon and Channel areas of Tasmania and the Ovens and King Valleys in Victoria. A small area is also under hops in Western Australia, near Manjimup, but the details are not available for publication.

Production and imports of hops

The production of hops in Australia is insufficient to meet local requirements, and additional supplies are imported to meet the needs of the brewing industry. In the following table details of the production and imports of hops and the quantity of hops used in breweries are shown for each of the years 1960-61 to 1964-65. Exports of hops are negligible and are not recorded separately.

HOPS: PRODUCTION AND DISPOSAL, AUSTRALIA
1960-61 TO 1964-65

Year	Production(a)		Imports	Net available supplies (b)	Quantity used in breweries
	Quantity	Gross value			
	cwt.	\$'000	cwt.	cwt.	cwt.
1960-61	33,099	2,358	991	34,090	40,015
1961-62	32,936	2,484	5,569	38,505	39,064
1962-63	33,629	2,570	1,337	34,966	38,202
1963-64	19,858	1,534	536	20,394	37,033
1964-65	27,893	2,372	9,521	37,414	39,517

(a) Excludes production in Western Australia, for which details are not available for publication. (b) Disregards movements in stocks.

Vegetables for human consumption**Area, production and trade**

Vegetables were initially grown on a large scale near the main cities, where there was ready access to reliable water supplies and to markets. Later, the expansion of irrigation areas and improvement in transport services resulted in their production being extended into many other areas. At present, because of the wide diversity of climatic conditions across Australia, supplies for main city markets are drawn from widely different areas, depending upon the times of maturity of the various crops. Apart from potatoes and onions, which are sold in some States through marketing boards, the bulk of vegetable trading takes place at the metropolitan markets of the cities concerned.

Details of the areas planted and production of individual kinds of vegetables are shown hereunder for the seasons 1962-63 to 1964-65. Certain particulars shown are incomplete in that details for specific vegetables in some States are either not available or are not available for publication. For further information see the bulletin *Rural Industries*. Details of the estimated consumption of vegetables for a series of years ending 1964-65 are given in the chapter Miscellaneous.

FRESH VEGETABLES FOR HUMAN CONSUMPTION: AUSTRALIA 1962-63 TO 1964-65

Vegetable	1962-63		1963-64		1964-65

Processed vegetables

Total production of canned vegetables in 1964-65 amounted to 152,115,000 lb., the principal types produced being green peas (including mint-pro peas), 39,179,000 lb.; green beans, 5,482,000 lb.; baked beans (including pork and beans), 37,123,000 lb.; asparagus, 9,126,000 lb.; beetroot, 24,313,000 lb.; and mushrooms, 6,996,000 lb.

The production of dehydrated vegetables, including split peas, during 1964-65 amounted to 15,091,000 lb., while the production of potato crisps, chips and flakes was 14,818,000 lb.

There has been rapid development in the quick-frozen vegetable industry. Data were collected for the first time in 1957-58, when 13,846,000 lb. of frozen vegetables were produced, made up principally of 10,131,000 lb. of peas and 2,540,000 lb. of beans. In 1964-65 production had risen to 67,254,000 lb., of which 57,040,000 lb. were peas and 9,638,000 lb. were beans.

Exports and imports of vegetables

The quantity and value of overseas exports of pulse and fresh vegetables during 1964-65 were respectively: pulse, 7,310 tons, \$728,034; fresh onions, 2,247 tons, \$177,270; potatoes, 4,715 tons, \$426,924; other vegetables, 5,604 tons, \$842,520. Imports of pulse amounted to 6,197 tons, valued at \$1,035,894, while imports of fresh vegetables in total were 9,959 tons, valued at \$1,946,716.

In 1964-65 exports of vegetables preserved in liquid consisted of: asparagus, 1,007,196 lb., \$261,666; beans (including baked), 390,301 lb., \$58,450; peas, 412,369 lb., \$57,004; tomatoes, 327,873 lb., \$49,854; other vegetables, 512,133 lb., \$101,302.

Potatoes

This crop requires deep friable soils, which in Australia are usually basaltic, alluvial or swampy in origin. Fertilizer requirements, which are generally high, vary with the type of soil. Potatoes are killed by heavy frost, but require only moderate temperatures for growth. Mechanical

planters and diggers are used to a variable extent depending upon a variety of factors including terrain, state of the soil and scale of operations. Seed certification schemes, which operate in all States except Queensland, provide a supply of seed which is free from viral, fungal and bacterial diseases. In Australia potatoes are used almost entirely for human consumption and not for the production of starch or alcohol. They are rarely used as stock feed.

Potatoes

Area, production, and yield per acre. Victoria possesses particular advantages for the growing of potatoes, as the rainfall is generally satisfactory and the climate is unfavourable to the spread of Irish blight; consequently, the crop is widely grown. The principal areas of that State are the central highlands and the south-western and Gippsland districts. Until 1958-59 Tasmania (where production is mainly in the north-west) came next in order of acreage sown, although production exceeded that of Victoria in some of the war years. Since then, however, acreage in New South Wales and Queensland has increased considerably, and there is now a greater area of potatoes in both of these States than in Tasmania. In New South Wales production is chiefly in the tablelands districts.

The area sown, production and yield per acre of potatoes in each State during the years 1960-61 to 1964-65 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown hereunder. A graph showing production since 1935-36 appears on page 996 of Year Book No. 49.

(a) Not available for publication.

(b) Incomplete; excludes Northern Territory.

Potato marketing boards were established in all States except Tasmania under separate State legislation after Commonwealth control of potato marketing under war-time legislation ceased at the end of 1948. The life of the Queensland Board was not extended when its term ended in 1954. The New South Wales Board was voted out by growers in 1956, and the Victorian Board also ceased functioning in that year. The boards in South Australia and Western Australia are the only statutory boards still in operation.

Value of potato crop. The estimated gross value of the potato crop of each State for the 1964-65 season and the value per acre are shown in the following table.

POTATOES: VALUE OF CROP, STATES AND A.C.T., 1964-65

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.
Aggregate value	\$'000	9,578	24,820	8,153	6,048	5,372	6,732	10	60,713
Value per acre	\$	467	754	582	1,153	927	717	625	691

Consumption and exports of potatoes. The annual consumption of potatoes in Australia during each of the three years 1962-63 to 1964-65 amounted to 594,300 tons, 507,700 tons and 469,000 tons respectively or 123.1 lb., 103.1 lb. and 93.4 lb. respectively per head of population. These figures exclude the quantities used for seed, which averaged about 46,000 tons annually over this period. Details showing exports for the years 1960-61 to 1964-65 are given in the following table.

POTATOES: EXPORTS, AUSTRALIA, 1960-61 TO 1964-65

		1960-61	1961-62	1962-63	1963-64	1964-65
Quantity	tons	5,219	4,121	15,819	12,722	4,715
Value	\$A'000 f.o.b.	390	320	850	643	427

The increased exports in 1962-63 and 1963-64 were due principally to increased shipments to Singapore, Ceylon, French Possessions, Pacific Islands, and Hong Kong. Imports of potatoes into Australia are usually negligible, but in 1964-65 they amounted to 5,404 tons valued at \$343,066.

Onions

Area, production and yield per acre. Until recently Australia's onion supply came chiefly from Victoria. However, during the last five years Victorian production has not been as great as formerly, and in 1960-61, and again in 1963-64, it was exceeded by Queensland. The Victorian crop consists almost entirely of brown onions, and the bulk of the crop is grown in a small section of the Western Division of the State, where the volcanic ash soils have been found to be particularly suitable for onion growing on a commercial scale. Most of Queensland's onion production is grown in the Lockyer Valley and also consists mainly of brown varieties. Details of the area, production and yield per acre are given in the following table for the years 1960-61 to 1964-65 together with averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. A graph showing production since 1935-36 appears on page 996 of Year Book No. 49.

Consumption and exports of onions. The consumption of onions in Australia during 1964-65 was 68,700 tons or 13.7 lb. per head of population. Onions are the only root crop, other than potatoes, in which any considerable overseas trade is carried on by Australia. In 1964-65 exports amounted to 2,247 tons, valued at \$177,270, and were shipped mainly to Malaysia, Papua and New Guinea, and New Caledonia. The quantity of exports in 1963-64 was 3,547 tons, valued at \$250,026. Imports of onions amounted to 815 tons, valued at \$74,112 in 1964-65, and 3,035 tons, valued at \$244,020 in 1963-64. The principal country from which onions were imported was New Zealand.

Fruit

The varieties of fruit grown differ in various parts of the States, ranging from pineapples, papaws and mangoes in the tropics to strawberries, raspberries and currants in the colder parts of the temperate zone. In New South Wales citrus fruit (oranges, lemons, etc.) and bananas are the principal crops, although apples, peaches, plums, pears, and cherries are grown extensively. The principal varieties grown in Victoria are apples, pears, peaches, oranges, and apricots. In Queensland apples, pineapples, bananas, oranges, mandarins, peaches, and plums are the varieties

most largely cultivated. In South Australia, in addition to oranges, apples, peaches, apricots, and pears, almonds and olives are grown extensively. In Western Australia apples, oranges plums, and pears are the chief varieties. In Tasmania apples occupy over three-quarters of the fruit-growing area, but small fruit, such as currants, raspberries and gooseberries, are grown extensively, the balance of the area being mainly taken up with pears and apricots.

Oversea marketing of fruits

The *Apple and Pear Organization Act 1938-1964* provides for the establishment of an Australian Apple and Pear Board comprising representatives of growers, exporters, employees, and the Commonwealth Government. A representative in London has also been appointed by the Board. An export levy to meet the expenses of the Board is provided for in the *Apple and Pear Export Charges Act 1938-1960*. The function of the Board is the organization and control of exports of fresh apples and pears, and it has the power to regulate shipments, determine export quotas, allocate consignments from each State, and recommend the licensing of exporters. The Board contributes to apple and pear publicity activities overseas.

The *Canned Fruits Marketing Act 1963*, which was introduced in January 1964, replaced the *Canned Fruits Export Control Act 1926-1959* under which the oversea marketing of canned fruit was initially organized (see Year Book No. 49, page 1050). The Australian Canned Fruits Board, which is constituted under the Act, determines the terms and conditions for oversea sales. The Board exercises this control through a system of export licences. The Board, whose membership was increased from five to eleven members and which was granted greater powers under the 1963 Act, comprises representatives of the Commonwealth Government (one), canners of deciduous fruit (six), growers of deciduous fruit (three), and pineapple interests (one). The Board maintains a London office. The *Canned Fruits Export Charges Act 1926-1963* provides for a levy on exports to meet the Board's expenses, which include contributions to oversea publicity connected with the canned fruit industry. In 1963 an excise duty was imposed by the *Canned Fruits Excise Act 1963* on canned deciduous fruit entered for domestic consumption, and the proceeds of the duty are made available to the Board to assist in the promotion of oversea sales of canned deciduous fruit.

In 1959 the Australian Canned Fruits Sales Promotion Committee was established to promote the sale of canned deciduous fruit on the home market and overseas. The operations of the Committee are financed by a levy on fruit accepted by the canneries for the production of canned fruit. The Committee comprises representatives of growers and processors of canning fruit and a representative of the Commonwealth Government.

Area and production of fruit

The area under fruit in Australia has been increasing steadily in recent years, and new record levels have been reached each year since 1961-62. The following tables set out the area under fruit in the several States.

FRUIT: AREA, STATES AND TERRITORIES, 1960-61 TO 1964-65

Production and consumption of jams and jellies and preserved fruit

In Australia considerable quantities of fruit are used in the production of jams and jellies and for preserving. During 1964-65 output of jams, conserves, fruit spreads, etc. amounted to 90,078,000 lb., while output of preserved fruit amounted to 511,074,000 lb. Of the latter figure, pears accounted for 119,726,000 lb., peaches 203,012,000 lb., and pineapples 54,354,000 lb.

In 1964-65, 7,190,080 cwt of fruit was used in factories classified to the sub-classes Oils, vegetable; Jam, fruit and vegetable canning; Condiments, coffee, spices; Aerated waters and cordials; and Dehydrated fruit and vegetables. Details of the estimated consumption of fruit and fruit products per head of population for a series of years ending 1964-65 are shown in the chapter Miscellaneous.

Imports and exports of fruit and fruit products

The imports of fresh fruit into Australia are negligible, while those of dried fruit consist mainly of dates. A considerable export trade in both fresh and dried fruit is carried on by Australia with overseas countries. The values of the shipments in 1964-65 amounted to \$30,542,000 and \$24,100,000 respectively. Apples constitute the bulk of the fresh fruit exported, although exports of pears and citrus fruit are considerable. Particulars of the Australian export trade in fresh and frozen fruit for each of the years 1960-61 to 1964-65 are shown in the following table.

FRESH AND FROZEN FRUIT: EXPORTS, AUSTRALIA, 1960-61 TO 1964-65

Year	Apples		Pears		Citrus		Total value(a)
	Quantity	Value	Quantity	Value	Quantity	Value	
	'000 bus.	\$A'000 f.o.b.	'000 bus.	\$A'000 f.o.b.	'000 bus.	\$A'000 f.o.b.	\$A'000 f.o.b.
1960-61 . .	5,729	14,642	1,235	4,160	419	1,328	20,738

1963-64 . .	8,212	24,036	1,666	5,294	961	2,986	33,156
1964-65 . .	7,051	20,989	1,461	5,297	1,082	3,382	30,543

(a) Includes exports of all other fresh and frozen fruit.

The quantity and value of oversea imports and exports of dried fruit, other than raisins and currants, for the years 1960-61 to 1964-65 are shown below. Normally the bulk of the imports consists of dates obtained almost entirely from Iraq and Iran. The export figures include particulars of some re-exported dried fruit.

**DRIED TREE FRUIT^(a): IMPORTS AND EXPORTS, AUSTRALIA
1960-61 TO 1964-65**

Year	Imports ^(b)		Exports	
	Quantity	Value	Quantity	Value
	'000 lb.	\$A'000 f.o.b.	'000 lb.	\$A'000 f.o.b.
1960-61	9,178	606	8,199	1,864
1961-62	8,266	628	5,961	1,565
1962-63	8,939	592	6,611	1,905
1963-64	10,262	604	8,555	2,003
1964-65	8,454	601	9,420	1,810

(a) Excludes raisins and currants dealt with separately under Vineyards (see below). (b) Dates and figs only.

Exports of jam and jellies in 1964-65 were 11,006,000 lb., valued at \$1,676,000 f.o.b., compared with 11,774,000 lb., valued at \$1,622,000 f.o.b. in 1963-64. Imports of jams and jellies in 1964-65 were 1,234,000 lb., valued at \$251,000, compared with 1,432,000 lb., valued at \$271,000 in 1963-64.

The total value of fruit preserved in tins or other airtight containers, or pulped, imported into Australia during 1964-65 was \$508,430. Large quantities of fruit preserved in tins or other airtight containers are normally exported from Australia, the quantity recorded in 1964-65 being 102,003 tons valued at \$27,583,558. Exports in 1964-65 were made up principally of peaches (41,489 tons), pears (39,517 tons), fruit salad (6,697 tons), pineapples (4,657 tons), and apricots (4,078 tons). In addition, the exports of pulped fruits during 1964-65 amounted to 1,458 tons valued at \$534,346.

Vineyards

Grapes require a warm to hot climate and a predominantly winter rainfall. Freedom from late spring frosts is essential. They are grown for wine-making, drying and, to a minor extent, for table use. In Australia wine is produced very largely from irrigated crops, as are dried fruits. Some of the better known wine producing areas are the Murray Valley (South Australia and Victoria), Barossa Valley and Southern Vales Areas (South Australia), the Murrumbidgee Irrigation Area and the Hunter Valley (New South Wales), the Mildura, Rutherglen and Stawell districts of Victoria, and the Swan Valley (Western Australia). Nearly all the dried fruit is produced along the River Murray and its tributaries, with small localized areas in the other States.

Area of vineyards

The area under vineyards in the 1964-65 season in Victoria and South Australia constituted 77 per cent of the total area of vineyards. The total area of vines in the several States during each of the years 1960-61 to 1964-65 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table.

VINEYARDS: AREA, STATES, 1936-37 TO 1964-65

(a) Excludes for some years particulars for Northern Territory and Australian Capital Territory, which are not available for publication. There are no vineyards in Tasmania.

Wine industry

Australia produces wine of every type and also brandy. In recent years there has been a distinct trend toward greater consumption and production of unfortified or table wines. Until 1957-58 production of these wines (which include burgundy, claret, riesling, sauterne, and sparkling wines) was less than half that of the fortified varieties (sherries, ports, etc.). By 1964-65 production of table wines reached a volume only 24 per cent smaller than that of fortified varieties.

The *Wine Overseas Marketing Act* 1929-1963 was introduced to place the overseas marketing of wine on an orderly basis. The Australian Wine Board, consisting of representatives from wineries and distilleries, grape-growers and the Commonwealth Government, supervises the sale and distribution of Australian wine exported and recommends conditions under which export licences should be issued. The Board also engages in wine publicity and trade promotion activities both in Australia and overseas. In London the Board maintains an Australian Wine Centre, which is a medium for promoting interest in Australian wines and brandy. It is also a retail shop for the sale of these products. The *Wine Grapes Charges Act* 1929-1957 provides for the imposition of a levy on all grapes used in Australia for the manufacture of wine, brandy and spirit used for fortifying wine. The proceeds of the levy are used to meet the Board's projects in Australia and overseas and to defray the administrative expenses of the Board, which has no other source of income.

Production and consumption of wine

In 1964-65 the total production of wine (beverage and distillation) in Australia was 38.6 million gallons, while total consumption of beverage wine was 13.8 million gallons (1.22 gallons per head of population). Similar particulars for 1963-64 are 37.5 million gallons and 13.4 million gallons (1.22 gallons per head of population) respectively.

The quantities of wine and brandy produced in the several States during the 1960-61 to 1964-65 seasons, together with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59, are shown in the following table.

WINE: PRODUCTION(a), STATES, 1936-37 TO 1964-65
(^{'000} gallons)

1964-65 . . .	1,183,351	1,400,100

(a) Includes New South Wales and Victoria, for which separate details are not available for publication.

Exports and imports of wine and brandy

Exports of wine and brandy in 1964-65 totalled 2,109,139 gallons, of which the United Kingdom received 1,418,837 gallons, Canada 361,789 gallons, New Zealand 79,928 gallons, Hong Kong 26,563 gallons, and other countries 222,022 gallons. Exports of Australian-produced wine for the five years ended 1964-65 are shown in the following table.

WINE: EXPORTS, AUSTRALIA, 1960-61 TO 1964-65

Year	Quantity (gallons)			Value (\$Af.o.b.)		
	Sparkling	Other	Total	Sparkling	Other	Total
1960-61 . . .	11,441	1,884,978	1,896,419	59,572	2,546,158	2,605,730
1961-62 . . .	5,145	1,664,984	1,670,129	34,200	2,737,860	2,772,060
1962-63 . . .	17,245	1,596,887	1,614,132	92,444	2,657,052	2,749,496
1963-64 . . .	10,373	1,527,666	1,538,037	62,118	2,682,108	2,744,226
1964-65 . . .	16,035	1,977,329	1,993,364	96,056	3,427,426	3,523,482

Imports for 1964-65 amounted to 149,818 gallons valued at \$618,342, compared with 117,537 gallons valued at \$466,456 in the previous year. During 1964-65 Italy supplied 65,128 gallons valued at \$190,792, France 33,810 gallons valued at \$231,922 and the Federal Republic of Germany 13,067 gallons valued at \$73,232.

Exports of Australian-produced brandy in 1964-65 amounted to 115,775 proof gallons, valued at \$467,630. Imports of brandy, mainly from France, amounted to 84,383 proof gallons, valued at \$465,130.

Dried vine fruit industries

The dry period from November to March in the lower Murray valley makes this an ideal area for dried vine fruit. Harvesting for drying takes place at the end of summer. The sun-drying process is often accelerated by using a dip of cold potash.

The *Dried Fruits Export Control Act* 1924-1964 was passed to organize oversea marketing of Australian dried vine fruit. The Australian Dried Fruits Control Board, consisting of growers' representatives, members with commercial experience in marketing dried fruits and a Government representative, controls the sale and distribution of dried fruit exports, recommends the licensing of exporters and contributes to dried vine fruit publicity activity overseas. In conjunction with its London office, the Board has improved dried fruit marketing overseas by its system of appraisal, regulation of shipments and advertising. The *Dried Fruits Export Charges Act* 1924-1964 provides for a levy on exports of dried fruit to defray costs and expenses incurred by the Board.

For details of the bulk purchase agreements between the Governments of the United Kingdom and Australia which operated during the period 1946-53 see Year Book No. 40, page 888. From 1 December 1953 exports to the United Kingdom have been on a trader to trader basis.

In June 1963 Australian, Greek and Turkish dried vine fruit interests concluded an agreement to maintain minimum prices for sultanas on world markets. The agreement, which aims at international price stability, is periodically reviewed. A permanent committee of the contracting parties was established in London for the purpose of supervising the working of the agreement, and a sub-committee of the permanent committee was established in Hamburg in 1964.

The Dried Vine Fruits Stabilization Scheme was introduced under the *Dried Vine Fruits Stabilization Act* 1964 to stabilize seasonal returns to growers of currants, sultanas and raisins. Its main features are:

Growers are guaranteed an average return from seasonal sales of currants, sultanas and raisins equal to the average cost of production of each variety less \$10.00 per ton.

The maximum quantities for which returns are guaranteed each season are 13,500 tons of currants, 75,000 tons of sultanas and 11,000 tons of raisins.

Growers are required to contribute to separate varietal stabilization funds when the average return to the industry from seasonal sales of a variety exceeds cost of production by more than \$10.00 a ton, with a limit on such contributions of \$20.00 a ton.

When the quantity received for packing in any season does not reach 8,000 tons of currants, 50,000 tons of sultanas or 6,000 tons of raisins, growers are not required to contribute to the stabilization fund for the variety concerned.

Contributions are to be made by the Commonwealth to raise average returns to the guaranteed price when there is insufficient industry money in a stabilization fund for this purpose.

Limits are set to accumulation of money in the stabilization funds. These are \$1,000,000 in the case of both the currant and raisin stabilization funds, and \$4,000,000 in the case of the sultana stabilization fund.

Where these limits are exceeded during the operation of the scheme, the excess will be used first to reimburse the Government for any contribution it may have made to a fund; any balance will be repaid to growers on a first-in first-out basis.

The scheme is to operate for five years. At the end of the fifth year any credit balance in the stabilization funds will be used, in the first instance, to reimburse the Government for unrepaid contributions (if any). If the scheme is not renewed any remaining money will be returned to growers.

Growers' contributions for the scheme are collected under the *Dried Vine Fruits Contributory Charges Act* 1964 and the *Dried Vine Fruits Contributory Charges (Collection) Act* 1964.

Production and disposal of dried vine fruit

As the production of dried vine fruit is far in excess of Australia's requirements, considerable quantities are available for export. Total production during the 1964-65 season amounted to 107,911 tons, while exports for the year ended December 1965 were 77,828 tons, leaving an estimated 30,083 tons available for Australian consumption from that season's production. Australian consumption includes amounts delivered to biscuit manufacturers, bakeries, etc., as well as retail sales for household consumption.

The production of dried vine fruit during each of the seasons 1960-61 to 1964-65 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table.

(a) Includes sultanas and lexias.

The following table shows the exports of dried vine fruit during each of the years 1960-61 to 1964-65.

DRIED VINE FRUIT(a): EXPORTS, AUSTRALIA, 1960-61 TO 1964-65

Year	Raisins, sultanas and lexias		Currants		Total	
	Quantity	Value	Quantity	Value	Quantity	Value
	tons	\$A'000 f.o.b.	tons	\$A'000 f.o.b.	tons	\$A'000 f.o.b.
1960-61 . . .	48,805	14,266	7,838	2,065	56,643	16,331
1961-62 . . .	60,169	17,910	4,564	1,240	64,733	19,150
1962-63 . . .	56,696	16,058	4,208	1,141	60,904	17,199
1963-64 . . .	57,451	17,442	5,512	1,601	62,963	19,043
1964-65 . . .	63,197	20,322	6,532	1,968	69,729	22,290

(a) Excludes quantities exported as mincemeat.

The chief countries importing Australian dried vine fruit are the United Kingdom, Canada, the Federal Republic of Germany, New Zealand and Ireland. The quantities exported to these countries in 1964-65 were 27,029 tons, 17,559 tons, 9,389 tons, 6,701 tons, and 1,962 tons respectively.

Table grapes

Grapes for table use are grown in all States except Tasmania, but the area of this type was only about 8 per cent of the productive area of vines in 1964-65. The quantities of table grapes produced during the season 1964-65 in each State are shown on page 887.

PASTORAL PRODUCTION

Livestock numbers

A detailed account of the various enumerations of livestock in Australia made prior to 1860 was given on page 748 of Year Book No. 35. Since 1860 annual enumerations have been made, based, with few exceptions, on actual collections made through the agency of the State police or by post. Particulars concerning the numbers of each of the principal kinds of livestock in Australia, at decennial intervals from 1860 to 1960, and from 1961 onwards in single years, are given in the following table, and are shown continuously since 1870 on the graph on plate 54 of this Year Book.

LIVESTOCK: AUSTRALIA, 1860 TO 1965

('000)

Year	Horses	Cattle	Sheep	Pigs	Year	Horses	Cattle	Sheep	Pigs
1860 .	432	3,958	20,135	351	1940 .	1,699	13,080	119,305	1,455
1870 .	717	4,276	41,594	543	1950 .	1,057	14,640	112,891	1,123

1930 .	1,793	11,721	110,568	1,072	1965 .	520	18,816	170,622	1,660

While livestock numbers (particularly sheep) have increased substantially since 1860, marked fluctuations have taken place during the period, mainly on account of widespread droughts which have from time to time left their impressions on the pastoral history of Australia. These occurred in 1868, 1877, 1883-84, 1892, 1893, 1895, 1901-02, 1912, 1914, 1918, 1919, 1922-23, 1925-26, 1927-28, 1929-30, 1940-41, 1944-45 to 1946-47, and 1964-65. The years in which the numbers of livestock attained their peaks are as follows: horses, 1919 (2,527,000); cattle, 1964 (19,055,000); sheep, 1965 (170,622,000); and pigs, 1941 (1,797,000).

The distribution throughout Australia of sheep, beef cattle, dairy cattle, and pigs at 31 March 1963 is shown in the maps on pages 1049 and 1050 and facing pages 1082 and 1083 of Year Book No. 50.

The numbers of horses, cattle, sheep, and pigs in each State and Territory are shown later in this chapter. As explained on page 940, since 1964 farmers are no longer asked to classify their herds as either 'beef cattle' or 'dairy cattle'; consequently detailed statistics of cattle from 1964 onwards are not comparable with those for earlier years.

Value of pastoral production

Values of pastoral production are shown for 1964-65 and earlier years in the following tables. Further details of the source of the information and an explanation of the terms used in this compilation will be found in the chapter Miscellaneous. Maintenance costs and depreciation have not been deducted; consequently the net values are inflated to the extent of these amounts.

GROSS, LOCAL AND NET VALUES OF PASTORAL PRODUCTION, STATES AND TERRITORIES, 1964-65

(\$'000)

State or Territory	Gross production valued at principal markets	Marketing costs	Local value of production	Value of materials used in process of production	Net value of production(a)

Indexes of quantum and price of pastoral production, 1960-61 to 1964-65

The quantum indexes shown in the following table relate to gross output of farm products valued at constant prices. The quantities of each farm product produced each year have been re-valued at the unit gross value for the period 1936-37 to 1938-39. The price indexes relate to average 'prices' of farm products realized in the principal markets of Australia. Average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed weights. For further details of the methods of calculating these indexes and of the weights used see the chapter Miscellaneous.

**INDEXES OF QUANTUM(a) AND PRICE OF PASTORAL PRODUCTION
AUSTRALIA, 1960-61 TO 1964-65**

(Base: Average 3 years ended June, 1939 = 100)

—	1960-61	1961-62	1962-63	1963-64	1964-65
Quantum(a) produced—					
Wool	165	174	170	183	183
Other products	136	144	154	158	158
<i>Total, pastoral</i>	152	160	163	172	172
Per head of population	100	104	104	107	105
Price—					
Wool	397	412	449	531	437
Other products	513	433	451	480	496
<i>Total, pastoral</i>	443	421	450	511	460

(a) Index of value at constant prices, i.e. quantities revalued at average unit values of base years 1936-37 to 1938-39.

Sheep

Distribution throughout Australia

With the exception of a short period in the early eighteen-sixties, when the flocks of Victoria outnumbered those of New South Wales, the latter State has occupied the premier position in sheep-raising, depasturing nearly one-half of the sheep of Australia.

A map showing the distribution of sheep in Australia at 31 March 1963 appears on page 1049 of Year Book No. 50. Graphs showing the number of sheep in Australia from 1870 onwards appear on plates 54 and 55 of this Year Book.

SHEEP: NUMBERS IN STATES AND TERRITORIES, 1937 TO 1965

('000)

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Average for three years ended—									
1939 . . .	51,202	17,845	21,889	8,916	8,972	2,460	23	251	111,558
1949 . . .	46,525	17,900	16,442	8,793	10,368	2,060	24	227	102,339
1959 . . .	67,006	26,615	22,537	15,285	15,609	3,259	25	265	150,601
At 31 March—									
1961 . . .	68,087	26,620	22,135	14,952	17,152	3,439	16	278	152,679
1962 . . .	69,498	27,533	22,125	16,415	18,314	3,531	10	286	157,712
1963 . . .	70,021	27,472	22,811	15,737	18,727	3,570	9	279	158,626
1964 . . .	71,764	28,413	24,337	16,403	20,165	3,600	10	289	164,981
1965 . . .	72,396	30,437	24,016	17,289	22,392	3,793	9	290	170,622

Except when affected by drought, the relative numbers of sheep in the different States have remained fairly constant in recent years. The percentage distribution in 1965 was: New South Wales, 43; Victoria, 18; Queensland, 14; South Australia, 10; Western Australia, 13; and Tasmania, 2.

Movement in sheep numbers

The following table shows the approximate movement in sheep numbers in Australia in each year from 1960-61 to 1964-65.

SHEEP AND LAMBS: ANALYSIS OF MOVEMENT IN NUMBERS, AUSTRALIA 1960-61 TO 1964-65

('000)

Year ended 31 March	Numbers at beginning of season	Lambs marked	Net exports	Sheep and lambs slaughtered (a)	Estimated deaths on farms (b)	Numbers at close of season
1961 . . .	155,174	39,792	171	32,582	9,534	152,679
1962 . . .	152,679	45,596	181	33,317	7,065	157,712
1963 . . .	157,712	45,146	247	33,944	10,041	158,626
1964 . . .	158,626	47,818	312	33,240	7,911	164,981
1965 . . .	164,981	47,608	307	33,549	8,111	170,622

(a) Includes an estimate for numbers boiled down.
died before marking.

(b) Balance figure; excludes lambs which

Comparisons of Australian flock numbers with those of certain other principal sheep producing countries are given on page 952.

Classification of sheep according to age, sex and breed

In the following table numbers of sheep in Australia are classified according to age and sex at 31 March.

SHEEP, BY AGE AND SEX: AUSTRALIA, 1961 TO 1965
(^{'000})

Description	1961	1962	1963	1964	1965
Rams, 1 year and over . . .	1,934	1,956	1,979	1,986	2,047
Breeding ewes (including ewes intended for mating) . . .	69,662	70,693	70,936	72,862	75,580
Other ewes, 1 year and over . . .	8,951	8,729	8,878	8,631	8,952
Wethers, 1 year and over . . .	42,912	43,021	44,267	46,203	49,284
Lambs and hoggets, under 1 year	29,220	33,313	32,566	35,299	34,759
Total, sheep and lambs . . .	152,679	157,712	158,626	164,981	170,622

Particulars of the principal breeds of sheep at 31 March 1965 (details are collected on a triennial basis) are shown in the following table.

SHEEP, BY PRINCIPAL BREED: STATES AND TERRITORIES, 31 MARCH 1965
(^{'000})

Breed	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Merino . . .	56,232	14,148	23,655	14,581	20,533	351	9	245	129,754
Other recognized breeds . . .	7,601	7,486	129	1,218	788	2,352	..	13	19,587
Merino comebacks (a) . . .	1,163	2,160	47	284	287	419	..	1	4,361
Crossbreds(b) . . .	7,400	6,643	185	1,206	784	671	..	31	16,920
Total . . .	72,396	30,437	24,016	17,289	22,392	3,793	9	290	170,622

(a) Merino comeback is the progeny of a crossbred Merino ewe and a Merino ram, i.e. finer than half-bred.

(b) Half-bred and coarser.

Imports and exports of sheep

The oversea exports of live sheep from Australia are of comparatively minor importance. On 27 November 1929 the export of stud Merino sheep was prohibited, except with the approval of the Minister for Primary Industry. Exports of sheep are now principally for slaughter overseas. Consignments for this purpose in recent years were made chiefly from Western Australia to Singapore. In 1964-65 the number of sheep exported was 286,205, valued at \$2,411,000 (1963-64, 327,607, valued at \$2,837,000). Since June 1958 an embargo has been imposed on the import of sheep in order to prevent the introduction of the disease blue-tongue.

Cattle

Objects of cattle-raising in Australia

Cattle-raising is carried out in all the States, the main object in certain districts being the production of stock suitable for slaughtering purposes and in others the raising of profitable dairy herds. While dairy cattle are restricted mainly to coastal districts, beef cattle are more widely distributed, particularly in the eastern States, and are raised in areas unsuitable for dairy cattle, such as the tropical area of northern Queensland, the Northern Territory and the Kimberley district in the north of Western Australia.

Distribution throughout Australia

Although cattle numbers declined after 1957 because of drought conditions and heavy slaughtering, they began to rise again in 1960 and in 1964 reached a record level of 19,055,000. Again because of drought in the eastern States, this figure declined to 18,816,000 in 1965.

A graph showing the number of cattle in Australia from 1870 onwards appears on plate 54.

CATTLE: NUMBERS IN STATES AND TERRITORIES, 1937 TO 1965

('000)

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Average for three years ended—									
1939 . . .	3,040	1,861	6,002	324	767	260	882	8	13,144
1949 . . .	3,122	2,153	5,971	443	830	244	1,006	9	13,778
1959 . . .	3,770	2,722	7,177	598	985	367	1,173	10	16,802
At 31 March—									
1961 . . .	4,242	2,864	7,004	561	1,100	394	1,154	13	17,332
1962 . . .	4,399	3,156	7,098	659	1,218	425	1,064	14	18,033
1963 . . .	4,569	3,225	7,233	679	1,298	444	1,087	14	18,549
1964 . . .	4,789	3,301	7,402	694	1,299	450	1,105	15	19,055
1965 . . .	4,619	3,316	7,393	697	1,258	451	1,068	14	18,816

Although the proportion was not as high as it has been in some previous years, Queensland was carrying 39 per cent of the cattle in Australia in 1965. The percentage in each State and Territory during that year was: New South Wales, 25; Victoria, 18; Queensland, 39; South Australia, 4; Western Australia, 7; Tasmania, 2; and Northern Territory, 5.

Maps showing the distribution of beef and dairy cattle in Australia appear on pages 1050 and 1082 of Year Book No. 50, and maps showing the distribution in earlier years were published in previous issues of the Year Book.

Classification of cattle

Following an investigation into the adequacy of the wording and arrangement of the cattle sections of the statistical forms used for recent Agricultural, Dairying and Pastoral Censuses, certain changes were made to the forms used for the Census conducted at 31 March 1964. Prior to 1964 farmers were asked to classify their herds as either 'beef cattle' or 'dairy cattle'. These two terms tended to cause confusion between breed and purpose, and in those instances where vealer production was carried on in association with dairying, farmers were in doubt how to classify part or all of their herds. From 1964 onwards farmers have been asked to classify their cattle according to the two main purposes of (i) milk production and (ii) meat production, irrespective of breed, and to report separately the number of cows and heifers kept for their own domestic milk supply. Consequently detailed statistics of cattle from 1964 are not comparable with earlier figures. However, four broad groupings of cattle are generally comparable with earlier years, and particulars for each year from 1961 to 1965 are shown below.

CATTLE: NUMBERS, AUSTRALIA, 1961 TO 1965

('000)

At 31 March—	Bulls one year and over	Cows and heifers one year and over	Calves under one year	Other	Total

(a) Collected according to this classification for the first time in 1964. See text on p. 940. (b) As at 30 June 1965. (c) Mainly for meat production. (d) Includes vealers, and bull calves intended for service.

For beef cattle and dairy cattle numbers up to 1963 see pages 1056 and 1078 respectively of Year Book No. 50.

Meat research schemes

In November 1965 the Commonwealth Parliament passed legislation providing for the extension of the cattle and beef research scheme to cover beef, mutton and lamb research. Details of the beef research scheme were set out on page 1,050 of Year Book No. 51. Under the new legislation the Cattle and Beef Research Committee will be re-constituted as the Meat Research Committee and its powers and functions will be the same as the former Committee as widened to include mutton and lamb research. The Meat Research Committee will consist of twelve members—seven meat producer representatives, the Chairman of the Australian Meat Board, one representative from the Universities engaged in meat research, the Commonwealth Scientific and Industrial Research Organization, the Australian Agricultural Council, and the Department of Primary Industry. The new Committee will come into being on a date to be proclaimed and the Cattle and Beef Research Committee will cease to exist from that date.

The scheme will be financed from the Livestock Slaughter Levy (see below). The Commonwealth will make a matching contribution on a \$1 for \$1 basis to meet expenditure on research. The research will be conducted by existing bodies such as the Universities, C.S.I.R.O. and State Departments of Agriculture.

The Minister for Primary Industry has approved a beef research programme of just over \$2,000,000 for 1965–66. This is approximately the same amount as in the previous year.

The Livestock Slaughter Levy

The *Livestock Slaughter Act* 1964–1965 imposed a levy on all cattle (over 200 lb. dressed weight), sheep and lambs slaughtered within Australia for human consumption. These levies operated from 1 August 1964 and replaced the charge imposed on meat exports and also included

the cattle slaughter levy for beef research purposes imposed in 1960. (See page 909 of Year Book No. 51 for details.) The proceeds of the levies under the Livestock Slaughter Levy Act are for the purposes of meat market development (including the financing of the operations of the Australian Meat Board) and for research into the technical, scientific and economic problems of the meat industry. The rates of levy are not to exceed 75 cents for cattle, of which a maximum of 20 cents is for beef research, and 7.5 cents for sheep or lambs, of which a maximum of 3.75 cents is for sheep or lamb research.

Imports and exports of cattle

In 1964-65 the number of cattle exported was 9,425, valued at \$835,000 (1963-64, 7,634 valued at \$613,000). The bulk of the animals at present being exported are sent to the Philippines for slaughtering, the number exported thereto in 1964-65 being 4,685 head valued at \$332,000. Prior to June 1958 small numbers of cattle were imported, consisting mainly of valuable animals for stud purposes. Since that date an embargo has been imposed on the import of cattle in order to prevent the introduction of the disease 'blue-tongue'.

Comparison with other countries

The following table shows the number of cattle in Australia and in some of the principal cattle-raising countries of the world at the latest available date.

CATTLE: NUMBERS IN VARIOUS COUNTRIES

Source (for countries other than Australia): *World Agricultural Production and Trade*, United States Department of Agriculture

('000)

Country	Year and month	Number p
India(a)	1962 (May)	236,000
United States of America	1965 (January)	107,152

(a) Includes buffaloes.

Horses

Distribution throughout Australia

About eighty per cent of the horses in Australia are in the States of New South Wales, Victoria and Queensland.

HORSES: NUMBERS IN STATES AND TERRITORIES, 1961 TO 1965

('000)

At 31 March—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

1964.	163	56	206	(a) 25	39	8	38	1	(b) 536
1965.	158	56	201	(a) 24	37	7	36	1	(b) 520

(a) Estimated. (b) See South Australia.

The number of horses in Australia reached a peak of 2,527,000 in 1919. Since then it has declined, because of mechanization of transport and farming, at an average rate of 44,000 a year. A graph showing the number of horses in Australia since 1870 appears on plate 54.

The percentage distribution of the number of horses in each State and Territory for 1965 was: New South Wales, 30; Victoria, 11; Queensland, 39; South Australia, 5; Western Australia, 7; Tasmania, 1; and Northern Territory, 7.

Oversea trade in horses

Exports of horses in 1964-65 numbered 467, valued at \$658,000 (Australian produce 412 for \$408,000, re-exports 55 for \$250,000), made up of horses for breeding (177 valued at \$176,000), horses for racing (226 valued at \$452,000, shipped principally to Hong Kong, Malaysia and New Zealand), and horses for other purposes (64 valued at \$30,000). Horses imported into Australia in 1964-65 (715 valued at \$2,352,000) were mainly from the United Kingdom and New Zealand.

Pastoral products: wool

With about one-sixth of the world's woolled sheep, Australia produces almost one-third of the world's wool and more than half the world's fine-quality Merino wool. The bulk of the production is exported, mainly as greasy wool, although substantial amounts of scoured and carbonized wool, wool on sheep skins and small quantities of semi-manufactured wool are also shipped. The important position held by Australia among the principal sheep and wool producing countries of the world is shown in the table on page 952.

Wool marketing

Details of past wool marketing schemes and agreements, including the 1914-18 War Imperial Purchase Scheme, the British Australian Wool Realization Association Ltd., the 1939-45 War Acquisition Scheme, Joint Organization, and Minimum Reserve Price Plan, are given in previous issues of the Year Book.

More than ninety per cent of the Australian wool clip is disposed of at auction. (During both world wars, however, auction selling was suspended and replaced by bulk purchase schemes.) There are fourteen recognized wool-selling centres, namely Sydney, Goulburn, Newcastle, Albury, Melbourne, Geelong, Ballarat, Portland, Brisbane, Adelaide, Perth, Albany, Hobart, and Launceston. At these centres wool-selling brokers operate large stores where wool received from growers is held awaiting sale.

Each year a wool-selling programme is drawn up jointly by the selling brokers and wool-buyers on the basis of the expected clip. Selling dates and the quantities to be offered are then determined for each centre. Before each sale the selling brokers, who act as agents for the wool-growers, display a representative portion of the wool to be sold on show floors for buyers' inspection and valuation. Auction sales are attended by buyers purchasing on behalf of wool users in more than fifty countries.

Wool Marketing Committee of Inquiry

In 1961 the Commonwealth Government appointed an independent committee to inquire into the marketing and promotion of Australian wool and related matters (*see* Year Book No. 48, page 977, for further details). The Committee presented its report to the Government in 1962. Its most important recommendation was that wool promotion, research and testing should be brought under the control of a single body, which should also act as an advisory authority on wool marketing. This recommendation was implemented under the *Wool Industry Act* 1962, which set up the Australian Wool Board.

Australian Wool Board

This Board consists of a chairman, six woolgrower representatives, three members with special qualifications, and a representative of the Commonwealth Government. The first chairman of the Board was appointed by the Minister for Primary Industry after consultation with the Australian Wool Industry Conference (*see* page 944), but subsequent chairmen are to be appointed on the nomination of the Board. The six woolgrower representatives are appointed by the Minister on the nomination of the Wool Industry Conference, and the three members with special qualifications are appointed from a panel of names submitted by the Conference. The Act provides that the latter members must be experienced in one of the following fields: wool marketing and manufacturing, research, finance, and commerce.

When the Board came into being on 1 May 1963 it took over the functions of the Australian Wool Bureau. On 1 July 1963 the Australian Wool Testing Authority became part of the Board, and on 1 January 1964 the Board took over the functions of the Wool Research Committee. Information on these three former instrumentalities appears in Year Book No. 48, pages 977-81.

Following the organizational changes carried out under the Wool Industry Act, the functions of the Board embrace the following activities.

Wool promotion in Australia and overseas by publicity and other means. Promotion overseas is carried out through the International Wool Secretariat, which is maintained jointly by the Wool Boards of Australia, New Zealand and South Africa.

Provision of a testing service for wool and wool products. This service is administered by a subsidiary board retaining the name Australian Wool Testing Authority.

Administration of wool research. The Board is responsible for preparing annual programmes of research expenditure which are subject to the approval of the Minister for Primary Industry. Two committees established by the Board, the Wool Production Research Advisory Committee and the Wool Textile Research Advisory Committee, assist in this task.

Investigation into all aspects of wool marketing on a continuing basis. The Wool Marketing Committee, an ancillary body appointed by the Board, assists in carrying out this function. The Board is required to report to the Australian Wool Industry Conference on its findings and advise it on measures which should be adopted to meet changing marketing conditions. However, the Board has no executive powers over marketing.

In July 1964 the Board, after an investigation by the Wool Marketing Committee, made recommendations to the Australian Wool Industry Conference for the introduction of a Reserve Price Plan for wool, which were put to woolgrowers in a referendum in December 1965. For details see page 945.

Maintenance and administration of the wool stores which were entrusted to the Board by the Commonwealth Government. Further details concerning these stores appear in Year Book No. 48, page 978.

Other activities approved by the Minister for the benefit of the wool industry, including the operation of the Wool Statistical Service and the registration of wool classers. The Wool Statistical Service (described in more detail in Year Book No. 48, pages 977-8) provides comprehensive statistics on the Australian wool clip, while the registration of wool classers is designed to improve the standards of wool classing in Australia.

At present the main sources of finance for the various activities of the Board are a levy paid by woolgrowers and contributions by the Commonwealth Government.

The Australian Wool Industry Conference

This body was formed by woolgrowers in October 1962 to meet the need for an organization with sufficient authority to speak on behalf of the woolgrowing industry as a whole. It is not a statutory body and consists of twenty-five members each from the Australian Woolgrowers' and Graziers' Council and the Australian Wool and Meat Producers' Federation, and, from October 1965, five members from the Australian Primary Producers' Union. The fifty-five member conference is presided over by an independent chairman.

The Conference makes recommendations to the Commonwealth Government on policy matters concerning the wool industry. Under the Wool Industry Act it is the responsibility of the Conference to nominate woolgrower representatives for appointment to the Australian Wool Board and to prepare panels of names from which the three Board members with special qualifications are selected. Under the Wool Tax Acts (see below) the Conference is also responsible for recommending to the Commonwealth Government what rates of levy should be paid by woolgrowers to finance the activities of the Wool Board.

Wool Levy

Since 1936 a statutory levy has been collected from woolgrowers to finance wool promotion activities. The initial rate of 6d. (5c) a bale was increased at the request of woolgrowers to 2s. (20c) a bale in 1945 and 4s. (40c) a bale in 1952, the latter rate continuing until 1960. Further details regarding the operation of this levy prior to 1957 appear in Year Book No. 48, page 978.

Under legislation passed in 1957 provision was also made for the payment by woolgrowers of a contribution for wool research which was fixed at 2s. (20c) a bale. In 1960 the wool promotion levy was raised to 5s. (50c) a bale, and the following year it was increased further to 10s. (\$1) a bale. The operation of this rate was subsequently extended for 1962-63 and 1963-64.

On 1 July 1964 the basis of collecting the woolgrowers' combined levy for wool promotion and research was changed from the existing unit charge per bale to a percentage of the gross sale value of the wool. The maximum rate was set at 2 per cent and provision was made for annual adjustments to the operative rate, not greater than that maximum, to yield the required amounts. At the same time the levy for wool promotion was increased from 10s. (\$1) a bale to the equivalent of 27s. (\$2.70) a bale, but the levy for research remained unchanged at the equivalent of 2s. (20c) a bale. For 1964-65 the rate for the combined levy for wool promotion and research was set at $1\frac{1}{4}$ per cent and for 1965-66 it was at the full rate of 2 per cent.

The imposition and collection of the combined levy from woolgrowers is governed by six complementary Acts, the Wool Tax Acts (Nos. 1 to 5) 1964 and the *Wool Tax Administration Act* 1964.

Commonwealth Government's contributions to wool research and promotion

Since 1945 the Commonwealth Government has contributed to wool research on a statutory basis. Originally the contribution was equivalent to 2s. (20c) a bale. This was increased to 4s. (40c) a bale in 1957 and has remained unchanged since then.

Until 1964-65 the Commonwealth Government had not contributed to wool promotion, but in that year began contributing at the rate of about \$8,500,000 a year. This was the result of a request in July 1963 from the Australian Wool Industry Conference to the Government for assistance to the Australian Wool Board to finance its vastly increased commitments to the International Wool Secretariat (see page 944) for wool promotion overseas. The Secretariat had announced a five-year plan of expanded wool promotion activities that envisaged an increase in the Australian Wool Board's share of contributions to the Secretariat from its then \$5,000,000 to about \$20,000,000 a year.

The Government agreed in October 1963 to match \$1 for \$1 any increase in the growers' levy for promotion in excess of their current levy of 10s. (\$1) a bale for that purpose. In January 1964 the Conference agreed to increase the growers' levy to the equivalent of 27s. (\$2.70) a bale, which resulted in a Government commitment of 17s. (\$1.70) a bale. In terms of aggregate quantities this commitment required a Commonwealth Government contribution of about \$8,500,000 a year, commencing in 1964-65. This will be reviewed after three years.

Wool Reserve Prices Plan Referendum

On 9 December 1965 a compulsory referendum was held among Australian woolgrowers to decide whether or not they approved a plan of reserve prices for Australian shorn wool sold at auction. The plan originated from recommendations made by the Australian Wool Board to the Australian Wool Industry Conference. The chief object of the plan was to set a limit to extreme short-term falls in wool prices and so protect growers against exceptionally low returns.

The plan envisaged a scheme conducted as an integral part of the existing auction system and administered by a statutory marketing authority with the following financial resources for the buying-in of wool:

- (a) a fund of \$60 million to be provided by woolgrowers over a period of about seven years;
- (b) ready access to \$100 million credit to be provided by trading banks as and when required;
- (c) a Government guarantee to provide such further finance as might be required in excess of the total of \$160 million to be raised by (a) and (b) above, and special funds to be available to finance the administrative costs of the proposed scheme.

The plan provided for reserve prices to be set at conservative levels in accordance with certain criteria. If the commercial bidding on a lot being auctioned did not reach the reserve price, that lot would be bought-in by the marketing authority, with the grower thus receiving a minimum return. The authority would hold the wool until market conditions favoured its re-offer at auction. However, wool would not have been sold below the reserve prices operating at the time.

The Australian Government stated that it was prepared to legislate to implement the scheme, provided it received the approval of the majority of woolgrowers. However, the plan was rejected by 53.4 per cent of the enfranchised woolgrowers who voted at the referendum.

Wool production

Wool as shorn from the sheep contains an appreciable amount of grease, dirt and other extraneous matter, and is termed 'greasy wool'. The quantity of grease and other matter in a fleece differs not only between countries, but between districts in the same country. It fluctuates with the vagaries of the season, and with the breed and the condition of the sheep. To allow for this factor, the weight of greasy wool is sometimes given on a 'clean' basis, i.e. minus the estimated amount of impurities. The net wool fibre content of greasy wool, expressed as a percentage, is termed 'clean yield'.

From 1946-47 to 1952-53 the Australian Wool Realization Commission, and from 1953-54, the Wool Statistical Service, have assessed annually the clean yield of the Australian wool clip. During the period of assessment the clean yield showed a continuous rise up to 1951-52, when it reached 57.5 per cent. It has since fluctuated between 55.8 per cent and 57.7 per cent.

Wool scoured, washed and carbonized in Australia before export, however, has a clean yield somewhat lower than for the whole clip, because the grade of greasy wool treated locally for export as scoured, washed or carbonized includes a large proportion of dirty and low-grade wool. In recent years it has been slightly over 50 per cent. The quantity of this wool exported during 1964-65 was about 10 per cent of the total raw wool exports (excluding wool exported on skins) in terms of greasy. For the clean yield of Australian scoured wools exported a standard factor of 93 per cent is taken.

The production of wool in the States and Territories varies broadly in accordance with the number of sheep depastured and with seasonal conditions which affect clip per head (*see* page 947). In general, however, South Australia obtains from its large-framed Merinos a much heavier fleece per sheep than the Australian average, while Tasmania generally obtains from its predominantly non-Merino flocks a lighter fleece per sheep. In addition, as a result of better management (improved pastures, fodder conservation, better breeding, control of diseases, etc.), the long-term trend has been towards higher fleece weights.

The following table shows details of total wool (i.e. shorn, dead and fellmongered, and exported on skins) produced by each of the States and Territories during the years 1960-61 to 1964-65 compared with averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. A graph showing the production of wool in relation to sheep numbers from 1870 onwards appears on plate 55 of this Year Book.

The bulk of the Australian wool production (about 91 per cent in recent years) is shorn from live sheep. The remainder is obtained by fellmongering (about 2 per cent) or is exported on skins (about 7 per cent). The following table shows details of total wool production according to method of obtaining wool, and also the gross value of wool produced. Gross value is based, for shorn wool, upon the average price realized for greasy wool sold at auction and, for skin wools, on prices recorded by fellmongers and skin exporters.

QUANTITY (GREASY BASIS) AND VALUE OF WOOL PRODUCED AUSTRALIA, 1936-37 TO 1964-65

Period	Shorn (incl. crutchings)	Dead and fell- mongered	Exported on skins	Total production

Classification of wool according to quality

The following table provides a detailed analysis of wool sold at auction, according to quality, for the years 1960-61 to 1964-65. These data are compiled by the Wool Statistical Service on the basis of catalogues of auction sales. 'Quality' ('64's, 60's, 58's,' etc.) is a measure of the fineness and texture of wool for spinning purposes. Broadly, it means the maximum number of hanks of yarn, each of 560 yards length, which can be spun from 1 lb. of combed wool. For instance, wool of 64's quality is of a fineness and texture which will produce 64 hanks, each of 560 yards, from 1 lb. of tops (combed wool) of that particular wool.

**CLASSIFICATION OF GREASY WOOL SOLD AT AUCTION(a): AUSTRALIA
1960-61 TO 1964-65**
(Bales of approximately 300 lb.)

Pre-dominating quality	1960-61		1961-62		1962-63		1963-64		1964-65	
	Quantity	Per cent	Quantity	Per cent	Quantity	Per cent	Quantity	Per cent	Quantity	Per cent

(a) All greasy wool sold at auction except 'wool re-offered account buyer'.

Price and value

During 1964-65 the price of greasy wool sold in the selling centres of Australia averaged 47.8c per lb. compared with the average price of 58.1c per lb. in 1963-64 and 49.2c per lb. in 1962-63. These prices are as compiled by the National Council of Wool Selling Brokers and represent the average price realized for all greasy wool, of whatever type or quality, marketed during the years indicated.

Fluctuation in Australian wool prices has a marked effect on the nation's rural and national income. In 1945-46 the gross value of wool production was £58,597,000 (\$117,194,000), representing 17.4 per cent of the gross value of production of all rural industries, while in 1950-51, when prices reached a peak, wool was valued at £651,902,000 (\$1,303,804,000) or 55.6 per cent of the total value of production for all rural industries. The value of wool production fluctuated considerably in subsequent years. In 1964-65 it was £420,276,000 (\$840,552,000), 24.3 per cent of the gross value of production of rural industries.

¹(a) Includes shorn, dead and fellmongered wool and wool exported on skins.

Stocks of wool

Stocks of raw wool held in Australia at 30 June 1965 amounted to 310.7 million lb. (greasy basis), of which 66.3 million lb. (45.3 million lb. as greasy and 21.0 million lb. as scoured and carbonized) were held by woollen mills, wool scourers and fellmongers, and 244.4 million lb., assumed to be all greasy, were held by brokers. Of the wool held by brokers, 85.8 million lb. were unsold wool and 158.6 million lb. were sold wool held awaiting shipment. These stocks exclude wool on skins, since this wool is not recorded as production until fellmongered in Australia or exported on skins.

Consumption of wool

Statistics of raw wool consumption published in recent years for the purposes of broad international comparisons are based on the quantities of scoured or carbonized wool used on the woollen and worsted systems (mill consumption), plus quantities used in such processes as felting. Consumption estimates compiled on this basis have obvious defects, as they disregard overseas trade in semi-processed wool (e.g. tops and yarns) as well as woollen goods. Estimates of raw wool used on the woollen and worsted systems and by felt manufacturers in Australia are shown in the following table for the years 1960-61 to 1964-65.

ESTIMATED CONSUMPTION OF RAW WOOL IN AUSTRALIA, 1960-61 TO 1964-65
('000 lb.)

Year	Greasy basis			Clean equivalent		
	Used on woollen and worsted systems	Used for felt manufacture (including hats)	Total	Used on woollen and worsted systems	Used for felt manufacture (including hats)	Total

1961-62 . . .	117,555	4,328	121,883	70,682	2,056	72,738
1962-63 . . .	120,238	3,868	124,106	72,295	1,837	74,132
1963-64 . . .	126,678	3,568	130,246	75,688	1,695	77,383
1964-65 . . .	120,676	2,392	123,068	72,102	1,136	73,238

As considerable quantities of tops, noils and yarn are exported from Australia, the series on raw wool consumption shown above is over-stated to this extent. The series entitled 'Estimated consumption of processed wool in Australia' provides a more reliable indication of wool consumption in Australia, as allowance has been made for exports of wool in semi-processed form. This series is shown in the following table for the years 1960-61 to 1964-65. Briefly, the series measures consumption of wool in terms of yarn used in Australian mills and other factories to produce woollen cloth and other woollen goods, yarn used for hand knitting purposes, and scoured wool used for felt manufacture. No allowance has been made for oversea trade in woollen piece goods, clothing, etc., because of the obvious difficulties of estimating accurately the wool content of these products.

Quantities of wool exported

Of the total shipments of greasy and slipe wool in 1964-65, 32 per cent went to Japan, 14 per cent to the United Kingdom, 9 per cent to France, 8 per cent to Belgium-Luxembourg and 7 per cent to Italy.

Value of wool exported

The value of wool (other than wool on sheepskins) exported from Australia during 1964-65 was 31 per cent of the total value of exports of merchandise of Australian origin, while the proportion for the five years ended 1964-65 averaged 34 per cent. The value for the five years ended 1964-65, together with the principal countries to which wool was exported, is shown in the following table.

(a) Excludes re-exports and wool exported on sheepskins.

World sheep numbers and wool production

The following table shows particulars of the woolled sheep numbers and total production of wool, in terms of greasy, in the principal wool-producing countries of the world, together with estimates of world production of merino, crossbred, and carpet type wool for the latest available years.

In 1964-65 Australia produced 31 per cent of the world total of all types of wool, the share of all British Commonwealth countries combined representing approximately 47 per cent. The principal wool producers, other than Australia, were New Zealand with 11 per cent of the world total, Argentina, 7 per cent, South Africa, 5 per cent, and United States of America, 5 per cent. Production in the U.S.S.R., China and eastern European countries together amounted to 19 per cent. World production of wool (all types) in 1964-65 exceeded the average for the years 1934 to 1938 by approximately 1,872 million lb. or 49 per cent.

Australia's wool clip is predominantly merino. New Zealand and Argentina produce mainly crossbred wool, while the clip of the U.S.S.R. is largely of the carpet type. World production of merino wool in 1964-65 was 43 per cent above the average for the years 1934 to 1938, and the production of crossbred types has risen by about 72 per cent. Carpet wool production has risen by about 29 per cent.

Principal importing countries and sources of supply

The following table, prepared from information published by the Commonwealth Economic Committee, furnishes, in respect of the principal importing countries, details of their production and imports of wool for 1964 together with the chief sources of supply. The quantities imported refer to the actual weight of wool, without distinguishing between greasy and scoured, except in the case of the United States of America, where estimated clean content of raw wool is quoted.

PRINCIPAL WOOL IMPORTING COUNTRIES AND SOURCES OF SUPPLY, 1964

United States of America(c) . .	287	43.8	61.7	35.2	19.0	52.3	212.0

(a) Greasy basis, 1963-64. (b) Actual weight of greasy and scoured wool. (c) Imports are in terms of estimated clean content of greasy and scoured wool. Actual weight of total United States of America imports was 283.1 million lb.

As a considerable transit trade exists between European countries, it must not be assumed that the whole of the imports recorded by these countries is retained for their own consumption. The countries chiefly concerned with the transit trade are the United Kingdom and Belgium.

Pastoral products: meat

Australian Meat Board

The Australian Meat Board, which was re-constituted under the *Meat Industry Act 1964*, is the body responsible for controlling the external marketing of Australian beef, mutton and lamb. Powers and membership of the Board prior to its re-constitution in 1964 are set out on page 801 of Year Book No. 40. The Board's primary function is to ensure that Australian meat exports are marketed in a manner which will safeguard the long-term interests of the Australian meat industry. It consists of representatives of producers, exporters and the Commonwealth Government, and an independent Chairman.

The Board regulates overseas marketing of Australian meat by means of an export licensing system. It has power of control over the kinds of meat that may be exported by licensed exporters to particular places, or to particular agents and representatives. The Board also has power to undertake measures to promote the sale and consumption of meat both in Australia and overseas, and it may purchase and sell meat in its own right for the purpose of market development. However, the exercise of this power is limited to activities aimed at meeting special marketing problems or circumstances which preclude the effective participation of private traders. The Board may also purchase and sell meat, with the approval of the Minister for Primary Industry, for the purpose of administering any international arrangements to which Australia may be a party. See also *Livestock Slaughter Levy*, pages 941-2.

United Kingdom long-term purchase arrangements

Details of the long-term meat contracts with the United Kingdom from 1939 to 1952 and of the Fifteen Year Meat Agreement (1952-67) are given on page 710 of Year Book No. 41 and in earlier issues. In September 1953 the trade in meat between the United Kingdom and Australia reverted to private traders. The main features of the arrangements were given in Year Book No. 47, page 960. Details of minimum prices operating and deficiency payments received in recent years under private trading appear in Year Book No. 48 (page 973) and No. 50 (page 1068).

Lamb Guarantee Scheme

Since the 1962-63 lamb export season the Australian Meat Board has guaranteed exporters a minimum price on all lambs 36 lb. and under shipped to the United Kingdom. For the 1962-63 and 1963-64 seasons these prices were set at 15c a lb. f.o.b. for the period September to November and 13.8c a lb. for the following three months, December to February. For the 1964-65 and

1965-66 lamb export seasons the corresponding prices were 15.8c a lb. and 14.6c a lb. The higher guaranteed price for the initial period was aimed at stimulating early shipments of lamb, because normally the most opportune time for selling Australian lamb in the United Kingdom market is early in the export season. Any commitment by the Board is payable from moneys accrued in the Lamb Deficiency Payments Account under the Fifteen Year Meat Agreement.

United States-Australia Meat Agreement

In February 1964 the Governments of Australia and the United States concluded an agreement for the regulation of beef, veal and mutton exports from Australia to the United States with the object of promoting the orderly development of the trade in these classes of meat between the two countries. The agreement sought to preserve approximately the current pattern of trade in beef and mutton and to permit Australia to obtain a reasonable share of the expected market growth. Under the agreement Australia undertook to limit its exports of beef, veal and mutton to the United States to 242,000 tons in 1964, 251,000 tons in 1965, and 260,000 tons in 1966. There is provision for this figure to be increased in succeeding years in accordance with the estimated rate of increase in the total United States meat market. The agreement is subject to review every three years and, as appropriate, the established annual rate of increase will be adjusted to apply to the succeeding three years.

In August 1964 the United States Congress passed a Bill providing for the imposition of quotas on imports of beef and veal, mutton, and goatmeat, from all sources, in 1965 and subsequent years, if imports of these items are estimated by the United States Department of Agriculture to equal or exceed 110 per cent of a basic quantity. The basic quantity, 323,840 tons, is approximately the average of imports from 1959 to 1963. This quantity may be increased or decreased in any future calendar year by a percentage equal to that by which the United States average annual commercial production of beef and veal, mutton and goatmeat has changed since the base period 1959-1963. For this purpose the level of domestic production is the average of estimated commercial production for the year in which quotas may be applied and the two preceding years. An increase of 22.7 per cent in the basic quantity was set for 1966, providing for allowable imports of approximately 397,300 tons and an import ceiling, at which quotas would be established, of about 437,000 tons. On the basis of the first official estimate of United States meat imports during 1966, the United States Secretary for Agriculture announced on 30 December 1965 that it would not be necessary to invoke meat import quotas for 1966. However, if a later quarterly estimate in 1966 indicated that the import ceiling would be equalled or exceeded then quotas could be imposed.

Cattle slaughtered

The numbers of cattle slaughtered during each of the years ended June 1961 to 1965 compared with averages for the three-year periods ended June 1939, 1949 and 1959, are shown in the following table.

**CATTLE (INCLUDING CALVES) SLAUGHTERED

Consumption of beef and veal

The highest post-war consumption of beef and veal (including canned beef and veal) was 132.7 lb. per head in 1956-57. With the buoyant overseas market for beef and the high prices ruling in Australia during the following four years, consumption per head fell substantially, and in 1960-61 amounted to only 88.3 lb. In 1964-65 consumption per head was 102.5 lb., consisting of 99.3 lb. carcass weight and 3.2 lb. (carcass equivalent) of canned meat.

(a) Includes carcass equivalent of boneless beef exported and all fresh and frozen meat shipped as ships' stores. (b) Less than 500 tons.

Exports of beef and veal

In 1964-65 chilled beef exports were 116,000 lb. valued at \$35,000, while frozen beef exports amounted to 679,873,000 lb. valued at \$192,369,000.

While beef and veal were previously shipped largely in carcass form, there has been in recent years a substantial increase in the amount of boneless beef exported. From 1958-59 to 1964-65 the quantity of boneless beef shipped exceeded that exported in carcass form. The trade in boneless beef has been developed principally with the United States of America. Since 1958-59 the United States has surpassed the United Kingdom as the principal market for Australian beef exports, the United Kingdom now occupying second place. The total value of beef and veal shipped to these two countries during 1964-65 was \$93,342,000 and \$64,847,000 respectively.

**EXPORTS OF FROZEN AND CHILLED BEEF AND VEAL(a): AUSTRALIA
1960-61 TO 1964-65**

Consumption of mutton and lamb

In 1959-60 consumption of mutton and lamb, at 103 lb. per head of population, showed a rise of approximately 15 lb. per head over the previous year and exceeded that of beef and veal for the first time on record. Subsequently, consumption of mutton and lamb combined has declined each year; since 1962-63 it has been below the consumption of beef and veal. The consumption in 1964-65 was 85.6 lb. per head.

1963-64	149,918	24,752	41,606	7,718	191,524	32,470
1964-65	162,964	29,517	54,132	10,832	217,096	40,349

(a) Actual weight shipped, not carcass equivalent.

The principal customer for Australian frozen mutton and lamb is the United Kingdom, although Japan has become a major buyer of mutton in recent years and in 1964-65 exports of mutton to Greece increased sharply. The exports of mutton and lamb to the United Kingdom in 1964-65 represented 16 per cent and 71 per cent, respectively, of the total quantities exported. Twenty-three per cent of the mutton exported went to Japan and 21 per cent to Greece.

Consumption of meat and meat products

The apparent consumption of meat (including cured and canned meat) and edible offal per head of population in Australia is shown in the table below for the years 1960-61 to 1964-65 in comparison with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

**MEAT (INCLUDING CURED AND CANNED) AND EDIBLE OFFAL AVAILABLE FOR

(a) Carcass weight. (b) Canned weight. (c) Cured carcass weight. (d) Includes offal.

Other pastoral products

Tallow

Details of tallow consumption are collected from the principal factories using tallow. Consumption of inedible tallow in these factories (soap and candle, chemical, pharmaceutical and toilet preparations, and woolscouring works) for the five years 1960-61 to 1964-65 was as follows: 1960-61, 1,158,000 cwt; 1961-62, 1,060,000 cwt; 1962-63, 1,090,000 cwt; 1963-64, 1,079,000 cwt; 1964-65, 1,159,000 cwt. These figures are, however, deficient to the extent that no allowance has been made for small unrecorded amounts used in other types of establishments. Details of edible tallow consumed in factories are not available.

Particulars of exports of edible and inedible tallow of Australian produce are shown in the following table for the five years 1960-61 to 1964-65.

TALLOW: EXPORTS, AUSTRALIA, 1960-61 TO 1964-65

Overseas trade in hides and skins

The value of cattle and horse hides, sheep and other skins, and skin pieces sent overseas during 1964-65 amounted to \$79,534,000, compared with a total of \$91,180,000 in 1963-64 and \$73,420,000 in 1962-63.

Of the total exports of sheepskins with wool during 1964-65, amounting to 185,967,000 lb. valued at \$59,621,000, 120,945,000 lb. valued at \$37,887,000 (64 per cent of total value) were shipped to France, 22,735,000 lb. valued at \$8,218,000 (14 per cent) to Italy, and 13,998,000 lb. valued at \$4,112,000 (7 per cent) to the United Kingdom. In the previous year, also, France received 64 per cent (by value) of all sheepskins with wool exported, Italy 14 per cent and the United Kingdom 7 per cent. The exports of sheepskins with wool during each of the years 1960-61 to 1964-65 were as follows.

EXPORTS OF SHEEPSKINS WITH WOOL: AUSTRALIA
1960-61 TO 1964-65

—	1960-61	1961-62	1962-63	1963-64	1964-65
Number . . . '000	25,883	26,237	26,795	27,913	27,248
Value . . . \$'000	42,858	48,444	55,484	73,696	59,621

In 1964-65 sheepskins without wool to the value of \$167,000 (22 per cent) were shipped to the United States of America; \$164,000 (21 per cent) to France; \$128,024 (17 per cent) to the United Kingdom; \$85,000 (11 per cent) to Germany (Federal Republic); and \$40,106 (5 per cent) to the Netherlands. In 1964-65 a total of 1,459,000 sheepskins without wool were exported, valued at \$761,000. Since 1954-55 the number exported has exceeded two million once only (in 1958-59), and the value has averaged about \$648,000.

The export trade in cattle hides and calfskins during 1964-65 was distributed among the main importing countries as follows: Japan, \$5,598,000; Germany (Federal Republic), \$2,147,000; South Africa, \$1,048,000; Italy, \$1,015,000; China (Mainland), \$852,000; the Netherlands, \$725,000. The total quantity exported was 124,423,000 lb., valued at \$14,423,000.

The exports of furred skins in 1964-65 were valued at \$3,022,000, of which rabbit and hare skins constituted \$1,321,000. The highest total value exported, \$4,026,000, was recorded in 1955-56, when rabbit and hare skins accounted for \$3,421,000. In 1963-64 they accounted for \$1,846,000 out of a total of \$3,783,000. Skins were shipped principally to the United States of America, the United Kingdom, Italy, and Germany, the values shipped to each in 1964-65 being: United States of America, \$2,418,000; United Kingdom, \$268,000; Italy, \$135,000; and Germany (Federal Republic), \$84,000.

The quantity of cattle hides, including calfskins, imported into Australia during the year 1964-65 amounted to 3,452,000 lb. valued at \$451,000. The chief sources of supply are New Zealand and the Pacific Islands.

OTHER RURAL INDUSTRIES: DAIRYING, POULTRY AND BEE-FARMING

The dairying industry

The introduction of cattle into Australia and the early history of the dairying industry are treated in some detail in earlier issues of the Year Book. Australian dairy cattle have shown steady improvement in quality, as demonstrated by yield, over the years. This is attributable to improved breeding, associated with herd recording, and better feeding, resulting from the use of improved pastures. Better farming methods, arising from the development of modern farm machinery and the application of the results of research, have also played a part in the increased yields.

The Australian dairying industry is conducted under conditions ranging from tropical to temperate and Mediterranean type climates, and nowhere is it necessary to house cattle in the winter months. Most Australian dairy cattle are fed only on pasture and pasture products, and this accounts for average yields being somewhat lower than in those countries where stock are fed heavily on concentrated feed. In general, dairy farming is confined to the coastal and near coastal regions where rainfall and topography are favourable. These conditions are found in parts of the eastern, southern and south-western coasts. Inland districts include the lower north-east of Victoria, the south-western slopes of New South Wales, the fertile Darling Downs in Queensland, and the irrigated districts of the Riverina in New South Wales and northern Victoria.

The manufacturing and processing sections of the industry are highly organized and are well advanced technologically. Certain techniques and equipment developed in Australia are being adopted overseas. Dairy experts of the various State agricultural departments give instruction in approved methods of production, and inspect animals, buildings and marketable produce, with the result that a high standard of cleanliness and technology prevails in the industry.

Marketing of dairy products

The export trade is regulated by the terms of the Commonwealth *Customs Act* 1901-1954 and the Commonwealth *Commerce (Trade Descriptions) Act* 1905-1950 and regulations thereunder. This legislation requires that the true trade descriptions, etc. be marked on all produce intended for export, while official inspection ensures the maintenance of purity and quality. Upon request of the exporter the goods are given a certificate by the inspector.

Details of the *Dairy Produce Export Control Act* 1924-1965 and of the Australian Dairy Produce Board constituted under it, were given in earlier issues of the Year Book (see No. 48, pages 999-1000). The administrative expenses of the Australian Dairy Produce Board, and other sundry expenditure, were met from the proceeds of a levy imposed by the *Dairy Produce Export Charges Act* 1964 (see Year Book No. 51, page 1070). In 1965 this Act, together with the *Dairy Produce Levy Act*, 1958 was repealed by the *Butterfat Levy Act* 1965 (see page 961).

Equalization schemes

Reference is made to the butter and cheese equalization schemes in Year Book No. 48, pages 998-9. Particulars of the returns realized on local and oversea sales and of the average equalization rate for the years ended June 1961 to 1965 are given on page 968. Details are also given on page 966 of the wholesale prices of butter and cheese for home consumption as determined by the Commonwealth Dairy Produce Equalisation Committee Ltd.

An equalization scheme for casein similar to that for butter and cheese has been operated since 1952 by the Commonwealth Dairy Produce Equalisation Committee Ltd. Average realizations per cwt under the scheme were 174s. 10.9d. (\$17.491) in 1960-61, 163s. 3.4d. (\$16.328) in 1961-62, 159s. 0.9d. (\$15.908) in 1962-63, 161s. 0.1d. (\$16.101) in 1963-64, and 173s. 9.7d. (\$17.381) in 1964-65. The interim equalization value for 1965-66 has been fixed at \$24.00 per cwt.

Commonwealth subsidies and stabilization plans

Butter, cheese and processed milk products. Under the provisions of the various Dairy Industry Assistance Acts, the first of which was passed in 1942, the Commonwealth Government has provided subsidies on milk supplied for the manufacture of butter and cheese. Subsidies were paid on a seasonal basis prior to 1 April 1946, but from that date have been on a flat rate basis. Subsidies are distributed by the Commonwealth Dairy Produce Equalisation Committee Ltd. through factories to milk producers by payments on butter and cheese manufactured. Subsidy on milk supplied for the manufacture of processed milk products was also payable from 1942 until 30 June 1948, and again from 1 July 1949, to 30 June 1952. The Commonwealth Government

RATIO GRAPH

SHEEP NUMBERS AND WOOL PRODUCTION: AUSTRALIA

1870 TO 1965

provided, under the *Processed Milk Products Bounty Act* 1962, for the payment of a maximum amount of \$700,000 as a bounty on exports of processed milk products in 1962-63. The bounty is to continue under present legislation until 30 June 1967, the maximum amounts made available being \$1,000,000 for 1963-64 and \$800,000 for each subsequent year.

Details of the three five-year stabilization plans which operated up to 30 June 1962 will be found in Year Book No. 49, page 1084.

Under the five-year stabilization plan which came into operation on 1 July 1962 a fixed bounty of \$27,000,000 has been provided for each year of the plan. The bounty is payable on butter, cheese and butterfat products containing 40 per cent or more of butterfat. Bounty is payable on the production of these commodities provided they are taken into equalization.

The Commonwealth Government extended for the full period of the plan the provision whereby it underwrites the final minimum equalized return to butter and cheese factories each year. The actual level at which returns are to be underwritten is to be decided prior to the commencement of each year of the plan. Returns to producers have been underwritten at 40d. (33c) per lb. on commercial butter each year since the inception of the underwriting arrangement in 1958. The principal value underlying this guarantee is that it enables the Commonwealth Dairy Produce Equalisation Committee Ltd. to make a higher initial payment to factories than would otherwise be possible without risk of overpayment.

Under the current plan the Dairy Industry Investigation Committee has been disbanded. This Committee was responsible, during the last five-year plan, for the determination of the cost of efficient production of butterfat. However, this determination is not required for the current plan.

The Australian Dairy Industry Council assumes responsibility for determining domestic wholesale prices of butter and cheese. Under the previous plan it was the responsibility of the Minister for Primary Industry to determine local prices, after consultation with the Council.

Amounts realised on exports of butter and cheese in excess of the f.o.b. equivalent of the guaranteed return have been credited to the Dairying Industry Stabilization Fund, which was established in July 1948 for the purpose of stabilizing returns from exports. During 1951-52 the Stabilization Fund met the deficiency in respect of all exports which did not earn sufficient to meet the basic return to the factory. From 1 July 1952 to 30 June 1957 it was available to the industry to be used, in whatever manner it considered desirable, to make good any deficiency in respect of all exports other than the 20 per cent provided for under the Commonwealth Government's Five-year Stabilization Plan. The Act was amended in 1957 to enable the Board to use the fund for such other purposes as are approved by the Minister for Primary Industry. The amount standing to the credit of the Dairying Industry Stabilization Fund at 30 June 1965 totalled approximately \$4,240,000. The major portion of the fund represents capital and other investments in milk recombining plants now established by the Board in Bangkok, Singapore and Manila.

Whole milk. In addition to the subsidies referred to above, the Commonwealth Government subsidized the production of whole milk consumed directly from 1943-44 to 1948-49. Details of the amounts distributed during each year will be found in Year Book No. 38, page 1031.

Extension, research and promotion of the dairying industry

Dairy Industry Extension Grant. An annual grant of \$500,000, to be expended by State Governments for the purpose of promoting improved farming practices in the dairying industry, was first made by the Commonwealth Government for the five years from 1 July 1948. This assistance was continued for further periods of five years from 1 July 1953 and from 1 July 1958 at the same rate. For the five years from 1 July 1963 the amount of the annual grant has been increased to \$700,000.

Dairy industry research and sales promotion. At the request of the Australian Dairy Industry Council, legislation was enacted in 1958 to provide for a sales promotion campaign for butter and cheese in Australia and also for research into industry problems. The legislation provided for a statutory levy on the manufacture of butter and cheese (the Dairy Produce Levy) which was initially set at rates of $\frac{1}{4}$ d. (.104c) per lb. for butter and $\frac{1}{16}$ d. (.052c) per lb. for cheese, the proceeds being divided equally between research and sales promotion. The rates of levy operative from November 1959 were $\frac{3}{16}$ d. (.156c) per lb. for butter and $\frac{3}{32}$ d. (.078c) per lb. for cheese, of which two-thirds was allocated to sales promotion and one-third to research.

In August 1964 the legislation was amended to include butter powder, at the same rates as for butter, and butter oil and ghee at $\frac{3}{16}$ d. (.065c) per lb. for research and $\frac{3}{32}$ d. (.130c) per lb. for sales promotion. In 1965 the Dairy Produce Levy Act was repealed and replaced by the *Butterfat Levy Act* 1965 which provides for the amalgamation of the three levies into one levy on butterfat used in the manufacture of butter, cheese and related products. The maximum rate of levy in the Act is 60 cents per cwt. of butterfat and the prescribed operative rate is 50 cents per cwt. (22 cents for promotion, 20 cents for administration and oversea market development, and 8 cents for research).

The Commonwealth Government agreed to contribute one half of the costs incurred on approved projects included in the programme of research, with a maximum contribution of \$1 for \$1 against funds raised by way of levy and allocated to research. The sales promotion programme is financed solely by the levy. The following table lists the amounts of levies collected for research and sales promotion during the five years 1960-61 to 1964-65.

DAIRY PRODUCE LEVY: AMOUNTS COLLECTED, 1960-61 TO 1964-65
(\$)

	1960-61	1961-62	1962-63	1963-64	1964-65
Research(a) . . .	233,182	260,000	263,500	264,200	262,800
Sales promotion . . .	466,362	520,000	527,000	528,400	543,000
Total collected(a) .	699,544	780,000	790,500	792,600	805,800

(a) Excludes amounts contributed by the Commonwealth Government.

The scheme is administered by the Australian Dairy Produce Board, which, in respect of research, is advised by a statutory committee, the Dairy Produce Research Committee.

Dairy cattle

For the reasons indicated earlier in this chapter (*see* page 940), farmers are no longer asked to classify their herds according to breed. Commencing with the 1964 census they have been asked instead to classify their cattle according to the two main purposes of (a) milk production and (b) meat production and to report separately the number of cows and heifers kept for their own domestic milk supply. Consequently the statistics shown in the following table are not comparable with those for earlier years.

DAIRY BREED BULLS, AND COWS AND HEIFERS USED OR INTENDED FOR PRODUCTION OF MILK OR CREAM: STATES AND TERRITORIES
31 MARCH 1964 AND 1965

State or Territory	Bulls, dairy breed (a)	Cows and heifers used or intended for production of milk or cream for sale					House cows and heifers (b)
		Cows		Heifers			
		In milk	Dry	1 year and over		Under one year	
				Spring- ing(c)	Other		
1964	99,270	3,078,075		821,286		717,895	218,098
1965—							
New South Wales	19,940	532,323	186,342	191,298		145,533	104,690
Victoria	40,500	873,288	313,550	321,897		309,151	29,154
Queensland . . .	18,789	477,727	211,656	181,019		121,293	43,659
South Australia	6,720	97,627	61,182	23,685	25,922	37,846	6,735

Tasmania	4,179	143,257		43,311		42,648	6,212
Northern Territory	9	325		73		72	89
Australian Capital Territory . . .	27	1,153	387	134		245	462
Australia . . .	95,012	3,011,832		843,212		690,267	202,138

(a) Used or intended for service; excludes bull calves (under 1 year). (b) Kept primarily for rural holdings' own milk supply. (c) Within three months of calving.

For particulars relating to dairy cattle numbers up to 1963 see page 1078 of Year Book No. 50.

A map showing the distribution of dairy cattle in Australia at 31 March 1963, appears facing page 1082 of Year Book No. 50.

Milking machines

The following table shows particulars of the number of milking machines on rural holdings in each State and Territory for the years 1961 to 1965.

MILKING MACHINES ON RURAL HOLDINGS: NUMBER OF UNITS(a)
STATES AND TERRITORIES, 1961 TO 1965

At 31 March	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1961 . .	43,640	92,315	47,403	18,235	10,419	11,704	} n.a. { 23	99	(b)223,815
1962 . .	43,369	95,661	47,486	18,831	10,562	12,220		99	(b)228,228
1963 . .	43,089	97,372	46,674	18,836	10,514	12,701		84	(b)229,270
1964 . .	42,970	98,321	45,072	19,057	10,157	13,382		83	(b)229,042
1965 . .	42,209	101,994	44,074	19,135	10,055	13,806		93	231,389

(a) The number of units indicates the number of cows that can be milked simultaneously, i.e. the cow capacity of installed milking machines. (b) Excludes the Northern Territory.

Production of milk

The quantity of milk produced by a dairy cow can be as high as 1,000 gallons a year, and varies greatly with breed, locality and season. For all dairy cows and for all seasons for the whole of Australia prior to 1916 production averaged considerably less than 300 gallons per annum. Largely owing to an improvement in the quality of the cattle and the increased application of scientific methods the 300-gallon average was exceeded in each year since 1924. In the last five years an average of 449 gallons per cow per annum has been obtained. In 1964-65 the average yield was 467 gallons. The annual average yields per cow shown in the following table are obtained by dividing the total production of whole milk for the year ended June by the mean of the number of cows in milk and dry and house cows at 31 March of that year and of the preceding year. They are, in effect, based on the approximate number of cows which were in milk during any part of the year. The average shown is, therefore, less than that for cows which were yielding during the greater part of the year, but it may be accepted as sufficiently reliable to show the general trend.

AVERAGE MILK PRODUCTION PER COW: STATES AND TERRITORIES
1936-37 TO 1964-65
(Gallons)

1964-65(a) . .	347	613	306	614	490	589	248	547	467

(a) May not be comparable with earlier years: see page 962. (b) Excludes the Northern Territory before 1963-64.

In the following table particulars of the production of whole milk in the various States are shown for the years 1960-61 to 1964-65 compared with the averages for the three years ended 1938-39, 1948-49 and 1958-59. Victoria is the principal milk-producing State, and in 1964-65 the output from that State, 746 million gallons, represented 49 per cent of total production. Output from New South Wales in 1964-65 was 292 million gallons (19 per cent of the total) and that of Queensland 230 million gallons (15 per cent). Production in the remaining States accounted for 17 per cent.

TOTAL PRODUCTION OF WHOLE MILK: STATES AND TERRITORIES
1936-37 TO 1964-65

(a) Principally fluid milk for domestic purposes. is included in 'Other purposes'.

(b) Milk used for farm production of butter and cheese

Production of butter, cheese and preserved milk products

The establishment of large central butter factories, either on a co-operative or independent basis, has resulted in a considerable reduction in the cost of manufacture. The product is also of a more uniform quality, and whereas formerly the average quantity of milk used per pound of hand-made butter was about three gallons, factory butter requires only about two gallons. In addition, subsidy payments by the Commonwealth Government are made only on factory-produced butter. As a result the production of farm-made butter has declined to negligible proportions. A similar position exists in the cheese-making industry.

In 1964-65 factories in Australia engaged in the processing of milk into butter or cheese or the various preserved milk products numbered 344 and were distributed among the States as follows: New South Wales, 70; Victoria, 120; Queensland, 69; South Australia, 43; Western Australia, 18; and Tasmania, 24. More details regarding numbers of factories, output, etc., are given in the chapter Manufacturing Industry (*see* page 137).

Factory production of butter in 1964-65 at 203,465 tons was 656 tons (0.3 per cent) more than the amount produced in 1963-64, and 2,326 tons (1 per cent) less than the record post-war production of 1955-56.

Local consumption of butter and cheese

Following the cessation of butter rationing after the 1939-45 War, consumption per head rose to 31.2 lb. in 1951-52. However, in later years it gradually declined, and in 1964-65 it reached its lowest level since the war. At 22.6 lb. per head it was 3.4 per cent below the level of 1963-64. Consumption of cheese per head has been rising in recent years, reaching 7.2 lb. in 1963-64. This figure decreased slightly to 7.0 lb. in 1964-65.

1964-65 . .	(a) 41.811	4.449	37.362

(a) Interim rates.

Overseas trade in dairy products

The production of butter and cheese in Australia is considerably in excess of local requirements, and consequently a substantial surplus is available for export overseas. In normal circumstances the extent of this surplus is chiefly dependent upon seasonal conditions.

Exports of butter in 1964-65 amounted to 202.2 million lb., compared with 196.6 million lb. in 1963-64. Exports of cheese in these years were 60.9 million lb. and 62.3 million lb. respectively. As in previous years, the principal importing country for Australian butter and cheese was the United Kingdom. In 1964-65, 84 per cent of butter and 59 per cent of cheese exported was consigned to the United Kingdom.

All butter and cheese exported comes under the provisions of the Exports (Dairy Produce) Regulations and is subject to supervision, inspection and examination by officers appointed for that purpose. These commodities are graded according to quality which has been fixed by regulation as follows: flavour and aroma, 50 points; texture, 30 points; and condition, 20 points. Butter and cheese graded at 93 to 100 points is of choicest quality; at 90 to 92 points, first quality; at 86 to 89 points, second quality; and at 80 to 85 points, pastry or cooking quality or, in the case of cheese, third quality.

In the following table particulars are given of the relative proportions of butter and cheese graded for export according to quality. Further details, which include actual quantities by States, are to be found in *Rural Industries*, 1963-64, Bulletin No. 2.

BULK BUTTER AND CHEESE GRADED FOR EXPORT
AUSTRALIA, 1962-63 TO 1964-65
(Per cent)

Grade	Butter			Cheese		
	1962-63	1963-64	1964-65	1962-63	1963-64	1964-65

(a) Includes malted milk.

Pigs

At 31 March 1965, 1,660,000 pigs were recorded, representing an increase of 192,500 (13.1 per cent) on numbers a year earlier. The number of pigs in each State and Territory at 31 March for each of the years 1961 to 1965 compared with the averages for the three-year periods ended 31 March 1939, 1949 and 1959, are given in the following table.

PIGS: NUMBERS IN STATES AND TERRITORIES, 1937 TO 1965

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) Not available for publication.

(b) Incomplete, excludes Australian Capital Territory.

A long-term comparison of pig numbers is given in the division Pastoral Production of this chapter (see page 936). A map showing the distribution of pigs in Australia at 31 March 1963 faces page 1083 of Year Book No. 50 and a graph showing the number of pigs in Australia from 1870 onwards appears on plate 54 of this Year Book.

The number of pigs slaughtered during each of the years 1960–61 to 1964–65, compared with the averages for the three-year periods ended 1938–39, 1948–49 and 1958–59, is shown in the following table.

PIGS SLAUGHTERED: STATES AND TERRITORIES, 1936-37 TO 1964-65 ('000)

(a) Pressed and canned bacon and ham have been converted to cured carcass weight for periods subsequent to 1948-49.

Consumption of pigmeat, bacon and ham

Apparent consumption of pigmeat per head in 1964-65 was 11.9 lb., compared with 11.5 lb. per head in 1963-64. The 1961-62 level of 13.6 lb. was the highest since the war. In recent years annual consumption of pigmeat per head has not fallen below 11 lb.

PRODUCTION AND DISPOSAL OF PIGMEAT (CARCASS WEIGHT)
AUSTRALIA, 1936-37 TO 1964-65

Period	Change in stocks (a)	Production	Exports	Curing and canning	Apparent consumption (as pork or smallgoods) in Australia

Exports of pigs and pig products

Total quantities and values of exports of pigs and pig products of Australian origin for the years 1962-63 to 1964-65 are given in the following table.

EXPORTS OF PIGS AND PIG PRODUCTS: AUSTRALIA, 1962-63 TO 1964-65

		Quantity			Value (\$A'000 f.o.b.)		
		1962-63	1963-64	1964-65	1962-63	1963-64	1964-65
Bacon and ham (including canned)	'000 lb.	216	186	379	118	120	259
Lard	'000 lb.	246	95	231	48	22	32
Frozen pork	'000 lb.	482	370	818	167	133	324
Pigs, live	number	113	547	n.a.	10	80	n.a.

The poultry industry

Originally the poultry industry was conducted in conjunction with other branches of rural activity, mainly dairying, but it is now a specialized and distinct industry. It is from this source that the bulk of the commercial production is obtained. Practically all farm households keep poultry for the purpose of supplying their own domestic requirements, and some supplies from this source are also marketed. In addition, many private homes in both rural and suburban areas keep small numbers of fowls in back-yard runs to help satisfy domestic needs. Because of the incompleteness of data available on poultry throughout Australia, details of poultry numbers are not published.

Marketing of eggs

Details of the annual contracts entered into between the United Kingdom and Australian Governments up to 1952-53 and of the results of trading under free market conditions in the four years following appear in previous issues of the Year Book.

Over the period 1954-55 to 1964-65 Australian exports of shell eggs fell by 84 per cent. In 1964-65 they amounted to 3,327,000 dozen compared with 3,599,000 dozen in 1963-64. The main outlets for Australian eggs in 1964-65 were Kuwait (1,359,000 dozen), Saudi Arabia (364,000 dozen), and Qatar (257,000 dozen).

The United Kingdom provides the major export market for egg pulp. Australian exports of pulp to that country were approximately 3,554 tons in 1963-64 and 6,793 tons in 1964-65. In 1964-65 the United Kingdom absorbed the bulk of the exports of dried eggs (151,000 lb.) also.

Details of the *Egg Export Control Act 1947* were given in earlier issues of the Year Book (see No. 47, page 997).

Recorded production of eggs and egg products

Available statistics of the production and disposal of eggs in Australia are restricted to those recorded by the Australian Egg Board and the Egg Marketing Board of New South Wales. Details of production as recorded by these authorities are shown in the following table.

SHELL EGGS: PRODUCTION^(a) RECORDED BY EGG BOARDS STATES, 1960-61 TO 1964-65 (*000 dozen)

State	1960-61	1961-62	1962-63	1963-64	1964-65
New South Wales ^(b)	62,157	61,657	54,609	56,713	62,918
Victoria	28,215	29,939	26,793	25,141	28,016
Queensland	10,810	10,176	11,290	12,464	14,181
South Australia	10,492	11,388	9,816	8,732	9,379
Western Australia	7,333	7,558	7,796	8,331	9,620
Tasmania	n.a.	n.a.	n.a.	n.a.	n.a.
Total^(c)	119,007	120,718	110,304	111,381	124,114

(a) Receipts from consignors and sales by producer agents. (b) Includes Australian Capital Territory.
(c) Excludes Tasmania.

Particulars of the production of whole egg pulp as recorded by the Egg Marketing Board for the State of New South Wales and by the Australian Egg Board for the other States are shown in the following table.

LIQUID WHOLE EGG PULP: PRODUCTION RECORDED BY EGG BOARDS STATES, 1960-61 TO 1964-65 (*000 lb.)

State	1960-61	1961-62	1962-63	1963-64	1964-65
New South Wales	21,496	20,916	11,500	9,272	18,463
Victoria	7,948	12,000	7,684	3,216	5,512
Queensland	3,716	3,321	3,864	3,922	5,731
South Australia	3,394	3,374	2,836	3,001	2,639
Western Australia	916	620	533	835	1,450
Tasmania	n.a.	n.a.	n.a.	n.a.	n.a.
Total^(a)	37,470	40,231	26,417	20,246	33,795

(a) Excludes Tasmania.

In addition to liquid whole egg, production was also recorded of liquid egg whites and liquid egg yolks. Output in 1964-65 amounted to 2,984,000 lb. and 2,134,000 lb., respectively, compared with 2,767,000 lb. and 1,984,000 lb., respectively, in the previous year. These figures exclude small quantities produced in Tasmania for which details are not available.

Consumption of eggs and egg products

Because of the operations of producers in areas outside the control of the Egg Boards and the extent of 'back-yard' poultry-keeping, for which no statistics are collected, figures relating to total egg production must be accepted with some reserve. The production shown in the following table, together with details of exports and consumption, is based upon the records of Egg Boards of production from areas under their control, plus estimates of production from uncontrolled areas and from 'back-yard' poultry-keepers.

**ESTIMATED PRODUCTION AND DISPOSAL OF EGGS IN SHELL
AUSTRALIA, 1936-37 TO 1964-65**

Period	Change in stocks	Estimated total production	Exports (a)	For drying and pulp(b)	Apparent consumption in Australia

Poultry, live(a)	number	550,362	1,027,871	735,911	146	258	184

(a) Includes day-old chicks.

For a number of years prior to 1961-62 there were considerable imports of canned chicken from the United States of America. In 1960-61 the quantity imported was 2,016,000 lb. valued at \$454,000, but the trade had declined to 150,000 lb. valued at \$29,000 in 1964-65.

The bee-farming industry

Production of honey and bees-wax

Although practised as a separate industry, bee-farming is also carried on in conjunction with other branches of farming. In recent years there has been considerable growth in the number of itinerant apiarists operating on a large scale with mobile equipment. Some of these apiarists move as far afield as from Victoria to Queensland in an endeavour to provide a continuous supply of nectar from flora suitable for their bees. The returns of honey from productive hives during 1964-65 show an average of 129.0 lb. per hive, and the average quantity of wax was 1.7 lb. per productive hive.

BEEHIVES, HONEY AND BEES-WAX: STATES AND A.C.T., 1964-65

State or Territory	Beehives(a)			Honey produced		Bees-wax produced	
	Pro- ductive	Unpro- ductive	Total	Quantity	Gross value	Quantity	Gross value

Australia	326	131	457	42,080	4,866	549	253

(a) At 30 June 1965.

The production of honey and bees-wax fluctuates considerably and is determined mainly by the flow of nectar from flora, particularly the eucalypts, which varies greatly from year to year.

Honey Levy

The *Honey Levy Act* 1962 imposed a levy on honey sold for domestic consumption* in Australia at the initial operative rate of one halfpenny a pound which was reduced to four-tenths of a cent from 14 February 1966. The Act provides for a maximum rate of one penny (one cent) a pound. The proceeds of this levy may be expended on the regulation of Australian exports of honey and on associated promotional and research activities. In 1962-63, 1963-64 and 1964-65 collections amounted to \$7,000, \$81,000 and \$104,000 respectively.

Overseas trade in bee products

The principal importers of Australian honey in 1964-65 were the United Kingdom (58 per cent of total exports), the Federal Republic of Germany (18 per cent), and Japan (12 per cent).

Bees-wax was exported mainly to the United Kingdom in 1964-65.

EXPORTS OF HONEY AND BEES-WAX: AUSTRALIA, 1962-63 TO 1964-65

CHAPTER 24

FORESTRY

For further details on subjects dealt with in this chapter *see* the annual bulletins *Non-Rural Primary Industries and Value of Production*, and *Manufacturing Industry* (for sawmills, etc. operations).

Source of statistics

Statistics relating to forestry are, in general, provided by the various authorities concerned with forestry administration. Particulars of forest reservations contained in this chapter have been collected by the Statisticians of the various States, mainly from information provided by the State forestry authorities. Other information on forested areas has been provided by the Commonwealth Forestry and Timber Bureau, which has also supplied certain other data. Statistics of timber and by-products have been compiled from the annual factory collections undertaken by the Statisticians in the several States. Figures of production of gums, resins and tanning barks have been provided by the State forestry authorities. Data of imports and exports of forest products and timber and timber products have been compiled in the Commonwealth Bureau of Census and Statistics as part of the statistics of overseas trade. The figures shown relate, in general, to years ended 30 June.

Forestry in Australia

Objects of forestry

The main object of forestry authorities is to manage the forests of the country in a manner that will provide the maximum benefits, both direct and indirect. Direct benefits include the provision of essential commercial commodities such as structural timber, pulpwood, plywood, veneers, firewood, bark products, tars, oil, and resins. Indirect benefits include protection of soil and stock from wind and exposure, regulation of stream flow, provision of recreational facilities, and aesthetic effects. Forestry also aims at improving existing forests and woodlands by properly controlled exploitation, by protection from such destructive agencies as fire and insect attack, and by inducing regeneration where it is desirable. The provision of a partial tree cover on denuded lands where this cover is necessary for protective purposes and a complete cover when the land is better under forest than under any other land use are further aims of forestry.

General account of forests and timbers

The area of land in Australia suitable for the production of commercial timber as a primary crop is very small in comparison with the size of the continent. Broadleaved forests (hardwoods) cover 97 per cent of the total forested area, and approximately 94 per cent of the broadleaved forests area is occupied by eucalypts.

Eucalypts. The genus *Eucalyptus* is remarkable in that it includes over 600 species, ranging in size from the mighty forest giants, mountain ash (*E. regnans*) of Victoria and Tasmania, and karri (*E. diversicolor*) of Western Australia, down to the small mallee species which inhabit vast areas of the inland. The habitats range from the dry inland areas to the high mountain areas in the Australian Alps, from areas with the annual rainfall as low as 10 inches to those where it is 150 inches. Of the 600 species, only about 100 are used for sawmilling, and not more than 40 of these are exploited extensively.

The better class of eucalypt forest is concentrated mainly in the higher rainfall areas such as the east coast, the highlands of southern New South Wales, Victoria and Tasmania, and the south-western corner of Western Australia. The more important species include blackbutt (*E. pilularis*), tallowwood (*E. microcorys*), flooded gum (*E. grandis*), and red mahogany (*E. resinifera*) of New South Wales and Queensland, alpine ash (*E. delegatensis*) of New South Wales, Victoria and Tasmania, mountain ash (*E. regnans*), messmate (*E. obliqua*) and blue gum (*E. bicostata*) of Victoria and Tasmania, and karri (*E. diversicolor*) of Western Australia. For height and grandeur, mountain ash and karri are unequalled among the broadleaved trees of the world and are excelled only by a few North American coniferous (softwood) species.

In the coastal regions with lower rainfall the eucalypt forests contain many durable species such as the ironbarks, grey gums and bloodwoods of the east coast, and jarrah (*E. marginata*) and tuart (*E. gomphocephala*) of Western Australia. The spotted gum (*E. maculata*) occurring in New South Wales and Queensland is another example.

Along most of the inland streams and adjacent flood-plains there are riverain forests consisting mainly of river red gum (*E. camaldulensis*), a very durable broadleaved tree which has supplied large quantities of sawn timber, railway sleepers and fence posts.

Eucalypts also occur in open forest and savannah woodland formations in areas receiving a reliable rainfall of about 10 to 20 inches per annum, as on the goldfields of Western Australia where salmon gum (*E. salmonophloia*), brown mallet (*E. astringens*) and wandoo (*E. wandoo*) occur. These forests are of considerable value for firewood, as mining timbers and for fencing. Minor forest products such as sandalwood, tan bark, essential oils, etc. also come from isolated areas in this type of country, and in the more arid areas.

In 1964-65 the volume of eucalypt timber sawn was 1,001 million super. feet.

Other broadleaved timbers (hardwoods). Broadleaved genera other than *Eucalyptus* cover a comparatively small portion of the forested land in Australia (some 6 per cent), but these areas provide a great variety of timbers suitable for a multitude of uses. There are two basic types of forest containing supplies of broadleaved timbers other than eucalypts, namely, the tropical and sub-tropical rainforests of coastal New South Wales and Queensland and the temperate rainforests of southern Victoria and Tasmania, both of which yield species known collectively as rainforest or brushwood species. The total volume of brushwood species produced in 1964-65 was estimated at 78 million super. feet, i.e. less than 7 per cent of the total broadleaved timber cut in Australia.

The tropical and sub-tropical rainforest along the eastern coast of Australia contains a large number of different species. Tropical rainforest occurs in northern Queensland in the vicinity of Cairns and on the Atherton Tableland, providing such well-known cabinet woods as Queensland maple (*Flindersia brayleyana*), Queensland walnut (*Endiandra palmerstonii*) and the silky oaks. The sub-tropical rainforest found in southern Queensland and Northern New South Wales yields the tulip oak, crab apple (*Shizomeria ovata*) and white beech (*Gmelina leichhardtii*). Coachwood (*Ceratopetalum apetalum*) and sassafras (*Doryphora sassafras*) occur in regions to the south near Dorrigo and have yielded valuable timber for many years.

Turpentine (*Syncarpia glomulifera*), an excellent harbour pile timber resistant to marine borer attack, and brush box (*Tristania conferta*), a superior structural and decking timber, are found in association with some eucalypts in the wetter rainfall areas on the north coast of New South Wales and in southern Queensland.

Temperate rainforest which is to be seen in southern parts of Victoria and western Tasmania consists of myrtle beech (*Nethofagus cunninghamii*), but produces also southern sassafras (*Atherosperma moschata*) and blackwood (*Acacia melanoxylon*).

Conifers (softwoods). One of the most important species of native conifers is white cypress pine (*Callitris hugelii*). The main cypress pine forests of commercial value occur in New South Wales and southern Queensland west of the Great Dividing Range. The trees are comparatively small, but the timber has particular value owing to its durability and resistance to termites. It is suitable for use as scantlings, flooring, linings, weatherboards, poles, and posts. As much of the area originally covered by cypress pine has been cleared for wheat farming and grazing, the production from the remaining State forests is now strictly regulated to ensure a continuous supply. The volume of cypress pine cut in 1964-65 was approximately 74.3 million super. feet.

Another important native conifer is hoop pine (*Araucaria cunninghamii*), which occurs naturally in the sub-tropical rainforest of southern Queensland and northern New South Wales associated with tulip oak, crab apple, white beech, coachwood, and sassafras. The greater part of the original hoop pine forests has been exploited, but considerable areas have been replanted to this species in Queensland and, to a lesser extent, in New South Wales.

Other native conifers which have played a useful but minor part in the Australian timber industry include bunya and kauri pines (*Araucaria bidwillii* and *Agathis palmerstonii*) of Queensland and celery top, Huon and King William pines (*Phyllocladus asplenifolius*, *Dacrydium franklinii* and *Athrotaxis selaginoides*) of Tasmania. Kauri pine is found in the tropical rainforest of northern Queensland in association with non-eucalypt broadleaved trees, while bunya pine occurs in the sub-tropical rainforests. In the temperate rainforests of Tasmania celery-top, Huon and King William pines are found in association with myrtle beech, southern sassafras and blackwood.

Extent of forested areas

Estimates prepared for the Eighth British Commonwealth Forestry Conference held in Kenya in 1962 show the total area of forest in Australia as 512.2 million acres, or about 27 per cent of

the total land area of the continent. In making these estimates the Food and Agriculture Organization definition of 'forest' (published in *World Forest Inventory*, 1958, page 123) was used. This definition includes areas of sparse or stunted tree growth, and in the case of Australia some four-fifths of the total forest area falls into this category.

CLASSIFICATION OF FOREST AREA(a): AUSTRALIA

(Source: Forestry and Timber Bureau)

('000 acres)

Type of forest	Area
LANDS	
Accessible forests—	
Productive forests in use—	
Coniferous (softwood)	492
Non-coniferous (broadleaved)	24,352
Mixed woods	5,636
Open areas	245
Total, productive forests in use	30,725
Productive forests not in use	(b) 31,961
Unproductive accessible forests	(c) 257,687
Total, accessible forests	(d) 320,373
Inaccessible forests	191,795
Total, forested area	512,168

OWNERSHIP OF ACCESSIBLE FORESTS

Publicly-owned forests—	
State forests	23,534
Other forests	150,329
Total, publicly-owned forests	173,863
Privately-owned forests	145,537
Ownership not yet determined	973
Total, accessible forests	320,373

(a) Based on the 1960 classification of forests. (b) Includes approximately 25 million acres capable of producing fuelwood only.
 (c) This area carries only sparse, stunted trees. (d) Includes approximately 258 million acres of land carrying only stunted trees classified as unproductive accessible forests.

Forest reservations

Statements furnished by State and Commonwealth authorities show reservations of forest areas in Australia at 31 March 1965 totalling 37.6 million acres, of which 25.7 million acres

were dedicated State forests and 11.9 million acres were timber and other reserves. The distribution of those areas is shown by States in the following table. Detailed comparisons between States are not possible because of the lack of uniform definitions.

AREA OF FOREST RESERVATIONS: STATES AND TERRITORIES 31 MARCH 1965

(Source: Forestry and Timber Bureau)

('000 acres)

State or Territory	State forests	Timber reserves	Other reserves of forestry value	Total
New South Wales	6,803	1,303	..	8,106
Victoria	5,604	(a)	368	5,972
Queensland	6,203	2,043	1,046	9,291
South Australia	286	..	663	949
Western Australia	4,459	1,852	737	7,049
Tasmania	2,391	138	1,217	3,746
Northern Territory	9	(b) 2,394	2,403
Australian Capital Territory	(d) 131	131
Australia	25,747	5,344	6,556	37,647

(a) Included in State forests. (b) Comprising scenic reserves (forested), pulpwood concessions and exclusive forest permits on crown land. (c) Includes fauna and flora reserve, Coburg Peninsula (473,600 acres), land within welfare reserves (1,100,000 acres), land covered by pastoral lease (820,000 acres). (d) Forest land not specifically reserved but under forestry control.

A considerable proportion of the permanently reserved areas is in inaccessible mountainous country, and many of the forests contain a mixture of species, only some of which are at present of commercial value. Much of the area consists of inferior forest, and a large proportion of the whole has been seriously degraded by recurrent fires.

Plantations

The indigenous forest of Australia does not contain adequate supplies of coniferous timber, and Australia's requirements have had to be met largely by imports. As a result of the planned policy of the forest services and of several private commercial organizations, the area of conifer plantations, mainly of exotic species, is steadily increasing. It was natural that this aspect of forestry should receive earliest attention in South Australia, as this is the State most poorly endowed with natural forest. South Australia now has a larger area of planted conifers than any other State in Australia, and for some years has been exploiting considerable quantities of timber from these plantations. Production is also increasing in the other States, and the thinnings from their plantations are already supplying a significant volume of timber.

The total production of roundwood from Australia's coniferous plantations is now more than 50 million cubic feet per annum and is expected to increase substantially during the next decade.

A special article prepared by the Forestry and Timber Bureau giving a detailed account of the history and development of coniferous plantations and of the characteristics of individual species is included in Year Book No. 44, page 975.

Broadleaved plantations (mainly *Eucalyptus spp.*) comprise a much smaller area, and the total acreage at 31 March 1965 was 36,000 acres, about two-thirds of which was mallet. Plantations of this species have been established in Western Australia for tan bark production.

(a) Estimated.

Forest administration and research

Commonwealth Forestry and Timber Bureau. The functions of the Commonwealth Forestry and Timber Bureau are laid down in the Forestry and Timber Bureau Act and include forestry research and education, the study of timber supply, and advice to the Government on forestry matters. The administering department is the Department of National Development.

In 1961 the Commonwealth Government decided to expand its activities in forestry research in Australia. The existing Forestry and Timber Bureau Divisions of Silvicultural Research and Forest Management Research were combined to form the Forest Research Institute as a separate branch of the Bureau. The purpose of the Institute is to provide complete coverage in forestry research, ensuring that all problems of primary importance to the practice and development of forestry in Australia are investigated. In developing a programme with this objective, the Institute takes account of the research activities and potential of the State forest services and other organizations. The research work carried out by the existing sections of the Forest Research Institute covers a wide range of studies, including the following: factors affecting tree growth, tree breeding, introduction of exotic species, forest nutrition, forest botany, forest entomology and pathology, fire protection, watershed management, forest mensuration, forest management and management economics, and aerial inventory. The Forest Research Institute maintains five regional establishments in the Commonwealth, two of which have an outpost in addition to the regional headquarters. These regional stations are run on a co-operative basis with State forest services and private forest companies or other government instrumentalities.

The Forestry and Timber Bureau also maintains a Timber Supply Economics Branch concerned with the compilation and analysis of statistics of production, consumption and trade in timber and other forest products. This Branch also carries out studies in forest economics and research into logging methods and machines. Advice on timber supply matters is currently made available to government departments and private enterprise. Research is also undertaken on matters associated with the marketing of timber products.

Commonwealth Scientific and Industrial Research Organization, Division of Forest Products. The Division of Forest Products was formed in 1928 to carry out investigations into Australian forest products, assist in the effective use of such products, reduce waste, reduce losses from decay and insect attack, and conduct research into the fundamental chemical, physical and mechanical properties of Australian timbers.

The research work of the Division is carried out by eight separate sections: wood and fibre structure, wood chemistry, timber physics, timber mechanics, timber preservation, timber seasoning, plywood and glueing, and timber utilization. In addition, the Division provides assistance to individuals and local industry, administers courses of instruction on timber properties and usage, and maintains co-operative projects with several overseas authorities operating in the same field.

Forestry in the Territories. Forestry activities in the Territory of Papua and New Guinea are controlled by the Administration through its Department of Forests. The management of forests in the Australian Capital Territory is the responsibility of the Forestry Section of the Department of the Interior.

The Forestry and Timber Bureau advises the Administrations of the Australian external Territories on the management of the forests in those Territories, while the Northern Regional Station of the Forest Research Institute advises the Northern Territory Administration on forestry matters affecting the Northern Territory.

Forestry activities of the States. Forestry on State-owned lands in the various States is the responsibility of the respective State Governments, but they do not exercise any control over forestry activities on private property. The powers and functions of State forest authorities are laid down under forest Acts and Regulations. In each State there is a department or commission to control and manage State forests, etc. Its functions include the introduction of proper measures for the control and management of forest land; the protection of forest land; the conversion, marketing and economic utilization of forest products; the securing of an adequate and permanent reservation of State forests; the establishment and maintenance of coniferous forests to remedy the existing deficiency of conifers in Australia. All State forest services are actively engaged on research programmes. Annual reports are issued by each State forest authority.

In addition to developing permanent forest reserves in each State, foresters are surveying all forested Crown lands with a view to obtaining dedications of new State forests to add to the permanent forest estate or to release for other uses areas unsuitable for forestry. State forest authorities also usually control all timber on unoccupied Crown lands as well as over 10 million acres of timber reserves, national parks, etc.

Private forestry. Privately owned lands contribute considerably to the total production from Australian forests. The most important areas of managed native forest in private ownership are the forests owned by pulp and paper companies.

The area of privately owned coniferous plantations is rapidly increasing, and here again the pulp and paper companies are very active. In step with the increase in afforestation programmes the number of professional foresters employed in private forestry enterprise is increasing, while several are engaged on research.

An estimate of the area of coniferous plantations established by private companies and individuals is included in the table on page 984.

Forestry education

The functions of the Australian Forestry School at Canberra, previously a division of the Forestry and Timber Bureau, were taken over by the Australian National University at the beginning of the 1965 academic year. The School has been absorbed into the University School of General Studies as the Department of Forestry. This department provides a full four-year training leading to the degree of B.Sc. in forestry. The University of Melbourne also maintains a School of Forestry which gives training leading to a B.Sc. degree in forestry. The universities in all States provide facilities for post-graduate studies in forestry leading to higher degrees.

The Victorian Forests Commission maintains a Forestry School at Creswick where recruits are trained, mainly for employment in the Commission.

The Australian Forestry Council

Following extensive discussions the Commonwealth Government and the Governments of the six Australian States agreed in 1964 to establish an Australian Forestry Council, comprising the Ministers responsible for forestry in the seven Governments and the Commonwealth Minister for Territories.

The Council is intended to provide the means for the mutual exchange between the State and Commonwealth Governments of information and views on forestry. It will co-ordinate research into problems affecting the establishment, development, management, and fire protection of all forests, and the utilization of forest products. It will assist in co-ordinating the work of State and Commonwealth Governments and also private enterprise in the development of Australian forestry.

The Council is supported by a Standing Committee, consisting of the Director-General of the Forestry and Timber Bureau, the heads of each of the six State Forest Services, the Chief of the Division of Forest Products, C.S.I.R.O., and the Secretary of the Department of Territories.

Fire protection

The provision of adequate fire protection is one of the main problems facing forest and rural authorities. The commercial forest area is estimated at 63 million acres, and of this area the forest services maintain a high degree of protection over a relatively accessible area of about 23 million acres, about 17 million acres in the more inaccessible area receive a lesser degree of protection, and about 8 million acres are at present not protected. The remaining area of 15 million acres is mainly privately owned or leased, and under some degree of fire protection from the rural volunteer fire-fighting organizations or Government-financed fire protection associations.

Very intensive fire protection is afforded the coniferous plantation area of Australia. The area burnt in 1963-64 was 273 acres or 0.06 per cent of the area for which statistics are available. During the severe 1964-65 season 3,130 acres of coniferous plantations were burnt. This represents 0.56 per cent of the area of 556,000 acres for which statistics are available. This is the largest area of coniferous plantations burnt since 1952.

Protection of private property outside urban areas is undertaken by volunteer bush fire brigade organizations which are co-ordinated in each State by a committee or board carrying out functions of an advisory or educational nature and fostering the growth and organization of the bush fire brigade movement. Throughout the main agricultural and forest areas of Australia there are over 5,000 registered volunteer bush fire brigades with a membership approaching 250,000. Although forest and rural fire organizations are entirely separate entities, a high degree of co-operation and liaison is maintained.

In addition to the forest service and rural organizations, various private and semi-governmental bodies in each State maintain fire protection organizations, which are generally concerned with the protection of private forestry operations and hydro-electric and water catchment areas.

Over the five-year period 1961 to 1965 the annual cost of protecting from fire the 40 million acres of forest land for which State forest services, semi-governmental bodies and private companies provide protection is estimated at \$4,800,000, or about twelve cents an acre. The cost of fire protection during the severe 1964-65 fire season was \$5,500,000. The cost of rural fire control as a whole cannot be estimated with any degree of accuracy, because by far the greatest contribution comes from the personal efforts of volunteer brigade members.

The Australian fire season is very variable, especially in the eastern and southern States. On the average, damaging fires can occur over a period of four months in all climatic zones. Occasionally this occurrence can extend one month either side of the main fire period. Individual fire seasons are generally of much shorter duration than four months, and the severity of a season is judged more on the number of 'blow-up' days than on its length. On the average, four years in ten are classified as of average severity and two years in ten as severe, the remaining four years being of below-average severity. During severe seasons in the past as much as 5 to 15 per cent of the forest area has been burnt. However, with improving fire control services, it can be expected that the area burnt in severe fire seasons will in future be significantly reduced. The number of forest fires and the forest area burnt during recent years is shown in the following table.

NUMBER OF FIRES AND FOREST AREAS BURNT: AUSTRALIA 1960-61 TO 1964-65

(Source: Forestry and Timber Bureau)

Year	Number of fires	Forest areas burnt	Burnt areas as a proportion of area receiving protection(a)
	No.	'000 acres	Per cent
1960-61 . . .	2,667	1,294	3.5
1961-62 . . .	1,761	297	0.8
1962-63 . . .	1,299	275	0.7
1963-64 . . .	1,494	549	1.5
1964-65 . . .	2,307	1,626	4.1

(a) For this table the area receiving protection has been taken as the 40 million acres for which State forest services provide protection.

Intensive research work is being undertaken on fire problems, and several government groups are working on such projects as the study of fire behaviour and associated fuel and meteorological conditions, the use of chemical aids in fire suppression, the development of protective clothing and devices to aid fire-fighters, and the development of more efficient fire-fighting equipment, including aerial methods of attacking fire and infra-red scanning devices.

Since fire prevention is one of the most important aspects of the problem, intensive campaigns are being conducted to reduce the incidence of man-caused fires. A study of fire causes in recent years reveals that human agencies account for about 90 per cent of all fires, and of this figure at least 80 per cent are preventable. It is estimated that 'burning-off' (much of which is started illegally) accounts for 30 per cent of all fires. Lightning accounts for a little over 10 per cent of all fires in Australia, although the incidence of fires caused by lightning is much higher in certain

areas, especially the Southern Highlands regions in New South Wales and Victoria. Although lightning is a relatively small numerical cause of fire, the percentage area burnt from this cause is estimated at about 20 per cent. This higher figure is due to the occurrence of multiple fire outbreaks which cause fire fighting difficulties and to the inaccessibility of the areas in which such fires generally occur.

An increasing number of fires are starting from roadsides, and smoking materials account for a high proportion of these fires. The fire-proofing of roadsides by chemical and mechanical means should reduce this incidence, which has accounted for over 25 per cent of all fires in some regions.

The damage resulting from bushfires in Australia is difficult to estimate. Eucalypts, which comprise the main forest species, are seldom killed by fire, and damage estimates frequently involve the complicated question of loss of increment and degradation of timber quality. It may be conservatively estimated that damage to forest values lies between \$2 and \$4 per acre burnt per year and that over the last ten years the average value of forest fire damage is of the order of \$4 million a year. In very severe fire seasons such as 1925-26, 1938-39 and 1951-52, which affected large areas of the continent, fire loss may have been as high as \$200 million. In 1964-65 fire damage may have reached a value of \$10 million.

Commonwealth loans to expand softwood plantations

The Australian Forestry Council recommended that Australia should increase its rate of softwood planting from the present 40,000 acres a year to 75,000 acres for the next thirty-five years. This proposal envisaged annual plantings of 65,000 acres by the various governments for the next thirty-five years and an average of at least 10,000 acres a year by private forest owners. In February 1966 the Commonwealth Government endorsed these recommendations by offering the States about \$20 million in long term loans over the following five years to help lift the planting rate in State government softwood plantations. The loans would be free of interest and repayment of capital for the first ten years because of the long term nature of forestry and the long period between planting and income-earning production. The loans would cover the additional cost to the States in carrying out their parts of the Australian Forestry Council's recommendation over the next five years and it was expected that the planting rate of softwood plantations in Australia would be raised to 75,000 acres per year. If this rate of planting could be maintained for the next thirty-five years it was estimated that Australia would become substantially self-sufficient in production of softwood timber by the year 2,000.

Employment in forestry

Persons engaged in forestry activities

In the following table, which shows particulars collected in the Population Censuses of Australia of 30 June 1947, 1954 and 1961, the numbers of persons whose industry statements were classified to 'forestry (excluding sawmilling)' are shown, together with the numbers engaged in all primary industries and the total work force. An adjustment was made to the 1947 and 1954 industry data by distributing over the range of recorded industry the number of persons whose industry was not stated. No such adjustment was made to the 1961 figures.

PERSONS ENGAGED IN FORESTRY: AUSTRALIA, CENSUSES, 1947, 1954 AND 1961

	Census, 30 June—		
	1947	1954	1961
Persons engaged in—			
Forestry (excluding sawmilling)	24,793	15,468	13,847
All primary industries	563,607	560,100	513,286
Total work force	3,196,431	3,702,022	4,225,096
Persons employed in forestry (excluding sawmilling)			
as a proportion of—			
All primary industries %	4.4	2.8	2.7
Total work force %	0.8	0.4	0.3

Employment by Forestry Departments

In the table following details are shown of the number of persons employed by State forestry departments and by the Forestry and Timber Bureau in the Australian Capital Territory and the Northern Territory at 30 June 1965.

Employment in milling operations

Details of the average number of persons employed, including working proprietors, in sawmills during the year 1964-65 are shown in the next table. Further details regarding the operations of sawmills in 1963-64 are shown in the chapter Manufacturing Industry.

**NUMBER OF SAWMILLS AND NUMBER OF PERSONS EMPLOYED
STATES AND TERRITORIES, 1964-65**

—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
Number of sawmills	741	441	520	89	192	308	2,299
Average number of persons employed during year—	7,967	5,652	5,404	2,226	3,341	2,793	27,454

(a) Excludes some production from private land, thought to be relatively small, details of which are not available. (b) See footnote (b) to previous table. (c) See footnotes (c) and (d) to previous table. (d) Incomplete; see footnote (d) to previous table. (e) See footnotes (e) and (f) to previous table. (f) Includes timber used for tannin extract and sandalwood and substitutes in Western Australia.

Value of production

While statistics of both the gross value (at principal markets) and local value (at place of production) of the forestry industry are available, particulars of the value of materials used in the process of production are not available for all States. For this reason values cannot be stated on a net basis, as has been done with most other industries. A more detailed reference to the value of production of forestry and other industries in Australia, as well as a brief explanation of the terms used, will be found in the chapter Miscellaneous.

GROSS AND LOCAL VALUE OF FORESTRY PRODUCTION
STATES AND TERRITORIES, 1964-65
(\$'000)

State or Territory	Gross value(a)	Marketing costs	Local value(b)
New South Wales	32,539	953	31,586
Victoria	33,629	1,553	32,076
Queensland	17,777	4,295	13,482
South Australia	8,846	45	8,801
Western Australia	12,093	770	11,323
Tasmania	15,327	2,057	13,270
Northern Territory	276	n.a.	276
Australian Capital Territory	314	n.a.	314
Australia	120,801	9,673	111,128

(a) Gross production valued at principal markets.
valued at place of production.

(b) Gross production

The following table shows, for each State, the local value of forestry production and the local value per head of population for the years 1960-61 to 1964-65.

LOCAL VALUE OF FORESTRY PRODUCTION: STATES, 1960-61 TO 1964-65

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
LOCAL VALUE (\$'000)							
1960-61 . . .	30,600	27,880	14,298	7,458	10,334	11,470	102,404
1961-62 . . .	28,862	26,260	11,790	7,466	10,382	10,180	95,236
1962-63 . . .	27,976	26,200	11,976	8,116	10,162	11,314	96,102
1963-64 . . .	29,618	28,920	12,980	8,168	10,734	11,638	102,624
1964-65 . . .	31,586	32,076	13,482	8,801	11,323	13,270	111,128

LOCAL VALUE PER HEAD OF POPULATION (\$)

1960-61 . . .	7.8	9.6	9.6	7.8	14.2	32.8	9.8
1961-62 . . .	7.4	8.8	7.8	7.6	14.0	28.6	9.0

1964-65 . . .	7.6	10.1	8.5	8.4	14.2	36.1	9.9

(a) Includes Northern Territory and Australian Capital Territory.

Timber and timber products

Mill production of timber

Particulars of logs treated and the production of sawn, peeled and sliced timber by sawmills and other woodworking establishments are shown in the following table. These figures have been compiled from the annual factory collections in each State, which cover virtually all sawmills. The only omissions are some small portable mills operated by itinerants, e.g. sleeper cutters.

OUTPUT OF AUSTRALIAN-GROWN TIMBER: ALL MILLS, STATES, 1964-65 ('000 super. feet)

—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
Logs treated (true volume)—

(a) Excludes Australian Capital Territory and Northern Territory.

OUTPUT OF AUSTRALIAN-GROWN TIMBER, ALL MILLS: AUSTRALIA(a)
1960-61 TO 1964-65
('000 super. feet)

	1960-61	1961-62	1962-63	1963-64	1964-65
Logs treated (true volume)—					
Broadleaved	2,672,080	2,524,528	2,552,552	2,681,565	2,767,843
Coniferous	646,801	640,833	778,674	704,296	728,691
<i>Total, logs treated</i>	<i>3,318,881</i>	<i>3,165,361</i>	<i>3,331,226</i>	<i>3,385,861</i>	<i>3,496,535</i>
Sawn, peeled or sliced timber produced from logs above—					
Broadleaved	1,152,995	1,063,086	1,088,197	1,157,165	1,210,990
Coniferous	264,838	289,117	322,370	330,862	329,322
<i>Total, timber produced</i>	<i>1,417,833</i>	<i>1,352,202</i>	<i>1,410,567</i>	<i>1,488,027</i>	<i>1,540,312</i>

(a) Excludes Australian Capital Territory and Northern Territory.

In addition to the mill production of timber shown in the preceding tables, a large quantity of hewn and round timber, e.g. sleepers, piles, poles, fencing timber, timber used in mining and fuel, is obtained directly from forest and other areas. Complete information in respect of the volume of this output is not available.

Veneers, plywood, etc.

Cutting of timber for the manufacture of veneers, plywood, etc. has been carried out in most States for a number of years. In recent years this has been considerably extended, since plywood manufacture has allowed the use of some species unsuitable for sawing. Special attention has been paid to ensure that logs suitable for peeling are diverted to ply factories.

PLYWOOD PRODUCED: STATES, 1960-61 TO 1964-65

('000 square feet: $\frac{3}{16}$ -in. basis)

State	1960-61	1961-62	1962-63	1963-64	1964-65
New South Wales	64,930	56,184	56,766	58,880	59,045
Queensland	112,414	98,086	85,746	97,252	94,766
Other States	46,045	48,537	52,751	60,150	63,249
<i>Australia</i>	<i>223,389</i>	<i>202,807</i>	<i>195,263</i>	<i>216,282</i>	<i>217,059</i>

Of the total plywood produced in 1964-65, 137,826,000 square feet ($\frac{3}{16}$ -in. basis) were classed as 'Commercial', 52,379,000 as 'Waterproof', 2,873,000 as 'Case', and 23,981,000 as 'Sliced Fancy'.

During 1964-65, 806.4 million square feet ($\frac{1}{16}$ -in. basis) of veneers were produced by the rotary process for the manufacture of plywood, including 252.6 million square feet ($\frac{1}{16}$ -in. basis) sold or added to stock, the bulk of which would eventually be used in the production of plywood. In addition, 59.9 million square feet of sliced veneers were produced.

Manufactured boards

Hardboard. There were five factories producing hardboard in Australia during 1964-65 (two in New South Wales, and one in each of Victoria, Queensland and Tasmania), and during the three years ended 30 June 1965 the following quantities were produced: 1962-63, 300 million square feet; 1963-64, 358 million square feet and 1964-65, 381 million square feet.

Resin-bonded boards. Production of resin-bonded boards (made from wood chips, wood wool, sawdust, etc.) amounted to 5,761,000 square yards during 1964-65.

Wood pulp and paper

Wood pulp. During 1964-65 five wood pulp mills were operating in four States, and production was 317,435 tons of chemical, mechanical¹ and other pulp. During the previous year production was 286,006 tons.

Detailed information relating to the types and methods of production of wood pulp in the various States was published in Year Book No. 50, 1964, page 1110.

Paper and paper board. Paper and paper board are manufactured in all States, but the greater part of the industry is in New South Wales, Victoria and Tasmania. During 1964-65 twenty-five paper mills were operating, twelve in Victoria, four in New South Wales, four in Tasmania, two each in Queensland and South Australia, and one in Western Australia. A wide variety of paper and paper board is produced in Australian mills. The table below gives details of the production of some of the principal items.

PRODUCTION OF PAPER PRODUCTS: AUSTRALIA, 1962-63 TO 1964-65

Type of paper	Quantity (tons)			Value (\$'000)		
	1962-63	1963-64	1964-65	1962-63	1963-64	1964-65
Newsprint . . .	90,245	92,039	93,142	12,868	12,854	12,948
Blotting . . .	558	553	488	166	164	124
Duplicating . . .	6,794	7,008	7,386	2,146	2,370	2,618
Printing and writing .	85,711	94,473	101,222	26,756	29,062	28,948
Wrapping—						
Kraft . . .	118,018	141,006	160,807	28,616	33,134	37,403
Other . . .	9,942	12,127	16,158	3,520	4,294	5,269
Paper felts . . .	1,889	1,917	1,868	400	410	407
Paper boards . . .	240,965	258,374	296,387	37,955	40,966	47,670

Oversea trade in forest products, timber and timber products**Imports**

Quantities and values of forest products, timber and timber products imported into Australia during the years 1962-63 to 1964-65 are shown in the following table.

**IMPORTS OF FOREST PRODUCTS, TIMBER AND TIMBER PRODUCTS
AUSTRALIA, 1962-63 TO 1964-65**

		Quantity			Value (\$A'000 f.o.b.)		
		1962-63	1963-64	1964-65	1962-63	1963-64	1964-65
Logs not sawn—							
Softwoods(a) '000 sup. ft.	3,226	2,220	1,117	237	152	81
Hardwoods(b)	47,312	41,223	53,577	2,713	2,523	3,307
Undressed timber—							
Dunnage	8	10	20
Softwoods(a), n.e.l.—							
Douglas fir '000 sup. ft.	154,457	193,291	170,038	13,518	17,697	15,954
Radiata pine	24,388	25,086	32,432	1,720	1,763	2,333
Other	26,465	41,565	39,855	3,084	4,811	4,790
Hardwoods(b), n.e.l.	64,300	67,987	101,200	6,838	7,559	12,256
Box shooks, n.e.l.	561	567	865	79	95	140
Dressed timber	9,079	6,328	8,055	1,311	966	1,298
Veneers '000 sq. ft.	25,063	23,743	40,693	623	620	1,087
Plywood	26,040	30,398	47,298	1,806	2,326	3,245
Tanning substances	.. cwt.	161,209	151,243	156,328	740	874	965
Sandalwood oil lb.	2,516	1,811	1,475	18	10	18

(a) Non-pored woods. (b) Pored woods.

Imports of softwood logs in recent years have come largely from the Solomon Islands and Malaysia, and approximately two-thirds of the imports of hardwood logs have come from Malaysia. Imports of undressed soft wood timber comprise mainly Douglas fir (Oregon pine) from Canada and the United States of America and Radiata pine from New Zealand. Imports of undressed hardwood timber come mainly from Malaysia. Timbers from Scandinavian countries provide most of the dressed timber imports.

Imports of timber products are mainly veneers and plywoods. Papua and New Guinea and Japan provide most of the plywood imports, and the United Kingdom and Papua and New Guinea supply nearly half of Australia's imports of veneers. Tanning substances are the only other forest products imported in significant quantities. The most important of these is wattle bark produced in South Africa.

Exports

Details of exports of Australian forest and timber products in the years 1962-63 to 1964-65 are given in the following table.

EXPORTS OF AUSTRALIAN FOREST PRODUCTS, TIMBER AND TIMBER PRODUCTS(a): AUSTRALIA, 1962-63 TO 1964-65

	Quantity			Value (\$A'000 f.o.b.)		
	1962-63	1963-64	1964-65	1962-63	1963-64	1964-65
Logs not sawn . . . '000 sup. ft.	4,392	4,070	2,994	322	371	323
Undressed timber(b)—						
Sleepers . . . "	22,998	21,578	9,735	2,570	2,263	1,056

Eucalyptus oil . . . '000 lb.	475	304	295	312	230	269
Acaroid resin, grass tree and yacca gum . . . cwt.	10,934	6,583	6,774	40	26	21

(a) Excludes re-exports. (b) Excludes stumps and the like. (c) Non-pored woods. (d) Pored woods.

Of the exports of logs in 1964-65, 92 per cent were consigned to New Zealand; of the sleepers exported, 54 per cent were consigned to South Africa and 28 per cent to New Zealand; while of all undressed timber exported, 39 per cent were consigned to South Africa and 37 per cent to New Zealand. Consignments to the United States of America accounted for 74 per cent of the exports of tanning substances in 1964-65.

CHAPTER 25

FISHERIES

Further information on subjects dealt with in this chapter is contained in the annual printed bulletin *Non-Rural Primary Industries and Value of Production* and in the annual mimeographed statistical bulletin *Fisheries*, particularly as regards types of fish, etc., caught.

Fisheries resources and their commercial exploitation

Fish

It has been calculated that there are approximately 2,000 species of fish in Australia and the waters surrounding it (including freshwater species). Fishing is carried out continually in estuarine, coastal and offshore Australian waters in the east and south from Port Douglas in Queensland to Ceduna in South Australia, and in Western Australia from Esperance to Exmouth Gulf, and sporadically in the Onslow, Broome, Darwin, and Karumba areas in the north. Most fishing is done in waters over the continental shelf, which varies greatly in width around the continent, but tuna is sometimes fished beyond the shelf. As in other countries, fisheries in Australia may be divided into three types: the estuarine fisheries, located in the tidal waters of rivers and coastal lakes; the pelagic fisheries, which exploit species inhabiting the surface layers of the open ocean; and the demersal fisheries, which fish the bottom layers of the sea. The estuarine fisheries produce considerable quantities of the table varieties, such as mullets (*Mugil cephalus* and associated species) and breams (*Acanthopagrus* spp.). In addition to these there is a small freshwater commercial fishery, principally in New South Wales and South Australia, exploiting Murray cod (*Maccullochella macquariensis*) and golden perch (*Plectroplites ambiguus*). The pelagic fisheries produce species exploited during their seasonal migration, such as Australian 'Salmon' (*Arripis trutta*), which is a member of the order Perciformes, or perch-like fishes, tunas (Fam. *Thynnidae*, *Katsuwonidae*, *Sardidae*), barracouta (*Leionura atun*), and mackerels (*Cybius* spp.). These fisheries, with the exception of some tuna, mackerel and reef fisheries, are concentrated in the temperate waters around the southern half of the continent. The offshore demersal fisheries include those pursued on the reefs which may be found virtually right around the continent, and which yield such species as snapper (*Chrysophrys auratus*), the so-called 'cods' (*Epinephelus*, *Choerodon*, *Callydon* spp.) and associated species; those pursued on the trawling grounds, which produce species such as flathead (*Neoplatycephalus*, *Trudis* spp.), morwong (*Nemadactylus* spp.), John Dory (*Zeus faber*), etc.; and the important fishery for edible shark (school shark, *Galeorhinus australis* and gummy shark, *Mustelus antarcticus*) in south-eastern Australia.

Crustaceans

Crustaceans taken in Australia include crayfish, prawns, crabs, and freshwater lobsters. Crayfish (southern, *Jasus lalandei*; western, *Panulirus cygnus*; and eastern, *Jasus verreauxi*) is the most important crustacean exploited in Australia, and various species occur on the reefs of the continental shelf in all States. The commercial fishery, for technological reasons and through lack of knowledge of numbers, has not extended to the tropical species (*P. ornatus*), etc., but is concentrated on species found around the southern half of Australia. Prawns (*Penaeus* and *Metapenaeus* spp.) are taken in the estuarine, coastal and offshore waters of New South Wales and Queensland, and in the Shark Bay and Exmouth Gulf region of Western Australia. Crabs (*Scylla* and *Portunus* spp.) are taken mainly in Queensland and Western Australia, but small quantities are also taken in the other States. Freshwater lobsters (*Eustacus serratus*) are caught in inland streams in New South Wales, and one species, marron (*Cheraps tenuimanus*) forms the basis of an amateur fishery in the south-west of Western Australia.

Molluscs

Edible molluscs produced in Australia include oysters (mainly *Crassostrea commercialis*), scallops, mussels, and some of the cephalopods (squid, octopus, cuttlefish). Naturally-grown oysters are produced in all States except South Australia. In New South Wales and to a lesser extent in Queensland edible oysters are cultured commercially. The scallops (*Pecten meridionalis* and *Equichlamys bifrons*) are taken in Tasmania, the saucer scallop (*Amusium balloti*) is harvested in Queensland, and a fishery exploiting the species *Pecten alba* has recently been developed in Port Phillip Bay. The scallop resources in the Shark Bay area of Western Australia have not been

developed, and are still the subject of scientific investigations. Mussels (*Mytilus planulatus*) are gathered mainly in Victoria. Small quantities of cephalopods, mainly squid (*Loligo spp.*), are produced in many localities. Increased interest in the abalone (*Haliotis spp.*) has resulted in the development of small fisheries off southern New South Wales and Victoria and the east coast of Tasmania. Other edible molluscs taken from time to time include pipis (*Plebidonax deltoides*).

Pearl-shell and trochus-shell

The shell of the Australian species of pearl oyster (*Pinctada maxima*) is taken in the tropical waters of Australia from Exmouth Gulf in Western Australia to Cairns in Queensland for the manufacture of buttons, knife handles, etc. Live pearl-shell is used for pearl culture, the *Pinctada maxima* being capable of producing pearls which are the largest in the world and which command top market prices. Trochus-shell is found mainly on coral reefs off the Queensland coast, although small quantities occur in Western Australia.

Whales

The Australian whaling industry formerly exploited the humpback whales (*Megaptera novaeangliae*) during their winter migrations along the east and west coasts of Australia. However, owing to the total prohibition placed on their capture by the International Whaling Commission in 1963, Australian whaling is now confined to the sperm whale (*Physeter catodon*) which has been taken in the southern waters of Western Australia since 1955.

Marine flora

Seaweeds of possible commercial value occur in the coastal waters of New South Wales, Tasmania, South Australia, and Western Australia. In 1964, at Louisville, Tasmania, a factory began processing seaweed (*Macrocystis pyrifera*) for its alginic content.

History of the development of fisheries industries in Australia

Fishing

At the beginning of this century Australian fisheries were principally estuarine and onshore, and the deeper offshore resources were comparatively unknown. Vessels were generally sail-powered, and catching and preservation methods were primitive.

From 1909 to 1914 a Commonwealth vessel was engaged in research into fisheries resources around Australia. As a result of this exploration otter trawling in the south-eastern waters began in 1915. There have been several years of high production from this fishery, but in each case the peak year was followed by a period of low production. Danish seine trawlers entered this fishery in 1936. In 1958–59 steam otter trawling vessels used in this area were taken out of service. This fishery is at present stabilized at a relatively low level of production.

The tuna fishery began with the establishment in 1937 of a cannery at Narooma in New South Wales to exploit the occurrences, mainly of southern bluefin tuna (*Thunnus thynnus maccoyii*), which had been revealed by aerial surveys in 1936. However, landings were insignificant for over a decade. In 1950 the Commonwealth Government sponsored a Fijian tuna clipper and trained crew to instruct fishermen in the pole-and-live-bait method of catching tuna. Development of the South Australian tuna fishery followed the visit of two American tuna experts in 1954. Recent developments in tuna fishing include the use of gill netting, long-lining and the purse seine technique which was successfully used for the first time in 1965. Techniques for taking species of tuna other than southern bluefin are being investigated.

Crustaceans

The crayfishery, which is pursued off south-eastern Australia and off the west coast of Western Australia, was for many decades on a small scale. It was not until 1944 that the major sector, the western crayfishery, began to develop into what is now Australia's most productive single fishery. Between 1944 and 1947 production from the shallow areas of Houtman Abrolhos was used for canning for the armed forces. From 1948 to 1953 mechanization of the fleet was introduced progressively and deeper waters were worked. The United States market for frozen craytails was established during this period. The period 1954 to 1962 saw the introduction of larger and more powerful vessels, of conservation measures designed to maximize the sustainable yield, and of increased processing facilities. In the southern crayfishery, development has followed similar lines, but on a smaller scale because of the smaller crayfish population.

The prawn fishery was pursued for many decades on a small scale, but it was not until the discovery that prawns spawn in oceanic waters that interest developed in catching them during this phase of their life cycle. The discovery in 1947 of stocks of prawns in Stockton Bight and off Evans Head (both in New South Wales) initiated the development of deep-sea prawning in Australia. Since that time the prawn fishery has expanded to the eastern offshore grounds. Commercial prawn fisheries in Western Australia commenced at Shark Bay in 1962 and at Exmouth Gulf in 1964.

Molluscs

Natural oyster-beds were being harvested soon after settlement first began, but by 1870 rapid depletion of the stocks had resulted in restrictive legislation being passed in New South Wales. By the end of the nineteenth century, however, farms had been established in New South Wales and oyster cultivation was a notable industry. This cultivation has been almost entirely confined to the river estuaries of New South Wales. Very few oysters are exported and importation of oysters is necessary to cope with home demand. During 1964 a commercial scallop fishery was established in Port Phillip Bay and there was a noticeable development in the harvesting of abalone in the waters of New South Wales, Tasmania and Victoria.

Whaling

Whaling has been undertaken from time to time in Australia since the early days of settlement. Humpback whaling was carried out from stations on the west coast of Australia from 1949, and on the east coast from 1952. However, depleted stocks of the species resulted in the closing down by 1962 of the eastern stations, and in 1963, owing to the severe decline in world stocks of humpback whales, the International Whaling Commission, of which Australia is a member, prohibited the capture of the species south of the equator for an indefinite period. Australian whaling is now carried out from Albany only, where the catch is confined to sperm whales.

Pearling

Since the middle of the nineteenth century, when pearling by Europeans first commenced in Australia, the collection of natural pearls has been incidental to the production of mother-of-pearl shell. Although attempts to establish pearl culture in Australia had been partially successful as early as the end of the last century, it was not until 1956 that the modern technique, as developed by the Japanese, was introduced into Australia at Kuri Bay in Western Australia. The joint venture between Australian and Japanese interests proved successful and others entered the industry. There are now fifteen pearl culture farms in Western Australia, the Northern Territory and Queensland. Twelve of the farms are operated as joint ventures by Australian and Japanese interests, while three are wholly Australian enterprises. The technique of pearl culture is still a closely-guarded trade secret.

A map showing Australia's principal ports and the localities of the fishery resources under exploitation appears on plate 56 (facing page 992).

Fisheries administration and research

Government administration

The fisheries within territorial waters (that is, within three miles of the shore) are administered by State departments and Territory administrations. The Fisheries Branch of the Department of Primary Industry develops and administers fisheries in extra-territorial waters and co-ordinates fisheries administration.

The fisheries laws of each State and Territory and of the Commonwealth provide for the licensing of boats used in commercial fishing operations and of commercial fishermen. The provisions are broadly similar in each State, the general requirement being that any person who takes fish for sale, and any boat used in such fishing operations, must be licensed in the State or Territory concerned. Some States extend the licensing requirements to amateur or part-time fishermen. Australian nationals who fish commercially outside the territorial waters of a State or Territory, but within Australian waters as proclaimed under the *Fisheries Act 1952-1959*, are required to take out licences and to register their boats under that Act.

Fish stocks inhabiting Australian waters are a common property resource. With the exception of the Western Australian crayfishery and the Shark Bay prawn fishery, there are no restrictions on recruitment of men and vessels to any fishery. It has, therefore, been necessary for governmental action to be taken in an endeavour to provide rules of operation in certain fisheries which are vulnerable to depletion. The policy basic to the management of these fisheries is the greatest sustainable yield consistent with economic operations. Where a fishery, for economic reasons, is not producing its maximum yield, efforts to discover new methods of utilization of the catch are made.

The *Pearl Fisheries Act 1952-1953* provides for the management of the pearl-shell resources in accordance with Australia's proclamation of sovereign rights over the natural resources of the sea bed and subsoil to the 100 fathom line. It requires that all pearlers, vessels, etc. must be licensed, and prohibits the removal of live shell from Australian waters except with the written permission of the Minister for Primary Industry.

Under the *Whaling Act* 1960 the Commonwealth controls whaling from Australian stations in accordance with the conditions laid down by the International Whaling Commission. This Commission was established by the International Convention for the Regulation of Whaling, 1946, to organize world-wide conservation measures.

Research

The aim of all fisheries research in Australia is to achieve the greatest sustainable yield of fish and to assist in the development of an efficient industry. To this end much of the biological research already undertaken has been directed at formulating recommendations for management measures in various fisheries. Research work is also carried out which is expected to lead to the development of new fisheries, the expansion of under-exploited fisheries, more economical operations, and the use of more efficient equipment.

The organizations in Australia at present engaged in research into fisheries matters are:

- (i) Division of Fisheries and Oceanography, C.S.I.R.O. (fisheries science and oceanography);
- (ii) Division of Food Preservation, C.S.I.R.O. (research into handling, storage, processing, and transportation of fish);
- (iii) the several State fisheries departments (general biological research);
- (iv) Fisheries Branch, Department of Primary Industry (economic and management research, gear technology, extension work to the industry).

Collection and presentation of fisheries statistics

Source and basis of statistics

Statistics presented in this chapter have been collected by a number of authorities. The various State fisheries authorities have supplied, through the Deputy Commonwealth Statisticians in the States, the details of employment, boats, equipment, and production of the general fisheries and the pearl and shell fisheries. The Fisheries Branch of the Department of Primary Industry has supplied particulars of the whaling industry. Statistics of the processing of general fisheries products and of overseas trade in the products of fishing and whaling have been compiled in the Commonwealth Bureau of Census and Statistics.

The statistics refer, in general, to financial years. However, pearl and shell fishing data refer to the season ended in the financial year shown. Whaling statistics are shown by calendar years, and refer to the season in the calendar year. All overseas trade information refers to financial years.

In the preparation of Australian fisheries production statistics the quantities of individual products are generally in terms of the form in which they are taken from the water. For example, the statistics of fish production published in this chapter are in terms of 'estimated live weights' which are calculated from landed weights by using conversion factors for each species in each State. These conversion factors allow for the fact that the quantities of fish reported are frequently in a gutted, headed and gutted, or otherwise reduced condition. Crustaceans are reported on a 'whole weight' basis and molluscs (edible) on a 'gross (in-shell) weight' basis. The figures of pearl-shell and trochus-shell refer to the actual quantities of dry shell for sale and exclude the weight of the fish.

In Australia the basic source of statistical information on commercial fishing operations is the fishermen. In four of the six States monthly returns of catch by species have been obtained from fishermen for a number of years. In the other two States (Queensland and South Australia) there have been no statistical collections from fishermen, and catch statistics have been derived from other sources such as markets and receiving depots. In general it is recognized that catch statistics in Australia have been somewhat incomplete in past years. For example, details of production given in this chapter refer in most cases only to the recorded commercial production. In view of the importance of amateur fishermen in certain types of fishing, details shown cannot be taken as representing the total catch. In addition, it is likely that the figures shown understate to some extent the full commercial catch because no information is available on fish taken for sale by persons not licensed as professional fishermen.

Two weaknesses of fisheries statistical collections in Australia to date have been the lack of uniformity, which makes it difficult to compile statistics on an Australia-wide basis, and the lack of data on the effort involved in taking fish (time spent fishing, gear used, etc.). Recognizing these weaknesses, the Commonwealth-States Fisheries Conference in 1960 appointed a Statistics Committee 'to examine all aspects of fisheries statistics and fully document a proposed system for submission to the States and Commonwealth for approval'.

Model system of catch and effort statistics, 1962

The model system of catch and effort statistics designed by the Committee was adopted by the Commonwealth-States Fisheries Conference in 1962. The new system was introduced in Tasmania in 1963 and in Victoria and Western Australia in 1964. The system was introduced in Queensland for the otter trawl fishery early in 1965, but there are no definite plans at present to extend the system to other fisheries. Arrangements are proceeding for the introduction of the model system in New South Wales, but there are no plans as yet for the introduction of the system in South Australia.

Under the new system fishermen are asked to report, on a monthly basis, for the various fishing methods used, catch of each species taken and the locality where the greatest proportion of the catch is taken. Fishermen are asked to record catch in terms of landed weight, and appropriate conversion factors are used to obtain live weight where this is required. A grid system of 1° rectangles (relating to latitude and longitude) is used for recording location of catches at sea, and estuaries and inland waters are recorded where appropriate. Other data obtained include details of fishing effort, ports at which catch is landed, and employment details.

The eventual implementation of this system in all States is expected to ensure the availability of statistical information of a much higher standard in the future. In addition to the new system of catch and effort statistics, a uniform boat registration system is now being introduced by the States. This new system will eventually ensure that details of various characteristics of the commercial fishing fleet are available on a uniform basis for all States.

Boats and equipment used in fisheries

Fish, crustaceans and molluscs (edible)

The boats used for the estuarine fisheries are mostly small vessels, propelled by diesel or petrol engines of low power. The offshore vessels range in length from 30 feet to 120 feet and are almost invariably powered by diesel engines. Many of them have insulated holds to carry fish in ice, and some of the crayfish boats are fitted with wells in which the catch is kept alive. Some vessels have dry refrigeration, and others, including some of the tuna live-bait pole-fishing vessels, are equipped with brine refrigeration.

A recent survey showed that about 50 per cent of Australia's commercial fishing fleet, including tenders, consists of vessels up to twenty feet in length, about 25 per cent are in the 20-29 feet category, and the remainder are greater in length. Only a very small number are greater than fifty feet in length. It is hoped that more precise information on this aspect of the fishing fleet will be available in the future when an improved boat registration system is adopted in all States. Almost every type of fishing equipment is used. The following table sets out the equipment most commonly used for the main types of fish, crustaceans and molluscs.

FISHING EQUIPMENT USED IN AUSTRALIA

Type of fish	Equipment used
Mullet . . .	Beach seine, gill net
Shark (edible) . . .	Long-lines, gill net
Australian salmon . . .	Beach seine
Barracouta . . .	Trolling lines
Flathead . . .	Danish seine, otter trawl
Snapper . . .	Long-lines, traps, gill net, hand-line
Morwong . . .	Danish seine, otter trawl, traps
Whiting . . .	Handlines, Danish seine, beach seine
Garfish . . .	Gill net, beach seine
Mackerel . . .	Trolling lines
Tuna(a) . . .	Pole and live-bait, trolling lines, gill net, purse seine
Prawns . . .	Otter trawl, beam trawl, seine net
Crayfish . . .	Pots, traps
Scallops . . .	Dredge, otter trawl

(a) Lampara nets and purse seines are used for taking live bait for tuna.

Pearls, pearl-shell and trochus-shell; whaling

Ketch-rigged luggers about fifty-five feet long which carry crews of eight to fourteen members are used for pearl and pearl-shell fishing around Australia.

The whaling industry is highly mechanized. Standard equipment includes aircraft to locate whales, diesel-powered catchers of about 100 to 125 feet in length, and tow boats.

Boats and equipment employed, by industry

The following two tables show details of boats and equipment employed in the taking of fish, crustaceans and edible molluscs, pearl-shell and trochus-shell, and the number of chasers and stations engaged in whaling operations. The reservations mentioned on page 1000, regarding the use of employment information are also applicable to these tables. Boats employed in more than one industry are classified to their main activity.

Employment in fisheries**Census data**

In the following table, which shows particulars collected in the population censuses of Australia at 30 June 1947, 1954 and 1961, the numbers of persons whose industry statements were classified to 'fishing' are shown together with the numbers engaged in all primary industries and the total work force. The census classification 'fishing' includes such activities as fishing, whaling, pearl-shell fishing, etc. An adjustment was made to the 1947 and 1954 industry data by distributing over the range of recorded industry the number of persons whose industry was not stated. No such adjustment was made to the 1961 figures.

PERSONS ENGAGED IN FISHING: AUSTRALIA, CENSUSES, 1947 TO 1961

	Census, 30 June—		
	1947	1954	1961
Persons engaged in—			
Fishing	10,656	8,637	8,252
All primary industries	563,607	560,100	513,286
Total work force	3,196,431	3,702,022	4,225,096
Persons engaged in fishing as a proportion of—			
All primary industries %	1.9	1.5	1.6
Total work force %	0.3	0.2	0.2

Annual employment by industry

The following two tables show details of persons engaged in the taking of fish, crustaceans and edible molluscs, pearl-shell and trochus-shell, and in whaling. These statistics are derived mainly from the licensing records of the various State fisheries authorities. Because the definitions and licensing procedures used by these authorities are not uniform the statistics should not be used to compare the relative productivities of fishing industries in the several States. Figures for employment in general fisheries in 1962-63 to 1964-65 are not comparable with those for previous years because licensed part-time (non-commercial) fishermen were included in the total for South Australia prior to 1962-63. However, since 1962-63, an estimate for full-time (commercial) fisherman engaged has been included. Persons engaged in more than one industry are classified according to their main activity, and so may be classified differently from one year to the next.

EMPLOYMENT IN FISHERIES: STATES AND NORTHERN TERRITORY, 1964-65
(Persons engaged)

(a) Excludes freshwater fish caught in Queensland, particulars of which are not available.

Crustaceans

In terms of gross value of catch, the importance of crustaceans has increased in recent years, and is considerably greater than that of fish. The crayfish is the most important crustacean. The bulk of Australian production of crayfish is exported, nearly all going to the United States of America.

**CRUSTACEANS: PRODUCTION, BY TYPE, STATES AND
NORTHERN TERRITORY, 1964-65**

Molluscs (edible)

A fast-developing scallop production since 1964 led to scallop exports rising to 1.9 million pounds weight for the 1964-65 period. France provided the largest market. Abalone has also become an export commodity, but production is on a smaller scale and is likely to remain so.

Pearls, pearl-shell and trochus-shell

In recent years the production of pearl-shell has declined, owing to the development of plastics. However, the advent of pearl culture has since created a growing demand for live pearl-shell. Particulars of cultured pearl production are not available for publication and particulars of the production of natural pearls are not available.

(a) Season ended January of years shown. Shell taken by Queensland luggers operating in Northern Territory waters is included in Queensland. (b) Season ended December of years shown. (c) Excludes pearl-shell taken by Japanese pearl-ers operating in Australian waters. The quantities taken were as follows: 1960-61, 860,000 lb.; 1961-62, 813,000 lb. The Japanese pearling fleet did not operate in Australian waters after 1961-62.

Whales

Only sperm whales were caught during the 1965 season and no quotas were imposed on the catch. Quotas previously set by the Department of Primary Industry for the baleen species were in terms of humpback whales, and for this purpose 1 blue whale was taken as the equivalent of 2 fin, 2½ humpback, 6 sei, or 6 bryde whales.

Processing of fish

Quick-freezing is used at sea and ashore to preserve fish before delivery to consumers. The main technique employed in Australia is brine-freezing, as used extensively in the tuna and salmon fisheries.

Fish canning in Australia on a modern scale dates from 1937, before which the only fish canning carried out was on an occasional basis by factories handling other foodstuffs. In 1964-65 there were 17 canneries in Australia dealing exclusively with marine products, as well as several other canneries using small amounts of fish in general canning operations. The main canneries handle tuna (Eden, New South Wales; Melbourne, Victoria; Port Lincoln, South Australia); Australian salmon (Eden, New South Wales; Melbourne, Victoria; Port Lincoln and Adelaide, South Australia; Albany, Western Australia; Margate, Tasmania); barracouta (Melbourne and Portland, Victoria; Margate, Tasmania); scallops (Morningson, Victoria); and abalone (Melbourne, Victoria).

Other methods of fish processing include smoking and bottling, but these are undertaken on a minor scale only. Among the few fish by-products produced are small quantities of fish meal.

FISH PROCESSING (EXCEPT FREEZING): AUSTRALIA, 1960-61 TO 1964-65

	1960-61	1961-62	1962-63	1963-64	1964-65

Fish meal(e)	2,041	2,640	2,076	2,222	2,390

(a) Fish used for canning (including fish loaf), smoking and the manufacture of fish paste, but excluding the weight of oysters, other shellfish and crustaceans used for canning. (b) The weight of headed and/or gutted fish is taken as 85 per cent of live weight. (c) Excludes canned crayfish, lobsters, prawns, oysters, and clams, details of which are not available for publication. (d) Includes fish loaf, fish cakes, etc. (e) Excludes whale meal.

Processed crustaceans and molluscs

Quick-freezing is also used to preserve crustaceans and molluscs. The chief technique employed to preserve crayfish and scallops is air blast freezing, while plate contact freezing is being used on an ever increasing scale for prawns, scallops and abalone. Crayfish for the domestic market are usually cooked whole and then frozen, as are some exported crayfish. However, the major proportion of crayfish exports consists of frozen raw craytails. Most prawns for domestic consumption are sold in a whole cooked condition. Some are also exported in this form, after freezing. As a rule, however, the majority of prawn exports consist of green headless prawns, sometimes de-veined, sometimes split in 'butterfly' style, but in all cases frozen into five-pound blocks. Scallops are normally frozen in cello-wrapped five-pound blocks, although packaging of individually frozen scallops in polythene pouches is growing in popularity for local consumer packs. Canned abalone is now packed for the Asian market, as well as abalone soup for domestic and overseas sale. Small quantities of frozen abalone are also now being exported to the United States of America and Asia.

Whale processing

Oil from sperm whales is used in the manufacture of soap, plastics and watch lubricants, and in automatic transmission systems in motor cars.

WHALE PROCESSING: AUSTRALIA(a), 1961 TO 1965

(a) Excludes details of Norfolk Island. (b) Includes produce from whales taken for scientific research.
(c) 6 barrels = 1 ton.

Domestic marketing of fisheries products

Although virtually the whole of the tuna and Australian salmon catches and a large proportion of the barracouta catch are canned, the greater part of Australian fisheries production is marketed fresh or frozen.

Marketing arrangements for fresh fish vary from State to State. In New South Wales fish marketing is the responsibility of the New South Wales Fish Authority, which operates the Metropolitan and Wollongong Fish Markets. In other coastal centres of New South Wales fishermen's co-operatives may become registered as local fish markets. Fish for industrial use do not pass through any of these markets. The Queensland Fish Board sells all production on behalf of fishermen in that State, and has branches in eighteen centres, as well as depots at eight others. The Board also purchases fish on its own account to stabilize prices. In Victoria, Western Australia and Tasmania the marketing of fish is undertaken through agents. In South Australia the great majority of the fishermen are members of the South Australian Fishermen's Co-operative Ltd., which handles the whole of their production. Canned fish and frozen fish in the form of consumer packs are marketed mainly by the supermarket-type retail establishments. Oysters are usually sold live in the shell directly to restaurants, or are shelled and bottled before being sent to retailers.

Value of fisheries production

The following tables show details of the values of production of edible fisheries products, pearl-shell and trochus-shell for the years 1960-61 to 1964-65. *See also* the chapter Miscellaneous for an explanation of the value terms used.

FISHERIES PRODUCTION: GROSS VALUE
STATES AND NORTHERN TERRITORY, 1964-65
 (\$'000)

Product	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.

(a) Includes Northern Territory.

Consumption of edible fisheries products

Particulars of the estimated supplies of fish, crustaceans and molluscs available for consumption per head of population, in terms of edible weight, are included in the table below. For the purpose of compiling this table, an allowance has been made for the non-commercial fish catch.

FISHERIES PRODUCTS: ESTIMATED SUPPLIES AVAILABLE FOR CONSUMPTION AUSTRALIA, 1960-61 TO 1964-65 (lb. edible weight per head per annum)

Oversea trade in fisheries products

Values shown in this section are expressed as \$A f.o.b. port of shipment. The tables of exports relate to Australian produce only, but quantities and values quoted in the text sometimes include re-exports, the amounts involved, however, generally being small.

Edible fisheries products

A large proportion of the fish consumed in Australia is imported. Of the edible products imported in 1964-65, those originating in United Kingdom were valued at \$6.2 million (26 per cent of the total value), Japan, \$5.7 million (24 per cent), Canada, \$1.9 million (8 per cent), and South Africa, \$1.7 million (7 per cent).

The United Kingdom supplied 13.7 million lb. (34 per cent, valued at \$4.0 million) of the fresh or frozen fish products imported in 1964-65, South Africa, 5.8 million lb. (15 per cent, valued at \$0.8 million), New Zealand, 5.7 million lb. (14 per cent, valued at \$1.4 million), and Denmark, 3.8 million lb. (10 per cent, valued at \$1.2 million). Of the smoked or dried fish products imported in 1964-65, South Africa supplied 4.1 million lb. (45 per cent, valued at \$0.9 million) and the United Kingdom, 2.9 million lb. (32 per cent, valued at \$0.5 million). Japan supplied 9.6 million lb. (37 per cent, valued at \$4.9 million) of the canned fish products imported in 1964-65.

The value of exports of edible products in 1964-65 was 27 per cent more than that in 1963-64. The value of crayfish tails exported in 1964-65 was 75 per cent of the value of all exports of edible products. Of all crayfish tails exported in 1964-65, 98 per cent (7,678,000 lb., valued at \$13,403,000) were consigned to the United States of America.

The table below gives further details of Australia's overseas trade in edible products in the years 1962-63, 1963-64 and 1964-65.

**OVERSEA TRADE IN EDIBLE FISHERIES PRODUCTS: AUSTRALIA
1962-63 TO 1964-65**

(c) Excludes frozen smoked, which is included in item Products not elsewhere included.

Pearls

Cultured pearls valued at \$1,078,000 were imported into Australia in 1964-65. This was 67 per cent greater than the value imported in 1963-64 (\$646,000). In 1964-65 imports of cultured pearls valued at \$1,066,000 (99 per cent of the total value of cultured pearl imports) originated in Japan. Cultured pearls exported from Australia in 1964-65 were valued at \$1,299,000, \$348,000 more than 1963-64. In 1964-65 cultured pearl exports consigned to Japan were valued at \$1,248,000, 96 per cent of the value of all cultured pearls shipped in that year.

The value of natural pearls exported from Australia in 1964-65 was \$28,000, an increase of \$15,000 compared with 1963-64 (\$13,000). In 1964-65 natural pearls consigned to Japan were valued at \$19,000, 68 per cent of the value of all natural pearls shipped in that year.

Pearl, etc. shell and marine animal oils

Of the pearl-shell exported in 1964-65, 378,000 lb. (34 per cent) were consigned to the United States of America, 283,000 lb. (25 per cent) to the Federal Republic of Germany, and 243,000 lb. (22 per cent) to Japan. Of the trochus-shell exported, 132,000 lb. (66 per cent) were consigned to the Federal Republic of Germany, and 28,000 lb. (14 per cent) to Italy. Imports of shells included quantities of pearl, trochus and green snail shell from New Guinea, Papua and the Pacific Islands, which were subsequently re-exported from Australia.

OVERSEA TRADE IN SHELLS: AUSTRALIA, 1962-63 TO 1964-65

CHAPTER 26

MINERAL INDUSTRY

Further detailed statistics and information on the subjects dealt with in this chapter are contained in the annual printed bulletin *Non-Rural Primary Industries and Value of Production* issued by this Bureau and in *The Australian Mineral Industry—Annual Review* and other publications issued by the Bureau of Mineral Resources, Geology and Geophysics, which also issues, in conjunction with this Bureau, a quarterly publication, *The Australian Mineral Industry*, comprising two parts—Part 1—Quarterly Review and Part 2—Quarterly Statistics. The annual mimeographed statistical bulletin *Mining and Quarrying* of this Bureau contains economic statistics of the industry prepared and published as soon as possible after the data have been compiled. Two monthly statistical bulletins *Minerals and Mineral Products* and *The Gold Mining Industry, Australia* are issued also, and other current statistics on mining or mine products are contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Monthly Bulletin of Production Statistics*.

Geology

General geology

The greatest part of the area of outcropping rock on the Australian continent is Precambrian in age. These basement rocks form the western and central core of the continent and are flanked by younger Palaeozoic rocks, which, along the eastern edge of the continent, form a belt several hundred miles wide extending from north Queensland to Tasmania. Mesozoic sediments overlies large areas of the continent and reach their greatest development in central Queensland. Cainozoic rocks occur mainly in the southern parts of Victoria and South Australia and as residual basalt cappings over an extensive area of the Palaeozoic rocks of eastern Australia.

Economic geology

Minerals of economic significance occur widely throughout the Precambrian and Palaeozoic rocks of the continent. Palaeozoic mineralization is perhaps more varied, but the Palaeozoic deposits now being worked are in general smaller than those found in Precambrian rocks. Most of Australia's metallic mineral deposits occur within two broad regions, a region of Precambrian rocks in the west and central areas of the continent and a region of younger Palaeozoic rocks in the east. This situation is especially true in the case of the larger base metal deposits and also for smaller deposits of metallic minerals.

The major deposits of metallic minerals, including iron ore, lead, zinc, silver, copper, uranium, and gold are contained in the Precambrian rocks of the Australian shield. Smaller deposits of tin, tungsten, tantalum, mica, beryllium, manganese, and cobalt are also contained in these rocks.

The mineralized Palaeozoic rocks contain major deposits of gold, now mostly worked out, and a few large copper and lead-zinc-silver occurrences. Smaller amounts of tin, tungsten, molybdenum, bismuth, and other metals also occur in these rocks.

Outside these two main categories, however, there are some metallic mineral deposits of considerable economic importance which were formed during the Tertiary Period. These include bauxite which occurs as a surface capping over various rocks, mostly of Mesozoic age. Extensive deposits of bauxite occur at Weipa on Cape York peninsula in north Queensland, at Gove on the north-eastern tip of the Northern Territory, in the Darling Range in Western Australia, and near Kalumburu in the north-west of Western Australia. These deposits are the result of a long period of weathering.

Mineral sands, another important exception, contain rutile, zircon, ilmenite, monazite, and other minerals and are particularly well developed on the central and northern New South Wales coast, southern Queensland and south-western Western Australia. The deposits of the eastern States are considered to be derivatives of Mesozoic rocks. The Western Australian deposits are thought to be derivatives of the Precambrian granites of the Australian shield.

Occurrences of fuel minerals (coal, oil and natural gas) are characteristically located in former sedimentary basins. Large areas of Australia are covered by these basins, and more than twenty major sedimentary basins have been identified on the Australian mainland. In addition, sedimentary basins are known to exist in off-shore areas adjacent to the Australian coast. The individual basins range in area from 4,000 to 510,000 square miles and contain marine and continental sedimentary rocks ranging in maximum thickness from 1,000 to about 50,000 feet and including rocks of all ages from Proterozoic to Palaeozoic.

Deposits of black coal in Australia are mainly of Permian age and are located in sedimentary basins in the coastal areas of the eastern States. The majority of the New South Wales and Queensland black coal deposits are bituminous in type. The extensive brown coal deposits of Victoria were formed during the Tertiary Period.

Oil and natural gas have been found in a number of sedimentary basins, but the only proved commercial fields at present are at Moonie, Alton and Conloi in the Surat Basin in south-east Queensland and Barrow Island off the coast of north-west Western Australia. The Moonie deposit is found in rocks of lower Jurassic age. The Barrow Island field, which will begin production in 1967, is mainly of Cretaceous age, but minor oil shows have been recorded from the underlying Jurassic rocks. Other discoveries of potential commercial significance have been made in the Gippsland Basin, off-shore from eastern Victoria (natural gas and oil); at Richmond and Gilmore in Queensland (gas); at Mereenie in the Northern Territory (gas); and at Moomba and Gidgealpa in South Australia (gas). A map of Australia showing the main sedimentary basins and locations of oil and gas discoveries appears on plate 60.

Of the non-metallic minerals, many, such as clay, sand and silica, etc., are not restricted to the rocks of any particular era and are often polycyclic in nature. However, Precambrian rocks do contain important deposits of blue asbestos in Western Australia, limestone and dolomite in South Australia, and mica in the Northern Territory.

Opals are found in the flat-lying sedimentary beds of the Great Artesian Basin in Queensland, New South Wales and South Australia. These opal deposits were formed during the Tertiary Period.

Most of the larger mineral deposits now being mined in Australia are shown in the following table, according to the age of the geological formation in which they are found.

PRINCIPAL AUSTRALIAN MINERAL DEPOSITS

Age of geological formation in which located	Metal or mineral	State or Territory	Locality
Precambrian (more than 520 million years old)	Copper . .	Queensland . .	Mount Isa
		Northern Territory	Tennant Creek
	Gold . .	Western Australia .	Kalgoorlie and other localities
	Iron . .	South Australia .	Middleback Ranges
Palaeozoic (between 200 and 520 million years old)		Western Australia .	Yampi Sound and Pilbara
	Lead-silver-zinc	New South Wales .	Broken Hill
		Queensland . .	Mount Isa
	Black coal .	New South Wales .	Hunter Valley, Lithgow, South Coast
		Queensland . .	Kianga-Moura, Baralaba, Bowen, etc.
		Western Australia .	Collie
	Copper-gold .	Queensland . .	Mount Morgan
		Tasmania . .	Mount Lyell
	Lead-silver-zinc	Tasmania . .	Mount Read and Rosebery
	Tin (lode) .	Queensland . .	Herberton
Mesozoic (between 75 and 200 million years old)		Tasmania . .	North-east of State
	Tungsten .	Tasmania . .	King Island and north-east of State
	Black coal .	Queensland . .	Ipswich
		South Australia .	Leigh Creek
Cainozoic (less than 75 million years old)	Manganese .	Northern Territory	Groote Eylandt
	Bauxite . .	Queensland . .	Weipa
		Western Australia .	Darling Range
	Brown coal .	Victoria . .	Gippsland
	Mineral sands(a)	New South Wales .	North coast
		Queensland . .	South coast
		Western Australia .	South-west coast
	Tin (alluvial) .	New South Wales .	Tingha
		Queensland . .	Herberton
		Tasmania . .	North-east of State

(a) Derived from granites of Palaeozoic age and sandstones of Mesozoic age in eastern Australia and from granites of Precambrian age in Western Australia.

Mineral resources

Australia is self-sufficient in most minerals of economic importance and much more than self-sufficient in some. The following table summarizes, in a general way, known reserves and production of the principal metals and minerals in relation to Australian consumption of these commodities and present export availability. Many qualifications are necessary to a simple summary of this kind and the table should be read in conjunction with the following detailed notes on principal minerals. A map showing the location of principal mining centres, mineral discoveries, and mineral processing centres appears on plate 57.

RESERVES OF MINERALS: AUSTRALIA

(Source: Bureau of Mineral Resources, Geology and Geophysics)

Productive capacity	Reserves adequate	Reserves uncertain	Reserves negligible
Production sufficient for domestic demand and exports	Cadmium Copper Gold Lead Silver Zinc Barite Bauxite Coal (black) Crocidolite asbestos Gypsum Iron ore Mineral sands(b) Opal Salt	Beryl Manganese ore (metallurgical)(a) Talc Tantalite Uranium oxide	
Production sufficient for domestic demand	Coal (brown) Clays (except light grade china clay) Dolomite Felspar Limestone	Glass sands Sillimanite	
Production not sufficient for domestic demand	Lithium minerals Sulphides (as source of sulphur)(c)	Antimony Cobalt Platinum Tin(d) Abrasives Bentonite China clay Chromite Diatomite Fluorite Magnesite Manganese ore (chemical) Mineral pigments Petroleum	Bismuth Molybdenum Asbestos (chrysotile) Phosphate rock
Production nil	Magnesium Potassium salts (from alunite muds)	Arsenic Nickel Diamonds Graphite Vermiculite	Mercury Vanadium Borates Nitrates Sulphur

(a) Exports permitted as an exploration incentive. (b) Ilmenite, monazite, rutile, zircon. (c) At a price disadvantage as compared with imported brimstone for the manufacture of sulphuric acid. (d) Increased production for self-sufficiency or even export probable in near future.

Lead-zinc

Since the discovery in 1883 and subsequent development of the ore body at Broken Hill, Australia has been a major producer of lead and zinc. Ore reserves in the Broken Hill area are estimated to exceed 70 million tons, and further exploration is being undertaken to extend reserves. Mt. Isa, with ore reserves in excess of 27 million tons, is the major lead-zinc deposit in Queensland, and further reserves exist in adjacent leases. In Tasmania substantial lead-zinc deposits are situated at Read-Rosebery near the west coast. In the Northern Territory investigation of a large lead-zinc ore body in the McArthur River area is proceeding.

Copper

The principal deposit of this metal is at Mt. Isa, where ore reserves were estimated at 34 million tons in 1964. Recent discoveries have indicated very large additional reserves at Mt. Isa and further exploration and testing is proceeding. Other important deposits are situated at Mt. Morgan, Queensland, and Mt. Lyell, Tasmania. Small deposits at Ravensthorpe, Western Australia, and Tennant Creek, Northern Territory, have also been developed. In New South Wales recent exploration at Cobar has resulted in the opening of a new operation at a previously abandoned mine, and ore reserves in this area are now estimated to be in excess of 18 million tons.

Aluminium

As a result of the recent discoveries at Weipa, Gove and the Darling Range, Australia's reserves of bauxite are known to be very large, perhaps the largest in the world. Total reserves in the Weipa region are probably in excess of 2,000 million tons, while the deposits at Gove are reported to contain up to 200 million tons of bauxite. The Darling Range deposit has nearly 80 million tons of proved reserves, with a reasonable indication of a further 100 million tons. In addition, another potentially significant deposit has been identified in the Kimberley district of Western Australia.

Tin

The main deposits of tin now being exploited are in the Herberton field inland from Cairns, Queensland, in north and central Tasmania, in south-west Western Australia, and in the New England area and Ardlathan in New South Wales. Exploration and expansion of known deposits is expected to result in Australia again becoming self sufficient in tin by 1969.

Gold

Australia's gold resources are heavily concentrated in Western Australia, mainly in the Kalgoorlie-Coolgardie area. However, small deposits of gold-bearing ore occur in all States. In addition, gold is commonly obtained as a by-product of other mining activities, particularly copper mining. Gold ore reserves at Kalgoorlie were estimated to be about 12 million tons in 1965, with a gold content of between 3.90 and 5.40 dwt per ton.

Iron ore

In recent years very extensive deposits of iron ore have been discovered in Australia. These discoveries have established Australia as one of the most important iron ore provinces in the world. The largest deposits, in the Pilbara region of Western Australia, are currently being developed for export. A smaller deposit in the Savage River region of north-west Tasmania is also under development at present. These deposits are adequate to supply the estimated needs of the Australian iron and steel industry far into the future, as well as providing a large export availability. Total Australian reserves are estimated to be in excess of 15,000 million tons.

Manganese

Australia's known reserves of manganese, which is highly important for the iron and steel industry, are on a far more restricted scale than the deposits of iron ore. The principal deposits currently being worked are in the Pilbara and Peak Hill areas of Western Australia and on Groote Eylandt in the Gulf of Carpentaria. Reserves on Groote Eylandt are believed to be substantial, and testing of the deposits is continuing.

Tungsten

The main deposits of tungsten ores are in northern Tasmania (wolfram) and on King Island (scheelite). Australia's own requirements are small, and production is principally for export.

Mineral sands

Ores of titanium (rutile and ilmenite), zircon (zirconium) and thorium (monazite) occur in beach sands over extensive areas of the north coast of New South Wales, the south coast of Queensland and the south-western coast of Western Australia. Resources are large and easily workable. Australia's reserves of rutile represent the bulk of the world's reserves of this mineral.

Uranium

Australia's known reserves of uranium ore were heavily depleted during the years 1953 to 1963. During this period substantial quantities of uranium concentrate were exported to the United Kingdom and the United States. It was estimated during 1964 that total Australian known commercial reserves of uranium ore contained 10,950 short tons of U_3O_8 . The Mary Kathleen deposit is estimated to contain in excess of three million tons of uranium-bearing ore.

Coal

Australia has adequate coal resources in relation to present and estimated future needs. These resources include coal of all types, except pure anthracite. The table below shows that the major part of the black coal reserves is bituminous. Australia's coal reserves are concentrated mainly in the mainland eastern States. The bituminous coal is located mainly in New South Wales and, to a lesser degree, in Queensland; Victoria has very substantial brown coal reserves in the Latrobe Valley.

AUSTRALIAN COAL RESERVES

(Source: Joint Coal Board, Eighteenth Annual Report, 1964-65)

State	Type of coal	Reserves (in million tons)	
		Measured and indicated	Inferred
New South Wales . . .	Bituminous	2,951	Very large(a)
Queensland	Bituminous-sub-bituminous	1,243	Very large(a)
Western Australia . . .	Sub-bituminous	282	1,597
South Australia	Sub-bituminous	49	..
Tasmania	Bituminous	Very small(b)	137(c)
Victoria	Bituminous	20	11
Victoria	Brown	54,700	43,000
South Australia	Lignite	630	..

(a) Inferred reserves are more than 10,000 million tons. (b) Measured reserves in Tasmania amount only to several thousand tons. (c) This figure includes both indicated and inferred reserves.

Crude petroleum

Continued exploration is slowly accumulating evidence that Australia may possess significant resources of petroleum and natural gas. The Surat Basin (Moonie) in south-east Queensland and the Barrow Island field are Australia's only commercial oil fields. Other possible commercial fields have been discovered, the most important being off-shore Victoria.

Natural gas

Several discoveries of natural gas deposits have been made in Queensland, Western Australia, Northern Territory, South Australia, and off-shore Victoria. In some areas reserves are extensive but commercial development will depend on the availability of markets and related capital costs.

History

The mineral industry has been an important factor in the growth of the Australian economy since the middle of the nineteenth century, when the discovery of gold attracted population to Australia and thus provided a valuable impetus to economic development. Over the years the mineral industry has been a substantial earner of foreign exchange, and has in general provided ample supplies of raw materials for Australia's developing manufacturing industries. In addition, earnings from mineral production have provided capital for the development of important manufacturing industries such as iron and steel production.

The history of mineral discovery and development in Australia, however, has not been one of continuous growth, and the growth of the industry may be divided into several episodes of activity which to some extent overlap. Probably the first mining in Australia was for coal, following discoveries in the northern and southern portions of the Sydney coal basin in 1796 and 1797. Metal mining first began in the 1840's in South Australia, where small deposits of silver-lead and copper were mined. In 1851 Edward Hargreaves discovered gold near Bathurst, New South Wales,

and shortly afterwards several other gold strikes were made in Victoria and Queensland. Thus began the first gold-rush in Australian history, and a rapid development of gold mining followed. Gold production for the ten years 1851-1860 was nearly 25 million ounces. However, by the mid-1860's gold mining had declined and the average annual gold production fell to less than 2 million ounces.

Subsequently a number of important discoveries of other minerals were made, and the development of these deposits revitalized the mining industry. These finds included the discoveries of copper, tin and lead-zinc from 1870 to the late 1890's (including Mount Bischoff in 1871, the Broken Hill Lode in 1883 and Mount Lyell in 1890) and the gold discoveries in Western Australia, beginning about 1884 (including Coolgardie 1892 and Kalgoorlie 1893). These discoveries were followed by large increases in the production of gold, silver-lead, copper, tin, and coal. Indeed, for a considerable period prior to 1900 Australia was the major gold producing country in the world. In addition, from 1890 to 1910 Australia was the leading tin producing country. This resurgence of the mineral industry, which began in the late 1880's, reached a peak in 1907 with a value of output being achieved which was not surpassed until 1937.

During the period 1908 to 1931 the industry underwent a period of decline, with a concomitant reduction in mineral exploration activity in Australia. This reduction has been attributed to the rapid expansion of the gold mining industry in South Africa about this time. British mining capital which had been channelled into Australia was diverted to another area of the world, and the limited amount of local capital was reserved mainly for agricultural and other less speculative activities. Despite this, a few very important mineral discoveries were made—the Mount Isa lead-zinc deposit in 1923 (and subsequently the copper deposit in 1929-31) and the Aberfoyle tin and wolfram deposits in 1926. During the period 1931-1941 the mineral industry experienced a period of recovery. Major production increases in gold and coal occurred for a short period. However, during the latter years of the second World War another period of decline occurred and gold production fell once again.

The immediate post-war period saw the beginning of a major era of expansion and diversification of the industry, which has continued, with little interruption, to the present. Since 1950 mining and quarrying output has doubled, both in money and real terms, while the output of manufacturing industries processing and treating minerals has expanded even more rapidly. The expansion of mineral processing in Australia (smelting and refining of metals, the processing of non-metallic minerals, etc.) is one of the most important features of the post-war expansion of the industry. A considerable part of the diversification and development which has occurred, or which is under way at present, can be attributed to the number of important mineral discoveries which have been made in Australia in the post-war period.

These discoveries include the following major finds:

Uranium—Mary Kathleen (Qld), Rum Jungle and South Alligator River (N.T.);

Bauxite—Weipa (Qld), Gove (N.T.), Darling Range (W.A.), Kalumburu (W.A.);

Iron ore—Pilbara (W.A.), Savage River (Tas.);

Manganese—Groote Eylandt (N.T.);

Oil and gas—Moonie, Roma area (Qld), Barrow Island, Gingin and Yardarino (W.A.), Mereneie (N.T.), Moomba and Gidgealpa (S.A.), off-shore Gippsland area (Vic.).

Developments which have occurred in the last few years have important implications for the future of the industry. Most attention at present is being focussed on the large iron ore deposits which have been discovered, the expansion of the aluminium industry, the revitalization of the coal mining industry, and the results of an increasing rate of exploration, particularly petroleum exploration. One notable feature of these recent developments is that the industry is becoming much more involved in export trade and its contribution to export earnings is expected to increase considerably in the next few years. Japan has emerged as the major market for Australia's minerals.

Administration

For all practical purposes all mineral rights in Australia are vested in the Crown. In the States, sovereign rights are held by the State Governments with respect to mineral resources within their boundaries. In the Territories of the Commonwealth these rights are vested in the Commonwealth Government. The Commonwealth Government is able also to influence overall development and production activity in the mineral industry by virtue of its statutory powers with respect to international trade, customs and excise, taxation and loan raisings. Certain specially formed bodies such as the Joint Coal Board and the Australian Atomic Energy Commission have been given administrative responsibility in defined areas.

Control of mining

Each State or Territory in the Commonwealth has its own mining Acts or Ordinances and regulations governing the prospecting for and working of mineral deposits. These Acts, etc. are similar in principle, but differ in detail. They all make provision for the following tenures.

- (i) The holding of a miner's right which gives the holder the right to prospect on Crown land, and to use the timber and water necessary for his operations. The miner's right does not give the power to remove or sell any mineral.
- (ii) Small mining leases, having a maximum area of about 100 acres, which necessitate the payment of rent and, in most cases, a royalty. There is usually no limit on the number of such leases which may be held by any one person, partnership, private or public company. In practice a restriction is imposed by the requirement that a lease must be continuously worked, or that work to a given value must be done annually, but exemption from the labour requirements may be obtained under certain circumstances. The exemption is given for limited periods only, and where the labour requirements are not met and exemption has not been granted, any person may apply for forfeiture of the lease in his favour. If the rental is not paid the lease is forfeited.

Provision is also made in the various Acts and Ordinances for prospecting areas, claims, etc. Such areas, claims, etc. are all quite limited in size and from the practical viewpoint are cheap forms of mining lease which carry limiting powers relating to the removal of minerals. A very large enterprise may take the course of acquiring mining titles by negotiation with the appropriate Minister for Mines and having the agreed terms and conditions embodied in an Act of the State Parliament. This method of acquisition has been used in several cases where the leasing company undertook an obligation (such as the erection of a large treatment works) in return for leases over large areas for a long period, and has become more common in recent years, particularly where very large scale capital intensive projects are involved (e.g. iron ore in Western Australia, coal and bauxite in Queensland, bauxite in the Northern Territory).

See page 79 of the chapter Land Tenure and Settlement for areas occupied under mining acts and ordinances.

Control of exploration

Following the introduction of large-scale modern prospecting methods (particularly air-borne prospecting), small prospecting areas were found to be unsuitable, and steps have been taken in the States and Territories to ensure the availability of large areas for prospecting by interested persons. Large areas may be made available in either of the following ways:

- (i) by the Minister of Mines withdrawing an area from the provisions of the Mining Act and giving an informal agreement that the prospector would have preference in applying for titles to leases within the area; or
- (ii) by provision within the Mining Acts or Ordinances for the issue of authorities to prospect over an area defined by a written agreement which also sets out provisions as to the amount of money to be spent, methods of prospecting, tenure of the agreement, etc.

The tenure of such areas is limited, usually to one or two years only, and, if renewed for a further period, is only over an area selected from the larger area as a result of work done during the life of the initial agreement. Neither form of prospecting concession gives the holder any rights over, or authorities to prospect on, land already held under a mining title within the agreed area. Unless specifically stated in an agreement, the discovery of minerals, whether inside or outside an area covered by an authority to prospect, gives the discoverer no legal rights except the right to apply for a mining lease over the area in which the discovery was made. Suitable prospects are converted to mining tenements by making application for lease under the appropriate mining Act.

The above discussion refers in general to the exploration for all types of mineral deposits in Australia. Additional information relating to the search for petroleum is given below.

Control of petroleum exploration

On-shore. In Australia, all petroleum on or below the land is, and shall be deemed always to have been, the property of the Crown. Consequently, full control of petroleum mining rights is vested in the Government or Administration of each State or Territory. Any company, syndicate, or individual proposing to join in the search for petroleum must first satisfy the Government concerned that the necessary financial resources are available to carry out exploration activity.

The names given to different types of exploration permits differ with variations in petroleum legislation from State to State, but there are essentially two basic forms of authorization for exploration: (a) Permit for surface survey; (b) licence for exploratory drilling.

In most States the minimum permit area is 1,000 square miles and up to a maximum area of 10,000 square miles in the Northern Territory. There is no limit in most States on the number of permits that may be held by one company, syndicate or individual. The term of the initial

permit varies between States from one year to five years, but in all cases there is provision for extensions with a maximum in most States of ten years. A bond must be lodged, and in some States rent is payable. All permits contain obligations to carry out certain exploration work with a general provision that survey must be started within three to six months after a permit is granted.

In most States the maximum licence area is 200 square miles with no limit to the number of licences that may be held. The term of the initial licence varies from State to State and ranges from two to five years. Extensions are permissible with a maximum term ranging in most States from six to ten years. A bond is required in most States, and some States also charge a fee. All States charge a rental ranging from 10c to \$2 a square mile per annum. The obligations of a licence require a company, syndicate or individual to carry out more detailed survey work than at the permit stage and may also require a minimum drilling programme.

If exploration is successful a lease may be granted which gives the right to produce petroleum. The maximum lease area is 100 square miles, and in most States there is no limit to the number of leases that may be held. When a lease is granted the remaining portion of the licence area in which a lease is situated must in most cases be surrendered to the Crown, but surrender clauses vary from State to State.

The initial term of a lease in most cases is twenty-one years, and the lease may be renewed for a similar period. Also, one of the general obligations of a lease is that drilling for production must be commenced within six months. In some States the appropriate Minister has jurisdiction over the processing and marketing of the oil.

Legislation in most States requires the payment of rent at the rate of \$20 a square mile per annum, but this is deductible from any royalties payable on commercial production. All States and Territories have provisions requiring the operating company to guard against wasteful and dangerous practices and make provision for field development in accordance with sound oilfield practice.

Off-shore. More than three years ago Federal and State Ministers and Attorneys-General began a series of conferences to determine the extent of their respective jurisdictions over rights to prospect for petroleum in Australian off-shore areas. In November 1965 it was announced that agreement had been reached between the Federal and State Governments on a system of joint legislation to control and safeguard the exploration for, and the exploitation of, the petroleum resources on the territorial sea-bed and on the outer continental shelf. The continental shelf is described as off-shore territory not exceeding 200 metres in depth.

Following the November 1965 announcement representations were made by the off-shore exploration companies seeking modifications of some aspects of the scheme. These representations were considered by Federal and State Ministers, and on 30 June 1966 it was announced that the Ministers had agreed that some modifications would be made to the original scheme as a result of the representations made by exploration companies. Under the modified draft legislation the State Governments administer the legislation and collect all rents and fees. Granting of tenements is subject to approval by the Federal Government as the authority responsible for external affairs, defence, health, customs, and navigation. Royalties are divided on a 50-50 basis between the Federal Government and the adjacent State. The draft off-shore legislation provides for a two-stage system of granting authorities to explore and produce. A permit covers all stages of exploration, including drilling. Rent is payable at the rate of 20c a square mile per annum, but not exceeding \$2,000 for any permit area.

A licence (equivalent to a lease on land) for production is issued for twenty-one years, with the licensee having the right of extensions for a further twenty-one years. Further extensions may be granted. Royalty is ten per cent of value of production at the well-head for the first twenty-one years. Royalty rate for the whole of the second twenty-one year period will be fixed by the Parliaments at or before the time of granting a renewal, and in the absence of Parliamentary action to fix a new rate, the ten per cent will continue to apply for the period of the licence.

The draft legislation provides for the establishment over off-shore areas of a graticular system of block areas. The size of each graticular block is five minutes of arc of latitude by five minutes of arc of longitude. This results in graticular blocks ranging in area from a little over thirty square miles in northern Australia to approximately twenty-five square miles in southern Australia. Reduction in size is due to the fact that minutes of latitude decrease in length between the Equator and the South Pole. The maximum permit area is 400 blocks (approximately 10,000 square miles). There will be no statutory limitation on the number of permits which may be granted to any individual company. Permits will be issued for an initial period of six years with rights of renewal for further successive periods each of five years subject to satisfactory compliance with the conditions of the permit and to the permittee's surrendering half of the effective permit area at the end of each period. Furthermore, the draft legislation will include discretionary powers for the Minister to modify the requirement for compulsory reduction if this would result in a permit area being reduced below sixteen blocks (i.e. approximately 400 square miles).

Following a discovery of petroleum within a permit area the permit holder will be asked to nominate a block which will then become the centre of a group of nine blocks, called a location, from which the permit holder may be granted a licence over five blocks (an area of approximately 125 square miles) with four blocks reverting to the Crown. Where locations consist of less than nine blocks they will be split evenly between the permittee and the Crown if the number of blocks within the location is even, and the odd block will be held by the permittee if the number is uneven. The permit holder has at least two years, which may be extended to four years, in which to make his selection. Graticular blocks not selected by the permit holder will be excised from the permit area and may be disposed of by State or Territories by tender. The original permit holder will have the first option to purchase any such graticular blocks at the top price offered. Existing tenements which have been previously issued by States or Territories will be honoured where possible, and the holder may have the option of deciding whether they wish to be covered by the new legislation.

See page 80 of the chapter Land Tenure and Settlement for particulars of areas held under authorities to prospect or explore for petroleum.

Mineral royalties

The collection by governments of royalties for the production of minerals within their area of authority is an internationally accepted practice. In Australia the responsibility for mineral royalties is largely a State concern, and all States except Tasmania currently collect some form of mineral royalty payments. In the past most States have relied on an established system of standard rates which were uniform for all producers of any particular mineral in the State concerned. These charges were either a fixed monetary amount per ton (e.g. 5c per ton on gypsum mined in New South Wales) or an *ad valorem* royalty (e.g. 1.5 per cent of gross value of gold produced in New South Wales).

In recent years there has been an important basic change in the system of establishing royalty commitments, and it is now quite common for State Governments to negotiate special royalty rates with companies which are seeking mineral leases for large scale developments. These royalty rates may vary depending on whether production is for export or for domestic processing. The rates for a particular mineral may also vary between producers. Important examples of this type of royalty agreement are the iron ore development agreements in Western Australia and coal development agreements in Queensland. Mineral royalties received by State Governments in recent years are shown in the table below.

MINERAL ROYALTY RECEIPTS
STATES AND NORTHERN TERRITORY, 1961-62 TO 1964-65
(£)

State or Territory	1961-62	1962-63	1963-64	1964-65
New South Wales	2,901,734	1,633,640	5,090,622	19,946,772
Victoria	(a) 76,732	(a) 85,004	(a) 94,072	(b) 39,996
Queensland	727,688	486,938	642,560	1,201,264
South Australia	789,310	756,156	895,540	962,668
Western Australia	239,454	248,646	243,182	291,354
Tasmania	(c)	(c)	(c)	(c)
Northern Territory	65,960	61,996	68,682	80,892

(a) Includes, in addition to mineral royalty receipts, mine-tailing licences and rents. (b) Mineral royalty receipts only. (c) No mineral royalties are collected in Tasmania.

Control of exports

The Commonwealth Government maintains export controls over certain minerals and metals. These controls are enforced by means of Customs (Prohibited Exports) Regulations as amended from time to time by Statutory Rules. The Commonwealth authorities having jurisdiction over mineral and metal exports, together with the relevant products, are listed below. A clearance to export is needed in each case.

Department of National Development—iron ores, beneficiated iron ores and iron concentrates; mineral sands in all forms (including concentrates) containing zircon, rutile or ilmenite; lithium ores and concentrates; manganese ores; beryllium ores and concentrates.

Department of Primary Industry—phosphate rock, phosphate and superphosphate, and fertilizers containing phosphate or superphosphate.

Australian Atomic Energy Commission—uranium and thorium minerals including monazite; uranium, thorium, beryllium, hafnium and lithium metals, compounds and alloys; hafnium-free zirconium metals, alloys and compounds; very pure calcium metal; nickel metal in certain forms; minerals, raw and treated (including residues and tailings), containing more than 0.05 per cent of uranium or thorium, singly or together.

In addition to these controls which are, in general, of fairly long standing, the Commonwealth Government has imposed export controls on copper and copper-bearing materials in recent years. These controls have been administered by the Department of National Development.

In November 1964, as a result of the closure of the copper smelter at Mount Isa, an emergency ban was imposed on the export of copper and copper scrap. The ban did not include copper concentrates or fabricated copper products. These restrictions were lifted as from 1 September 1965.

Subsequently a ban on the export of copper scrap and copper alloy scrap was announced on 20 December 1965. As from 1 May 1966 the ban was extended to include the following materials from which copper may be obtained—residues, speiss, slag, dross, scale, sweepings, ash, sludge, slime, dust, and wastes. In addition, it was announced that export permits would not be issued for copper and copper alloy cakes, billets and similar shapes produced from scrap.

Joint Coal Board

The Joint Coal Board was established in 1946 under joint legislation of the Commonwealth and of the State of New South Wales to carry out special administrative functions in regard to the New South Wales black coal mining industry. A summary of these functions is given below.

- (i) To ensure that coal is produced in the State of New South Wales in such quantities and with such regularity as will meet requirements throughout Australia and in trade with other countries;
- (ii) To ensure that the coal resources of the State are conserved, developed, worked, and used to the best advantage in the public interest;
- (iii) To ensure that coal produced in the State is distributed and used in such manner, quantities, classes and grades, and at such prices as are calculated best to serve the public interest and secure the economical use of coal and the maintenance of essential services and industrial activities; and
- (iv) To promote the welfare of workers engaged in the coal industry in the State.

Australian Atomic Energy Commission

During 1953 Commonwealth legislation was enacted to set up an Atomic Energy Commission which is responsible, in an overall sense, for the production and utilization of uranium in Australia. This Act, the *Atomic Energy Act 1953*, superseded the *Atomic Energy (Control of Materials) Act 1946*, but retains a provision of that Act which provides for the control of substances which could be used for production or use of atomic energy.

The functions of the Commission fall under two main headings. Firstly, it is responsible for undertaking and encouraging the search for and mining of uranium and is empowered to co-operate with the appropriate authorities of the States in connection with these and related matters. Secondly, it is authorized to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research and generally fostering the advancement of atomic energy technology. The Commission functions under the direction of the Minister for National Development.

Government assistance

The Commonwealth Government and the various State Governments provide assistance to the mineral industry in a variety of ways. The main forms of assistance are discussed below.

Commonwealth Government assistance

Assistance provided by the Commonwealth Government takes the form of income taxation concessions, subsidies, bounties, and technical assistance mainly through the work of the Bureau of Mineral Resources and the Commonwealth Scientific and Industrial Research Organization. A table showing direct Commonwealth Government payments to sectors of the mineral industry is given on page 1023.

Income taxation concessions. One-fifth of the net income derived from mining for prescribed minerals in Australia or the Territory of Papua and New Guinea is exempt from tax. The metals or minerals to which this concession applies are as follows: asbestos, bauxite, chromite, emery, fluorspar, graphite, ilmenite, kyanite, magnesite, manganese oxides, mica, monazite, pyrite,

quartz crystals (piezo-electric quality), radio-active ores, rutile, sillimanite, vermiculite, and zircon; and ores of antimony, arsenic, beryllium, bismuth, cobalt, columbium, copper, lithium, mercury, molybdenum, nickel, osmiridium, platinum, selenium, strontium, tantalum, tellurium, tin, tungsten, and vanadium.

Income derived from mining principally for gold in Australia or the Territory of Papua and New Guinea is exempt from tax. The exemption is also available in respect of income derived from mining principally for gold and copper if the value of the gold obtained is not less than 40 per cent of the value of total output.

Income attributable to uranium obtained from working a mining property in Australia or the Territory of Papua and New Guinea, or from the treatment of ore in Australia or the Territory of Papua and New Guinea, is exempt from tax for residents of Australia and the Territory of Papua and New Guinea. The exemption is, however, conditional upon the uranium recovered being owned by the Commonwealth or disposed of to a person approved by the Commonwealth.

Dividends paid wholly and exclusively out of exempt mining income are also exempt from tax.

Valuable assistance has been given in the form of certain taxation concessions to encourage the search for petroleum. Investors are permitted, for tax purposes, to deduct from their assessable income all sums paid for shares issued by petroleum exploration companies in respect of application, allotment, and call moneys. These deductions are allowable only if a petroleum exploration company elects to forgo an equivalent amount when, in the event of commercial production, capital expenditure is claimed as a deduction for tax purposes. Most Australian petroleum exploration companies have elected to pass on this benefit to their shareholders. In 1963, amendments aimed at providing increased incentive to petroleum exploration companies extended the range of deductible items to include expenditure on the purchase of rights to prospect, preliminary expenses incurred in the operation of exploration companies, and several other fringe items. The effect of these concessions is to exempt a company from payment of income tax on profits derived from the sale of petroleum until such time as the capital expended in developing the production has been recouped.

Petroleum search subsidy. In 1957 the Commonwealth Government introduced the *Petroleum Search Subsidy Act 1957* whereby stratigraphic drilling operations were subsidized to the extent of 50 per cent of cost. The *Petroleum Search Subsidy Act 1959* widened the scope of operations for which subsidy was offered to include all types of geophysical surveys and off-structure drilling operations. Another amendment in 1961 further widened the scope of the 1959 Act to provide subsidy for test drilling and detailed structure drilling operations. It also provided for the calculation of drilling subsidies on a footage basis as an alternative to the total cost basis. A sum of \$10 million was allocated to the petroleum search subsidy scheme for 1962-63 compared with an allocation of \$5.4 million in the previous year. Applications for subsidy increased to such an extent, however, that in spite of the increased allocation, the maximum rate of subsidy was reduced from 50 per cent of the allowable cost of approved operations to 30 per cent.

The *Petroleum Search Subsidy Act 1959-1961* was amended in June 1964 to extend Commonwealth subsidy for a further three years. The *Petroleum Search Subsidy Act 1959-1964* provides subsidy for approved geophysical surveys and test and stratigraphic drilling operations; bore-hole surveys, off-structure and detailed structure drilling are no longer eligible. As in the previous Act, an applicant may elect to receive subsidy for both types of drilling operations on either a footage basis or a total cost basis. In addition, the production testing of any well approved for subsidy is also eligible for additional subsidy. Under the Act the Minister may vary the rates of subsidy for prescribed operations, but they may not exceed one-half the total cost. The present rates of subsidy for approved operations on a cost basis are 30 per cent for test-drilling and 40 per cent for stratigraphic drilling. The rate for all types of geophysical operations is 30 per cent. The 1959-1964 Act also specifies that exploration for petroleum on the Australian continental shelf is eligible for subsidy, retrospective to 1959. The Federal budget for 1965-66 contained an appropriation of \$11.4 million for subsidies under the Act.

On 28 October 1964 the Minister announced that action was necessary to limit the burden of the Commonwealth subsidy scheme on the Australian taxpayer in view of the many recent encouraging discoveries of oil and gas which were now providing the incentive to further exploration. To this end the Minister announced that operations within certain defined areas around discovery wells and fields would not be approved for subsidy. For the present, projects in the following areas would not be eligible for subsidy: twenty miles from a gas well; thirty miles from an oil well; forty miles from a gas field; fifty miles from an oil field. Specified areas excluded from subsidy payments are periodically announced by the Minister.

Pricing of Australian crude oil. The Commonwealth Government, subsequent to a Tariff Board Inquiry during 1965, established a basic price for Australian crude oil of \$US 2.48 a barrel at the nearest refining centre, plus a differential for the quality of the oil produced, plus an exploration incentive of 75 U.S. cents a barrel. In the case of Moonicie crude oil, the quality differential is 27 U.S. cents a barrel, and the price for Moonicie crude oil delivered Brisbane is \$US 3.50.

In order to ensure that local crude oil is used in Australian refineries, the Government will impose penal import duties of 0.8c a gallon on crude oil and 2.4c a gallon on motor spirit to be paid by those companies which do not take their share of local crude oil. A more detailed discussion on the pricing of Australian crude oil is included on page 1050.

Assistance to the gold-mining industry. Assistance to the gold-mining industry by subsidy was introduced at a time of rising costs in the industry and fixed official world price for gold. Because many producers were faced with the likelihood of closing down, the Government decided to subsidize marginal producers in Australia and the Territories of Papua and New Guinea. Under the *Gold-Mining Industry Assistance Act 1954* a producer, the value of whose gold output exceeded 50 per cent of the total value of his mine output, was eligible for assistance, subject to certain conditions, on the production of gold from 1 July 1954. The assistance scheme has been reviewed on a number of occasions since the Act was originally passed, and some liberalizations have been approved, including increases in the rates of subsidy payable authorized in amendments enacted on 22 October 1957, 22 May 1959 and 2 June 1965.

The rate of subsidy payable under the original Act was increased under amendments enacted on 22 October 1957 and 22 May 1959. The Act was again amended on 2 June 1965. Under the Act as it now stands the subsidy payable to small producers whose annual deliveries do not exceed 500 fine oz. is \$6 per fine oz., irrespective of cost of production. For large producers, subject to certain provisions, the rate of subsidy payable is an amount equal to three-quarters of the excess of the average cost of production over \$27 per fine oz., with a maximum amount of subsidy of \$8 per fine oz. A producer whose deliveries during the year exceed 500 fine oz. may elect to be treated as a small producer. In this case the subsidy rate payable per fine oz. on total deliveries is \$6 reduced by 1c for each fine oz. by which deliveries exceed 500 fine oz. The benefit under this provision terminates when deliveries in a year reach 1,100 fine oz. Where a producer receives an amount in excess of the official price of \$31.25 per fine oz. as a result of sales on overseas premium markets or otherwise, the subsidy payable is reduced by the amount of the excess. Prior to 1 July 1965 subsidy payable to large producers was subject also to a limiting provision that the annual net profit of a producer was not, with the addition of the subsidy, to exceed 10 per cent of the capital used in the production and sale of gold. This limitation has now been removed. The latest amendments also provided for the removal of two other restrictive provisions. A large producer's entitlement to subsidy is no longer subject to reduction if the amount of expenditure on development included in costs exceeds a certain amount, or if the grade of ore being mined falls below a certain level. On the other hand, the Act now provides that subsidy may be adjusted if it is considered that operations are not conducted in accordance with good mining practice. With effect from 1 July 1965 a large producer is able to include in his costs for subsidy purposes one-half of net costs incurred in approved exploratory diamond drilling elsewhere than on his mining property. Payments under the amended Act are to apply to production until 30 June 1970. Payments under the Act commenced in March 1955, and the amounts paid to gold producers in the various States and Territories of Australia in each of the years 1960 to 1965 are shown in the table on page 1023.

The purpose of the *Gold Mines Development Assistance Act 1962* was to provide assistance to gold producers in Australia and the Territories of Papua and New Guinea not receiving subsidy under the *Gold-Mining Industry Assistance Act 1954-1962*, in order to increase the rate of their development work and so to add to their proved reserves of gold-bearing minerals. In recent years these reserves had declined to the extent that the long-term prospects of the industry were jeopardized. The Act, which applied to 1962-63 and the next two financial years, provided that a development allowance was payable to a mine approved for the purposes of the scheme equal to the amount by which its allowable expenditure on development in a year, as defined in the Act, exceeded a defined base amount which would normally be the average annual amount spent by the mine on development during the three years preceding 1962-63. The payment of allowance was also subject to a number of other conditions and limits provided for in the Act. With the liberalization of the *Gold-Mining Industry Assistance Act* from 1 July 1965, the Commonwealth Government decided not to extend the development assistance legislation which, accordingly, lapsed on 30 June 1965.

Assistance to the copper mining industry. After a Tariff Board investigation, assistance was accorded to the industry in 1958, partly by import duty and partly by bounty. The assistance was continued until 31 December 1965. However, because of the unsettled conditions in the industry at this time, it was decided to defer a Tariff Board Inquiry and to continue the present bounty assistance until 31 December 1966 unless an earlier date of cessation is proclaimed. Under the *Copper Bounty Act 1958-1965* bounty is payable, subject to specified conditions, on refined copper sold for use in Australia. The rate of bounty is \$70 per ton when the overseas price, as determined by the Minister for Customs and Excise, is \$580 (£Stg232) or less. When the overseas price rises above \$580, the bounty falls by the same extent, so that no bounty is payable when the overseas price is \$650 (£Stg260) or more. A duty is imposed on imports of copper when the overseas price falls below \$580 a ton, to the extent of \$1 for each \$1 that the price falls below \$580. Including freight and other charges, the landed cost of imported copper is thus expected not to fall below \$610 a ton.

Assistance to producers of sulphuric acid and iron pyrites. Following recommendations of the Tariff Board, the Sulphuric Acid Bounty Act was extended for a period of five years from 1 July 1960. Arising from these same recommendations, the *Pyrites Bounty Act* 1960 was enacted on 15 December 1960 to be operative for a period of four and a half years from 1 January 1961. The Acts provide for bounties to be paid, subject to specified conditions, on sulphuric acid produced from prescribed materials of Australian origin and to producers of iron pyrites. In June 1965 it was announced that assistance under these Acts would continue until 31 December 1965. Both of these Acts have now been extended by legislation to 30 June 1969.

Payments to producers of phosphate fertilizers. The *Phosphate Fertilizers Bounty Act* 1963 provides for a bounty to be paid on superphosphate and ammoniated phosphate fertilizers manufactured and sold for use in Australia on and after 14 August 1963. The bounty is based on the fertilizer value of superphosphate as measured by its soluble content of phosphorus pentoxide. A standard grade of superphosphate containing 20 per cent, plus or minus 0.5 per cent, soluble content of phosphorus pentoxide, qualifies for the full bounty of \$6 per ton. When the phosphorus pentoxide content of the superphosphate is less than 19.5 per cent or above 20.5 per cent, bounty is payable at the rate of \$30 for each ton of contained phosphorus pentoxide. Bounty in respect of ammonium phosphate is payable at the rate of \$30 for each ton of the phosphorus pentoxide content of the ammonium phosphate. In addition to standard grade superphosphate, 'double' and 'triple' superphosphate, containing 40 per cent and 50 per cent phosphorus pentoxide respectively, are produced in Australia, and bounty on these products is payable at the rate of \$12 per ton and \$15 per ton respectively. Payments under this Act are designed to assist consumers of superphosphate (primary producers) rather than the manufacturers of superphosphate.

COMMONWEALTH GOVERNMENT PAYMENTS TO THE MINERAL INDUSTRY AUSTRALIA, 1961 TO 1965

(\$)

Period	Petroleum exploration (a)	Gold mining (b)	Copper mining (c)	Pyrites mining (d)	Sulphuric acid production (e)	Phosphate fertilizer production (f)

Bureau of Mineral Resources, Geology and Geophysics. The functions of the Bureau of Mineral Resources, Geology and Geophysics are to explore, investigate and encourage the development of mineral deposits; to survey and assess the mineral resources of the Commonwealth and its Territories and to initiate and investigate proposals for their development; to interpret the results of completed surveys and recommend ways of remedying or meeting mineral deficiencies and to advise on all aspects of the mineral economy of Australia, including the best utilization of mineral resources in the national interest; to carry out geological and geophysical surveys and investigations and advise on all aspects of applied geology and geophysics.

The Bureau comprises five branches under the Director: Operations, Mineral Resources, Geological, Geophysical, and Petroleum Exploration. The Operations Branch consists of three sections, Planning and Co-ordination, Publications and Information, and Administrative. It carries out central office functions, including planning and control of programme, assessment of results, co-ordination of activities, liaison, and distribution of information. The Mineral Resources Branch comprises the sections Mineral Economics, Mining Engineering and Petroleum Technology and is concerned largely with those aspects of the Bureau's work which involve studies of the mineral industry as a whole, and the preparation of advice and reviews for the Government, industry and the public. The Geological and Geophysical Branches are responsible for the principal field activities of the Bureau, and the operation of observatories; while the Petroleum Exploration Branch is concerned with the administration of the Petroleum Search Subsidy Act and is also engaged in the assessment of sedimentary basins in Australia and its Territories. The establishment of the Bureau is 556 officers, of whom 280 are professional. The budget for the financial year 1965-66 was \$16.8 million, of which \$11.4 million was provided for payment under the Petroleum Search Subsidy Act.

The Bureau maintains in Canberra, Melbourne and Darwin laboratories which are engaged on geochemical, geochronological and petroleum technological studies and basic research into the design and testing of geophysical equipment. The Bureau also maintains a vulcanological observatory at Rabaul and geophysical observatories at Melbourne, Toolangi, Mundaring, Darwin, Port Moresby, Mawson and Wilkes (Antarctica), and Macquarie Island. The geophysical observatories are engaged in magnetic, ionospheric and seismic investigations and are base stations for field operations.

Commonwealth Scientific and Industrial Research Organization. The activities of this body with respect to the mineral industry are discussed on page 1025 under Research.

State Government assistance

In addition to free assays and determinations of rocks and minerals carried out for prospectors by the Mines Department of the States and Territories, technical officers of these departments provide advice to the mining and allied industries where required, carry out field examinations of mining prospects, advise on exploration and development, select sites for water supply, and in general give a free technical service to the mining industry.

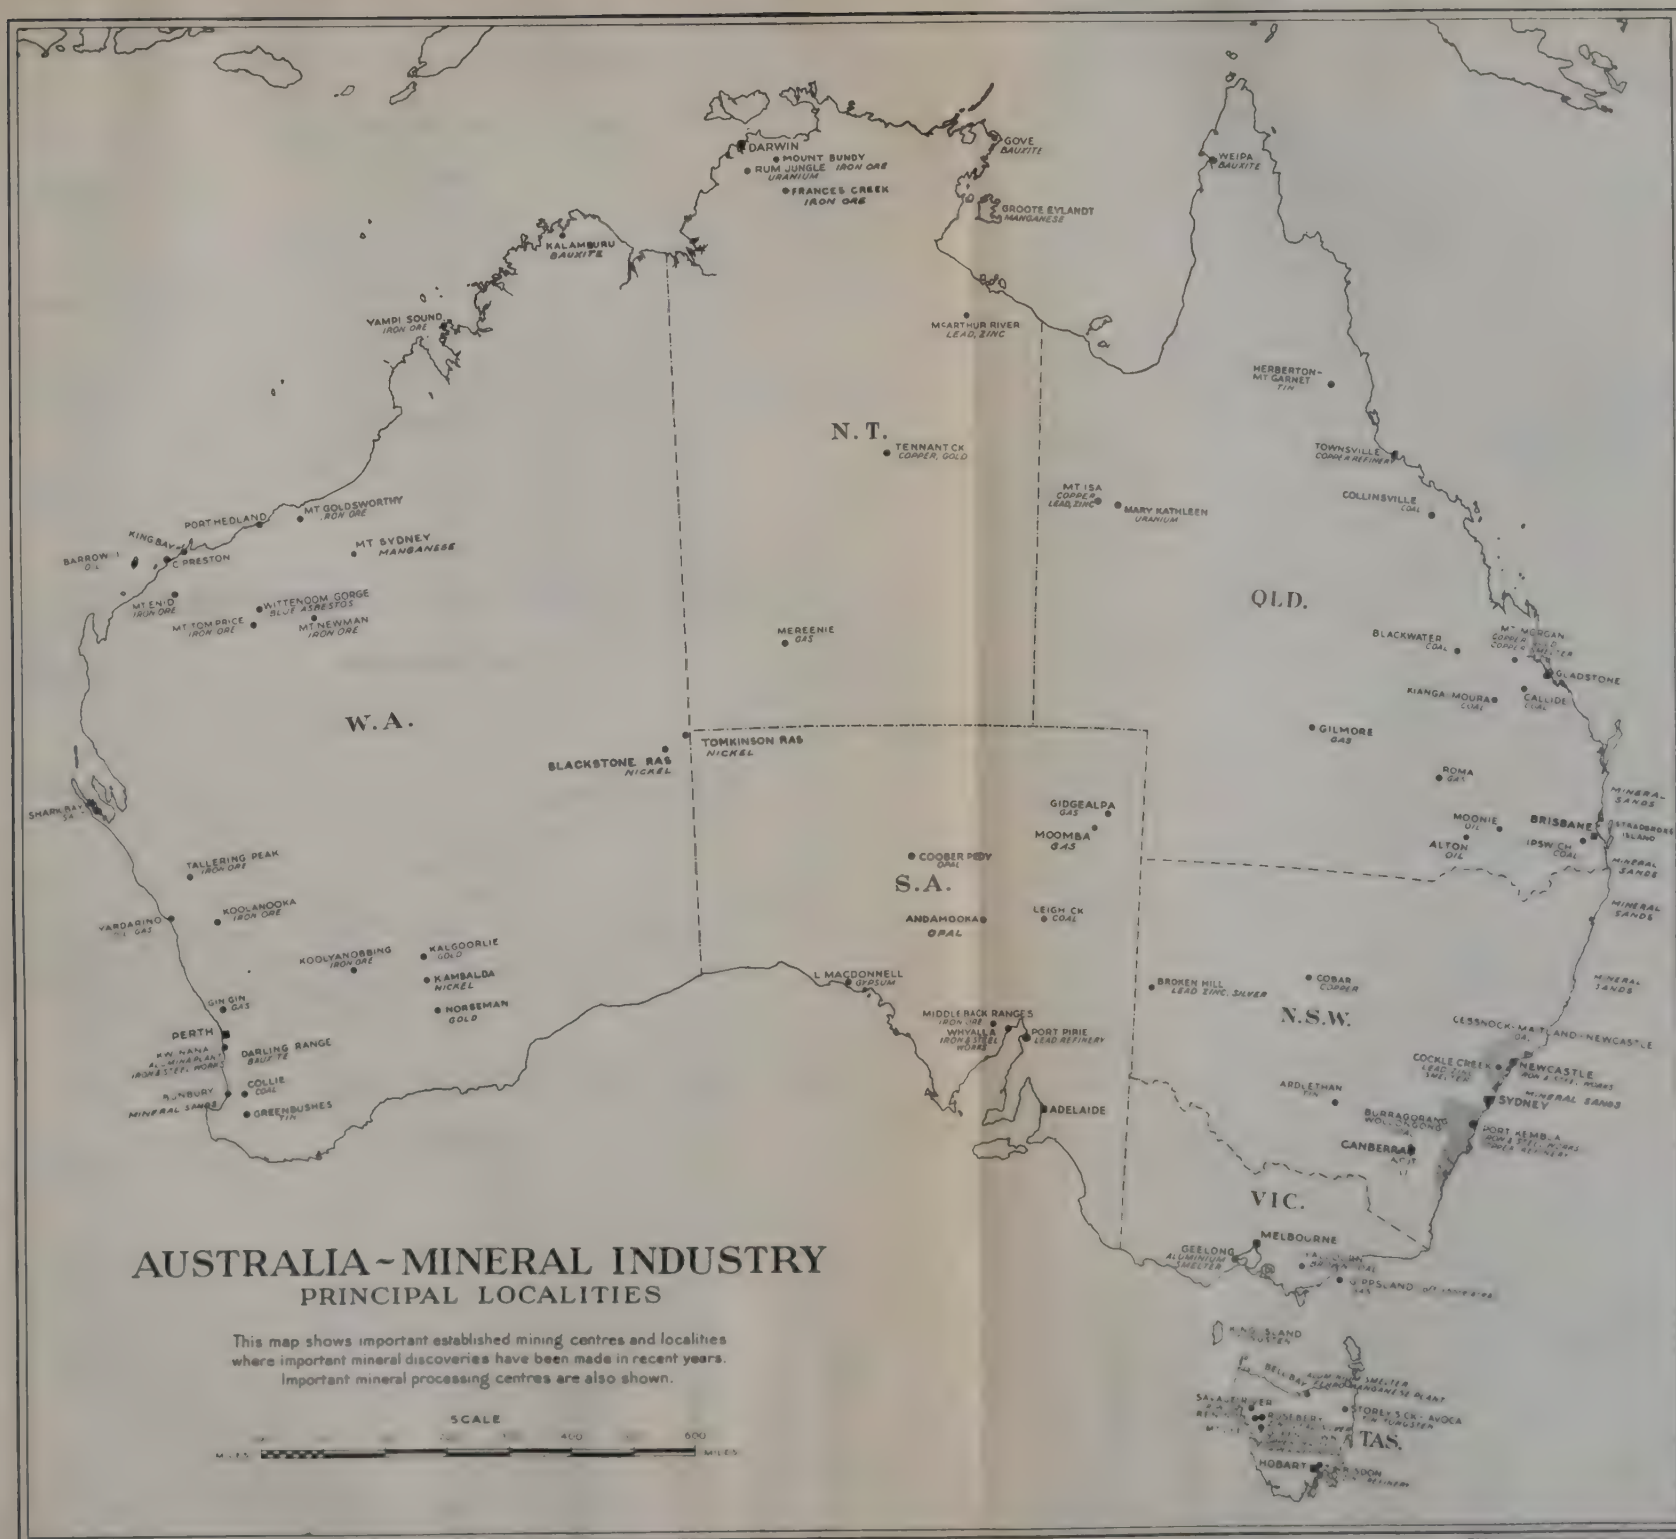

New South Wales. State aid to assist metalliferous mining may consist of grants to assist the the prospecting and/or mining for gold and minerals, and for the purchase, removal and installation of mining plant or equipment. A quantity of mechanical equipment is also available in several localities for hire at reasonable rentals to prospectors and small mine operators, and District Inspectors have geiger counters and scheelite detectors which are loaned to approved persons. In the year 1964-65 \$400,000 was made available for exploration work carried out by the Department and to give financial assistance to exploration groups and prospectors.

Victoria. Loans may be granted to assist prospecting and development or the purchase of machinery for gold mining. The Mines Department has stamp batteries in different parts of the State to crush ore for prospectors at nominal rates. Small mining companies may avail themselves of these facilities. Drilling with diamond, rotary and percussion drills is carried out by the Mines Department for mining companies and for general mineral exploration. A survey of the State's underground water resources is in progress, in conjunction with the development of town water supplies from underground sources.

Queensland. Various forms of assistance to mining are made available by the Queensland Department of Mines. Grants are made from the Consolidated Revenue Fund for use on construction and maintenance of roads in mining areas. Advances are made from the Gold Mining Encouragement Fund for mining development work. This assistance is restricted to gold mines, and advances are repayable from proceeds of the mine, if any. From the Assistance to Metalliferous Mining Fund, plant such as jackhammers, compressors and pumps is purchased and maintained. Such plant is made available on hire, the rental payments being credited back to the fund. Prospecting assistance is made available in approved cases, the rates being \$5 a week for a single man and \$7 a week for a married man with dependants. This is not repayable. From the Advances to Mining Fund assistance by way of subsidy is advanced for mine development. This is repayable from proceeds of the mine. The department also maintains a treatment works for tin ores, etc. at Irvinebank, an assay office at Cloncurry and diamond-drilling plants in several parts of the State. The Venus State battery at Charters Towers is available for the treatment of gold-bearing ores.

South Australia. The Department of Mines provides the following services and facilities to the mineral industry: (i) hire of boring plant and mining equipment, boring and testing of mineral deposits, financial subsidies in approved cases for prospecting and mining development, development of sub-surface water supplies for farming, pastoral, irrigation and mining purposes, and purchase of basic metal ores from prospectors; (ii) geological examination of mineral deposits, water supply, dam foundation and drainage problems, guidance on mining legislation, and publication and issue of geological bulletins and maps. It also provides, through the Australian Mineral Development Laboratories, chemical and metallurgical and analytical and assay investigation, testing and treatment of ores and minerals, and petrographic, mineragraphic and radiometric determinations. Pilot scale metallurgical and chemical treatment plants are maintained and operated for the development of mineral extraction processes.

Western Australia. Prospectors receive assistance of either \$12 or \$14 a week according to the prospecting locality. North of the 26th parallel and within a defined area south of this lying largely outside the agricultural areas assistance is given to the extent of \$14 a week. In the remainder of the State prospectors receive \$12 a week. Provision is also made for the supply of some tools required for prospecting. There are twenty State batteries operating intermittently throughout the goldfields for the treatment of ore from prospectors and small mine-owners at a nominal charge. A cartage subsidy is also granted to such operators sending ore to State batteries for treatment. Provision is made for loans to mine-owners who require assistance to develop mines. The Government also has a drilling scheme, financing mine-owners on a \$1 for \$1 basis.

Tasmania. The Department of Mines provides financial assistance to mining lessees for the purchase of plant and machinery, for sinking, repairing or de-watering of shafts, for constructions of dams and water races, for testing and proving a deposit of any mining product, for developmental work, and for diamond and other types of drilling. The Department has available for hire percussion and diamond drills for exploration, as well as a complete plant for small shaft sinking and tunnelling. Other assistance is rendered to the industry in the form of geological and engineering advice, through ore-dressing research into metallurgical recoveries, and the selection and design of treatment plant. In consequence of a serious fall in world tungsten prices the *King Island Scheelite Agreement Act* 1963 (No. 1) was passed. This Act permitted the Tasmanian Government to provide financial assistance until the end of August 1963 so that production of scheelite on King Island could be continued. A second Act (*King Island Scheelite Agreement Act* 1963 (No. 2)) gave authority for advances in the period to 31 May 1964. In October 1964 the price of tungsten on world markets moved above the level at which repayments under the subsidy agreement apply, and repayments to the Tasmanian Government, in accordance with a formula related to monthly production, were commenced by the operating company. Repayments, in respect of 1965 production, of advances under the King Island Scheelite Agreement Acts were \$302,518.

Northern Territory. To encourage the development of the mining industry the Northern Territory Administration operates two batteries for the treatment of miners' ores. The batteries are at Tennant Creek and at Mount Wells near Burrundie. The Tennant Creek battery is currently cyaniding the gold in accumulated tailings while the Mount Wells battery is crushing parcels of gold ores and tin ores. The crushing charges are subsidized by government grants. In addition, the Administration provides cartage subsidies and financial advances to encourage miners to carry out developmental work. Assistance is also given to the industry by drilling encouraging prospects. Roads and water supply services are provided and maintained for mines under active development throughout the Territory.

Research

General

Research investigations into problems of mining, ore-dressing and metallurgy are conducted by Governmental bodies, by universities, by private enterprise, and by combined efforts of these bodies. A summary of the functions of these bodies follows.

Commonwealth Scientific and Industrial Research Organization

Research for the mineral industry by the Commonwealth Scientific and Industrial Research Organization is concentrated mainly in the Divisions of Applied Mineralogy and Mineral Chemistry and in the Mineragraphic Investigations and Ore-Dressing Investigations Sections. All of these groups have their laboratories in Melbourne. In addition, the Division of Applied Mineralogy has a small laboratory in Perth.

The research programme of the Division of Applied Mineralogy is concerned mainly with the nature and the industrial application of mineral products, especially the non-metallics. A major part of the Division's programme is devoted to research on production and utilization of cement. Studies of industrial refractories and engineering ceramics are also being made. The Division of Mineral Chemistry is carrying out research on the chemical basis for the better utilization and processing of Australian minerals. Particular attention is being paid to studies of minerals that are abundant in Australia and have considerable potential for increased exploitation. A major aim of the Division of Coal Research is to promote the effective use of coal through research into the processes of combustion, gasification and carbonization. This work ranges from basic studies of the kinetics of the processes involved in combustion and gasification to studies of problems that have arisen in operating boilers in large power stations. Examination and recording of the characteristics of Australian coals from all known deposits are another important activity of the Division. In the Division of Chemical Engineering projects of particular interest to the mineral industry include studies of mineral grinding, fluidized bed techniques and high-pressure reactions in carbon and coal gasification. The Mineragraphic Investigations laboratory has become a general reference point in C.S.I.R.O. for examination of minerals and for advice on problems concerning their nature and origin. The Ore Dressing Investigations laboratory, which is under the joint control of C.S.I.R.O. and the University of Melbourne, has continued to serve industry on problems arising from the processing of Australian minerals. In addition, it is collaborating with interested firms in long-term studies on the chemistry of flotation pulps and assessment of the resistance of Australian ores to grinding.

All C.S.I.R.O. groups taking part in mineral research are in close contact with industry. Several projects are currently being developed by collaboration between C.S.I.R.O. and Australian firms, and the stage has now been reached where a significant proportion of the Organization's mineral research is carried on with funds provided by industry. A committee set up by the Advisory Council of C.S.I.R.O. is at present examining research needs in the mining and mineral processing industries in consultation with the other government agencies concerned.

Australian Atomic Energy Commission

The Australian Atomic Energy Commission conducts research at its laboratories at Lucas Heights in Sydney on the development of nuclear power, including research on nuclear materials and on metals and ceramics used for nuclear power. Research conducted by the Commission is discussed in detail in the chapter Education, Cultural Activities and Research.

Australian Mineral Development Laboratories

Research investigations into mineral problems are undertaken by the Australian Mineral Development Laboratories in Adelaide. This organization is sponsored by the Commonwealth Government, the South Australian Government and the Australian Mineral Industries Research Association (an association of companies engaged in the mineral industry formed to foster and develop mineral research). These sponsors furnish work for the laboratories, or guarantee finance, in the proportions 25 : 50 : 25 respectively. The laboratories have sections dealing with mineralogy, petrology, chemical analysis, ore-dressing, ceramic and extractive and physical metallurgy.

National Coal Research Advisory Committee

In December 1964 the appointments to the National Coal Research Advisory Committee were completed, and the inaugural meeting of the Committee was held in January 1965. The Committee will report on all coal utilization research programmes in Australia and advise the contributing Governments and industry as to the disposition of funds made available for such research. The Commonwealth matches additional funds made available by State Governments and by coal producing and consuming industries. In the first year of operation, 1965-66, additional funds of \$520,000 have been made available for increased coal utilization research, bringing total expenditure on coal utilization research in Australia to nearly \$2.5 million annually. In association with the setting up of the National Coal Research Advisory Committee, a new company, the Australian Coal Industry Research Laboratories Limited, was formed in late 1965 to take over all the current activities of the Australian Coal Association (Research) Limited, which was financed largely by the coal producing industry. This new company has available additional funds from the coal producing and consuming industries and from State and Commonwealth Governments, to permit the expansion of the former work of the Australian Coal Association (Research) Limited, in the particular direction of coal utilization research. The constitution of the Advisory Committee and the establishment of the new laboratories unit have brought into effect the recommendations of the Coal Utilization Research Advisory Committee which tabled its Report to Parliament in December 1962.

University research

The various universities in Australia carry out research into various aspects of the mineral industry such as geology, ore mineralogy and genesis, mining techniques, mineral processing, extractive metallurgy, and materials and metals technology.

Research by private enterprise

Most large mining and smelting companies have laboratories dealing with their own individual immediate problems. Private industry has formed the Australian Mineral Industries Research Association which is composed of forty-three members representing a large proportion of the mining, metallurgical and related companies operating in Australia at present. It was set up in 1959 chiefly to represent private industry in the management of the Australian Mineral Development Laboratories, but the Association now finances other research work into geology, mining and ore-dressing. The Association has conducted a survey among its members to obtain details of their research expenditure. The companies surveyed reported their expenditure on research and development, excluding exploration, as \$4,729,444 in 1962 and \$5,100,226 in 1963. Five of the companies reported their expenditure on research in excess of \$200,000 per annum, four between \$100,000 and \$200,000, five between \$20,000 and \$100,000, and twenty-nine reported a research budget less than \$20,000 per annum.

International relations

Because Australia is a large supplier of certain minerals to the rest of the world and because the welfare of the domestic industry depends to a large extent on the maintenance of a high level of exports, international relations are of considerable importance to the industry, and the Commonwealth Government takes an active role in international consultations and discussions relating to minerals. The most important international commitments are discussed on pages 1027-8.

International Tin Agreement

The First International Tin Agreement (of the post-war period) was in operation for five years from 1 July 1956 to 30 June 1961. This Agreement was subsequently replaced by the Second International Tin Agreement which came into force provisionally on 1 July 1961 and definitively on 21 February 1962.

This Agreement was for a period of five years and had the following objectives:

- (a) to prevent or alleviate widespread unemployment or under-employment and other serious difficulties likely to arise from maladjustments between the supply and the demand for tin;
- (b) to prevent excessive fluctuations in the price of tin and to achieve a reasonable degree of stability of price;
- (c) to ensure adequate supplies of tin at prices which are fair to consumers and provide a reasonable return to producers; and
- (d) to provide a framework for the consideration of measures to promote the progressively more economic production of tin, while protecting deposits of tin from unnecessary waste or premature abandonment, thus facilitating expansion in world consumption of tin; and to keep under review the long-term need for the development of new deposits of tin.

The Third International Tin Agreement, which is to come into operation as soon as possible after 30 June 1966, contains several additional objectives:

- (a) to ensure conditions which will help achieve a dynamic and rising rate of production of tin on the basis of a remunerative return to producers, which will help secure an adequate supply at prices fair to consumers and which will help provide a long-term equilibrium between production and consumption;
- (b) in the event of a serious shortage of supplies of tin occurring or being expected to occur, to take steps to secure an increase in the production of tin and a fair distribution of tin metal at equitable prices.

Although the framework of the Third Agreement is basically that of the Second, objectives have been broadened in line with the principles of the United Nations Conference on Trade and Development (UNCTAD) and, as such, emphasize the need for expansion of export earnings in the developing countries. Thus the emphasis has been shifted from surplus production and export controls inherent in the Second Agreement to one of increased production in the new Agreement.

The Agreement is operated by the International Tin Council which is made up of the following Governments: Australia, Austria, Belgium, Bolivia, Canada, Democratic Republic of the Congo, Denmark, France, India, Indonesia, Italy, Japan, Korea, Malaysia, Mexico, Netherlands, Federation of Nigeria, Spain, Thailand, Turkey, United Kingdom. Member Governments participate as producing or consuming countries. The producing countries hold a total of 1,000 votes, distributed so that each country receives five initial votes and an additional number corresponding to its percentage as laid down by the Agreement. The consuming countries hold a total of 1,000 votes also distributed so that each country receives five initial votes and an additional number proportionate to tonnages. The allocation of votes in each category is periodically reviewed.

The International Tin Agreement establishes floor and ceiling prices for tin and, by the medium of a buffer stock and remedial trading on the London Metal Exchange, aims at confining the price within these limits. The buffer stock is made up to the equivalent of 20,000 tons of tin by obligatory contributions from producing countries. In addition, both producing and consuming countries may make voluntary contributions to the buffer stock. However, since October 1963 world prices have been above the ceiling price.

International Lead-Zinc Study Group

With the cessation of stockpile buying of lead and zinc by the United States Government in 1958, world producers were faced with the prospect of a serious imbalance between world supply and demand for these metals. To meet this problem a series of meetings of interested governments was held, at which Australia was represented. These meetings culminated in the formation of the International Lead and Zinc Study Group which was established in January 1960. The Study Group comprises the following Governments: Australia, Austria, Belgium, Canada, Czechoslovakia, Denmark, Finland, France, the Federal Republic of Germany, India, Italy, Japan, Mexico, Morocco, the Netherlands, Norway, Peru, Poland, the Republic of South Africa, Spain, Sweden, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, the United States of America, Yugoslavia. The Group provides opportunities for inter-governmental consultations on international trade in lead and zinc and for studies of the world situation in lead and zinc having regard especially to the desirability of providing continuous accurate information regarding the supply and demand position and its probable development.

Tungsten Conference

During 1963 meetings were held by the United Nations Ad Hoc Committee on Tungsten and by the Committee's Technical Working Group to assess the world tungsten situation and to consider methods for dealing with the depressed state of the market. The Working Group recommended that the Tungsten Committee be put on a regular rather than an *ad hoc* basis; this recommendation was adopted by the Committee at its fourth session held in May 1965. The necessity of obtaining comprehensive, uniform and timely world statistics was also formally recognized. However, in view of the recent buoyant marketing conditions for tungsten, no direct action to influence the world market for tungsten has been taken.

Scope and sources of statistics

Scope of statistics

Statistics presented in this chapter refer mainly to mining and quarrying, although data relating to mineral processing and treatment activities are included where appropriate to present a more complete picture of the place of minerals in the Australian economy.

The mining and quarrying industry is defined for statistical purposes as including all mining and quarrying and the recovery of minerals from ore dumps, tailings, etc. Ore-dressing and elementary smelting of metallic minerals (e.g. in the case of gold) and miscellaneous treatment of non-metallic minerals, where these are carried out in an associated plant at or near the mine, are included in the mining industry. However, establishments primarily engaged in smelting and/or refining (including the smelting and refining sections of the large plants operated at Mount Morgan and Mount Isa in Queensland and at Mount Lyell in Tasmania) are excluded from the statistical definition of the mining industry and are classified to the manufacturing industry.

The statistical coverage of establishments engaged in mining is considered to be satisfactory. However, coverage of establishments engaged in the quarrying of construction materials is incomplete in most States. This deficiency is due primarily to the inherent difficulty of obtaining complete lists of quarries (including those operated by government authorities), many of which operate intermittently and in different locations. There is difficulty also in obtaining satisfactory returns from quarries operated in conjunction with some other activity, e.g. roadmaking, brickworks, etc., and quarries operated in conjunction with large construction projects, such as the Snowy Mountains Scheme, are excluded from these statistics. In some States there have been deficiencies also in the collection of data for certain non-metal (excluding fuel) mining industries, mainly because these are outside the fields normally under the administrative control of Mines Departments. Products chiefly affected are clays, loam and silica.

Sources of statistics

Mining industry data (such as employment, costs, value of output, etc.) have been obtained annually since 1952 from the Mining and Quarrying Census. This Census is carried out in collaboration with the several Mines Departments and involves the uniform collection of particulars from all establishments employing on the average four or more persons during the period worked by the mine. A representative specimen collection form is included in the bulletin *Non-Rural Primary Industries and Value of Production*, No. 1, 1962-63. For smaller mines either simplified census returns covering number of persons employed and value of output are collected, or these particulars are compiled from data made available by the Mines Departments. Oil search operations are excluded from the annual census, but the Bureau of Mineral Resources conducts an annual survey of these activities.

Mineral production statistics contained in this chapter consist, in the main, of data from the annual census and official statistics of the Mines Departments of the several States and of the Northern Territory Mines Branch. The particulars shown have been compiled as far as practicable on the standardized basis which has been used in Australia since 1950, and this presentation has involved some re-arrangement of official statistics published by the Mines Departments in some States. These statistics have been supplemented, as necessary, by data obtained from the Statisticians of the several States, the Bureau of Mineral Resources, Geology and Geophysics, the Joint Coal Board, and from several other sources.

Data of imports and exports of minerals and mineral products have been extracted from the official trade statistics compiled in the Commonwealth Bureau of Census and Statistics. Values of Australian overseas trade shown throughout this chapter are expressed as \$A f.o.b. port of shipment.

Mineral exploration

In recent years mineral exploration in Australia has expanded considerably compared with earlier periods. Exploration for extensions of known reserves in producing localities has increased, and some important additions to known reserves have been made (e.g. as at Mt. Isa). In addition, exploration for new deposits has continued and as outlined earlier a number of important new finds have been made in recent years.

Some important features of exploration for minerals in Australia in this period have been the uranium exploration boom in the mid-1950's, the expansion of petroleum exploration since 1960, and the even more recent upsurge in general mineral exploration which has been marked by an influx of overseas companies and capital. Currently there is more active mineral exploration being carried out in Australia than at any other time in the twentieth century.

The pattern of exploration at present is that, in terms of expenditure and footage drilled, exploration for petroleum is the most important activity. Exploration for other minerals, although expanding rapidly, is not on as large a scale as petroleum exploration. The range of minerals sought is diverse, with probably most attention being devoted to the base metals and phosphate rock.

Petroleum exploration

During the post-war period there has been a very great increase in exploration for petroleum in Australia, and this increase has been particularly notable since 1961. In the years 1946 to 1964 more than \$287 million was spent on petroleum exploration in Australia and Papua and New Guinea out of a total expenditure to the end of 1964 of almost \$300 million. Until recently, exploration was concentrated in the sedimentary basins on the land mass, but increased attention is now being paid to the off-shore areas of the continental shelf, with promising results. Up to the end of 1964 the bulk of expenditure related to exploration in Queensland, Western Australia and Papua and New Guinea. Footage drilled has been greatest in Queensland, Western Australia and Victoria, with footage drilled in Papua and New Guinea being comparatively low. The growth of expenditures and drilling footage over recent years is shown in the following tables. These statistics have been derived from the Bureau of Mineral Resources, Geology and Geophysics. Recent developments in the search for petroleum are discussed on page 1050, and particulars of areas occupied under authorities to prospect or explore for petroleum are given on page 80 of the chapter Land Tenure and Settlement.

EXPENDITURE ON PETROLEUM EXPLORATION BY PRIVATE ENTERPRISE AND BY GOVERNMENTS: AUSTRALIA, 1964

Origin of expenditure	Expenditure	Percentage contribution
	\$'000	
Private enterprise—		
Funds of Australian origin	17,874	35.7
Funds of overseas origin	18,232	36.4

Other mineral exploration

As a result of the influx of overseas companies and an increase in exploration by the major Australian mining companies, exploration for minerals other than petroleum is also at a very high level and is expanding rapidly. It has been estimated that this exploration is about equally divided between areas in which mineral discoveries were made fifty to seventy years ago and geologically favourable areas where sub-surface exploration is being carried out for the first time. Statistics relating to this exploration are not available at present, but statistical coverage of these activities is being established and a basic range of statistics will be available in future.

Mining and quarrying

The mining and quarrying industry is classified into four major groups, namely metal mining, fuel mining, non-metal mining (excluding fuel), and construction material quarrying. Mining and quarrying establishments are classified to these groups and to sub-divisions of these groups on the basis of the product or products of the establishments. This method of classification is straightforward for those establishments which produce only one product, but for mines and quarries which produce more than one product classification is not as simple a matter. Such establishments are classified according to the most important mineral produced in terms of value. Thus a mine producing, say, both tin and tungsten minerals would be classified as a tin mine if tin were the more important product by value, and as a tungsten mine if tungsten were the dominant product. There is, however, one important exception to this rule in that the mining establishment at Mount Isa is classified to the lead-silver-zinc sector rather than to the copper-gold sector.

For mines and quarries which produce more than one product it is not possible to apportion particulars of operations (such as employment, salaries and wages paid, costs) to the minerals produced. In practice, then, these data are recorded only as a total for each mine, and the mine is classified to an industry sector as outlined above.

Statistics relating to the structure of the industry, employment, production costs, value of additions and replacements to fixed assets, and value of output and production are given in the following pages.

Number of mines and quarries

The following table shows the number of mines and quarries which operated in each State and Territory in 1964.

NUMBER OF MINES AND QUARRIES: STATES AND TERRITORIES, 1964

Industry	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust
Metal mining—									
Gold	33	22	29	..	148	3	11	..	246

Total, all mining and quarrying	2,561	(b) 2,824	(b) 2,908	(b) 2,777	(b) 2,892

(a) Incomplete. See Scope and sources of statistics, page 1028. (b) Not comparable with years prior to 1961, owing to extension of coverage in Victoria.

Employment in mining and quarrying

Persons engaged. Statistics of persons employed in the mining and quarrying industry are derived mainly from the annual census of that industry.

Data on the work force employed in the industry are also obtained from the population censuses of Australia. The population census figure for mining and quarrying includes a number of persons excluded from the mining and quarrying census employment figure, e.g. persons engaged in exploration activities, prospectors, head office employees, etc.

In the following table, which shows particulars collected in the population censuses of Australia at 30 June 1947, 1954, and 1961, the numbers of persons whose industry statements were classified to 'mining and quarrying' are shown together with the numbers engaged in all primary industries and the total work force.

**PERSONS ENGAGED IN MINING AND QUARRYING: AUSTRALIA
1947 TO 1961**

	Census, 30 June—		
	1947	1954	1961
Persons engaged in—			
Mining and quarrying . . .	57,574	62,107	54,401
All primary industries . . .	563,607	560,100	513,286
Total work force . . .	3,196,431	3,702,022	4,225,096
Persons engaged in mining and quarrying as a proportion of—			
All primary industries . . %	10.2	11.1	10.6
Total work force . . . %	1.8	1.7	1.3

An adjustment was made to the 1947 and 1954 industry data by distributing over the range of recorded industry the number of persons whose industry was not stated. No such adjustment was made to the 1961 figures.

The following table is derived from mining census data and shows the average numbers engaged in the various mining industries in each State or Territory in 1964.

(a) Average employment during whole year, including working proprietors. (b) Not available for publication. (c) Includes other fuel mining. (d) Incomplete owing to difficulties of coverage. See Scope and sources of statistics, page 1028.

The following table shows particulars of mining employment in Australia for the years 1960 to 1964. The figures show the average number of persons employed during the whole year, including working proprietors.

MINING AND QUARRYING: EMPLOYMENT, AUSTRALIA, 1960 TO 1964

Industry	1960	1961	1962	1963	1964
Metal mining—					
Gold	5,544	5,438	5,290	5,287	4,753
Lead-silver-zinc	8,731	8,158	7,958	7,946	7,811
Copper-gold	2,364	2,322	2,242	2,288	2,341
Tin	946	1,131	1,157	1,116	1,191
Mineral sands	1,127	1,141	1,408	1,565	1,734
Other metal	1,177	1,097	968	1,168	1,348
<i>Total, metal mining</i>	<i>19,889</i>	<i>19,287</i>	<i>19,023</i>	<i>19,370</i>	<i>19,178</i>
Fuel mining—					
Black coal	18,529	16,957	16,312	a 15,636	a 15,364
Brown coal	1,399	1,441	1,453	1,613	1,673
<i>Total, fuel mining</i>	<i>19,928</i>	<i>18,398</i>	<i>17,765</i>	<i>17,249</i>	<i>17,037</i>
Non-metal (excluding fuel) mining	2,925	2,942	2,838	2,823	2,783
<i>Total, all mining</i>	<i>42,742</i>	<i>40,627</i>	<i>39,626</i>	<i>39,442</i>	<i>38,998</i>
Construction material quarrying(b)	5,016	c 5,498	c 5,599	c 5,406	5,814
<i>Total, all mining and quarrying</i>	<i>47,758</i>	<i>c 46,125</i>	<i>c 45,225</i>	<i>c 44,848</i>	<i>c 44,812</i>

(a) Includes other fuel mining. (b) Incomplete, see Scope and sources of statistics, page 1028. (c) Not comparable with years prior to 1961, owing to extension of coverage in Victoria.

Size classification of mines and quarries. Most of the mines and quarries worked during 1964 employed less than four persons, including working proprietors. However, more than half of the persons engaged in mining and quarrying were in the 45 mines each employing 200 persons or more. The following table shows the distribution of the total number of mines into various size groups according to the average number of persons employed during the period worked by each mine in 1964.

NUMBER OF MINES AND QUARRIES AND PERSONS EMPLOYED, BY AVERAGE NUMBER EMPLOYED: STATES AND TERRITORIES, 1964

Mines and quarries employing on the average(a)—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T. and A.C.T.	Aust.
Less than 4 persons—								
Establishments	651	269	380	222	237	132	76	1,967
Persons	953	474	568	411	624	264	156	3,450
From 4 to 20 persons—								
Establishments	170	172	89	99	73	28	11	642
Persons	1,349	1,337	848	786	560	227	109	5,216
From 21 to 200 persons—								
Establishments	90	26	73	13	19	11	6	238
Persons	6,988	1,042	3,349	675	1,243	578	269	14,144
More than 200 persons—								
Establishments	25	2	2	2	10	3	1	45
Persons	11,314	1,775	3,666	570	4,844	1,697	282	24,148
Total—								
Establishments	936	469	544	336	339	174	94	2,892
Persons	20,604	4,628	8,431	2,442	7,271	2,766	816	46,958

(a) Average during period worked. Includes working proprietors.

Accidents in mining. Particulars of numbers of persons killed and injured in accidents in mines and associated treatment plants are recorded by State Mines Departments. Numbers injured are not reported on a uniform basis in all States, as varying criteria are used in determining what constitutes injury. In 1964, 27 persons were recorded as killed and 1,120 as injured in mining (excluding quarrying) accidents. Recorded deaths and injuries in that year were highest in black coal mines (9 and 242, respectively), silver-lead-zinc mines (7 and 265), gold mines (6 and 293), and copper-gold mines (3 and 69). Persons killed and injured in the construction material quarrying industry numbered 3 and 71 respectively in 1964.

Salaries and wages paid

Salaries and wages paid in the mining and quarrying industries in Australia during each year 1960 to 1964 are shown in the following table. Information regarding rates of wages paid in the mining industry is shown in the chapter Labour, Wages and Prices (page 349) and also in the *Labour Report*.

MINING AND QUARRYING: SALARIES AND WAGES PAID(a), AUSTRALIA 1960 TO 1964 (\$'000)

Industry	1960	1961	1962	1963	1964
Metal mining—					
Gold	13,310	13,182	13,068	13,072	11,812
Lead-silver-zinc	27,110	26,522	24,454	25,678	29,948
Copper-gold	5,876	5,830	5,702	6,200	6,834

1964	47.0	(b) 11.7	47.0	32.7	40.3	49.4	51.1	(b) 35.4

(a) Local value, (i.e. value of output at mine or quarry), less cost of power, fuel, light, and other materials and stores used; depreciation and maintenance costs have not been deducted. (b) Not comparable with years prior to 1961, owing to extension of coverage of quarrying activities.

Quantity of principal minerals produced

In the preparation of Australian mineral commodity production statistics the quantities and values of individual minerals produced are recorded in terms of the form in which they are dispatched from the locality of each mine. For example, in the case of metalliferous mines, the output is recorded as ore if no treatment is undertaken at the mine, or as a concentrate if ore-dressing operations are carried out in associated works in the locality of the mine. In addition to the basic quantity data, the contents of metallic minerals and contents or average grade of selected non-metallic minerals are recorded. Whenever practicable, contents (based on assay) of metallic minerals are shown for each metal which is a 'pay metal' or a 'refiners' prize' when present in the particular mineral. In general, other metallic contents which are not recovered are excluded. Individual mineral products are arranged in four groups corresponding to the major groups of the industry, namely metal mining, fuel mining, non-metal mining (excluding fuels), and construction material quarrying, referred to on page 1031. Particulars relating to uranium-bearing minerals are excluded.

The following tables show particulars of the quantity of the principal minerals produced during 1964 and earlier years.

**QUANTITIES OF PRINCIPAL MINERALS PRODUCED
STATES AND NORTHERN TERRITORY, 1964**

Mineral	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.
METALLIC MINERALS								
Antimony ore and concentrate. tons	414							414
Bauxite	10,907	1,766	447,580	..	323,647	783,900
Beryllium ore	31	80	111
Copper ore(a)	3	17	47,200	54	2,197	10,215	..	59,686

Total, all minerals and construction materials	362,480	(b) 360,302	(b) 375,138	(b) 416,682	(b) 492,208

(a) Incomplete owing to difficulties of coverage. See Scope and sources of statistics, page 1028. (b) Not comparable with years prior to 1961, owing to extension of coverage in Victoria.

NOTE. Particulars of the value of uranium concentrate produced are not available for publication and have been excluded from the table above.

Owing to the necessity of classifying individual mines according to the principal mineral produced, the values in the table on page 1037 for mining industry groups differ slightly in some cases from totals of the corresponding groups of mine products shown in the table above.

Mineral processing and treatment

The extraction of minerals from ore deposits, as in mining and quarrying, is only part of the wider field of mineral technology. It is only in rare instances that minerals can be used directly in the form in which they are produced by mines, and much more commonly minerals must undergo considerable processing and treatment before their full utility and value can be realized. Examples of this processing and treatment are the smelting and refining of metals, the production of coke from coal, the refining of oil, and the treatment of non-metallic minerals as in the production of superphosphate and other chemicals and building materials like bricks and cement. The sectors of the economy which carry out this work are classified for statistical purposes to the manufacturing industry, and particulars relating to those activities which principally involve mineral processing and treatment—i.e. the treatment of non-metalliferous mine and quarry products, the manufacture of mineral oils and chemical fertilizers, the smelting, converting, refining and rolling of iron and steel, the extracting and refining of other metals, and the manufacture of alloys are given in the chapter Manufacturing Industry, pages 95–119 and 126–8.

Principal products

The following table shows particulars of the production of certain important manufactured products of mineral origin. Secondary metal is excluded from the metal production statistics except in the case of ingot steel. For blister copper and lead bullion the figures shown relate to the copper and lead content respectively.

**PRODUCTION OF PRINCIPAL MANUFACTURED PRODUCTS
OF MINERAL ORIGIN: AUSTRALIA, 1960-61 TO 1964-65**

(a) Metallic content.

(b) Newly-won gold of Australian origin.

Oversea trade

A significant proportion of Australia's mineral production is exported to overseas markets, and these exports make a valuable contribution to total exports. The major exports at present are lead, zinc, coal, mineral sands, gold, silver, copper, basic iron and steel products, and opals.

Mineral imports are dominated by crude petroleum, imports of which have expanded rapidly since the mid-1950's, concomitant with the growth of the domestic petroleum refining industry. Of the other mineral imports, the most important are phosphate rock, sulphur, asbestos, alumina, tin, nickel, industrial diamonds, and potassium fertilizers.

Exports and imports

Particulars of the quantities and values (\$A f.o.b. port of shipment) of the principal minerals and mineral products exported from and imported into Australia during the years 1962 to 1964 are shown in the following table.

IMPORTS AND EXPORTS OF PRINCIPAL MINERALS AND MINERAL PRODUCTS AUSTRALIA, 1962 TO 1964

Item	Quantity			Value (\$A'000 f.o.b.)		
	1962	1963	1964	1962	1963	1964

1963	157	156	156
1964	136	216	171

(a) These series are composed of two indexes linked at 1959.

Direction of trade

Australia's minerals are exported to many countries throughout the world, but the principal markets are Japan, United Kingdom, United States, and Europe. Since 1960 Japan has been the principal buyer of Australian minerals. The distribution of exports according to principal destinations, and imports according to principal sources, for the years 1962 to 1964, are shown in the following table.

**VALUE OF OVERSEA MINERAL TRADE, BY COUNTRY OR REGION
AUSTRALIA(a), 1962 TO 1964**

Country or region	Value (\$A m f.o.b.)			Percentage		
	1962	1963	1964	1962	1963	1964
EXPORTS(b)						
Japan	56.0	53.8	72.6	35.8	32.0	32.1
Other Asian and Pacific	13.4	13.8	25.8	8.6	8.2	11.4
United Kingdom	35.2	49.0	68.4	22.5	29.2	30.2

(a) Excludes gold movements. (b) Excludes uranium oxide and alumina, details of which are not available for publication.

Review of recent developments in the Australian mineral industry

In previous issues of the Year Book it has been customary to include a series of detailed reviews of the principal commodities produced by the Australian mineral industry. However, with the increasing diversification and development of the industry in recent years, it has become impractical to continue these reviews in the Year Book and the reader who wishes to obtain information of this kind is referred to *The Australian Mineral Industry—Annual Review*, published by the Bureau of Mineral Resources, Geology and Geophysics. This Annual Review contains comprehensive reviews of the mineral commodities of importance to the Australian economy, as well as a general review of the industry's performance during each year. Major developments in the industry are reviewed in subsequent parts of this section.

General review, 1965

Expansion of the mineral industry continued during 1965 despite the effects of the Mount Isa mine closure during late 1964 and early 1965. The value of output of mining and quarrying in 1965, on an ex-mine basis, is estimated at \$538 million, compared with \$492 million in 1964. Processing and treatment of mine and quarry products added substantially to this value and the industry's total contribution to the economy increased significantly. Despite the loss of export income from copper, and returns from lead and zinc which were lower than might have been expected, export earnings from minerals and mineral products were at a record level in 1965. Expenditure on exploration continued to increase and expenditure on petroleum exploration during 1965 was more than \$50 million.

Iron ore

Considerable interest is now being focussed on the development of the extensive resources of iron ore which have been revealed in Australia in the last few years. Developments up to early 1965 were reviewed in the previous issue of the Year Book (No. 51, page 1164). Over the last year additional contracts have been negotiated, and the pattern of development has become clearer. Recent developments are summarized below.

In August 1965 a contract was signed with the Japanese steel industry to supply 71.4 million tons of pellets (64 per cent iron content) over twenty-one years from April 1968 from the Robe River iron ore deposits. The contract provided for the construction of a pelletizing plant with a capacity of 5 million tons at Cape Preston by 1968. The Commonwealth Government subsequently granted a licence for these exports in March 1966.

Approval was granted by the Commonwealth Government in August 1965 to a contract which had been negotiated for the export of 16 million tons of pellets from the Mount Tom Price iron ore deposits to the Japanese steel industry over a period of sixteen years. In January 1966, however, the Commonwealth Government refused to grant an export licence for the export of a further 8.6 million tons of pellets to Japan from the Mount Tom Price deposit on the basis that the price was too low. Further negotiations took place, and in late March 1966 it was announced that agreement had been reached with the Japanese purchasers whereby the original 16 million tons of pellets would be shipped to Japan over a period of ten years, with no change in the approved price. The new agreement also incorporated variations in the pellet specifications in the previous contract. The Commonwealth Government subsequently granted a licence for the revised export contract, and plans are being developed for the establishment of a pelletizing plant at King Bay with an annual capacity of 2 million tons.

On 4 April 1966 the Commonwealth Government announced that permission had been granted for the export of 1.4 million tons of iron ore from the Mount Bundy deposits in the Northern Territory. Shipments, at an annual rate of 200,000 tons, will commence during 1967 and extend for a period of seven years. Total capital expenditure is estimated to be \$3.2 million.

In addition to these contracts with Japan, a contract has been concluded with a Welsh steel company for the export of 875,000 tons of iron ore from the Mount Tom Price iron ore deposits. Shipments under this contract are to commence in 1967 and to extend for a period of three years.

The projects under development as a result of these export contracts will require a capital investment in excess of \$500 million and involve the construction of about 625 miles of standard gauge railway and the development of four new ports for vessels of 60,000 tons and larger. Deliveries under the existing contracts will be spread over the period 1966-1991.

The following table summarizes iron ore contracts signed up to early 1966.

IRON ORE CONTRACTS: AUSTRALIA, UP TO EARLY 1966

State	Material	Quantity	Approximate value	Estimated cost of projects
		mil. tons	\$m	\$m
Western Australia	Ore	192.95	1,558	286
	Pellets	87.4	932	148
Tasmania	Pellets	45.0	494	80
Northern Territory	Ore	4.4	32.6	9.8
Total		329.75	3,016.6	523.8

Steel

In September 1965 it was announced that blast furnace, plate and strip capacity at Port Kembla would be expanded at a cost of \$80 million. The complete expansion programme will ultimately include new coke ovens, new steelmaking and primary rolling equipment, and additions to the tin-plate plant. The completion of these projects will make Port Kembla one of the world's major producing centres for flat products and will involve a total capital expenditure in excess of \$180 million.

Aluminium

The history of the aluminium industry in Australia and recent significant developments in the industry were reviewed in the previous issue of the Year Book (No. 51, page 1168). The aluminium industry continued its growth during 1965 and 1966, and plans for the establishment

of new smelting plants and the expansion of existing plants were announced. On 21 July plans were announced for the establishment of an aluminium smelter at Kurri Kurri near Newcastle by 1969. The new smelter will have a capacity of 35,700 tons per annum. The cost of this plant is expected to be approximately \$35 million. In December 1965 a \$9 million expansion programme was announced for the Bell Bay (Tasmania) smelting plant to bring capacity to 71,500 tons of aluminium per year. These increases in capacity will raise total domestic capacity to almost 150,000 tons per annum. In 1965 an aluminium extrusion plant was established at Belmont, Perth (Western Australia).

On 15 September 1965 the Commonwealth Government announced that the lease covering the central portion of the bauxite deposits in the Gove area had been allotted to a consortium made up of one overseas and several Australian companies. In addition to bauxite mining, the consortium envisages the construction at Gove by 1971 of a 500,000 tons per annum alumina plant, with associated facilities, at a cost of about \$100 million.

Deposits of bauxite were discovered in the Kimberly district of Western Australia during 1965, and testing of these deposits is proceeding to ascertain their commercial significance.

The Tariff Board opened an inquiry into the domestic aluminium industry on 28 September 1965. Until the report of the Tariff Board is received, protection in the form of tariffs and quantitative import restrictions, which had been temporarily extended after the date of expiry in January 1965, have been further extended.

Copper

Copper production during the second half of 1964 and the first half of 1965 was seriously disrupted by an industrial dispute at Mount Isa. Production at Mount Isa was resumed in March 1965, and subsequently record production levels were achieved. The \$130 million expansion programme at Mount Isa is due for completion in 1967-68.

An important recent development was the revival of copper mining at Cobar. Following an extensive investigation and development programme in the last few years, ore production at Cobar recommenced in July 1965. Mine output in terms of contained copper is expected to rise to about 15,000-20,000 tons per year by late 1966, although the drought resulted in diminished water supplies and caused a reduction in output in early 1966.

Lead-zinc

The Australian lead-zinc industry has been experiencing one of the most prosperous periods of its history as a result of higher prices for lead and zinc since 1963. Mine and smelter output has not increased significantly, but higher prices have meant considerably increased returns for the producing companies.

As from October 1958 imports of lead and zinc into the United States were controlled by a quota system. Australia received a quota for lead but not for zinc, and Australian exports of lead and zinc were restricted by this policy. In October 1965 the quota system was revoked, and in future all producing countries will have equal access to the large United States market.

A large lead-zinc deposit has been delineated at McArthur River in the Northern Territory, and further exploration and investigation is proceeding. In May 1966 it was announced by the company concerned that expenditure on this project to the end of 1966 would exceed \$3 million. It was anticipated that feasibility studies would continue for about five years before a decision on possible development could be made.

Black coal

There has been a significant revival of the Australian black coal industry in recent years as a result of increased exports and increased domestic consumption of black coal in iron and steel production and electricity generation. These increases have more than balanced losses in consumption in some uses due to competition from fuel oil.

The expansion of the export trade has been of major significance. In 1955 exports were about 200,000 tons valued at about \$1.7 million; in 1965 exports were 7.2 million tons valued at \$60.7 million. These increased exports have been almost wholly to Japan. As a result of this increased demand, new mines have been opened or are under development in Queensland and New South Wales, and established mines are being expanded.

In late 1965 further agreements for the export of coal to Japan were made public. These agreements and contracts which were negotiated earlier provide for exports of black coal to Japan to rise from about 7.5 million tons in 1966 to over 12 million tons in 1970. In 1970 the value of exports of black coal to Japan under existing contracts amounts to about \$100 million. The existing contracts in total involve the sale of almost 70 million tons of coal valued at about \$540 million. The largest single contract involves the export from Moura in central Queensland of 29.6 million tons of coal over thirteen years.

Petroleum

Petroleum exploration in Australia continued to expand during 1964 and 1965. Encouraging discoveries in the last few years, although small by world standards, have given new stimulus to further expenditure on exploration in potential areas. Developments in the last few years were reviewed in previous issues of the Year Book (No. 48, page 1094-8, No. 51, page 1179). A summary of developments in 1965 and early 1966 is given below.

Australia now has two commercial oil fields, Moonie and Alton, in Queensland, which together are producing more than 10,000 barrels of oil daily. Commercial production from an oil field on Barrow Island, Western Australia, will commence in 1967. A number of potentially important gas strikes were made during 1965 and the first half of 1966. Gas flows from two deep wells at Gingin, fifty-five miles north of Perth, might have potential for utilization in industrial enterprises at Kwinana. Promise of a major field of gas and possibly oil is indicated at Mereenie, 140 miles south-west of Alice Springs, Northern Territory. Other structures in adjacent areas, particularly one well at Palm Valley, have given very promising results. Potentially important gas discoveries have also been made at Gidgealpa and Moomba in South Australia.

Following the discovery of a number of natural gas flows in Queensland in the years 1962-1964, exploration activity has been concerned largely with further drilling in the vicinity of these discoveries. Drilling has continued at Rolleston and near Roma and Bony Creek, Richmond and Pickanjinnee. The possibility of a very extensive natural gas deposit at Gilmore is being further investigated. Small but interesting oil flows from several wells in the Roma area, such as Sunny Bank and Richmond, suggest possible commercial fields, but further drilling is required.

Substantial gas flows from three off-shore wells on the Gippsland Shelf, off the south-east Victorian coast, preceded the oil and gas discovery in the area announced on 15 March 1966. These discoveries, because of their close proximity to potential industrial consumers in Melbourne, could be of great significance, and prospects for this area are rated as very promising. These discoveries on the East Gippsland Shelf are characteristic of a new phase which petroleum exploration in Australia is now entering—off-shore exploration. Considerable attention is now being devoted to off-shore areas, and plans have been announced to bring additional off-shore drilling rigs to Australia to take part in this activity. As a result of this increase in interest in off-shore drilling, it is planned to construct off-shore drilling rigs at the shipbuilding and engineering works at Whyalla. Proposals have been made for uniform Australian legislation to control and administer this part of the search for oil. These proposals are outlined on page 1018.

Early in 1965 the Tariff Board conducted a public inquiry to determine an appropriate price for Australian crude oil, having regard to the Commonwealth Government's desire to encourage the search for oil and the consequent need to offer sufficient incentive to exploration companies. At the same time the Government indicated that it was anxious to prevent or minimize increased costs of petroleum products to consumers, and to ensure that refineries using Australian crude oil were not detrimentally affected in relation to other refineries. Evidence was heard from oil exploration, marketing and refining interests. Government officials, coal and power interests, and major users of refined petroleum products. The Tariff Board subsequently recommended that Australian crude oil should be valued at \$US 2.48 a barrel at the nearest refining centre, plus a differential for the quality of the oil produced. The Board also recommended an additional margin of 25 cents a barrel to provide an incentive for increased exploration activity. The Government adopted the Tariff Board's recommendations, but raised the incentive margin to 75 cents. As a result, the price for Moonie crude is \$US 3.50 a barrel delivered Brisbane, made up as follows: crude oil value, \$US 2.48; incentive margin, \$US 0.75; quality differential, \$US 0.27. This pricing method will operate for five years, but the Government will consider reviewing the valuation during this period if it considers that the incentive to exploration has proved inadequate.

In order to ensure that local crude oil is used in Australian refineries, the Government has also adopted the Tariff Board's recommendation to impose penal import duties of 0.8 cents a gallon on crude oil and 2.4 cents a gallon on motor spirit to be paid by those companies which do not take their share of local crude oil. The share of local crude to be taken will be based on the importer's share of total imports of refinery feedstock or refined products or both.

Any oil found in the Territory of Papua and New Guinea will be covered by these policies in the same way as oil found in Australia.

CHAPTER 27

DEFENCE

Department of Defence

Functions of Department of Defence

The functions of the Department of Defence include: defence policy; joint Service matters and matters having an inter-departmental defence aspect; the financial requirements of defence policy and the allocation of the funds made available; the supply aspect of defence policy including the review of production programmes and capacity; important matters of policy or principle affecting the Defence Forces and their requirements, including the strength, organization and disposition of the forces, higher appointments in the Services, their weapons and equipment, and defence research and development.

Organization, higher defence machinery and the control of the joint Service machinery

The joint Service and inter-departmental advisory machinery of the Department consists of various committees headed by the Defence Committee, the Chiefs of Staff Committee, the Defence Administration Committee, and the Joint War Production Committee.

The Defence Committee is a statutory body consisting of the Secretary, Department of Defence, who is Chairman; the Chairman of the Chiefs of Staff Committee; the Chiefs of Staff of the three Services; the Secretary, Prime Minister's Department; the Secretary, Department of External Affairs; and the Secretary to the Treasury. Its function is to advise the Minister for Defence on: the defence policy as a whole and the co-ordination of military, strategic, economic, financial, and external affairs aspects of defence policy; matters of policy or principle and important questions having a joint Service or an inter-departmental defence aspect; and such other matters having a defence aspect as are referred to the Committee by or on behalf of the Minister for Defence.

The Chiefs of Staff Committee meets regularly for the discussion of technical military matters on a joint service basis, and is responsible in peace for the preparation of military appreciations and plans. The functions of the Defence Administration Committee are the regular review of the progress of the Defence Programme, the co-ordination or integration of Service activities where appropriate in the interests of improved efficiency and economy, and the improvement of methods and organization. The function of the Joint War Production Committee is, briefly, to examine the Services' requirements for war *matériel* and to recommend whether industrial capacity is adequate to meet them. The major committees subordinate to the Defence Committee and/or the Chiefs of Staff Committee comprise the Principal Administrative Officers Committee (Maintenance and *Matériel*), the Principal Administrative Officers Committee (Personnel), the Defence Research and Development Policy Committee, the Joint Planning Committee, the Joint Intelligence Committee, and the Joint Administrative Planning Committee.

In addition, the Defence Business Board furnishes advice on business matters of common interest to the three Services, or important subjects on which the collective advice of the Board is desired from the business aspect, with a view to promoting efficiency and economy in the execution of the Defence Programme. The Board comprises businessmen who serve in a part-time honorary capacity and consists of an independent chairman and deputy chairman and the business advisers of the three Service Departments.

Basis of current defence policy

The objectives of Australia's defence policy are:

- to provide for the security of Australia and its island Territories;
- to pursue close friendship and co-operation with non-communist Asian countries;
- to seek the support of particularly the United States and the United Kingdom for promoting co-operative arrangements between the United States, the United Kingdom, Australia, New Zealand, and south-east Asian countries for collective security purposes in this area and for the defence and security of Australia;
- to counter communist aggression in south-east Asia;
- to support the development of the United Nations as an effective instrument of collective security.

These aims are pursued through a series of defence programmes which are designed to give progressive effect to the objectives of policy approved by the Government and are capable of adjustment in the light of strategic developments and changes in the international situation.

Because of the increased strength which comes from collective security, Australia participates in a policy of collective defence in south-east Asia, which is the area of primary defence interest to Australia. The SEATO, ANZUS and Commonwealth arrangements in which Australia participates are a fundamental part of current Australian strategic thinking and outlook, and much of the Government's defence effort is directed to supporting these alliances in a measure commensurate with national interests and resources while at the same time making appropriate provision for the immediate defence of Australia and her territories in the light of assessed threats. The provision by Australia of a site for the United States Naval Communication Station at North West Cape is a most important contribution to the mutual purposes of the ANZUS Pact.

General or global war is considered unlikely except as a result of miscalculation, but armed conflicts short of general war could develop at any time in areas of tension throughout the world. The prospects in south-east Asia are such that Australian defence policy must be based on the probable continuance of pressures and hostilities in the area which could in some circumstances develop into conflict on a larger scale. There is therefore a range of military situations in which Australia must be prepared to contribute forces and sustain them for a period. Should the situation change and Australia itself be directly threatened, our collective defence arrangements would be of great importance in maintaining the security of Australia and its territories.

The defence programme

The defence programme must be maintained at a level that will enable Australia to meet its regional and home defence responsibilities. In the present strategic circumstances the main aim of Australian defence preparations is the continual improvement of the capability of the forces to make a prompt and effective contribution to any allied effort required in a limited war or emergency situation in south-east Asia, while at the same time having the capacity for independent action to meet the initial shock of an emergency. To achieve this aim emphasis is placed on progressively increasing our military capacity and preparedness through the availability of highly trained regular forces, backed by appropriate reserves and citizen forces, and possessing a high degree of mobility to conduct operations throughout the area of Australia's strategic interests. The forces are being extensively re-equipped with modern conventional weapons which are standard or compatible, as far as possible, with those used by United States forces with whom Australia is associated in defence arrangements.

Navy. The naval programme provides for the continuing modernization and development of the Royal Australian Navy into a well-balanced fleet with emphasis on anti-submarine capabilities. Details of ships in commission and in reserve and of the current ship-building programme are shown on page 1056. In addition a wide range of naval projects is being provided. These include support facilities for the Charles F. Adams destroyers, a missile firing range, development of a submarine base and support facilities and provision of a submarine rescue vessel, replacement of harbour support craft and fleet boats, and modernization of Wessex helicopters. The Navy personnel requirement by June 1968 is 16,990. The Navy Emergency Reserve has been raised with a planned strength of 2,000 and enlistment is proceeding.

Army. The Regular Army is to be increased to an effective strength of 35,000 and a total strength of 40,000 by 1967. This will be achieved by the call-up of young men in their twentieth year at the rate of 8,400 per annum for compulsory selective service, in addition to voluntary enlistment. Selective service trainees are required to serve for two years full time with the Regular Army followed by three years in the Reserve, and are liable for service overseas. The field force organization is being expanded with emphasis on a substantial increase in the combat elements and high priority logistic units. More infantry battalions are being provided in a division. Seven battalions have already been raised and the eighth battalion is to be raised in the latter half of 1966. The new divisional re-organization is designed to give greater flexibility to meet requirements for cold and limited war situations, to improve further the Army's air mobility and to obtain maximum value from the increased availability of air transport support. A major formation is being located in the Townsville area in North Queensland. The target strength of the Citizen Military Forces is 35,000, and additional battalions have been raised in accordance with approved changes in the organization. The Regular Army Emergency Reserve with a planned strength of 4,000 has been raised and enlistment is proceeding. The Pacific Islands Regiment is being increased to three battalions with a total strength of some 3,500 by June 1968. In order to provide for the increased strength of the Army, major accommodation programmes are being undertaken in Papua/New Guinea and at Puckapunyal, Enoggera, Holsworthy, and Townsville.

Expenditure on Army equipment has been planned at a substantially higher level of \$150 million during the period 1965-66 to 1967-68. Of this, \$100 million is being spent in buying additional equipment similar to that already in service or on order. The remainder is to be used to purchase new equipment such as low level anti-aircraft weapons, air portable armoured

fighting vehicles, new artillery and infantry weapons, and combat surveillance equipment. Seventeen Sioux helicopters were delivered in 1965 and, together with the purchase of seven additional Caribou aircraft and twelve C130E Hercules heavy transport aircraft for the R.A.A.F., form part of the continuing programme for improving the tactical mobility of the Army.

Air Force. The operational units of the Royal Australian Air Force comprise three bomber squadrons, five fighter squadrons, two maritime reconnaissance squadrons, three transport squadrons, one surface-to-air missile squadron, two utility helicopter squadrons, and three control and reporting radar units. The fighter squadrons are being re-equipped with the supersonic Mirage III-O jet fighter, of which 100 have been ordered. Deliveries from combined Australian-French production have been coming forward since early 1964 at the scheduled rate. Twenty-four F111A strike reconnaissance aircraft have been ordered from the United States of America to replace the Canberra bombers, and deliveries are scheduled to commence in 1968. Twenty-five Caribou short take-off and landing transport aircraft have been delivered. Twelve C130E Hercules aircraft have been ordered from the United States for an additional medium range transport squadron. These are to be delivered over the latter half of 1966. Ten Orion P3B aircraft are to be ordered in 1966 to replace the squadron of P2E Neptune maritime reconnaissance aircraft. Seventy-five Macchi all-through jet trainers have been ordered. The initial batch of the aircraft are to be imported from Italy and the balance assembled in Australia. A further order for thirty-three aircraft is to be placed in later years. Ten dual Mirage training aircraft have been ordered, and eight HS748 aircraft are being obtained from the United Kingdom for navigational and radio training purposes. Seven new V.L.P. aircraft have been ordered, comprising two HS748 and two BAC 111 aircraft from the United Kingdom and three Mystere 20 aircraft from France. Contracts have been arranged for the supply of two new control and reporting units from the United Kingdom. The modernization of a third unit is in the planning stages. A network of modern operational airfields has been established and is being extended. This includes a second airfield in the Northern Territory at Tindal; construction of a new airfield at Boram near Wewak in New Guinea; the rehabilitation of the old wartime airfield at Nadzab and development of the airfield at Daru and other smaller airstrips located between Daru and Boram. The airfields at Learmonth near North West Cape in Western Australia and at Cocos Island are also to be developed. The number of personnel required for the operation of the R.A.A.F. by June 1968 is 21,000. In addition, the Air Force Emergency Force with a planned strength of 1,300 has been raised, and enlistment is proceeding.

Research and development. In this field Australia is making its principal contribution through the Long Range Weapons Project which is a joint effort with the United Kingdom. Australia also participates in the European Launcher Development Organization and is associated with the United States in many space and defence projects. The Australian executive authority in these matters is the Department of Supply.

Defence expenditure

Details of defence expenditure for 1964-65 and the allocation of the defence vote for 1965-66 are set out in the following table.

DEFENCE EXPENDITURE, 1964-65 AND DEFENCE VOTE, 1965-66
(\$'000)

Service or department	Maintenance, aid pro- grammes, etc.	Capital material requirements, machinery, plant and equipment	Capital buildings, works and acquisition of sites	Total expenditure
DEFENCE EXPENDITURE, 1964-65				
Defence	5,852	161	294	6,307
Navy	86,615	44,230	5,163	136,008
Army	145,236	36,312	18,413	199,961
Air	110,984	60,601	14,345	185,930
Supply	55,543	6,269	4,932	66,744
Other	13,690	342	..	14,032
Total	417,920	147,915	43,147	608,982

DEFENCE EXPENDITURE, 1964-65 AND DEFENCE VOTE, 1965-66—*continued*
(\$'000)

Service or department	Maintenance, aid pro- grammes, etc.	Capital material requirements, machinery, plant and equipment	Capital buildings, works and acquisition of sites	Total expenditure
DEFENCE VOTE, 1965-66				
Defence	6,947	2,017	182	9,146
Navy	100,702	82,328	7,904	190,934
Army	173,476	41,322	43,034	257,832
Air	124,568	78,984	13,746	217,298
Supply	58,666	8,510	5,294	72,470
Other	23,697	341	124	24,162
Total	488,056	213,502	70,284	771,842

Logistic arrangement with United States Government

A logistic arrangement has been agreed with the United States Government in respect of Australian equipment purchases during the programme period up to 30 June 1968. This arrangement is in effect a 'package deal' covering all the items required instead of negotiating each separate purchase as it arises, and by this method Australia has obtained more advantageous financial terms together with assurances of better delivery dates to meet our requirements. Under this arrangement, instead of paying for the equipment roughly in line with deliveries, the Government is enabled to spread payments over an extended period, and this will mean reduction in defence expenditure on equipment in 1966-67 and 1967-68. Deferment of payments to later years will cause a reduction in the currently approved programme of defence expenditure in 1966-67.

Personnel strengths

The personnel strengths of the Services at 31 March 1966 are shown in the following table.

PERSONNEL STRENGTHS: SERVICES, 31 MARCH 1966

Category	Navy	Army	Air Force	Total
Permanent Forces . . .	14,483	(a)30,455	18,809	63,747
Emergency Reserves . . .	673	584	149	1,406
Citizen Forces	3,741	30,747	870	35,358
Total Forces	18,897	61,786	19,828	100,511

(a) Excludes 1,613 Pacific Islanders.

Changes in defence legislation

Under amendments made to defence legislation in 1964* the Citizen and Reserve Forces may be called out by proclamation for continuous full-time service in a 'Time of Defence Emergency'. The particular circumstances giving rise to the proclamation of a time of defence emergency could be varied, but would occur in a situation where the Regular Forces needed the full-time support of the Citizen and Reserve Forces in hostilities short of general war.

The legislation also provided for the establishment of volunteer Emergency Reserves for the three Services. These Reserves provide a ready means of supplementing and reinforcing operational units and may be called out for continuous full-time service when the Governor-General considers it desirable to do so.

Provision was made in new defence legislation enacted in 1965 for the inclusion in the Permanent Military Forces of national servicemen who are obliged under the National Service Act as amended in 1964 and 1965 to render two years continuous full-time service in the Regular

* Air Force Act 1964, Defence Act 1964, National Service Act 1964, and Naval Defence Act 1964.

Army Supplement and three years part-time service in the Regular Army Reserve. The amendment also provided for extension of the liability to render continuous full-time service in time of defence emergency and in time of war. National Servicemen in common with all members of the Defence Force may be required to serve either within or beyond the territorial limits of Australia.

The amending legislation repealed the former provisions of the Defence Act under which persons called up for compulsory service in the Citizen Military Forces in time of war were not required to serve beyond the territorial limits of Australia unless they volunteered to do so. Liability for overseas service became mandatory for all persons called up for service in the Defence Force in time of war. The war-time powers of call-up for compulsory service were extended to apply to service in the Navy and Air Force as well as in the Army. New provisions dealing with registration, allotment and exemption from compulsory service in time of war were also enacted.

Australian forces serving overseas

Australia has participated with the United Kingdom and New Zealand in the Commonwealth Strategic Reserve in Malaya since it was first established in 1955. The strength of the Australian component normally serving with the Reserve is as follows:—Navy—two destroyers or frigates, with an annual visit by an aircraft carrier; Army—one infantry battalion and supporting units; Air Force—one light bomber squadron, two fighter squadrons and supporting units. At the request of the Federation of Malaysia, the Strategic Reserve continues to be stationed in Malaya to assist in border security operations against the communist terrorists. The Australian Government has also agreed, following a request by the Malaysian Government, to provide additional forces to the Strategic Reserve to assist Malaysian and British forces in the defence of Malaysia's territorial and political independence. Australian forces are providing assistance in countering infiltration of insurgents into Malaysian territory and for engineering construction in the Borneo States, and some air transport and anti-aircraft defence support. In January 1965 the Government decided that the Australian battalion in the Strategic Reserve should be made available for service in Borneo in rotation with other battalions. A Special Air Services Squadron has also been sent from Australia for service in Malaysia, including Borneo.

In pursuance of its obligations under the SEATO Treaty, at the invitation of the Government of Thailand, Australia deployed to Thailand a squadron of Sabre fighter aircraft which is an integral part of the air defence system for that country.

In response to an invitation of the Government of South Vietnam a team of Australian Army advisers has been provided since 1962 to assist in training Vietnamese in jungle warfare, village defence and related activities. The present strength of the team is 100. A detachment of six Caribou transport aircraft, together with the R.A.A.F. personnel required to fly and maintain them, was provided in 1964. In April 1965 the Australian Government also agreed to a request from the South Vietnamese Government to deploy an Australian battalion and supporting elements for combat service. A further 350 support troops were contributed in August 1965 to bring the Army combat force up to a battalion group. In consultation with our allies and at the request of the Government of South Vietnam the Government decided in March 1966 to treble the Australian contribution by providing a self-contained Australian task force of some 4,500 men under Australian command. The task force contains, in addition to its headquarters, two infantry battalions, a Special Air Services Squadron and a substantial force of combat and logistic support units. To provide close helicopter support the task force includes a flight of eight R.A.A.F. Iroquois helicopters. Provision of the flight of Caribou aircraft and of the team of Army advisers will continue.

Defence support aid

In support of Australia's strategic policy of contributing to the common defence of south-east Asia the Government provides substantial financial aid to our Asian allies in the form both of direct defence assistance to support the armed forces of these countries and to increase their defence capability and of civil aid and technical assistance.

Under this programme assistance to the extent of \$2,320,000 will be provided for South Vietnam, Thailand, Pakistan, and the Philippines during 1965-66. This will include material assistance, the training of service and civilian personnel both in their home countries and in Australia and, in the case of South Vietnam, special aid in the form of the provision of surgical teams to staff surgical blocks at the Long Xuyen and Bien Hoa hospitals, an engineering team to carry out a water supply project at Bien Hoa, the printing of school text books, and the supply of galvanized iron for housing of Vietnamese servicemen and dependants.

Malaysia is also being further assisted to strengthen its defence capability by the extension of the \$6 million aid programme commenced in 1965. Additional aid to be given to Malaysia will total about \$19 million up to 31 December 1967. This will take the form of ammunition, military vehicles, weapons, small craft, engineer equipment, and general stores. Malaysian servicemen will continue to be trained in Australia, and the number of Australian servicemen seconded to Malaysia will be increased.

Provision of defence support aid to India and Pakistan is being kept under review in the light of the situation in the area.

Naval defence

Prior to 1901, naval defence systems were organized under the State Governments. Information regarding these systems is given in Year Book No. 2, page 1084. An outline of the development of Australian naval policy is given in Year Books No. 3, page 1060, and No. 12, page 1012. An account appears in Year Book No. 15, pages 921-3, of the building of the Australian Navy, its costs, the compact with the Imperial Government, and other details. The growth and the activities of the Royal Australian Navy during the 1939-45 War are shown in Year Book No. 36, pages 1023-7.

Under the provisions of the Commonwealth of Australia Constitution Act the Minister of State for the Navy administers the Department of the Navy. Under the *Naval Defence Act 1910-1964* the Royal Australian Navy is administered by the Naval Board. The Naval Board consists of the Minister as Chairman, four Naval Members and the Secretary, Department of the Navy.

Strong links with the Royal Navy are maintained by a constant exchange of officers for extended tours of duty and by a full exchange of information and ideas. A liaison staff is maintained by the Royal Australian Navy in London and by the Royal Navy in Australia. Advanced training and staff courses in the United Kingdom are provided by the Royal Navy for Royal Australian Navy officers. A liaison staff is also maintained by the Royal Australian Navy in Washington, and a comprehensive exchange of information is provided by this link. Staff courses in the United States are also attended by officers of the Royal Australian Navy.

Ships of the Royal Australian Navy

In commission, March 1966: *Melbourne*—aircraft carrier; *Sydney*—fast troop transport; *Supply*—fast fleet replenishment tanker; *Vampire*, *Vendetta*, *Duchess*, and *Anzac*—destroyers; *Perth* and *Hobart*—guided missile destroyers; *Stuart*, *Parramatta*, *Derwent* and *Yarra*—escort ships; *Diamantina*—training and oceanographic ship; *Hawk*, *Gull*, *Ibis*, *Teal*, *Curlew*, and *Snipe*—minesweepers; *Kimbla*—trials ship and boom defence vessel; *Bass* and *Banks*—general purpose vessels; *Moresby* and *Paluma*—survey vessels.

In reserve, March 1966: *Arunta* and *Tobruk*—destroyers; *Queenborough*, *Quickmatch* and *Quiberon*—escort ships; *Gascoyne*—oceanographic ship; *Kangaroo*, *Kara Kara*, *Karangi*, *Kookaburra*, and *Koala*—boom working vessels; *Sprightly* and *Emu*—fleet tugs; *Culgoa*—accommodation ship; *Castlemaine*—training vessel.

On service overseas. During the year ended March 1966 the following ships served in south-east Asian waters as units of the Commonwealth Strategic Reserve with Headquarters in Singapore: *Melbourne*, *Supply*, *Vampire*, *Vendetta*, *Duchess*, *Parramatta*, *Derwent*, *Yarra*, *Hawk*, *Gull*, *Ibis*, *Teal*, *Curlew*, and *Snipe*. H.M.A. Ships *Sydney*, *Moresby* and *Diamantina* also made visits overseas. H.M.A. Ships *Perth* and *Hobart* were commissioned in the United States of America.

Fleet Air Arm

The Fleet Air Arm of the Royal Australian Navy is maintaining two front line squadrons embarked in the operational carrier H.M.A.S. *Melbourne*. This ship is fitted with an angled deck, steam catapult and mirror deck-landing sights. Training and support squadrons for H.M.A.S. *Melbourne*'s Sea Venom jet all-weather fighter and ground attack aircraft and Gannet turbo-prop anti-submarine aircraft are based at the Naval Air Station H.M.A.S. *Albatross* at Nowra, New South Wales. Westland Wessex anti-submarine helicopters have been introduced into the Fleet Air Arm and are embarked in H.M.A.S. *Melbourne*. Training and support squadrons for the helicopters are also based at the Naval Air Station.

Ship construction and repairs

There are two naval dockyards, at Garden Island, New South Wales, and at Williamstown, Victoria. Also, the dockyard at Cockatoo Island, which is operated by the Cockatoo Docks and Engineering Company Pty. Ltd. by agreement with the Commonwealth, carries out considerable naval work. All three dockyards carry out ship refitting for the Navy.

Included in the present ship construction plan is the building of two destroyer escorts, one each at Cockatoo Island and Williamstown Dockyards, and a 15,000 ton escort maintenance ship at Cockatoo Island. Four submarines of the Oberon class are under construction in the United Kingdom. In the United States one Charles F. Adams class destroyer is being built for the Royal Australian Navy at the DeFoe Ship Building Yard. Fourteen 100-foot patrol vessels are being built by Evans Deakin and Co. Pty. Ltd., Brisbane, Queensland, and Walkers Ltd., Maryborough, Queensland (seven by each contractor). A further six patrol craft will be ordered during 1966. An escort maintenance ship is also being built in Australian shipyards and is expected to be completed in 1967. H.M.A.S. *Melbourne* is to undergo a slightly extended normal refit in 1967 and her fixed wing aircraft are to be replaced by Tracker anti-submarine aircraft and Skyhawk fighter/bomber aircraft. The Daring class destroyers *Vendetta* and *Vampire* are to be

PLATE 62

Deep space station, Tidbinbilla, Australian Capital Territory.

modernized, commencing in 1968. The anti-submarine guided weapon *Ikara*, which has been designed and developed in Australia, is to be fitted into the guided missile destroyers, the Daring class destroyers *Vendetta* and *Vampire* and the destroyer escorts.

Personnel, entry, training, women's services, reserves

Personnel. The authorized established strength of the Royal Australian Navy for 1964-65 is 15,606. At 31 March 1966 the actual strength of the Permanent Naval Forces was 1,611 officers and 12,872 sailors, while there were 3,741 in the Citizen Naval Forces.

Naval college. The Royal Australian Naval College, H.M.A.S. *Creswell*, is at Jervis Bay. The College was established to provide trained officers for the R.A.N. Junior entry to the College is at the age of fifteen to seventeen years, and senior entry at a maximum age of nineteen and a half years. Subsequent training as midshipmen and sub-lieutenants is in ships of the fleet, at universities or technical colleges and at Royal Navy training establishments in the United Kingdom. In March 1966 there were 132 cadet midshipmen under training.

Direct entry into Navy. To meet increasing requirements for officers direct entries are accepted into the Royal Australian Navy. Short service commissions of seven years are granted on completion of training as seamen, supply and secretariat or aircrew officers to suitable applicants who have completed their secondary schooling and who are over seventeen years of age and under twenty-three years of age for seamen and supply and secretariat applicants, and under twenty-four years for aircrew applicants. Other direct entries may be approved outside these age limits from persons with appropriate qualifications and experience.

Opportunities exist for university undergraduates studying medicine, dentistry or engineering to enter the R.A.N. and on successful completion of their studies to commence full-time service in the Navy. Fully qualified doctors, dentists, mechanical or electrical engineers, and instructors may also enter the R.A.N. directly if they are of the appropriate age.

Training establishments. H.M.A.S. *Cerberus* at Westernport, Victoria, is the main training establishment for adult sailors in the permanent naval forces, while several advanced training schools are established in New South Wales. The period of initial engagement for sailors varies from six years for tradesmen entry to nine or twelve years, and on completion sailors may re-engage for shorter periods up to the age of fifty.

H.M.A.S. *Nirimba* at Quakers Hill, New South Wales, is the naval school for apprentices. It provides secondary education, as well as technical training in trades, to boys aged fifteen to seventeen years. The school was established in 1956 to meet the R.A.N.'s increasing demand for highly skilled tradesmen. In March 1966 there were 643 naval artificer apprentices under training. H.M.A.S. *Leeuwin* at Fremantle, Western Australia, is the junior recruit training establishment. Entrants must be aged between fifteen and a half and sixteen and a half years. Training lasts one year and instruction is mainly academic, the remaining time being devoted to basic naval and disciplinary training. On completion of the course sailors are posted for a period of sea training, after which they proceed to technical and specialist courses. In March 1966 there were 577 junior recruits undergoing training.

Women's Services. The present Women's Royal Australian Naval Service was inaugurated in January 1951. The numbers serving in shore establishments in March 1966 were 17 officers and 564 ratings. The Royal Australian Naval Nursing Service was reconstituted in November 1964, and its strength in March 1966 was twenty-one officers.

Emergency Reserve. In November 1964 approval was given to form the Royal Australian Naval Emergency Reserve to provide a readily available source of trained manpower which may be called on for continuous full-time service. The authorized establishment of this force is 2,000 officers and sailors. Members are required to complete thirteen days training annually and are paid an annual bounty.

Citizen Naval Forces. The Citizen Naval Forces consist of the Royal Australian Naval Reserve, Royal Australian Naval Reserve (Seagoing), R.A.N. Emergency List, Royal Australian Fleet Reserve, and Royal Australian Naval Volunteer Reserve. Members of the R.A.N.R. are the training reserve of the Citizen Naval Forces. They do weekly training and thirteen days annual continuous training. Officers are commissioned and may serve until retiring age is reached. Sailors engage for periods of three years. Other reserves do not carry out part-time training, but members may volunteer for periods of annual continuous training. Special courses and service for long periods are available to selected reservists.

Military defence

A detailed historical account of the Australian defence forces prior to federation appears in Year Book No. 2, pages 1075-80. See also Year Book No. 12, page 999.

Commonwealth systems

Under the terms of the Commonwealth of Australia Constitution Act the Commonwealth took over control of defence matters in March 1901. The growth of the Commonwealth Military Forces may be considered to have taken place in a number of phases. For particulars of the phases which cover the period from the welding together of the military forces of the States into one homogeneous Army in 1902 up to the re-establishment of the Military Board and the organization of Commands after the 1939-45 War see Year Book No. 46 and earlier issues.

National Service Training was introduced in 1951 and suspended in 1959-60. In November 1964 the Government announced that National Service Training was to be re-introduced as from June 1965. The scheme provides for a period of two years full-time duty in the Regular Army followed by three years in the reserve. National Service registrants who are members of the C.M.F. or who join prior to the ballot may elect to serve in the C.M.F. for a total of five or six years, depending on length of previous service, as an alternative to full-time continuous National Service Training.

Organization

Army Headquarters is responsible for the policy and control of the Australian Military Forces. The Military Board consists of the Minister for the Army, President; the Chief of the General Staff; the Adjutant-General; the Quartermaster-General; the Master-General of the Ordnance; the Deputy Chief of the General Staff; the Citizen Military Forces Member; and the Secretary, Department of the Army. After the 1939-45 War Command Headquarters were established to implement Army Headquarters policy and to command and administer those units placed under their authority. Command Headquarters are established in the capital cities of Australia and Papua-New Guinea. The geographic extent of Commands is as follows.

Northern Command—the State of Queensland and a small part of northern New South Wales.

Eastern Command—the State of New South Wales, less those parts included in Northern, Southern and Central Commands.

Southern Command—the State of Victoria and part of southern New South Wales.

Central Command—the State of South Australia, plus a portion of south-western New South Wales.

Western Command—the State of Western Australia.

Tasmania Command—the State of Tasmania.

Northern Territory Command—the Northern Territory.

Papua-New Guinea Command—the Territory of Papua-New Guinea.

The Army is divided into the Field Force, Forces in Papua-New Guinea and the Australian Support Area, with both Regular and Citizen Military Forces elements in each. The basic formation of the Field Force is the division, which consists of nine infantry battalions with supporting arms and services units. Within the division three task force headquarters can command varying combinations of divisional units. As at 31 March 1966 the substantial parts of the combat elements of one Regular and two Citizen Military Forces divisions had been raised, together with logistic support units. The Regular element of the Forces in Papua-New Guinea consists of two battalions of the Pacific Islands Regiment with a number of supporting units. An infantry battalion forms the major Citizen Military Force element. The Australian Support Area provides the training, administrative and command structure on the mainland.

As at 31 March 1966 units of the Regular Force were deployed overseas as follows. In Malaysia a battalion group was serving as part of the British Commonwealth Far East Strategic Reserve, while an anti-aircraft battery, an engineer construction group and a special air service company were serving at the invitation of the Malaysian Government. In Vietnam a battalion group was serving at the invitation of the Government of Vietnam. This force is to be built up to a Task Force of two battalions with supporting units, including aircraft support to be provided by the Royal Australian Air Force.

Personnel, training, women's services, cadets

Personnel. The effective strength at 31 March 1966 was: Australian Regular Army (including 1,613 Pacific Islanders and 813 Women's Services), 32,068; Citizen Military Forces, 30,747.

Staff College. Until 1938 the training of staff officers was carried out in the various Military Districts throughout Australia, except in cases where officers were selected from time to time to attend courses abroad. In 1938 an Australian Command and Staff School, located in the original Officers' Mess at Victoria Barracks, Sydney, was established. Between 1939 and 1945 the training of staff officers was carried out under varying conditions by different schools in accordance with the changing needs of the war.

Early in 1946 the Staff School (Australia) was established at Seymour, Victoria, and redesignated the Staff College in conformity with other Commonwealth training establishments for training officers for command and staff appointments. The College was later moved to Queenscliff, Victoria, where it is at present situated. The course is held annually and is of twelve months duration. The normal intake is sixty-six students, and on successfully completing the course an officer is awarded the symbol 'psc'. The course is designed to train selected officers for appointments in all branches of the staff in peace and war and to prepare them to assume, after experience, command and higher staff appointments.

Included in the 1967 course will be students from the United Kingdom, Canada, New Zealand, India, United States of America, Thailand, Malaysia, and the Philippines. Vacancies on each course are reserved also for officers who may be nominated by the Royal Australian Navy, the Royal Australian Air Force and the Commonwealth Public Service.

In order to ensure common standards in tactical doctrine and staff and command training throughout the Commonwealth of Nations liaison is maintained with other Staff Colleges, and to this end there is also a reciprocal exchange of instructors between the United Kingdom and Australia. An instructor is also provided by New Zealand.

Royal Military College. The Royal Military College was established in 1911 at Duntroon in the Australian Capital Territory for the purpose of providing trained officers for the Army. The conditions of entry are laid down in the Royal Military College Regulations. The length of the normal course is four years. While at the College Staff Cadets are wholly maintained, and, in addition, receive payment increasing with each year of the course. The course of instruction is organized into military and civil departments, and instruction is given by officers of the Army and academic staff. On graduation cadets are appointed lieutenants in the Australian Regular Army. The College also trains New Zealand cadets for commissions in the New Zealand Permanent Forces.

Officer Cadet School. The Officer Cadet School was established in 1951 at Portsea, Victoria, for the purpose of speeding up the production of junior regimental officers for the Australian Regular Army. Serving members of the Australian Regular Army, the Citizen Military Forces and civilians between the ages of eighteen and a half and twenty-two and a half years are eligible to apply for entrance. A special entry provides for candidates up to twenty-four and a half years. The course is of forty-four weeks' duration, and on graduation cadets are appointed second-lieutenants in the Australian Regular Army. Graduates normally proceed to further training at the Army School of the Arm and Service to which they have been allotted before being posted to regimental duties.

Officer Training Unit. An Officer Training Unit has been established at Scheyville, New South Wales, and is responsible for the training of National Service officers.

Women's Royal Australian Army Corps School. The W.R.A.A.C. School, established in 1952 at Mildura, Victoria, moved to Mosman, New South Wales, in 1958. It has three wings, one whose primary task is the training of officer cadets for the W.R.A.A.C., one for the training of non-commissioned officers at all levels and for other special courses and one which is a basic training wing. The officer cadets are selected from eligible applicants, who may be serving members between nineteen and a half and thirty-two years of age, or civilians between twenty-one and thirty years of age. The course is of six months' duration and on graduation cadets are appointed lieutenants in the Women's Royal Australian Army Corps.

Army Apprentices' School. The Army Apprentices' School was opened in 1948 at Balcombe, Victoria, with the aim of training youths as skilled tradesmen for the Australian Regular Army and to form a background for an Army career with prospects of promotion. The course is open to boys between the ages of fifteen and seventeen years and provides training in a number of highly skilled trades. A three-year course of intensive theoretical and practical work at the Apprentices' School is followed by one year in an appropriate Army workshop or technical unit. At the end of their third year boys are given their Army trade test and also take the Victorian Apprenticeship Commission's final grade public examinations, which ensures that they will be accepted as qualified tradesmen in civil life when they eventually leave the Army. In addition to trade training the Apprentices' School provides general educational facilities up to the School Leaving Standard.

Other Schools. Army Schools have been established for the major Arms and Services for the purpose of training officers and other ranks in the up-to-date techniques of their own Arm or Service, to qualify them for promotion requirements and to produce trained instructors. Courses at Army Schools are conducted for members of both the Australian Army and the Citizen Military Forces.

The following Army Schools have been established: Jungle Training Centre, Armoured Centre, School of Artillery, School of Military Engineering, Transportation Centre, School of Military Survey, School of Signals, Infantry Centre, Army Intelligence Centre, Royal Australian Army Service Corps Centre, Royal Australian Army Medical Corps School of Army Health,

Royal Australian Army Ordnance Corps Centre, Royal Australian Electrical and Mechanical Engineers' Training Centre, School of Music, Air Support Unit (Army Component), and Air Movement Training and Development Unit (Army Component).

Women's Services. In July 1950 approval was given for the enlistment of women into the Australian Regular Army on a limited scale. Enlistment commenced into the Royal Australian Army Nursing Service in November 1950 and into the Australian Women's Army Corps early in 1951. In February 1951 the Royal Australian Army Nursing Service became a Corps and was designated the Royal Australian Army Nursing Corps (R.A.A.N.C.). During June 1951 the Australian Women's Army Corps was redesignated the Women's Royal Australian Army Corps (W.R.A.A.C.). The Women's Services in the Australian Regular Army now comprise two Corps only, the Royal Australian Army Nursing Corps and the Women's Royal Australian Army Corps.

Women's Services are incorporated in the Citizen Military Forces, and one company of the Women's Royal Australian Army Corps is located in each Command excluding Northern Territory Command and Papua-New Guinea Command. Companies of the Royal Australian Nursing Corps are located in each Command excluding Northern Territory Command and Papua-New Guinea Command.

Australian Cadet Corps. The Australian Cadet Corps is a voluntary organization. It serves as a training ground to provide, to some extent, the future officers and non-commissioned officers of the Australian Military Forces, and, as such, occupies a foremost position in the scheme of national defence. The Australian Cadet Corps, however, does not form part of the Australian Military Forces. School Cadet units are raised at educational establishments throughout the Commonwealth and Papua and New Guinea, except in the Northern Territory. The minimum age for enrolment is the year in which the applicant reaches the age of fourteen years, and cadets, who, in the large majority of schools receive a free issue of A.M.F. pattern uniform, may remain in the Cadet Corps until they cease to be pupils of the educational establishments concerned. A few units retain their own pattern school uniform and are not issued with A.M.F. pattern uniforms. Provision is made for the appointment of officers, cadet under-officers, warrant and non-commissioned officers on an authorized establishment scale from within school units. School Cadet units may be, and in many cases are, affiliated with Citizen Military Force units. The establishment of the Corps is 46,566 all ranks, and at 31 March 1966 comprised 335 School Cadet units with a posted strength of 42,265, all ranks.

Air defence

A statement regarding the preliminary steps taken in connection with the development of air defence appears in Year Book No. 18, page 610, and one on the expansion and development and type of operations of the Royal Australian Air Force during the 1939-45 War in Year Book No. 36, page 1027. Details of the current defence expansion as it affects the R.A.A.F. were outlined by the Prime Minister in his speech in the House of Representatives on 8 November 1965.

Higher organization

The Air Board is responsible to the Minister for Air for the control, organization and administration of the Royal Australian Air Force and is constituted as follows: Chief of the Air Staff, Air Member for Personnel, Air Member for Supply and Equipment, Air Member for Technical Services, and the Secretary, Department of Air.

The Air Board exercises command and control over R.A.A.F. units in Australia through two commands, Operational Command and Support Command. The guiding principles of the command organization within Australia are to decentralize day-to-day operating activities as far as possible and to streamline the force and make it as efficient as possible. The operational units overseas, working within the broad directives issued by the Air Board, comprise the R.A.A.F. component of the British Commonwealth Strategic Reserve located at Butterworth in Malaysia, a unit in Thailand and the R.A.A.F. component of the Australian task force in South Vietnam.

The members of the Air Board and their staffs are located at the Department of Air in Canberra. A R.A.A.F. representative is located in London and Air Attachés are located in Djakarta, Saigon, Paris, and Washington. *Operational Command* is responsible for the command of operational units and the conduct of their operations within Australia and its territories. *Support Command* is responsible for the recruitment and training of personnel, and the supply and maintenance of service equipment.

Organization of units

Bases. Each command is established with the units necessary to carry out its allotted function. There is no fixed rule in relation to the number and types of units within each command as this depends upon the nature of its present and future responsibilities.

Where possible, units having similar functions or requiring similar facilities are located together and the geographical locations are known as bases. While in general only units belonging to one command will be located on a particular base, it is sometimes necessary to locate units of both commands at one base.

Formations—comprising a headquarters unit to control the activities of a number of units at one location; each formation has a base squadron which provides common services to all units at the location.

Flying squadrons—bomber, fighter, transport, helicopter, and maritime reconnaissance squadrons which undertake the operational flying and, in conjunction with operational conversion units, the operational flying training commitments of the R.A.A.F.

Operational conversion units—specializing in operational conversion training of aircrew for the bomber and fighter squadrons.

Aircraft depots—specializing in major overhaul, etc. of aircraft and equipment and relieving flying units of these commitments.

Stores depots—centrally located depots to which stores and equipment ordered by the R.A.A.F. are delivered for distribution to units.

Flying, ground training, navigation, and radio training units—schools specializing in the aircrew and ground staff training required by the R.A.A.F.

Airfield construction squadron—specializing in the construction of R.A.A.F. aerodromes and associated buildings and works services.

Royal Australian Air Force Academy—the training college for officer cadet entrants to the R.A.A.F.

Telecommunications units—responsible for the communications services of the R.A.A.F.

R.A.A.F. Staff College—trains specially selected R.A.A.F. officers for higher staff and command posts.

Aircraft

The R.A.A.F.'s strike force of Canberra aircraft will be replaced in 1968 by the F111A, and by this stage the Avon-Sabre fighter squadrons will have completed conversion to the Mirage III-O aircraft. Transport aircraft currently flown are Caribou, Dakota, Hercules, Metropolitans, and Viscount, with BAC 111, Mystere 20 and a further squadron of Hercules on order. Both maritime reconnaissance squadrons operate Neptune aircraft at present, but the older aircraft are to be phased out of service with the introduction of the Orion in the near future. Two helicopter squadrons operate the Iroquois. Aircraft used for training are the Winjeel, Vampire, Dakota, Sabre, Canberra, and Mirage. Macchi and HS748 training aircraft are on order.

Personnel, reserve, women's services

At 1 April 1966 the authorized Permanent Air Force establishment was 20,117, and the Citizen Air Force, 1,081; the enlisted strength was Permanent Air Force 18,809 and Citizen Air Force 870; while the strength of the General Reserve was 6,262. The preceding Permanent Air Force figures include the Women's Royal Australian Air Force, which has an establishment of 967 and strength of 861, and the R.A.A.F. Nursing Service with an establishment of 87 and strength of 81.

Department of Supply

For information relating to the creation of the Department of Supply and its development up to 1959 see Year Book No. 51, page 1204, and earlier issues. On 18 December 1959 the Department assumed responsibility for the operation and management of space tracking stations in Australia on behalf of the United States National Aeronautics and Space Administration. On 29 March 1962 Australia became a foundation member of the European Launcher Development Organization, and the Department accepted responsibility for the test firing of the launching rocket for that Organization's experimental satellite, using the facilities of the Woomera Rocket Range.

Functions of Department

The functions of the Department of Supply include the following.

Defence research and development, including the operation of the Joint United Kingdom—Australia Weapons Research Project, and Australian research and development through the Weapons Research Establishment, the Aeronautical Research Laboratories, the Defence Standards Laboratories, and associated establishments.

Manufacture, acquisition, provision, and supply of munitions (including aircraft) and miscellaneous goods and services required by the defence forces.

Arrangement of contracts for the supply of goods and the performance of services.

Operation and management of factories, workshops and undertakings concerned in the production of munitions (including aircraft), clothing, canvas-ware, and other defence goods.

Operation and management of space tracking stations in Australia on behalf of the United States National Aeronautics and Space Administration.

Test firing of the launching rocket for the European Launcher Development Organization's experimental satellite, using the facilities of the Woomera Rocket Range.

Acquisition, maintenance and disposal of strategic materials.

Planning and establishment of manufacturing facilities for the production of munitions and other defence goods.

Investigation and development of Australian sources of supply in connection with defence.

Sale or disposal of surplus Commonwealth property other than land or buildings.

Provision of Commonwealth transport facilities outside the Australian Capital Territory and the Northern Territory.

Provision and control of stores required for or in connection with matters administered by the Department of Supply and general storage for other Departments as required.

Provision of security services within the Department.

Arrangements for ascertaining costs and the control and limitation of profits in connection with the production of munitions and other defence goods.

The Minister for Supply administers the *Supply and Development Act 1939-1948*, except insofar as it concerns the building (see also the chapter Transport and Communication), repair and maintenance of merchant ships and the building, extension, alteration, repair, and maintenance of shipyards, drydocking and repair facilities for merchant ships.

Research and Development Division

The Research and Development Division, which is under the control of the Chief Scientist, is responsible for research and scientific development in relation to war *matériel*, including the operation of the Joint United Kingdom—Australia Weapons Research Project. The Chief Scientist is also the Chairman of the Joint Project Board, which is responsible for the administration of the Joint Project undertaking. The headquarters of the Division is situated in Melbourne, and the following establishments are included in the Division: (a) Weapons Research Establishment, Salisbury, South Australia; (b) Defence Standards Laboratories, Maribyrnong, Victoria, Finsbury, South Australia, and Alexandria, New South Wales; (c) Aeronautical Research Laboratories, Fishermen's Bend, Victoria.

Weapons Research Establishment, Salisbury, South Australia

This establishment, which occupies an area of about six square miles, includes Edinburgh Airfield, where accommodation is provided for a unit of the R.A.A.F. which carries out the experimental and other flying required. Extensive facilities have been provided for branches of British firms which have contracted with the British Ministry of Aviation to develop weapons systems or components.

The Establishment has four main sections, namely the Trials Wing, the Space Physics Wing, the Weapons Research and Development Wing, and the Engineering Wing. The Trials Wing is concerned with the operation, development and instrumentation of the Woomera Range, also the planning, execution and assessment of trials. The Space Physics Wing undertakes the operation of United States satellite and space tracking stations throughout Australia and conducts research and development in support of the Range, including investigations into the characteristics of the upper atmosphere using sounding rockets. The Weapons Research and Development Wing is concerned primarily with Australian-initiated defence research, but assistance is also given with some phases of the Joint Project programme. The Engineering Wing provides the design and manufacturing effort required to support the work of the Establishment and the Range.

Testing ranges have been established at Woomera, which is approximately 280 miles north-west of Adelaide. A township, together with modern amenities such as hospital, school, kindergarten, community store, swimming pool, and all sporting facilities, has been built at Woomera to accommodate the staff and their families. The population is approximately 5,300.

European Launcher Development Organization (ELDO)

By virtue of the major facilities at Woomera for launching space vehicles and the associated technical skills, Australia has become a member of ELDO, which has been established with the object of developing a launching vehicle for placing satellites in orbit for peaceful purposes. Other members of ELDO are Britain, Belgium, the Federal Republic of Germany, France, Italy, and the Netherlands. Test firings of the ELDO rocket will continue at Woomera until 1969.

United States space projects.

Agreements have been signed by the Australian and United States Governments for a co-operative programme for the establishment and operation in Australia of space vehicle tracking stations. The agencies for the Australian and American Governments are the Department of Supply and the National Aeronautics and Space Administration (NASA) respectively.

As part of the world wide network supporting NASA's space programme the stations are designed to track spacecraft in their orbits around the earth or on their journey into space, to receive telemetered data from the vehicle and to issue radio commands controlling the vehicle's manoeuvres. The Department of Supply is responsible for managing, staffing and operating the stations on behalf of NASA. The stations which are now in operation or under construction are at:

Island Lagoon near Woomera (deep space probes and optical tracking of scientific satellites, *see* plate 61);

Carnarvon in Western Australia (manned space flights and scientific satellites);

Tidbinbilla in the A.C.T. (deep space probes, *see* plate 62);

Orroral Valley in the A.C.T. (scientific satellites);

Honeysuckle Creek in the A.C.T. (manned space flights, particularly the 'man on the moon' Apollo project);

Cooby Creek near Toowoomba, Queensland (Application Technology Satellite).

An extensive communications system links the tracking stations with the control centres in the United States.

The orbits or courses of spacecraft determine the area in which tracking stations can be located. Within the area geographical and physical environment and protection from electrical noise determine the optimum location of the station. Being a large land mass in the Southern Hemisphere, diametrically opposite the United States, Australia is ideally situated for support of the United States space programme.

The initial stations near Woomera were managed by the Department of Supply's Weapons Research Establishment and manned by its personnel. With the new tracking stations industry has been brought into closer contact with space activities, contracts having been placed for their operation and maintenance by firms from industry. These contractors are SpaceTrack Pty. Ltd. (Tidbinbilla), Amalgamated Wireless (A'asia) Ltd. (Carnarvon), E.M.I. Electronics (Australia) Pty. Ltd. (Orroral Valley), Standard Telephones and Cables Pty. Ltd. (Honeysuckle Creek), and Amalgamated Wireless (A'asia) Ltd. (Cooby Creek). These firms are responsible for the operation and maintenance of the stations, subject to on-site directions of the Department of Supply Station Director.

NASA'S space projects requiring Australian participation are as follows.

Manned space flights

Project Mercury—initial manned satellites (now completed).

Project Gemini—extended orbits by two-man spacecraft: development of rendezvous techniques for two spacecraft.

Project Apollo—landing of men on moon and their return to earth.

Scientific and application satellites

Smaller single experiment satellites (Explorers, etc.).

Large multiple experiment scientific satellites (Orbiting Geophysical Observatories; Orbiting Astronomical Observatories, etc.)

Application satellites for communication (Echo; Applications Technology Satellite) meteorology (Tiros; Nimbus), etc.

Flight testing of technological experiments for application in communications, gravity gradient, meteorology, navigation, radio propagation, etc.

Deep space probes

Ranger—hard landing on moon; T.V. pictures of moon's surface.

Surveyor—soft landing of instrumented package on moon including T.V. cameras.

Lunar Orbiter—orbiting of moon.

Mariner—probes to Mars, Venus, etc.

Defence Standards Laboratories

The broad function of these Laboratories is to provide a scientific service to the Armed Services, civilian defence and the factories, branches and establishments of the Department of Supply. It also provides trained groups in specialist fields for which there is no counterpart elsewhere in Australia. This service covers problems arising in the provision and use of defence matériel and is given generally within the fields of chemistry, physics, metallurgy, and engineering and, to a limited extent, in those of bio-chemistry and physiology.

Aeronautical Research Laboratories

The work of these Laboratories lies in the fields of: (a) aeronautics; (b) guided missiles; and (c) branches of engineering appropriate to the special facilities, resources or experience resulting from (a) and (b). In particular it comprises aerodynamics, including wind tunnel, free flight model and actual flight testing; structures of aircraft and missiles; metals and other materials used in the construction of airframes and engines; engines of the air-breathing type used for the propulsion of aircraft or missiles; human engineering studies relating to the operation of aircraft and guided missiles; research and development related to Australian-initiated guided missiles; and operational assessment studies on devices and techniques employed or proposed for the defence of Australia.

Production of munitions

The Department is responsible for the production of a wide range of munitions required by the Armed Services. Production is carried out substantially in Government factories, although some orders, mainly for components, are placed with private industry.

The following Government factories are currently in operation: Ammunition—Footscray, Victoria; Explosives and Filling—Albion and Maribyrnong, Victoria; Mulwala and St. Marys, New South Wales; Ordnance—Maribyrnong, Bendigo and Port Melbourne, Victoria; Small Arms—Lithgow, New South Wales; Clothing—South Melbourne and Brunswick, Victoria.

The Ammunition Factory produces the complete round of small arms ammunition and also components for larger calibre gun ammunition, including empty cartridge cases, electronic and mechanical fuses, and primers. The Explosives Factories produce the various types of explosive compositions and propellants required for gun ammunition, rockets and guided missiles. The Filling Factory at St. Marys fills and assembles into complete rounds of ammunition (other than small arms ammunition) the empty components and materials supplied by the other munitions factories and by private industry.

The Ordnance Factories at Maribyrnong and Bendigo are equipped to produce heavy ordnance equipment, such as naval guns and gun mountings; large turbine gears; steel shell bodies; empty rocket motors for guided missiles; trailers and tank transporters; and other items requiring heavy engineering capacity. As well as work for the Services, the Bendigo Factory is producing equipment for projects of national importance, e.g. control equipment for the Snowy Mountains Hydro-electric Authority, components for marine diesel engines for Australian shipping, large heavy engineering items for the coal, cement and steel industries, and coining presses for the Royal Australian Mint.

The Port Melbourne Factory builds large marine diesel engines for the Australian ship-building industry. Major forgings and fabrications for these engines are produced at the Ordnance Factories at Maribyrnong and Bendigo. The Small Arms Factory is equipped to produce the rifles and other small arms required by the Services. Current production is the 7.62-mm. automatic rifle, for which orders have also been received from overseas, and the 9-mm. carbine, which replaces the Owen as the infantry light machine gun. The Clothing Factories make uniforms, clothing and canvas goods for the three Services and also for the Postmaster-General's Department and some other Commonwealth authorities.

Production of aircraft and guided weapons

Production both in Government factories and in industry of military types of aircraft and aero engines and of other aircraft components required by the Royal Australian Air Force is administered by the Department of Supply. Planning of capacity and the negotiations of contractual arrangements concerning aircraft modification, repair and overhaul, and for the supply of spare parts and airborne equipment for the R.A.A.F., the R.A.N. and the Army are also functions of the Department.

The following factories are operated by the Department: The Government Aircraft Factory at Fishermen's Bend and the Final Assembly Workshops and Test Airfield at Avalon, Victoria and the Airframe Repair Workshops at Parafield and Northfield, South Australia. The current aircraft production programme at the Government Aircraft Factory comprises the French Mirage supersonic fighter for the R.A.A.F. and the Jindivik radio-controlled target aircraft, which has been or is being supplied to Britain, Sweden and the United States, as well as to the Weapons Research Establishment and the Royal Australian Navy. Apart from the Government Aircraft Factory, the Commonwealth Aircraft Corporation Pty. Ltd. is the only major aircraft manufacturer in Victoria, and this company is currently producing the French Atar turbo-jet engine for the Mirage fighter and also some sections of the airframe. The corporation has also been appointed the prime contractor for the Australian production for the R.A.A.F. of the Italian Macchi jet trainer and for the production of the British Viper engine that will equip this aircraft.

Other major activities carried out in the Government factories or by various private contractors are the manufacture of airframe and engine spare parts; the overhaul, repair and modification of military aircraft and engines currently in service with the R.A.A.F., R.A.N. and Army; and the reconditioning and servicing of aircraft instruments and other ancillary equipment.

The production of the Ikara anti-submarine missile is continuing with the high level of activity at the Government Aircraft Factories at Fishermen's Bend. Production of the complete Ikara system, covering broadly the missile, motor, propellants, guidance equipment, launcher, and magazine handling equipment, is a combined effort by departmental establishments and industry directed and co-ordinated by the Department.

Planning is well-advanced towards the establishment of a facility, within the area of the St. Marys Munition Filling Factory, New South Wales, to repair and maintain the Tartar surface-to-air missile supplied by the United States for Australia's new missile destroyers. Later the facility will be expanded to cater for other Service missiles.

The Department is responsible for the technical aspects of production and procurement from local industry of telecommunications and electronic equipment for the Australian Forces and for certain other organizations such as Colombo Plan and SEATO. A wide range of these equipments is obtained from industry; some of the more important projects are the complete equipping of several major automatic telegraph relay centres for Army and Air; the local manufacture of ultra high-frequency ground station equipment for communication with Mirage and Sabre aircraft, automatic direction finders for the Macchi aircraft, remote-controlled target ranges for the Army, electronic guidance equipment for the Ikara system, and the development and production of a transistorized field transceiver for the Army.

Contracts have also been arranged for the local development of a lightweight magnetron of United States design for use in radar systems, of a high stability quartz crystal oscillator, and of other high stability electronic components such as various types of fixed and variable resistors, mica and tantalum capacitors and matched crystals.

Contract Board

Under the *Supply and Development Act 1939-1948* the Contract Board is the authority responsible for the arranging of contracts for the performance of services and the purchase of supplies for the Naval, Military and Air Forces of the Commonwealth, as well as for the Department of Supply. The Board is also responsible for the sale or disposal of all surplus or unserviceable Commonwealth goods approved for disposal. By arrangement, the Board also arranges purchases on behalf of other Commonwealth departments and authorities which desire to use its facilities.

The Contract Board meets in Melbourne and comprises representatives of the Departments of Supply, Navy, Army, and Air. The Board's administrative organization is the Contracts and Disposals Branch. In each State other than Victoria there is a District Contract Board with an administrative organization similar to that of the Contract Board. The table following shows, in respect of the Contract Board organization, the purchases and realizations from disposals for the years 1963-64 and 1964-65.

CONTRACT BOARD ORGANIZATION: PURCHASES AND REALIZATIONS FROM DISPOSALS, 1963-64 AND 1964-65 (\$'000)

State	Purchases		Realizations from disposals	
	1963-64	1964-65	1963-64	1964-65
Contract Board, Victoria .	93,534	82,632	3,319	4,171
District Contract Board—				
New South Wales . . .	14,652	18,528	2,738	2,249
Queensland	2,694	3,578	708	975
South Australia . . .	5,382	5,591	1,117	1,234
Western Australia . .	809	1,025	349	465
Tasmania	173	183	95	115
Total	117,244	111,537	8,326	9,209

Defence supply planning

The central planning authority of the Department is the Planning Branch, whose principal functions are:

- to study manufacturing capacity available for the Services' requirements in peace and war;
- to plan for and to assist in the development of additional production capacity;
- to prepare submissions on defence production preparedness to the Higher Defence Machinery;
- to plan the organization of industrial resources for defence production in war;
- to provide and administer stocks of relevant materials and reserve pools of plant equipment and other requirements needed for rapid expansion of production in the event of war;
- to prepare and advance co-ordinated production programmes against Service orders and to analyse and interpret achievement against these programmes for the information of the Department and the Services;
- to provide advisory services in the field of materials, supply and utilization to Government factories and contractors engaged in the production of munitions requirements;
- to administer the national stockpile;
- to administer oversea aid programmes allocated to the Department; and
- to undertake commercial sales.

A series of Industry Advisory Committees has been established to advise the Minister and the Department on the ability of industry to meet the Services' *matériel* requirements for mobilization and war. The Committees are: Aircraft and Guided Weapons; Chemical; Electrical; Electronics and Telecommunications; Heavy Engineering; Light Engineering; Fibres; Textiles, Clothing and Cordage; Leather and Footwear; Machine Tools and Gauges; Materials; Rubber. Members of the Committees include industrialists of wide experience and the highest ability in their chosen fields.

Stores and Transport Branch

This Branch, administered by a Board of Management and working under the direction of a General Manager, functions as the central storage authority and the central transport authority for all Commonwealth Departments. It is the authority for the arrangement of furniture removals at departmental expense in all States, but not in the Northern Territory. It has agents in Darwin. It also operates a shipping and customs section and the England-Australia bulk air freight scheme for Commonwealth Departments.

On 30 June 1965 the Branch had under its control land, buildings and works, vehicles, plant and equipment valued at \$24,132,234 and 3,180,000 sq. ft. of storage space, as well as storage facilities for large quantities of chemicals, bulk liquids and explosives.

Finance Branch

The total expenditure on Department of Supply activities during the year 1964-65 was \$127,554,000, comprising \$66,744,000 (net) from Parliamentary appropriations, and \$60,810,000 from Trust Fund Accounts. The latter included expenditure of \$13,026,000 for Stores and Transport and \$44,690,000 in Government Munitions and Aircraft Factories.

CHAPTER 28

REPATRIATION

The Repatriation Commission, established under the *Repatriation Act* 1920–1965, consists of three full-time members. It is responsible for the administration of the Repatriation Act and associated legislation, all matters of policy and the general administration and overall supervision of the Repatriation Department. The central office is in Melbourne and there is a branch office, under the control of a Deputy Commissioner, in each State.

The principal functions of the Department are: the payment of war and service pensions to eligible ex-servicemen and ex-servicewomen and their dependants; the provision of medical treatment to ex-servicemen and ex-servicewomen for injuries and illnesses caused or aggravated by their war service; the provision of medical treatment in certain circumstances to ex-servicemen and ex-servicewomen who are suffering from injuries and illnesses not caused or aggravated by war service; and the provision of medical treatment to widows and dependants of deceased ex-servicemen whose deaths are due to war service.

Benefits are provided in respect of service, not only in the 1914–18 and 1939–45 Wars, but also in the Korea and Malay operations and with the British Commonwealth Far East Strategic Reserve and the Special Overseas Forces.

Other functions of the Repatriation Department are outlined in a later section of this chapter (see page 1079).

War pensions

The first provision for the payment of war pensions to ex-servicemen and their dependants was made by the Commonwealth Parliament in the *War Pensions Act* 1914. This Act was repealed in 1920 by the *Australian Soldiers' Repatriation Act* 1920 (amended from 31 December 1950 to the Repatriation Act). The main features relating to war pensions under repatriation legislation are set out in the following paragraphs.

Eligibility for pensions

Claims for eligibility for war pensions are determined in the first instance by Repatriation Boards, of which there is one in each State of the Commonwealth. Members of women's services are eligible for pensions and other benefits, as prescribed in the Act, on the same basis as male members of the forces. Amendments to the Act in 1943 considerably widened the eligibility provisions, to the benefit, mainly, of members of the Citizen Military Forces who had not served outside Australia. These provisions are summarized as follows.

A member of the forces who served (a) outside Australia, (b) in the Territories of Australia, such as Papua and New Guinea, or (c) within Australia in circumstances which can be regarded as combat against the enemy is covered for war pension purposes in respect of incapacity or death which may result from any occurrence that happened during the period from the date of his enlistment to the date of the termination of his service in respect of that enlistment.

In other cases where a member served only in Australia, incapacity or death to be pensionable must have been attributable to service.

There is a third ground applicable to all members except those with less than six months camp service. This provides that, where a condition existed at enlistment, a pension may accrue if it is considered that the condition was aggravated by service.

If, at any time after discharge, an ex-serviceman who served in a theatre of war becomes incapacitated or dies from pulmonary tuberculosis, war pension is payable as if the incapacity or death resulted from an occurrence on service. (See also Service pensions, page 1074.) Medical treatment may also be provided.

Korea and Malaya operations. The commencement of hostilities in Korea and Malaya in 1950 made necessary the insertion in the Repatriation Act of a new Division, under the terms of which the pension provisions of the Act were extended to Australian ex-servicemen and ex-servicewomen who served or were allotted for duty in prescribed operational areas. A new Regulation was also made, in 1951, to make such service personnel eligible for almost all the benefits available under the existing Regulations applicable to members of the forces.

Repatriation (Far East Strategic Reserve) Act 1956-1964. Provision was made under this Act for Australian forces who served in South-east Asia as part of the British Commonwealth Strategic Reserve. This Act, together with Regulations made under it, gave members with Malayan service the right to many benefits available under the Repatriation Act.

Repatriation (Special Overseas Service) Act 1962-1964. This legislation provides repatriation benefits for serving members of the defence forces, the circumstances of whose service expose them to risks above the normal conditions of peace-time service. Regulations made under the Act prescribe special areas within which service qualifies for Repatriation benefits. These special areas now include Singapore, the whole of Malaysia and South Vietnam.

Rates

The main classes of war pensions are the special (T.P.I.) rate, the intermediate rate, the general rate, and the war widows' pension. These are not subject to a means test except where stated for certain classes of dependants.

The *special rate* of war pension is payable to those who are totally and permanently incapacitated and are unable to earn more than a negligible percentage of a living wage. The weekly rate is \$28.50, plus \$4.05 wife's allowance and \$1.38 for each child under sixteen years.

The *intermediate rate* of war pension, which previously applied only to certain cases of tuberculosis, was extended from 6 October 1965 to include ex-servicemen who, because of the severity of a war-caused incapacity, can only work part-time or intermittently and in consequence are unable to earn a living wage. The weekly rate is \$20.25, plus \$4.05 wife's allowance and \$1.38 for each child under sixteen years.

The *general rate* of war pension is the rate payable to those who suffer war-caused disabilities but are not thereby prevented from working, although their earning capacity may be reduced. The actual pension payable is assessed in accordance with the degree of incapacity suffered. The maximum (100 per cent) rate is \$12 a week. A wife and children under sixteen years also receive pensions at rates according to the assessed degree of incapacity of the ex-serviceman, the maximum being \$4.05 for a wife and \$1.38 for each child.

The *war widows' pension* is paid to widows of ex-servicemen who died as a result of war service and to their children under the age of sixteen years. A war widow's pension may also be paid to the widow of an ex-serviceman who was receiving, at the time of his death, the special rate of war pension or the rate payable to double amputees. The weekly rates are widow, \$12; first child, \$3.90; second and each subsequent child, \$2.75.

Other dependants of an ex-serviceman who is suffering from a disability due to war service may be granted pensions under certain circumstances. Such pensions are subject to a means test and are assessed in accordance with the degree of the ex-serviceman's incapacity. Except in the case of a widowed mother of an unmarried ex-serviceman, other dependants are required to prove dependence on the ex-serviceman.

Allowances

The following allowances are provided in addition to pension.

Domestic allowance (\$7 a week). This is paid, in addition to pension, to a widow of an ex-serviceman whose death is due to war service, if she is fifty years of age; or is permanently unemployable; or has a dependent child under the age of sixteen years, or a dependent child over sixteen years being educated or trained and not in receipt of an adequate living wage.

Attendant's allowance (maximum rate \$10.50 a week). This allowance is paid, in addition to war pension, to certain classes of seriously disabled ex-servicemen, for example, war blinded, those who are paralysed, and certain double amputees.

Clothing allowance. A clothing allowance is paid at various rates (38c to 75c a week) to an ex-serviceman who, as a result of war service, has lost an arm or a leg or, because of an injury to a limb, is required to use a surgical aid or appliance. An amount not exceeding \$19.50 in any one year is also payable to certain other war disabled ex-servicemen.

Sustenance allowance. This allowance is paid where an ex-serviceman is prevented from following his normal occupation through treatment of a war-caused disability or while undergoing medical investigation. The rate payable, where out-patient treatment is being received for a period of up to four weeks, or in-patient medical investigation is being carried out, is the same as the general (100 per cent) rate pension, less the amount of any war pension being paid.

Where an ex-serviceman is receiving in-patient treatment for a war-caused disability, is undergoing periods of essential convalescence immediately following discharge from hospital, or is prevented from following his usual occupation because of the necessity of out-patient treatment for a war-caused disability for a continuous period in excess of four weeks, a higher rate to bring the sustenance allowance up to the equivalent of the special (T.P.I.) rate is paid.

A wife, and children under sixteen years, also have pensions increased to the current general or general special rate.

Recreation transport allowance. This allowance provides transport for recreation purposes and may be paid to an ex-serviceman who, as a result of war service, suffers certain amputations of the arms or legs or is seriously disabled to the extent that his powers of locomotion are negligible.

Other allowances and general assistance. These include a guardian's allowance, re-establishment loans and allowances, funeral benefits, vocational training allowances for education and training of children, fares and allowances for loss of remunerative time in connection with medical or pension purposes, and motor vehicle allowances for seriously disabled ex-servicemen.

Appeals tribunals

The principal Act was amended as from 1 June 1929 to create tribunals to hear appeals in respect of war pensions. War Pensions Entitlement Appeal Tribunals are empowered to hear and decide any appeal by or on behalf of ex-servicemen or their dependants against decisions of a Repatriation Board or the Repatriation Commission that the incapacity or death of an ex-serviceman did not arise out of war service. Assessment Appeal Tribunals were created to hear and decide any appeal against a current assessment or a 'Nil' assessment of war pension made by a Repatriation Board or the Repatriation Commission in respect of the incapacity of an ex-serviceman which had been accepted as arising out of war service. Provision was made by subsequent legislation to enable the tribunals to hear appeals by certain members whose applications for a service pension had been refused on the grounds that they were not suffering from pulmonary tuberculosis or were permanently unemployable.

Summary of war pensions

The following tables provide a summary of war pensions (excluding miscellaneous war pensions) for the 1914-18 War, the 1939-45 War, the Korea and Malaya operations, the Far East Strategic Reserve, and the Special Overseas Service. Statistics relating to miscellaneous war pensions are shown on page 1074.

(a) Includes domestic allowances paid to widows. (b) Includes five twelve-weekly payments. (c) Includes Australian Capital Territory. (d) Includes Northern Territory.

Miscellaneous war pensions

The Commission is also responsible for the payment of pensions and allowances to beneficiaries under the *Seamen's War Pensions and Allowances Act* 1940-1965, the *Interim Forces Benefits Act* 1947-1964, the *Native Members of the Forces Benefits Act* 1957-65, and Cabinet decisions granting eligibility to persons who were attached to the armed forces during war time.

The following table shows the number of pensions under the various Acts, and the annual liability at 30 June 1965, and the table thereafter shows the amounts paid during the years 1960-61 to 1964-65 and the place of payment.

MISCELLANEOUS WAR PENSIONS: NUMBER OF PENSIONS AND ANNUAL LIABILITY, AUSTRALIA, 30 JUNE 1965

(a) Includes five twelve-weekly payments.

(b) Includes Australian Capital Territory.

(c) Includes Northern Territory.

Service pensions

The *Repatriation Act* 1920-1965 provides for a service pension to be paid, subject to a means test of income and property, to the following persons.

Ex-servicemen who served in a theatre of war and have attained the age of sixty years or are permanently unemployable;

Ex-servicemen who suffer from pulmonary tuberculosis, irrespective of the area of their service; and

Ex-servicewomen who suffer from tuberculosis, or who served in a theatre of war, or served abroad or embarked for service abroad and have attained the age of fifty-five years, or are permanently unemployable.

Rates of pension

The maximum rate of service pension is the same as that paid to an age or invalid pensioner by the Department of Social Services. A single or married ex-serviceman receives a pension of \$12.00 a week. If, however, an ex-serviceman's wife is receiving a Social Service pension, a tuberculosis allowance or a service pension as a member of the forces, the rate is \$11.00 a week. The service pension of an ex-serviceman is increased by \$1.50 a week for each eligible child other than the first.

The maximum weekly rates payable to a service pensioner's wife and eligible children are: wife, \$6.00; first child, \$1.50; other children up to three in number, 25c each. *Eligible child* means a child of a service pensioner, under the age of sixteen years, or a child over that age who

is wholly or substantially dependent on the pensioner and is undergoing full-time education, in which case pension may continue until the child's twenty-first birthday.

Supplementary assistance of \$2.00 a week is paid in addition to service pension to an ex-serviceman who is paying rent, or for lodging, or board and lodging, and whose *means as assessed* do not exceed \$2.00 a week or \$4.00 a week if he is married. (The allowance is reduced if the *means as assessed* exceed these amounts.)

A service pensioner who is unmarried, widowed, divorced, or married but separated, and who has care and control of one or more children, qualifies for a guardian's allowance of \$4.00 a week.

The means test sets limits to the amount of income or property which a pensioner may have for the purpose of service pension. The amount of service pension payable depends upon the claimant's *means as assessed*, which consist of his annual rate of income plus a property component equal to 8c a fortnight for each complete unit of \$20 of net value of property above \$400. For married couples, except where they are separated or in other special circumstances, the income and property of each for purposes of applying the means test is taken to be half the total income and property of both, even if only one is a pensioner or claimant. A person's *means as assessed* may consist entirely of income, entirely of property, or of both income and property components. If a single person's *means as assessed* do not exceed \$7 a week, he receives the maximum rate of pension. If his *means as assessed* exceed \$7 a week, the rate payable is the maximum rate less the amount by which *means as assessed* exceed \$7 a week. If his *means as assessed* are \$19 a week or more, no service pension is payable.

Income means earnings and other forms of income derived from any source, with certain exceptions, of which the principal are: certain income derived from property, gifts or allowances from children, parents, brothers or sisters, benefits from friendly societies, child endowment, Commonwealth health benefits. The value of board and lodgings received by a pensioner, either free or in return for services, is normally assessed as income at \$1.25 a week. Property includes all real and personal property, such as houses, land, money in hand, in a bank or on loan, shares, investments or legacies, vehicles used for business purposes, and livestock. Property does not include an applicant's permanent home, furniture or personal effects, the surrender value of life insurance policies (up to \$1,500), the value of any reversionary interest, the capital value of any life interest, annuity or contingent interest, or vehicles maintained only for personal use.

Eligibility for service pensions was extended on 1 November 1941 to veterans of the South African War 1899-1902 and in 1943 to members of the Forces of the 1939-45 War. Members of the Forces who served in Korea and those who served in Malaya prior to the commencement of the *Repatriation (Far East Strategic Reserve) Act* 1956-1964 are also eligible.

An ex-serviceman or ex-servicewoman in receipt of a service pension is entitled, with certain exceptions, to free medical benefits for disabilities not caused by war. These benefits include general practitioner service, specialist service where necessary, full pharmaceutical benefits, surgical aids and appliances (including spectacles), dental treatment, and treatment in Repatriation General Hospitals.

Operations, 1964-65

The following tables give a summary of service pensions.

(a) Includes Australian Capital Territory. (b) Includes Northern Territory. (c) Excludes payment for 200 miscellaneous service pensions. This type of service pension was not payable prior to 1963-64.

Medical treatment for ex-servicemen and dependants of ex-servicemen

Medical treatment is provided for all disabilities which have been accepted as due to war service. In addition, and subject to certain conditions, treatment is provided for disabilities not due to war service for: ex-servicemen and ex-servicewomen receiving war pensions at or exceeding the maximum general (100 per cent) rate; ex-servicemen who have contracted pulmonary tuberculosis; nurses who served in the 1914-18 war; widows and certain dependants of ex-servicemen whose deaths have been accepted as due to war service and of deceased T.P.I. pensioners; and service pensioners, including service pensioners of the Boer War.

In-patient treatment for eligible patients is provided at the six Repatriation General Hospitals (one in each State) and eight auxiliary hospitals and sanatoriums as follows: *New South Wales*—Lady Davidson Hospital; *Victoria*—McLeod Hospital and Anzac Hostel; *Queensland*—Kenmore Hospital, Rosemount Hospital and Anzac Hostel; *South Australia*—Birallee Hospital; and *Western Australia*—The Edward Millen Hospital. The Anzac Hostels specialize in the care and treatment of long-term patients.

The total number of available beds for patients in open wards or parts of wards in all these institutions at 30 June 1965 was 4,378, and expenditure amounted to \$21,593,458. In addition, expenditure of \$24,950,910 was incurred on medical services outside these institutions.

Repatriation hospitals and institutions

Details of full-time staff in Repatriation General Hospitals and other Repatriation institutions are given in the following table.

**REPATRIATION HOSPITALS AND INSTITUTIONS: FULL-TIME STAFF
STATES, 30 JUNE 1965**

In addition to the Repatriation institutions, eligible patients may be treated in other country and metropolitan hospitals and nursing homes at Repatriation expense. During 1964-65, 14,368 Repatriation in-patients were accommodated and treated in hospitals and 420 in nursing homes.

Repatriation psychiatric patients requiring custodial care are, by agreement with the State Governments, accommodated at the expense of the Repatriation Department in separate wings of psychiatric hospitals administered by the State authorities. At 30 June 1965 there were 870 Repatriation patients in these hospitals.

Out-patient treatment is provided throughout the Commonwealth at Repatriation hospitals and clinics and through the Repatriation Local Medical Officer Scheme. During 1964-65, 555,771 out-patients were treated at Repatriation institutions and visits to or by local medical officers totalled 2,620,683.

General repatriation benefits and miscellaneous

Other Repatriation Department activities

The activities of the Department in respect of general benefits for the welfare of ex-servicemen and dependants concern mainly education and training of children under the Soldiers' Children Education Scheme (*see* pages 1080-1), medical benefits for widows and children of deceased ex-servicemen and for widowed mothers of deceased unmarried ex-servicemen, funeral expenses for certain classes of ex-servicemen and dependants, and allowances to certain classes of dependants.

These and new benefits designed for the re-establishment of servicemen and servicewomen after discharge were extended and made available by legislation passed in June 1940 to servicemen and servicewomen engaged in the 1939-45 War, and in November 1950 and May 1963 to those engaged in the Korea and Malaya operations and to those serving in such other areas as may be prescribed under the *Repatriation (Special Overseas Service) Act* 1962-65, respectively. The re-establishment benefits generally administered by the Repatriation Commission are: payment of re-employment allowance while awaiting employment; provision of tools of trade and equipment where they are necessary to employment; transportation expenses to meet the cost of fares and removal of household belongings where an ex-serviceman takes up training, employment, or a business, or settles on the land; supplements to wages of apprentices whose apprenticeships were interrupted by war service; re-establishment loans to enable ex-servicemen and widows to establish themselves in business, practices or occupations, including (until the Division of War Service Land Settlement began operations early in 1946) agricultural occupations; payment of re-establishment allowance during the early stages of establishment in business; gifts up to \$150 for furniture to ex-servicemen who are blind or totally and permanently incapacitated, also to widows with children under sixteen years of age; and free passages to Australia for wives, widows and children of ex-servicemen who married abroad (and passages outward from Australia in certain cases of ex-servicemen and dependants).

In 1949 the Department took over the functions of the Re-establishment Division of the former Department of Post-War Reconstruction and became responsible for the co-ordination of all matters relating to training under the Commonwealth Reconstruction Training Scheme. This scheme is now concluded, the prescribed time limits for eligibility having expired. Re-establishment of the more seriously disabled, where ordinary training is not sufficient, continues to be a function of the Department, and special means have to be found to overcome each problem.

Expenditure in 1964-65 on general repatriation benefits for all wars was \$3,474,000, comprising expenditure on business loans, \$2,000; Soldiers' Children Education Scheme, \$2,282,000; recreation transport allowance, \$590,000; and other benefits \$600,000. In addition, \$58,000 was expended by other Commonwealth authorities on Repatriation employment and vocational training.

Expenditure by the Repatriation Department, 1964-65

The net expenditure by the Department for the year ended 30 June 1965 was \$242,005,016 distributed as follows.

	\$'000
Pensions, allowances and other benefits	182,787
Medical treatment	46,544
Administration	9,631
Works, rent and maintenance	3,042
Total	242,005

Soldiers' Children Education Scheme

The Soldiers' Children Education Scheme was established in 1921 and operates with the assistance of voluntary Education Boards in each State. These Boards consist of representatives of government and non-government education authorities and of ex-service and other organizations which have a general interest in the welfare of the children of ex-servicemen. The objects of the scheme are to assist and encourage eligible children in acquiring a standard of education compatible with their aptitude and ability, and to prepare them to enter an agricultural, commercial, professional, or industrial calling of their own choice.

Eligible children. Eligible children are children of ex-servicemen whose deaths have been accepted as due to war service; or of ex-servicemen who died from causes not due to war service but who were receiving at the date of death a war pension at a special rate for blindness, total and permanent incapacity, pulmonary tuberculosis, or for amputation of two or more limbs; or of ex-servicemen who, as a result of war service, are blinded, totally and permanently incapacitated, or receiving the special rate pension for pulmonary tuberculosis and are likely to receive such pension for a period of at least three years.

General benefits. From the commencement of primary education up to twelve years, school requisites and fares are provided. An education allowance is also payable for a child from commencement of secondary education or from the age of twelve years, whichever is the earlier, while the child is undertaking primary or secondary education. Further assistance beyond, or parallel with, the later years of secondary education is provided where an approved beneficiary continues with a course of specialized education or training necessary for a career. Specialized education covers a wide range and may include: professional degree or diploma courses at universities and technical colleges; theological training; cadet and pupilage training, i.e. training combined with employment, such as nursing, pharmacy and journalism; industrial, including apprenticeship, training, and other courses of trade and business training approved by an Education Board; and agricultural training at an agricultural college. At this stage of training, in addition to the education allowance, fees are paid and text books, essential equipment and other minor benefits provided.

All education allowances are subject to an allowed income limit test; i.e. the amount of education allowance payable depends upon the amount of income a child receives over the allowed limit. The child's income for the purpose of determining the allowance payable means earnings from employment and other earnings from personal exertion and such portion of a scholarship, bursary or grant as the Education Board determines to be income. Income does not include war or service pensions paid for the child or any similar payment, income the child receives from private means, or income from casual employment during the entire period of a school or university vacation where the student is to continue as a full-time student under the scheme after the vacation. The parent's income does not affect the child's allowance. The scale of maximum allowances payable to eligible children at various stages of education is as follows.

SOLDIERS' CHILDREN EDUCATION SCHEME WEEKLY RATES OF ALLOWANCES, JANUARY 1966

Type of training	Living at home	Living away from home
At school—	\$	\$
Aged 12 and under 14 years . . .	1.90	6.32

Settlement of returned service personnel on the land

Reference to the settlement of returned service personnel on the land will be found in the chapter Land Tenure and Settlement.

The Services Canteens Trust Fund

The Services Canteens Trust Fund was established under the *Services Trust Funds Act 1947*. Its funds are derived from the assets and profits of wartime services canteens, mess and regimental funds of disbanded units, and several other sources.

The total amount transferred to the Fund to 31 December 1965 was \$11,053,986. The Act prescribed that, of this, \$5 million and such further amounts as the trustees of the Fund might from time to time decide, should be devoted to the provision of education facilities for the children of eligible ex-servicemen and ex-servicewomen, and that the balance of the Fund should be used to provide relief for ex-servicemen and ex-servicewomen and their dependants in necessitous circumstances.

The Fund is administered by eleven honorary trustees appointed by the Governor-General. The trustees have power to determine the persons or groups of persons to benefit from the Fund and the extent of benefits to be granted within the provisions of the Act, and to appoint regional committees to assist with the administration. Members of regional committees are all persons who served in the 1939-45 War or are widows of men who served during the war. They serve in an honorary capacity.

Assistance from the Fund

Persons eligible for assistance from the Fund are those who, between 3 September 1939 and 30 June 1947, served in the Australian Naval, Military or Air Forces, including members of the canteens staff of any ship of the Royal Australian Navy, persons duly accredited to any part of the Defence Forces who served in an official capacity on full-time paid duty, and their dependants. The trustees have introduced schemes for providing welfare relief for ex-servicemen and ex-servicewomen who are eligible for benefits and for their dependants; benefits for children of eligible ex-servicemen and ex-servicewomen who are suffering from serious and incapacitating afflictions; and education benefits for the children of eligible ex-servicemen and ex-servicewomen. From its inauguration in 1947 the Fund is to be available for forty years for welfare relief and for thirty years for educational benefits.

Welfare relief. The trustees have prescribed a policy for welfare relief which makes assistance available only to those who are in genuine distress from which they cannot extricate themselves by their own efforts. To 31 December 1965, \$2,884,150 has been granted as welfare relief from the Fund, \$1,824,378 to ex-servicemen and their dependants, and \$1,059,772 to widows and orphans. The amount granted during 1965 was \$170,388. A total of 32,398 ex-servicemen and ex-servicewomen and 15,285 widows and orphans were granted welfare assistance from the Fund to 31 December 1965.

Assistance under Afflicted Children's Scheme. The Fund assists dependent children suffering from afflictions which permanently disable or seriously retard their progress or prevent the enjoyment of normal health and strength, and who face a prospect of dependence on others for all or part of their lives. The extent to which assistance will be granted in a particular case depends largely on the nature of the child's affliction, the facilities available, the family circumstances, and the funds that can be made available. Up to 31 December 1965, 2,538 afflicted children had been assisted under the Afflicted Children's Scheme, involving an expenditure of \$277,782. The amount granted during 1965 was \$13,480. The number of new children assisted in 1965 was 59.

Educational Assistance Scheme. Educational assistance is restricted to children who are fifteen years of age and over, thirteen years and over where there are exceptional circumstances, and twelve years in the case of orphans. The object is to assist eligible children to obtain the highest education within their capacity. Assistance is in the form of awards ranging from \$10 to \$400 a year depending on the nature of the course undertaken and the family circumstances. These awards are granted chiefly for children at secondary education level, but are also available for other types of education. They are designed to cover, or contribute towards, the cost of essential books, fees in cases where government school courses are not available, fares between the child's home and school, essential equipment and material, uniforms in certain cases, and maintenance for the child while at school. Higher training awards are provided for selected students for post-graduate study, in Australia or overseas, in the ancillary services to medicine, welfare and science, and also for selected craftsmen to gain experience in their trade overseas. One post-graduate scholarship is provided each year for study overseas, valued at \$2,000 per annum for up to three years.

The number of children assisted under the educational assistance scheme to 31 December 1965 was 47,099, and the expenditure on educational awards, post-graduate scholarships and higher training awards to 31 December 1965 was \$5,652,522. The number granted in 1965 was 7,031 at a value of \$603,634.

Total assistance. The total assistance granted under the three schemes during 1965 was \$787,502 and from the inception of the Fund to 31 December 1965 totalled \$8,814,454.

CHAPTER 29

THE TERRITORIES OF AUSTRALIA

The internal Territories of Australia are the Northern Territory and the Australian Capital Territory. External Territories under the control of Australia are: Norfolk Island; Papua (formerly British New Guinea); the Territory of New Guinea (under Trusteeship Agreement with the United Nations); Nauru (under Trusteeship Agreement with the United Nations); the Territory of Heard and McDonald Islands; the Australian Antarctic Territory; the Territory of Cocos (Keeling) Islands; and the Territory of Christmas Island. There is also the Territory of Ashmore and Cartier Islands, to which the laws, ordinances and regulations of the Northern Territory, of which it is deemed to form part, apply wherever applicable.

Information on all except Ashmore and Cartier Islands is contained in the following pages, and details of the acquisition of all the Territories will be found on pages 4, 5, 22, and 23 of Chapter 1. More detailed statistics and additional descriptive matter are to be found in the Annual Reports of the Administrations of the various Territories and in the *Northern Territory Statistical Summary* and the *Australian Capital Territory Statistical Summary* issued by this Bureau. Statistics for the Northern Territory and the Australian Capital Territory are also included in chapters dealing with particular subjects.

THE NORTHERN TERRITORY

General description

Area

Upon the extension of New South Wales westward to the 129th east meridian in 1825, the Northern Territory was incorporated in that colony, but in 1863 it was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1 January 1911. The total area is 520,280 square miles.

Legislation and administration

On 1 January 1911 the Territory was transferred from South Australia to the Commonwealth. The terms were outlined in Year Book No. 15, page 940. For particulars of the administration up to the *Northern Territory (Administration) Act 1931*, by which it was, for the second time, placed in the hands of an Administrator, see Year Book No. 38 and earlier issues.

The *Northern Territory (Administration) Act 1910-1965* provides for the constitution of a Legislative Council consisting of six official members, three nominated non-official members and eight elected members. A president is elected from among the non-official and elected members. The Council makes ordinances for the Territory, which must be submitted to the Administrator. The Administrator is obliged to reserve Ordinances relating to certain matters, including Crown lands and Aboriginal employment, for the Governor-General's pleasure, but in other cases has a discretionary power either to assent, withhold assent or to return the Ordinance to the Legislative Council with recommended amendments. The Governor-General also has a power in respect of a reserved ordinance to recommend to the Administrator any amendments to the laws of the Territory he considers to be desirable arising out of his consideration of the Ordinance. Money votes may be proposed in the Council only on recommendation by message of the Administrator.

The Territory elects a member to the House of Representatives, who has the right to take part in debates, but may vote only on matters that relate solely to the Northern Territory.

Physiography

The Territory is within the torrid zone, with the exception of a strip about 180 miles wide which lies south of the Tropic of Capricorn.

The low flat coast-line seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl and laterite form the occasional cliffy

headlands. The sea frontage of more than 1,000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries. The only practicable deep-water port, however, is Darwin.

Inland the country generally is destitute of conspicuous landmarks. From the coast there is a general rise southwards to the vicinity of the seventeenth or eighteenth parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea and those that form the scanty supply for the interior systems. Towards the centre of the continent the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

Climate, fauna and flora

There are two main climatic divisions, the wet season, November to April, and the dry season, May to October, with uniform and regular changes of weather. Nearly the whole of the rainfall occurs in the summer months. Further particulars appear in Year Book No. 6, page 1116.

The ordinary types of native Australian fauna inhabit the Territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous), and frogs abound. There are many varieties of fresh-water fish and littoral *Mollusca*. Butterflies and beetles are strongly represented. The termite is a pest which is capable of serious damage to wooden buildings unless special preventive measures are taken. A species of the ant builds anthills which sometimes attain great dimensions. Mosquitoes and sandflies are very troublesome, particularly in the wet season. Some types of native fauna are protected. Buffalo formerly existed in large herds, but their number has been reduced by indiscriminate shooting. Buffalo shooting is, however, now controlled by Ordinance.

The vegetation is north Australian in type, but a number of the forms belong to the Malayan and Oceanic regions. In the coastal regions tropical vegetation grows luxuriantly to the water's edge. In the north cypress pine, bloodwood and paper-bark timbers are now cut and milled for local building purposes. Cypress pine is resistant to termites. On the wide expanses of plain country in the interior there is little vegetation, the principal orders represented being: *Euphorbiaceae*, *Compositae*, *Convolvulaceae*, *Rubiaceae*, *Goodeniaceae*, *Leguminosae*, *Utricaceae*.

Population

See also the chapters Population and Vital Statistics.

At the census of 30 June 1961 the population of the Territory, excluding full-blood Aborigines, was 16,206 males, 10,889 females, 27,095 persons. Corresponding figures at the census of 30 June 1954 were 10,288, 6,181 and 16,469 respectively. The European population of the Territory increased slowly from 670 at the census of 1881 to 3,767 in 1918. By 1921 it had decreased to 2,458, and in 1933 was still only 3,306. It had risen to 9,116 at the census of 1947, to 14,031 at the census of 1954 and to 23,599 at the census of 1961. At 30 June 1965 the population, excluding full-blood Aborigines, was 34,803.

For particulars relating to the Aboriginal population see the chapter Population. All Aborigines, by virtue of the *Nationality and Citizenship Act* 1948–1960, are British subjects and Australian citizens. Northern Territory Aborigines are equal at law with all other Northern Territory residents, although a few special privileges exclusive to Aborigines have been retained. The *Social Welfare Ordinance* 1964 which repealed the *Welfare Ordinance* 1953–1963 provides for assistance without control for any person who is socially or economically in need of assistance. Reserves for Aborigines comprise an area of 94,025 square miles.

Production

See also the chapters dealing with particular subjects.

Land tenure

Three-sevenths of the land in the Territory is reserved or unoccupied and unreserved, the remainder, apart from a very small proportion alienated, being held under various forms of lease or licence, which are described in Year Book No. 48, pages 111–12. The following changes should, however, be noted.

Leases to Mission Organizations are now granted under the *Special Purposes Leases Ordinance* 1953–1965 for fixed terms or in perpetuity.

Miscellaneous Leases are now granted in perpetuity for purposes such as a market garden, plantation, orchard, vineyard, poultry farm, piggery, or the like.

Darwin Town Area Leases are granted in perpetuity for business or residential purposes, or both, in the Darwin Town Area.

Chapter 4, Land Tenure and Settlement, of this issue contains statistical information concerning areas occupied under various forms of tenure.

Agriculture

Up to the present agriculture has made little progress in the Territory, although rice, peanuts, tobacco, grain sorghum, bananas, pineapples, citrus fruits, cashew nuts, mangoes, papaws, vegetables, fodder plants, and improved pastures can be grown in certain areas. At the present time commercial agricultural production is practically confined to vegetables and small-scale fruit production (mainly pineapple, citrus and bananas) for local consumption. A small industry is being developed in Townsville lucerne seed production and in the production of hay.

Information concerning scientific surveys (commenced in 1946) conducted by the Commonwealth Scientific and Industrial Research Organization to determine more accurately the potentialities of the Northern Territory and the resulting establishment of an agricultural research station at Katherine and experimental farms at Katherine and Berrimah (near Darwin) is given in Year Book No. 51, page 101, and in earlier issues. Information is given also on the establishment of rice research stations and investigational work carried out and on subsequent rice crop commercial scale operations. The appointment by the Minister for Territories in 1959 of an expert committee to carry out investigations relative to agricultural settlement in the Territory and subsequent developments are also referred to.

NORTHERN TERRITORY: AREA AND PRODUCTION OF CROPS 1960-61 TO 1964-65

Crop	1960-61	1961-62	1962-63	1963-64	1964-65
AREA(a) (acres)					
Fruit—Bananas . . .	42	37	35	43	28
Pineapples . . .	20	15	11	23	19
Other . . .	58	84	90	83	83
<i>Total, fruit</i> . . .	<i>120</i>	<i>136</i>	<i>136</i>	<i>149</i>	<i>130</i>
Peanuts . . .	335	307	(b)	(b)	(b)
Sorghum for grain . . .	95	(b)	(b)	527	1,269

Other crops(c) . . .	919	1,115	1,465	1,680	2,687
<i>Grand total(a)</i> . . .	<i>1,611</i>	<i>1,683</i>	<i>1,750</i>	<i>2,489</i>	<i>4,236</i>
PRODUCTION					
Fruit—Bananas . . bushels	963	1,252	1,909	2,174	2,448
Pineapples . . . "	765	1,163	778	943	1,142
Peanuts . . . cwt.	1,215	1,343	(d)	(d)	(d)
Sorghum (grain) . . bushels	893	(d)	(d)	6,210	10,693

(a) Excludes rice; details are not available for publication. (b) Not available for publication, included in Other crops. (c) Principally fodder crops. (d) Not available for publication.

Pastoral industry

The pastoral possibilities of certain parts of the Territory were recognized at an early date, and both cattle and sheep raising have been attempted. For various reasons sheep-raising has not been very successful, but the cattle industry has progressed steadily and is continuing to expand, except in the Alice Springs District, which has experienced drought for eight years. There is substantial potential for further expansion in the higher rainfall area of the Territory through the introduction of improved pastures and the use of superphosphate. Cattle exported during 1964-65 numbered 85,130—38,588 to Queensland, 38,781 to South Australia and 7,761 to Western Australia. Other livestock exports included 1,035 horses. Imports of livestock were—bulls, 1,437; other cattle, 12,571; horses, 600; sheep, 4,449; pigs, 5; and poultry, 17,168.

NORTHERN TERRITORY: LIVESTOCK, JUNE 1961 TO 1965

30 June—	Horses	Cattle	Sheep	Pigs	Goats
1961 .	40,054	1,154,656	16,089	2,845	5,958
1962 .	40,809	1,063,528	10,388	2,762	4,949
1963 .	38,191	1,086,627	9,469	1,842	4,275
1964 .	38,391	1,105,161	10,023	1,806	4,727
1965 .	35,997	1,067,327	9,099	2,182	4,382

The numbers of hides and skins exported from the Territory during 1964-65 were as follows: sheep, 3,559; crocodile, 2,124; cattle, 35,902; and buffalo, 853.

Mining

During 1964 the value of output of the mining industry in the Territory, excluding uranium mining, was \$7,234,000.

The mining of copper ores and concentrates is the most important in terms of value of output, and accounts for more than half the Territory's total recorded production. Prior to 1956 gold minerals, first mined in 1869, accounted for most of the value of output, but from 1956 onwards gold production has remained relatively constant while copper production has increased considerably. The bulk of the copper and gold is won at Tennant Creek, where the government battery was re-opened in 1958 to encourage gold mining by smaller operators. The government also operates a battery at Mount Wells, about 100 miles south-east of Darwin, for the treatment of cassiterite (tin) and gold ores from that locality.

Plans are now being put into operation to work several large mineral deposits in the territory, bauxite at Gove, manganese on Groote Eylandt, iron at Frances Creek and Mount Bundy, and lead-zinc at McArthur River (*see also* the chapter Mineral Industry).

NORTHERN TERRITORY: MINING AND QUARRYING OPERATIONS, 1962 TO 1964

(Excluding uranium mining)

	1962	1963	1964
Number of mines and quarries	94	65	84
Average number of persons employed during whole year (including working proprietors)	424	457	585
Salaries and wages paid(a)(b) \$'000	1,520	1,590	2,138
Total fuel, materials, etc., used "	1,220	1,394	1,727
Value of additions and replacements to fixed assets(a) "	672	388	2,866
Value of output (at mine or quarry) "	5,364	6,480	7,234
Value of production(c) "	4,144	5,086	5,506

(a) Excludes mines employing less than four persons. (b) Excludes drawings by working proprietors; the amounts are net after deducting value of explosives sold to employees. (c) Value of output less cost of power, fuel and light and other materials and stores used; depreciation and maintenance costs have not been deducted.

Forestry

In August 1958 the Commonwealth Government approved a six-year programme of forestry improvement and development to preserve existing forest areas and increase possible timber resources. The programme is being carried out by the Forestry and Timber Bureau. Experimental work in reforestation is being carried out in small plantation areas. Cypress pine appears the most promising species for large-scale commercial plantings. Local production of log timber, mainly cypress pine, amounted to 1,425,757 super. feet in 1964-65, but this was insufficient to meet local requirements, and about 3,360,465 super. feet of timber was imported from the States and overseas.

Pearl fisheries

In 1884 mother-of-pearl shell was discovered in the harbour of Port Darwin. Since then the areas fished have extended to the various banks to seaward and coastwise along the Northern Territory coast.

NORTHERN TERRITORY: FISHING AND PEARLING(a), 1960-61 TO 1964-65

—	1960-61	1961-62	1962-63	1963-64	1964-65
General fisheries—					
Boats engaged . . . no.	27	33	30	30	28
Men employed . . . "	64	63	68	54	69
Landed weight of fish catch '000 lb.	396	226	306	249	290
Gross value of fish \$'000	80	46	38	44	55
Pearl-shell fisheries(b)—					
Boats engaged . . . no.	5	3	2	2	2
Men employed . . . "	39	37	22	23	22
Total take of pearl-shell '000 lb.	222	147	115	11	12
Gross value of pearl-shell \$'000	90	58	40	3	2

(a) Excludes operations of Japanese pearling fleet. (b) Season ended January.

Competition from plastic materials has reduced the price being paid for pearl-shell to a low level, and pearling has declined in recent years. The commercial production of cultured pearls has been commenced by a Territory enterprise and it is hoped that the new industry will succeed in replacing the old pearling industry.

Secondary industries

The secondary industries that have so far been established in the Territory have been largely the service industries normally associated with a developing area, for example home building, electrical repairs, printing, motor and marine engineering, plumbing, welding, joinery, sheet metal work, and blue metal crushing. Major industrial investments by private interests in recent years include two breweries and a factory for the manufacture of milk products, ice cream and aerated waters. A bitumen plant began operation early in 1966.

NORTHERN TERRITORY: FACTORIES, 1960-61 TO 1964-65

—	1960-61	1961-62	1962-63	1963-64	1964-65
	No.	No.	No.	No.	P No.

Average number employed(b)—					
Males	826	788	878	978	1,098
Females	88	77	89	97	112
Persons employed	914	865	967	1,075	1,210
	\$'000	\$'000	\$'000	\$'000	\$'000
Salaries and wages paid(c)—					
Males	1,820	1,874	2,146	2,628	3,298
Females	128	120	130	142	185
Total salaries and wages paid	1,948	1,994	2,276	2,770	3,483
Value of power, fuel, light, etc.(d) used	502	558	560	735	864
Value of materials(e) used	2,290	2,416	2,876	3,204	4,550
" " production(f)	3,506	3,980	4,492	5,118	6,654
" " output(g)	6,298	6,954	7,928	9,057	12,068
" " land and buildings(h)	2,732	2,872	3,304	4,586	6,815
" " plant and machinery(h)	2,812	3,058	6,338	6,046	6,103

(a) Any factory, workshop or mill in which four or more persons are employed or power other than hand is used. (b) The aggregate of the average number of persons employed in each factory. Includes working proprietors. From 1962-63 figures represent average employment over the whole year; for earlier years figures are averages during period of operation. (c) Excludes drawings by working proprietors. (d) Includes water and lubricating oil. (e) Includes also containers, etc., tools replaced and repairs to plant. (f) Value added in process of manufacture (i.e. value of output less value of materials and fuel used). (g) Value of goods produced including amounts received for repair work and other work done. (h) Depreciated or book value at end of year, including estimated value of rented premises and machinery.

Trade, transport and communication

Trade

No record is kept of the trade between the States and the Territory. The following table shows the values of the principal commodities imported into and exported from the Northern Territory from or to overseas countries during the years 1960-61 to 1964-65.

**NORTHERN TERRITORY: PRINCIPAL OVERSEA
IMPORTS AND EXPORTS, 1960-61 TO 1964-65**
(\$'000)

Commodity	1960-61	1961-62	1962-63	1963-64	1964-65
IMPORTS					
Petroleum and shale spirit—					
Aviation spirit	308	431	184	232	143
Other (motor spirit)	259	437	279	389	339
Aviation turbine fuel	696	1,371	521	670	1,022
Other oil(a)	179	201	293	310	487
Rotary oil-boring machinery and parts	49	338	5	..
Sulphur	105	89	159	141	71
Portland cement	110	122	157	174	322
Timber, undressed hardwood	139	120	97	151	214
Other articles	616	1,348	357	865	1,526
Total imports	2 412	4,168	2,385	2,937	4,124
EXPORTS(b)					
Meats	7	1,546	2,323
Hides and skins, raw	40	262	153	237	123
Non-ferrous base metals	172	..	9
Live animals	97	237	355	131	..
Copper ores and concentrates	280	347	242	78	805
Pearls	51	5	30	180	170
Other articles	402	372	130	302	379
Total exports	870	1,223	1,089	2,474	3,809

(a) Includes kerosene, gas oil, diesel oil, residual oil, etc.

(b) Includes domestic exports and re-exports

Shipping

Shipping services to Darwin are provided from the eastern States at intervals of about four weeks by ships of the Australian National Line and from Western Australia by about four ships a month of the Western Australian State Shipping Service. Oil tankers visit Darwin approximately fourteen times annually with supplies of aircraft fuel and other petroleum products. Other overseas vessels call at irregular intervals. During 1964-65 approximately 213,000 tons of merchandise were discharged at Darwin. A vessel operated from Brisbane serves settlements on the Gulf of Carpentaria, and some mission-owned boats carry cargo from Darwin to mission stations and government settlements along the coast.

Air services

At 30 June 1965 there were nine government aerodromes and 125 licensed aerodromes in the Territory. The overseas passenger services using the Darwin international airport are Air India; Qantas/B.O.A.C. (Sydney to London); B.O.A.C. (Sydney to Hong Kong); and K.L.M. (Sydney to Amsterdam). Qantas also conducts a freight service from Sydney to London. Regular inland services to Darwin, with, in some cases, intermediate stops at Territory centres, are operated by Trans-Australia Airlines and Ansett-A.N.A. (from Adelaide, Melbourne, Sydney and Brisbane).

and MacRobertson-Miller Airways Ltd. (from Perth and Derby). MacRobertson-Miller Airways Ltd. and Connellan Airways Ltd. operate a network of air services throughout the Territory, the latter company's base being at Alice Springs. The Royal Flying Doctor Service also operates aircraft, while charter services can be secured at Darwin and Alice Springs.

Railways

The Commonwealth Railways Commissioner operates the Central Australia Railway from Port Augusta in South Australia to Alice Springs over a distance of 822 miles, of which about 200 are in the Northern Territory. The line is standard gauge from Port Augusta to Maree, a distance of 217 miles, and 3 ft. 6 in. from Maree to Alice Springs. The Commissioner also operates the North Australia Railway between Darwin and Birdum on a 3 ft. 6 in. gauge over a distance of 317 miles. The two inland terminals, Alice Springs and Birdum, are about 630 miles apart and are connected by road transport along the Stuart Highway. Larrimah, on the highway and 6 miles north of Birdum, is the point of trans-shipment for passengers and goods and is, at present, the effective terminal. A road-rail freight service operates between Adelaide and Darwin via Alice Springs.

Roads

The Stuart Highway, 954 miles long, connects Alice Springs with Darwin and runs via Larrimah and Tennant Creek. The Barkly Highway, 403 miles long, connects Mount Isa (Queensland) with Tennant Creek and joins the Stuart Highway some 16 miles north of Tennant Creek. These highways are used for carrying various freights including cattle, particularly to and from the railheads at Alice Springs, Larrimah and Mount Isa. The routes are used also for overland tourists and travellers from the southern States to Darwin. With the further development of the pastoral and mining industries in the Territory, road trains are now being used on both highways for the export of cattle and ore. Both roads have good water bores and communications. There are now approximately 11,400 miles of roads in the Territory of which 1,474 miles are sealed.

Work on a programme for reconstruction of beef cattle roads, estimated to cost \$9,140,000 over a period of three to four years, commenced in 1961-62. Expenditure to 30 June 1965 was \$5,696,000. The transport of cattle by road is expected to increase the number, quality and value of cattle turned off.

Posts, telegraph, telephones and wireless

Postal communication is maintained by road, rail and air transport between Darwin and the capital cities of Australia. In addition, vessels belonging to the Western Australian State Shipping Service provide a regular service between Fremantle and Darwin. Inland, the northern part of the Territory receives its mail via Darwin or by means of the aerial services, and the southern districts are served via Adelaide.

The overland telegraph line, covering a length of 2,230 miles, runs from Adelaide to Darwin, and links Darwin in telegraphic communication with other parts of the world. Long-distance telephone communication is established between Darwin and the capital cities of Australia, and overseas telephone communication through Sydney or Perth is also available.

Regional national broadcasting stations are situated at Darwin, Alice Springs, Tennant Creek and Katherine, and there is a commercial station at Darwin. The majority of homesteads on pastoral leases are equipped with radio transceivers operated under licence from the Postmaster-General's Department. These stations are in daily communication with Flying Doctor bases situated at Alice Springs (Northern Territory), Wyndham (Western Australia), Broken Hill (New South Wales), and Cloncurry (Queensland), and are used for transmission of radio-telegrams and other communications.

Education

See also the chapter Education, Cultural Activities and Research.

European schools

Schools for European and part-European children in the Territory are conducted for the Commonwealth, on an agreed basis of reimbursement, by the South Australian Department of Education, which is represented in Darwin by an Assistant Supervisor of Education, Northern Territory Schools. At 30 June 1965 there were twenty-one government schools in the Territory, with 5,324 pupils, and four private schools, with 915 pupils, providing instruction according to the South Australian curriculum. There were also two subsidized schools on pastoral properties with a total enrolment of twenty-one. High schools have been established with classes to Leaving Certificate level at Alice Springs and Leaving Honours level at Darwin.

All children who live more than ten miles from an established school receive an allowance of up to \$320 (\$200 plus \$120 on a graduated scale according to family income) per annum plus fare concessions if they board away from home in order to attend school. Twelve Intermediate exhibitions or ten per cent of the number of candidates, whichever is the greater, are available annually, and carry benefits of \$10. There are also book allowances ranging from \$16 to \$20 per annum for secondary students. Approximately 350 children receive correspondence education under the South Australian Correspondence School system. The radio session 'School of the Air' supplements normal correspondence instruction for certain children in isolated areas.

Thirteen pre-school centres are in operation in the Territory, the staff of all except one being officers of the Northern Territory Administration. A number of scholarships are offered each year for Territory girls to qualify as pre-school teachers.

Special Aborigines' schools

The social, cultural and educational background of the Aborigines has made necessary the establishment of special schools for them. This is regarded as an interim measure only, and policy is that children are transferred into general community schools as they are judged capable of handling the curriculum. From the beginning of the 1956 school year control of these schools passed from the Commonwealth Office of Education to the Welfare Branch of the Administration. Nineteen schools have so far been established. A special syllabus and series of readers have been prepared for use in these schools. Free mid-day meals, milk, and school clothes are supplied to the pupils. In addition to the nineteen Administration schools, fifteen schools for Aboriginal children are conducted by missions with the aid of Government subsidies. Also, five schools aided by Government subsidies have been established on pastoral properties, and the establishment of others along similar lines is planned. Five pre-school centres are operated by the Administration for Aboriginal children, and four others are organized by the missions.

Theoretical training of apprentices

The recognition that technical school training is an extension of workshop training has led to the introduction of day-time classes which apprentices attend without loss of pay. Apprentices are directed by the Apprentices Board to undertake correspondence courses conducted by the Technical Correspondence School of the South Australian Education Department and the Sydney Technical College, these courses covering the work prescribed for the various trades in South Australia and New South Wales.

Aboriginal welfare

The Commonwealth and State Governments have adopted a common policy of assimilation which seeks that all persons of Aboriginal descent will choose to attain a similar manner and standard of living to that of other Australians and live as members of a single Australian community enjoying the same rights and privileges, accepting the same responsibilities and influenced by the same hopes and loyalties as other Australians. Since the commencement of the *Social Welfare Ordinance* 1964 in September 1964, Aborigines in the Northern Territory have been equal at law with all other residents, although some special benefits have been retained for them. An intensive welfare programme to prepare Aborigines for the demands of modern living is being carried out, and thirteen Government settlements and fourteen mission stations have been established, where Aborigines are encouraged to adopt a settled way of life, and health services, particularly child welfare services, education, housing, vocational training, and employment are provided. Aborigines are also encouraged to take part in the social activities of the community.

Finance

Details of receipts and expenditure of the Territory for the years 1960-61 to 1964-65 are shown in the table following. In this table the receipts and expenditure of the Northern Territory have been reclassified into a National Accounts form. The table covers transactions relating to the Northern Territory in the Commonwealth Consolidated Revenue Fund and the following trust funds: Northern Territory Government Settlements Canteens, Northern Territory Housing Commission, Northern Territory Housing Loans, and Northern Territory Transport. Details of the financial transactions of the Darwin City Council are also incorporated in the table. Revenue derived by the Commonwealth from income taxes, customs duties etc. levied in the Northern Territory and expenditure by the Commonwealth in the Northern Territory on such items as defence, civil aviation, railways etc., and payments to residents from the National Welfare Fund are not included.

THE AUSTRALIAN CAPITAL TERRITORY
General description

The Commonwealth Constitution provides that the Seat of Government of the Commonwealth shall be in the state of New South Wales but distant not less than 100 miles from Sydney. After a number of alternative sites were considered, an area of 911 square miles lying approximately 200 miles south-west of Sydney was transferred to the Commonwealth as from 1 January 1911. A further 28 square miles at Jervis Bay were transferred as from 4 September 1915 to serve as a port for the Territory.

The primary responsibility for administering the Australian Capital Territory lies with the Department of the Interior, whose functions include housing, education, police, and municipal services. Public health, justice and the provision of basic physical services, including water supply, sewerage and roads, are the responsibility of the Departments of Health, Attorney-General's and Works. The National Capital Development Commission has the overall responsibility for the planning and development of the Canberra city area.

The Australian Capital Territory Advisory Council was established in 1930. It has eight elected members and a representative from each of the Departments of Interior, Works, and Health and the National Capital Development Commission. The Council advises the Minister for the Interior on matters affecting the Australian Capital Territory. Ordinances are submitted in draft form to the Council for advice and comment before being implemented.

From 1911 until 1921 the population of the Australian Capital Territory remained almost static at about 2,000 persons. In 1922 it commenced to rise and by 1927 was nearing 6,000. The following year, with the transfer of departments from Melbourne, the population passed 8,000, and at the outbreak of the 1939-45 War had reached just under 13,000 persons. During the war growth was again slow, and at the Census of 30 June 1947 the population was 16,905 persons. In the post-war period the population increased more rapidly and at the Census of 30 June 1954 was 30,315 persons. With further transfers of departments from Melbourne it reached 58,828 persons (including 527 in Jervis Bay) at the Census of 30 June 1961. At 30 June 1965 the population was 88,571, made up of 85,779 in Canberra City and 2,792 in rural areas (including Jervis Bay). *See also* the chapters Population and Vital Statistics.

National Capital Development Commission

The *National Capital Development Commission Act 1957-1960* provides for a Commission to undertake and carry out the planning, development and construction of the City of Canberra as the National Capital of the Commonwealth. The year 1964-65 was the seventh year of the Commission's operations. Construction work was carried out by means of agency arrangements with the Department of Works and private consultants. Details of expenditure by the Commission in each year from 1959-60 to 1964-65 are included in the table on page 1096. Total expenditure in 1964-65 was \$30.9 million, comprising national works, \$1.8m; Commonwealth offices, \$6.8m; Territory works, \$14.2m; city works, \$1.9m; land developments, \$4.4m; other \$1.6m.

The following major works were completed during 1965 by the Commission and its agents: Oriental Studies Building, Australian National University; Canberra Theatre Centre; Anzac Park East Building; Gowrie Hostel; Campbell High School; Watson High School; Curtin South Primary School; Parliament House Extensions; Oakey Hill Reservoir; and Russell Buildings 6 and 7.

Works under construction at the beginning of 1966 included the following projects: National Library; Economics Building, Australian National University; Commonwealth Avenue Offices; Anzac Park West Building; Deakin High School; E.D.P. Building No. 2; A.C.T. Police Headquarters; Administration and Library Building, Canberra Technical College; Lyons Primary School; North Curtin Primary School; Hackett Infants School and South Curtin Infants School.

Works and services

Housing

In 1911 there were only 448 dwellings in the Australian Capital Territory, but by June 1965 the number had risen to almost 21,000. The following are the numbers recorded at successive censuses or surveys over the period: 1911, 448; 1921, 558; 1933, 2,098; 1947, 3,667; 1954, 7,444; 1961, 14,734; 1963, 16,547; 1965, 20,610. Figures for the last two years relate to occupied dwellings in Canberra only. Until the period following the 1939-45 War most houses and flats were built and rented by the Department of the Interior. More recently, particularly over the past four or five years, an increasing number of houses and flats have been built by private enterprise. Between 1961 and 1963 the proportion of privately owned homes and flats rose from 29 per cent to 38 per cent, and by 1965 it was 57 per cent. Public authorities will continue to provide the bulk of all rented accommodation in the foreseeable future. In June 1965, of the total of 20,610 occupied dwellings in Canberra, 8,866 were owned by the Commonwealth. To provide for additional home development three new suburbs have been opened in the Yarralumla Creek Valley, south-west of the former city area. In these suburbs, Hughes, Curtin and Lyons, 2,094 homes were occupied by the end of 1965. In all parts of Canberra 22,182 houses and 2,916 flats were completed during 1965.

Municipal services

Canberra has been developed as a garden city. More than three million trees and many acres of lawns have been planted since 1927. The development of new areas of parkland and the maintenance of existing tree and lawn areas is the responsibility of the Parks and Gardens Section of the Department of the Interior. Municipal services are also provided by the Department of the Interior.

At 30 June 1965, 19,781 consumers were connected to the city water supply, drawn through nine service reservoirs from two storages on the Cotter River with a total capacity of nearly 3,500 million gallons. A third storage dam site is currently being developed. In 1964-65 some 4,800 million gallons of water were consumed in Canberra and in addition the system supplied 373 million gallons to Queanbeyan in New South Wales. Treatment works at Weston Creek dispose of Canberra sewage. At 30 June 1965, 295 miles of sewers, 6½ miles of rising sewerage mains and 298 miles of storm water drains were laid.

Department of Works

Apart from the work it carries out for the National Capital Development Commission, the Department of Works acts as design and supervision agent for other Commonwealth departments and instrumentalities. Total expenditure during 1964-65 on all operations amounted to \$10.8 million (\$10.0 million in 1963-64), comprising: building works—housing, \$8,460; other building, \$6,671,154; engineering works, \$135,546; repairs and maintenance—building, \$1,747,736, engineering, \$2,032,820; purchase of plant, \$194,460. Major works completed during 1965 included: additions and alterations to the old block at Canberra Community Hospital; computer building and laboratories for the Commonwealth Scientific and Industrial Research Organization; Civic telephone exchange; and deep space tracking station, Tidbinbilla. Works under construction at the beginning of 1966 included: stages 1 and 2 of the new main hospital block and stage 2 of the nurses' home at the Canberra Community Hospital and a new barracks block at the Royal Military College, Duntroon.

Production

See also the chapters dealing with particular subjects.

Lands

Reference has been made in earlier issues of the Year Book to the general conditions of land tenure in the Territory and to the area of alienated and leased land, and the chapter Land Tenure and Settlement of this issue contains statistical information on the subject. (See also § 1. Canberra: Fifty Years of Development, page 123 of Year Book No. 49.)

Under the *Seat of Government (Administration) Act* 1910 Crown lands in the Territory may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act. Leases of land in the city area are granted under the *City Area Leases Ordinance* 1936-1961, and leases of other lands under the *Leases Ordinance* 1918-1958. Land is also leased for various purposes in the city area under the *Church Lands Leases Ordinance* 1924-1932 and the *Leases (Special Purposes) Ordinance* 1925-1943, while one lease under the *Church of England Lands Ordinance* 1926 has been granted for church purposes. As considerable portions of the Territory lands are not immediately required in connection with the establishment of the city, large areas have been leased for agricultural or grazing purposes.

The Royal Australian Naval College is situated in the area of about 28 square miles at Jervis Bay acquired from New South Wales for possible use as a port in connection with the Territory. Some 5,000 acres of land in the area, mostly of little value agriculturally, are used for grazing purposes. The natural forest is being utilized for the production of hardwood building material, and the area treated is being reforested with softwoods on an experimental basis.

Forestry

Afforestation work has been undertaken, and plantations (mainly *Pinus radiata*) have been established at Uriarra, Mount Stromlo, Pierce's Creek, Green Hills, Kowen, and Tidbinbilla. Experimental plots have been established in the Brindabella mountains, and soil conservation areas at various locations throughout the Territory. The total area of softwood plantations at 30 June 1965 was 27,377 acres, of which 24,944 acres were *Pinus radiata*, the balance consisting of other softwood species, chiefly *Pinus ponderosa* and *Pinus nigra*, and 461 acres of experimental planting at Jervis Bay, mainly *Pinus radiata* and *Pinus elliottii*.

Forestry operations in the Territory were begun on Mount Stromlo in 1915. Plantings up to 1925 were chiefly decorative, but since then a much wider programme has been undertaken. Continued thinning operations have improved the forests so that they now yield a wide variety of products. Poles, saw logs and case timber are now cut in addition to substantial quantities of fencing material and pulp-wood. The yearly output of pines has increased from 2,500 cubic feet in 1930-31 to 1.3 million cubic feet, worth \$376,000 delivered to purchasing mills in Canberra.

In 1926 a comprehensive review was undertaken of the Territory's potential for forest development. The existing forest area has been placed under management, and a considerable amount of survey and assessment work has been completed, resulting in the extension of operations, including fire protection to 100,000 acres of hardwood forests in the Cotter catchment

area. Hardwood log production from Jervis Bay and Tidbinbilla forests during 1964-65 was 30,000 cubic feet, valued at approximately \$10,000 delivered at the purchaser's mill. Only small quantities remain unexploited.

Approximately eighty men are directly employed in the establishment and protection of the forests with some further twenty men employed on contract for the utilization of the forest. Up to 30 June 1965 a total of 18.4 million cubic feet of pine logs had been cut from the plantations. At present day values these logs would be \$5,414,000 delivered to the purchasing mills. A total of 141 million cubic feet of hardwood logs, valued at \$418,000 delivered, has been cut from the forests of Jervis Bay and the remainder of the Territory.

Agricultural, pastoral and secondary industries

During 1964-65 the production of the more important items of the agricultural and pastoral industry was: wheat 57,792 bushels; wool 2,475,000 lb.; whole milk 1,094,000 gallons; meat (carcass weight, fresh), 4,253 tons. The numbers of livestock depastured at 31 March 1965 were: horses 627; cattle 14,049; sheep 289,826.

As in the Northern Territory, the secondary industries established in the Australian Capital Territory are largely the service industries associated with the growth of the Territory.

" plant and machinery(h)	2,688	3,214	4,694	5,104	9,681

(a) Any factory, workshop or mill in which four or more persons are employed or power other than hand is used. (b) The aggregate of the average number of persons employed in each factory. Includes working proprietors. From 1962-63 figures represent average employment over the whole year; for earlier years figures are averages during period of operation. (c) Excludes drawings by working proprietors. (d) Includes water and lubricating oil. (e) Includes also containers, etc., tools replaced and repairs to plant. (f) Value added in process of manufacture (i.e. value of output less value of materials and fuel used). (g) Value of goods produced including amounts received for repair work and other work done. (h) Depreciated or book value at end of year including estimated value of rented premises and machinery.

Transport and communication

Canberra is connected with the railway system of New South Wales at Queanbeyan by a line 4½ miles long. This line was opened for goods traffic on 25 May 1914 and for passenger traffic on 15 October 1923. Direct or linking services operate between Canberra and Sydney and Canberra and Melbourne. Two airlines provide several services daily each way on the Sydney-Canberra-Melbourne route. Regular motor-coach services link Canberra with towns in New South Wales, Victoria and South Australia. There are three radio broadcasting stations in the Territory, 2CY and 2CN of the national broadcasting system and 2CA, a commercial station, and two television stations, ABC Channel 3 of the national broadcasting system and CTC Channel 7, a commercial station. The total length of roads in the Territory at 30 June 1965 was: bitumen and concrete, 415 miles; gravel, 185 miles; other formed roads, 90 miles; total, 690 miles.

Social

See also the chapter Education, Cultural Activities and Research.

Education

The *Education Ordinance 1937-1964* provides for the compulsory attendance at school of children between the ages of six and fifteen years. The Commonwealth Department of the Interior is primarily responsible for the education of children in the Australian Capital Territory. By agreement, however, the New South Wales Department of Education arranges the teaching programme in accordance with its own curriculum and provides the teaching staff. It is reimbursed for expenses incurred.

At 31 December 1965 there were seven public secondary schools in Canberra providing courses proceeding to the Higher School Certificate standard. A further secondary school commenced teaching classes at the beginning of 1966. Twenty schools provided courses for children in infants and primary classes, including one in the Jervis Bay area and three in rural districts. There were also a school for mentally handicapped children; a school for physically handicapped children, located at Canberra Community Hospital; a school for deaf children, located at the Ainslie Public School; a therapy clinic for children with speech defects; and a clinic for educational guidance. At the same date there were sixteen private schools in Canberra. Of these, St. Edmund's Christian Brothers' College, the Catholic Girls' High Schools at Braddon and at Griffith, the Daramalan College, the Canberra Grammar School (Boys), and the Canberra Church of England Girls' Grammar School provide courses leading to the Higher School Certificate. Twenty-nine pre-school centres, including two occasional care centres and a mobile unit which visits outlying areas, provide pre-school facilities for approximately 2,200 children between the ages of three and five years.

The Canberra Technical College, which follows generally the curriculum set by the New South Wales Department of Technical Education, provides trade, post-trade, certificate, and some hobby courses. Over eighty courses are given, covering instruction in seventeen of the Department of Technical Education's twenty-seven schools of study. Enrolments at the two Colleges at Reid and Kingston exceed 4,300. An area of about 250 acres has been set aside at Acton for the Australian National University. Provision has been made for the University to establish such research schools as may be thought desirable, including a School of Medical Research and Research Schools of Physical Sciences, Social Sciences and Pacific Studies. Provision for undergraduate studies and some post-graduate study is made by the School of General Studies.

Health

The Canberra Community Hospital serves the population of Canberra and surrounding districts. At 30 June 1964 it had 427 beds, an honorary medical staff of 78, seven salaried medical staff, and a nursing staff of 356. Extensions are being made to the hospital to enable it to cope better with the needs of Canberra's growing population. For further information *see* the chapter Public Health.

Justice

The Australian Capital Territory has a Supreme Court and a Court of Petty Sessions. There is an Australian Capital Territory Police Force, which at the end of 1965 numbered 167, including 4 policewomen. Of these, 97 were engaged on general duties, the traffic branch comprised 41, including the specialist water police and accident investigation squads, 26 were engaged in criminal investigation, 2 in caring for the Police Boys Club, and 1 in the Jervis Bay area.

Finance

In the table following the receipts and expenditure of the Australian Capital Territory have been classified in a National Accounts form. The table covers transactions relating to the Australian Capital Territory in the Commonwealth Consolidated Revenue Fund and the following trust funds: Australian Capital Territory Electricity Supply (to 1962-63), Australian Capital Territory Forestry, Australian Capital Territory Housing, and Australian Capital Territory Transport. In addition, details of the financial transactions of the following semi-governmental authorities are also covered: Australian Capital Territory Electricity Authority (from 1963-64), Commonwealth Brickworks and National Capital Development Commission. Revenue derived by the Commonwealth from income taxes, sales tax, etc. levied in the Australian Capital Territory and expenditure by the Commonwealth in the Australian Capital Territory on such items as defence, civil aviation, railways, etc., and payments to residents from the National Welfare Fund are not included.

NORFOLK ISLAND

General description

Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude 29° 3' 3" S., longitude 167° 57' 5" E. Its total area is approximately 14 square miles, the island being about 5 miles long and 3 miles wide. It is 1,035 miles from Sydney and 660 miles from Auckland. The length of the coast line is 20 miles, and its form that of an irregular ellipse. Except for a portion on the south side and the landing place at Cascade on the northern side almost inaccessible cliffs rise from the water's edge. The climate is equable, the temperature ranging between 47° and 82° F. with a mean of 68° F. The average annual rainfall is 56 inches.

After serving as a penal station from 1788 to 1813 and from 1826 to 1855 Norfolk Island in 1856 became the home of the remaining descendants of the *Bounty* mutineers. At the Census of 30 June 1961 the population was 844, consisting of 421 males and 423 females. Total population at 30 June 1965 was 980.

Administration

In 1856 the island was created a distinct and separate settlement under the jurisdiction of New South Wales. In 1896 it was made a dependency under the Governor of that Colony, and finally, by the passage of the *Norfolk Island Act* 1913, it was accepted by the Commonwealth Parliament as a territory of Australia. It is controlled by the Minister for Territories through an Administrator. The Norfolk Island Council is established pursuant to the *Norfolk Island Act* 1957-1963 and is constituted in accordance with the provisions of the *Norfolk Island Council Ordinance* 1960-1964. The Council may consider and tender advice to the Administrator on any matter affecting the peace, order and good government of Norfolk Island, and must be consulted on certain legislative and financial matters. The Council comprises the Administrator as *ex officio* chairman and voting member and eight members elected biennially.

Economic activity

The major economic activities of the island are primary production, the tourist trade and Government instrumentalities.

Primary industries. The soil on the island is particularly fertile, the climate equable and the rainfall fairly evenly distributed except for a pronounced dry period in November. This enables a wide range of temperate and semi-tropical products to be cultivated. However, the island's comparative isolation presents trading difficulties, and production of bean seed, formerly the major export, has declined rapidly since 1962-63.

Fish abound off the island. In the past a number of ventures have been formed to exploit this resource but they have been short-lived, mainly because of the lack of a sheltered harbour. A modern whaling station was started on the island in 1955, and production commenced during the second half of 1956. The quota of 150 humpback whales in 1956, 120 in 1957 and in 1958, 150 in 1959, and 170 in 1960 and in 1961, was caught and processed at the station. Owing to a marked scarcity of whales, however, only four were caught in 1962, and the station has been closed down.

An active forestry programme is being carried out to increase the resources of Norfolk Island pine and to introduce suitable types of eucalypts.

Tourists. The unique history and unusual beauty of the island have always attracted a number of tourists. Before the 1939-45 War the only means of transport to the island was by ship, but the building of the aerodrome in 1943 made the island far more accessible for tourists, and the number of tourists has increased steadily during recent years. There are at present three licensed residential hotels and five guest houses; additional accommodation is being planned.

Government instrumentalities. A large proportion of the population is employed by Commonwealth Government instrumentalities, namely: Department of Civil Aviation, Norfolk Island Administration, and Department of the Interior (Meteorological Branch). The bulk of the finance for the operation of these instrumentalities is supplied by the Commonwealth Government and this greatly increases the income of the island.

Trade, transport and communication

Imports to Norfolk Island since the 1939-45 War have risen from \$65,000 in 1945-46 to \$1,715,000 in 1964-65. In 1964-65 the major proportion (\$988,000 or 58 per cent) came from Australia, while New Zealand and Pacific Islands supplied \$89,000 or 5.2 per cent. Exports rose from \$18,500 in 1945-46 to \$420,000 in 1960-61, but had declined to \$253,000 by 1964-65, after whaling had ceased in 1962-63. Exports to Australia, the principal market, amounted to \$199,000 in 1964-65, while exports to New Zealand and to Pacific Islands amounted to \$51,000. No duties are chargeable on goods imported into Australia from Norfolk Island if the goods are the produce or manufacture of Norfolk Island, shipped direct to Australia, and not goods which if manufactured or produced in Australia would be subject to excise duty.

A shipping service to the island is maintained at approximately seven-week intervals from Sydney via Norfolk Island to the New Hebrides, Solomon Islands and other island groups and thence back to Sydney, while other vessels plying between Sydney and Noumea call at Norfolk Island about every three weeks. Shipping between the island and New Zealand is infrequent.

A twice-weekly passenger and air freight service between Sydney and Norfolk Island, maintained by Qantas Empire Airways Ltd., extends to New Zealand under charter to Air New Zealand Ltd.

There are approximately fifty miles of usable road on the island. As a substantial section of the population possesses private motor cars, and taxi-cab and bus services are available, transport is almost exclusively by motor vehicle.

Education

Education is free and compulsory up to the age of fifteen years. The school, which is conducted by the New South Wales Department of Education, conforms to the Australian standard of public education, ranging from kindergarten to the School Certificate examination. The teachers are provided by the New South Wales Education Department, but they are paid by the Norfolk Island Administration. The number of scholars enrolled at 30 June 1965 was 191.

Judiciary

The judicial system of Norfolk Island consists of a Supreme Court and a Court of Petty Sessions. The Supreme Court is the highest judicial authority in the Territory and is a superior court of record with original criminal and civil jurisdiction. The jurisdiction of this Court is exercised by one judge sitting in Court or, to the extent and in the cases provided by or under ordinance, sitting in Chambers. The jurisdiction of the Court of Petty Sessions is exercised by a Chief Magistrate or any three magistrates other than the Chief Magistrate.

Finance

The revenue of the Territory, together with an annual grant from the Commonwealth Government for administrative expenses, is paid to the credit of the Norfolk Island Trust Fund, and advances for administrative and developmental expenses are drawn from the account. The principal items of revenue and expenditure for the five years 1960-61 to 1964-65 were as follows.

NORFOLK ISLAND: REVENUE AND EXPENDITURE, 1960-61 TO 1964-65
(\$'000)

PAPUA AND NEW GUINEA

The information under this heading is applicable to both the Territory of Papua and the Trust Territory of New Guinea. For details of the respective Territories *see* pages 1113 (Papua) and 1119 (New Guinea) and following pages.

Administration

The *Papua-New Guinea Provisional Administration Act 1945-1946*, which provided for the transfer back of control from the military authorities to civil authorities after the 1939-45 War, was repealed by the *Papua and New Guinea Act 1949*, which came into force on 1 July 1949.

The latter Act approved the placing of the Territory of New Guinea under the International Trusteeship system and provided for an Administrative Union of the Territory of Papua and the Territory of New Guinea with one Administrator, a Legislative Council and an Executive Council, one Supreme Court, and one Public Service.

For an outline of the development of the Legislative and Executive (later Administrator's) Councils between 1949 and 1963, see Year Book No. 51, page 117.

In May 1963 the Commonwealth Government passed an amendment to the Papua and New Guinea Act, making provision for a House of Assembly of 64 members to replace the Legislative Council. The House now consists of 10 official members appointed by the Governor-General on the advice of the Administrator, 44 members elected by the people of the Territory on a common roll in 44 open electorates, and 10 non-indigenous persons elected on a common roll in 10 special electorates comprising one or more open electorates. The first elections for the House of Assembly were held in February-March 1964, and the inaugural meeting of the new House convened on 8 June 1964.

The 1963 Act also increased the membership of the Administrator's Council from 7 to 11 seven of whom must be elected members of the House of Assembly.

Local government was introduced in 1949 by the Native Village Councils Ordinance which was replaced by the *Local Government Ordinance* 1963. The Administrator may establish by proclamation local government councils with authority in defined areas. Provision is also made for the establishment of multi-racial local councils.

Judiciary

The courts which exercise jurisdiction within the Territory are: the Supreme Court of the Territory of Papua and New Guinea, District Courts (Papua and New Guinea), Local Courts (Papua and New Guinea), and Warden's Courts.

The Supreme Court is the highest judicial authority in the Territory and has unlimited criminal and civil jurisdiction. District Courts have criminal jurisdiction over the less serious offences which are punishable on summary conviction, but have no jurisdiction to try treason crimes, misdemeanours and other indictable offences. They also exercise a limited civil jurisdiction. The Local Courts exercise a substantially similar jurisdiction but at a more subordinate level. They replace the former Courts for Native Matters (Papua) and Courts for Native Affairs (New Guinea) which used to deal only with disputes or offences involving indigenes. The Administrator has power to establish, in respect of each gold field or mineral field, warden's courts with jurisdiction over civil cases respecting mining or mining lands held under the *Mining Ordinance* 1937-1959 and offences against the mining laws of the Territory.

In addition, there is the Land Titles Commission set up under the *Land Titles Commission Ordinance* 1962-1965 to inquire into and determine rights in land, particularly native land. The Commission has the particular function under the *New Guinea Land Titles Restoration Ordinance* 1951-1965 to inquire into and determine claims to interest in land where the official records have been lost or destroyed as a result of the Japanese invasion of New Guinea. For the purposes of the latter Ordinance the jurisdiction of the Commission is exercised by the Chief Commissioner or a Commissioner appointed under the *Land Titles Commission Ordinance* who is a qualified legal practitioner.

Agriculture and animal industry

Soils

Although a large part of Papua and New Guinea is covered by skeletal soils unsuitable for agriculture, there are extensive areas in all districts where fertile soils occur suitable for growing a wide range of crops. Most of the agriculture of the Territory up to the present has been on soils on the coastal plains, which, apart from the swamp soils, consist mainly of alluvium and podsolized alluvium. So far these have been mostly under coconut plantations, although other crops such as rubber and cocoa have also been grown. The swamp soils, of which there are extensive areas in the delta plains and other parts of the Gulf of Papua and in smaller areas, are found intermittently around the coasts and along the lower reaches of the rivers, and are in general quite unsuited to any form of agricultural development.

Volcanic soils probably offer the greatest prospects for development. They are found mostly on the central plateau and southern foothills of the main island, but there are also areas in New Britain (particularly in the Gazelle and Willaumez Peninsulas), Bougainville and New Ireland, as well as in numbers of smaller islands. Other rich soils are the alluvials of the river valleys. The largest single area of this type is in the trough occupied by the Ramu and Markham Rivers.

Climate

The climate, particularly the rainfall, over so wide an area as Papua and New Guinea, with its numerous islands and varying elevations, naturally presents many variations. Generally speaking the climate is moist and tropical except at high altitudes. There are only small differences in both daily and seasonal extremes. The Territory has no winter and summer, and no great variation in day-length over the year. The two seasons which are experienced are generally described as the 'south-east' and the 'north-west', corresponding with the periods of the year when the south-east trade winds and the north-west monsoons direct the main Territory air-flow. The south-east season prevails approximately from May to October, the trade winds attaining maximum velocities during July and August. The north-west monsoon operates over a considerably shorter period, from the end of December to about March. During the periods between these seasons, November and early December and about March to April, there are two short spells of calm weather.

Rainfall varies considerably from an average annual rainfall of 245 inches at Gasmata in New Britain and 231 inches at Kikori in Papua to about 88 inches at Wewak in New Guinea and 40 inches at Port Moresby.

Although the Territory has no summer and winter it has a wide temperature range, due to differences in altitude, varying from an absolute highest temperature of about 100° F. along the coast to freezing point on its highest peak, Mt. Wilhelm (14,762 ft.).

Humidity in the Territory is very high throughout the year. Some coastal stations register an average relative humidity of more than 90 per cent. Humidities below 60 per cent are rare at coastal stations, average figures varying from 80 per cent at 9 a.m. to 65 per cent at noon and 75 per cent at 3 p.m. Humidity in mid-mountain forests appears to be higher than in the lowlands, while in the mossy forests there are periods when the whole belt is saturated.

Land tenure

The *Land Ordinance* 1962 of the Territory of Papua and New Guinea, which came into operation in 1963, replaced much land legislation previously in force separately in the two Territories. This simplification in legislation was a major step towards applying uniform principles to land tenure throughout the whole of the Territory of Papua and New Guinea. All land in the Territory other than native land or land subject to any estates, rights, titles, or interests in force from time to time is Administration land.

There is considerable variation throughout the Territory in the nature of customary ownership of land. In most areas some rights remain in the landholding group, and individuals within the group have limited rights of use, either for life or for a shorter period. Thus the normal system by which the rights of ownership in land use are acquired is by birth to a landholding group. Transfer of rights between individuals by sale and purchase appears to have been unusual in the past, but this practice is now an established custom in some localities and appears to be increasing. Inheritance may be based on either patrilineal or matrilineal descent, or both. In parts of the Territory, however, there is a tendency for the whole inheritance system to change, particularly in communities where it is based on matrilineal descent. Following a close study of the problems in relation to land holdings by indigenes, the Government has laid down the following broad principles of policy.

The ultimate and long-term objective in Papua and New Guinea is to introduce throughout the Territory a single system of land holding regulated by the central Administration by statute, administered by the Department of Lands of the central Administration and providing for secure individual registered titles after the pattern of the Australian system.

Only the Administration working through the Department of Lands, Surveys and Mines and through the Registrar of Titles may issue and register land titles.

Land subject to native custom remains subject only to native custom until it is taken out of custom either by acquisition by the Administration or by a process, provided for by the *Land (Tenure Conversion) Ordinance* 1963, of conversion of title to an individual registered title.

Upon either acquisition or conversion of title compensation is provided in respect of extinction of rights under native custom.

Land held under native custom may not be acquired outside of native custom by other than the Administration. Land may not be acquired by the Administration except for prescribed public purposes unless the native owners are willing to sell and the Administration is convinced, through its Department of District Administration, that the land is not required by them, and conversion of title from native custom to individual registered title may take place only if all those interested in the land under native custom consent to conversion and the method of conversion.

The services of Commissioners under the *Land Titles Commission Ordinance* 1962-1965 are used, as a first priority, on investigations into claims by the Administration that land is ownerless and may therefore be declared administration land, on investigation into the ownership under native custom of land proposed to be acquired by the Administration, on settlement of disputes about the ownership of land held under native custom, and on investigations into the rights held under native custom in land proposed to be converted to individual registered title. The Commissioners, as opportunity offers, continue investigations into the holding of land under native custom; the results of such investigations are recorded for use in connection with future acquisitions or conversions of title.

The legislation and administrative steps necessary to put the remainder of this policy into effect are well advanced.

Suitable crops

The crops which can be grown in Papua and New Guinea include coconuts, rubber, tea, coffee, cocoa, fibres, rice, pepper, tobacco, peanuts, kapok, cassava, pyrethrum, ginger, cinchona, nutmeg, vanilla, tropical fruits and vegetables, sago, and tung oil, but of these the only crops of any commercial importance are coconuts, cocoa, rubber, coffee, peanuts, and passion fruit. Major developments in the production of tea and pyrethrum are under way.

Non-indigenous rural production

In 1964-65 there were 1,219 holdings in use by non-indigenous persons, 338 being in Papua and 881 in New Guinea. The total area of these holdings was 1,014,158 acres, 272,223 in Papua and 741,935 in New Guinea. The following tables summarize the information available for principal activities.

TERRITORY OF PAPUA AND NEW GUINEA NUMBER OF HOLDINGS, AREA, PRODUCTION AND NEW PLANTINGS 1962 TO 1965

Livestock on non-indigenous holdings

A number of British breeds of cattle are represented in Territory herds. For dairying Jersey and Australian Illawarra Shorthorns are most popular; Black Polled, Polled and Horned Shorthorns, and Red Polled cattle are raised for meat production. Under good management these breeds have done well in the Territory. There are a small number of Romney Marsh sheep at Nondugl in the highlands of New Guinea.

A central abattoir controlled by the Administration has been constructed at Lae to provide slaughtering facilities for beef producers in the Wau-Bulolo Area, the Markham and Ramu Valleys and part of the Eastern Highlands District. Provision has been made only for immediate needs, but the design and layout make it possible to expand the abattoir to handle smallgoods manufacture, snap freezing and canning as the need develops.

The following table shows the numbers of the various kinds of livestock on non-indigenously occupied holdings in Papua and New Guinea at 31 March 1965.

Native agriculture

Most of the indigenous inhabitants of Papua and New Guinea are agriculturalists producing fruit and vegetables for their own consumption. The crops grown vary according to environment and altitude and include yams, taro and sweet potatoes, coconuts, bananas, papaws, maize, sugar cane, cassava, beans, peanuts, rice, cucurbits, and tobacco. Sago is the staple food in the extensive semi-inundated areas which occur along the lower valleys of the major rivers. In these areas it is cut largely from naturally occurring stands. In other parts of the country small areas of sago are grown along stream banks and in swampy patches and are regarded as a reserve in times of poor harvest. In recent years the indigenes have taken up the production of introduced crops such as peanuts, rice, cucurbits, and maize for their own consumption, and cocoa, coffee and pyrethrum for export. Some small-scale rubber growing is now being undertaken. In coconut areas large quantities of copra are produced. In 1964-65 native production of copra was 33,602 tons and that of cocoa and coffee 5,109 tons and 3,965 tons respectively. In many localities the indigenes follow a farming system known as bush fallowing rotation, which is described in Year Book No. 48 and earlier issues.

The growing of food is done both by the men and the women. The division of work is usually clearly defined within the village itself, but this division is not necessarily the same in all areas. Generally the felling of forests is done by the men, and carrying the harvested food home to the village is done by the women. Other work, however, such as cultivating, planting and weeding may be done by either men or women according to the customs of the particular village or area.

The advancement of native agriculture for local food supply and improved land use in village gardens as well as for economic production of crops for sale have a high priority in Government policy for the Territory. A five-year (1962-63 to 1966-67) programme for intensification of agricultural work among the indigenous inhabitants is being implemented.

Survey of indigenous agriculture and ancillary surveys, 1961-62

A survey of the agriculture of indigenes of Papua and New Guinea was carried out in 1961-62 by the Territory Bureau of Statistics in conjunction with the Commonwealth Bureau of Census and Statistics and the Territory Department of Agriculture, Stock and Fisheries. The survey was designed to meet the requirements of the 1960 World Census of Agriculture, as set out by the Food and Agriculture Organization of the United Nations, and to provide basic data for the use of the administration. It was concerned primarily with subsistence crops and was carried out by sampling methods*. In addition to the main survey, two ancillary surveys were held. These related to indigenously owned coconut palms and auxiliary primary production, and were used to gauge the extent of dependence on sources of foodstuffs not measured in the main surveys. A comprehensive report on the surveys was published by the Territory Statistician in 1963, and reference should be made to this for further information. It is planned to hold further surveys of indigenous agriculture in the Territory of Papua and New Guinea in connection with future World Censuses of Agriculture. The following tables give a summary of the principal results of the survey.

TABLE 1.—TERRITORY OF PAPUA AND NEW GUINEA: AREA OF GARDENS IN USE BY INDIGENES(a) DURING SURVEY YEAR 1961-62

Garden area	Area ('000 acres)			Area per person (acres)		
	Papua	New Guinea	Papua and New Guinea	Papua	New Guinea	Papua and New Guinea
At time of first visit—						
Cultivated	74	271	345	0.17	0.22	0.21
Newly cleared not yet cultivated	7	15	22	0.01	0.01	0.01
Total	81	286	367	0.18	0.23	0.22
During the survey year—						
Brought under cultivation	43	141	184	0.10	0.11	0.11
Cleared	38	140	178	0.09	0.11	0.10
Entire area in use at any time during the survey year	119	426	545	0.27	0.34	0.32

(a) These figures refer only to indigenous inhabitants of the Territory living in villages other than villages in the Port Moresby Urban Area, and therefore do not include those living in towns or on plantations.

Accuracy of survey results. As the estimates obtained from the surveys of indigenous agriculture and indigenously-owned coconut palms are based on samples they will generally differ from the results which would have been obtained from complete censuses of the areas covered by the surveys, using the same operators and procedures. Variations of this kind occur by chance and are known as sample errors. In addition to these there are non-sample errors of two kinds. One of these is caused by the exclusion of certain areas (i.e. those not fully under Administration control and those affected by the disease kuru) from any possibility of selection and the imputation of figures for these areas on the basis of similar areas which were given a chance of selection. The other kind of non-sample error arises from a few unavoidable subjective elements in the field procedures and from the use of yield factors and crop area conversion factors at the processing stage.

The standard error of an estimate is a measure of the sampling variability. Estimated standard error of all the non-derived statistics given in Tables 1-4 and 6 are shown in Tables 1(s)-4(s) and 6(s) respectively on pages 1109-10 as percentages of the estimates to which they refer. Where the percentage standard error is relatively small, say less than 10 per cent, there are about two chances in three that the estimate would differ from the figure which would have been obtained from a comparable complete enumeration by less than the standard error; about nineteen in twenty that the difference would be less than twice the standard error; and about ninety-nine in 100 that the difference would be less than two and a half times the standard error. Larger percentage standard errors, although still measures of sampling variability, cannot be assumed to obey this relationship. Standard errors greater than 25 per cent of the estimate indicate that only an order of magnitude has been obtained for the relevant item.

The standard errors of many items shown are much larger than would normally be desired for general purpose publication. These high standard errors are partly attributable to the necessarily small sample size, and partly to the high intrinsic variability between families and between villages—even after allowance is made for the different numbers of persons involved in any comparison. The decision to publish these figures, despite the high sampling errors attached to many of them, was taken on the ground that no relevant quantitative information was available from any other source. It is evident that estimates to which high standard errors are attached must be treated with very considerable caution.

The random component of the error introduced by the exclusion of certain areas from any possibility of selection has been allowed for in calculating the standard errors. The residual bias, analogous to non-response bias in other surveys, is believed to be small compared with the sampling variability.

Of the remaining non-sample errors, the most important are those introduced by the use of crop area conversion factors and yield factors in obtaining estimates of crop areas and production.

Tables 5, 7 and 8 are derived from complete collections by the Territory Department of Agriculture, Stock and Fisheries and sampling error therefore does not apply.

Co-operative societies

Co-operatives are under the supervision and guidance of a Registry of Co-operatives within the Department of Trade and Industry, and trained staff are stationed in districts throughout the Territory. Societies fall into two main categories, primary and secondary. The primary consist of marketing and consumer retailing bodies dealing directly with individual members. A society which combines both these activities is termed a dual purpose primary. Secondary organization is represented by associations of societies, formed to achieve an amalgamation of purchasing power in retail consumer store operation and marketing volume in relation to agricultural production, and to concentrate capital to facilitate the purchase of large assets such as shipping, land transport, agricultural machinery, etc.

For the year ended 31 March 1965 primary societies numbered 297, with a membership of 94,094, a total capital of \$1,580,706, and a turnover of \$3,865,120. Secondary organizations numbered 14, with 239 member societies, a total capital of \$593,776, and a turnover of \$1,261,834.

Native labour

At 31 March 1965 approximately 92,000 indigenous persons were engaged in wage employment, 63,000 of these being employed by private enterprise.

Minimum wages and conditions of employment for indigenous workers are prescribed under the *Native Employment Ordinance* 1958-1963. An employer is required to pay a minimum cash wage to every worker employed by him and provide the worker, and his family in appropriate

cases, with food, clothing, cooking and eating utensils, towels, soap and other articles, medical attention, and, where necessary, accommodation. The major portion of the workers employed under the conditions prescribed under the Ordinance are unskilled rural workers.

Industrial agreements negotiated between representatives of workers and employers in recent years have covered an increasing number of workers in urban areas. These agreements, covering the majority of workers in the towns of Port Moresby, Rabaul, Lae, Madang, Wewak, and Goroka, provide for the payment of a total cash wage, as distinct from the payment of cash-and-kind to the workers covered by them. The agreements are registered as awards under the Territory's Industrial Relations Ordinance.

There has been a continued expansion of the trade union movement since industrial legislation for the Territory was introduced in March 1963. In March 1965 twelve associations with a membership of over 12,000 had been registered as industrial organizations of workers under the Industrial Organizations Ordinance.

Provision is made in other legislation for the establishment and maintenance of modern standards of industrial safety and for the payment of compensation for injury or disease arising out of, or in the course of, employment.

A local apprenticeship scheme was inaugurated in 1955. An Apprenticeship Board, comprising representatives of private enterprise and government, advises the Administrator on apprenticeship matters. At 30 June 1965 a total of 206 apprentices had already received trade certificates, and 577 were being trained in 1964-65.

A Department of Labour handles matters relating to industrial organizations, industrial relations, industrial safety, and workers' compensation, carries out labour inspections, and provides industrial services and training in industrial fields.

Secondary industries

Secondary industries which have been established in the Territory are most frequently of the type associated with the elementary processing for export of local products such as copra, rubber, cocoa, coffee, passion-fruit, and timber on or near the plantations. There has been a gradual growth in the manufacture of more highly processed products, and industries already established include a paint factory, cigarette factory, twist tobacco factories, a copra crushing mill, a plywood factory, bakeries, biscuit factories, soft drink factories, and breweries. Large service industries already well established include air, sea, and land transport services and the building industry, which is serviced by sawmilling, joinery, furniture, and metal industries, concrete products manufactures, brickworks, etc. A wide variety of maintenance facilities is also available to service the various Territory industries, including engineering workshops, slipways, etc.

Finance

Revenue and expenditure

Information on the financial operations of each Territory will be found on pages 1117-18 and 1123-4.

Taxation

The main forms of taxation are income tax, personal tax and import duties.

Income Tax was imposed on 1 August 1959 to operate from 1 July 1959. The scale of taxation is about 50 per cent of the tax payable on the same taxable income in Australia. Deductions for dependants the taxpayer is maintaining and maximum deductions for medical, dental and educational expenses are considerably higher than those allowed in Australia. The tax on public companies is at a flat rate of 20c in the \$1, which is little more than half the predominant rate of company tax in Australia, while on private companies the rate is 12.5c in the \$1 for the first \$10,000 and 17.5c in the \$1 for the remainder, and generally comparable deductions are allowed. On 1 January 1958 a *Personal Tax* was introduced for all males (including non-indigenous) in Papua and New Guinea of 18 years of age and over. The maximum tax is \$4 per annum; the tax assessed is subject to the taxpayers' ability to pay, and consequently large areas have been exempted. Native Local Government Councils (which are formed voluntarily by the indigenes) are, however, empowered to levy taxes on villagers for the purpose of providing for local services carried out by the Councils. These taxes are set off against the indigene's Personal Taxation.

The present *Customs Tariff* provides high revenue rates on imports of ale, spirits, tobacco and cigarettes, timepieces, cigarette papers, fancy goods, and jewellery, but allows entry of most necessities affecting living and building costs duty free or at a low rate of duty. Under the Customs Tariff, plant, machinery and chemicals to be used mainly for industrial and developmental purposes are generally duty-free. A by-law covers goods imported by passengers. No preferential rates are specified in the schedule. Export duties imposed on copra, cocoa, rubber, mother-of-pearl, trochus and burgos shell, and gold were repealed in July 1959.

Provision is made in the *Australian Customs Tariff (Papua and New Guinea Preference) 1936* for the free entry into Australia of certain goods produced in and imported direct from the Territory (see the chapter Oversea Transactions), and a proclamation of 25 September 1935 exempted from primage duty goods produced or manufactured in the Territory.

To encourage the development of secondary industry, complete exemption from Territory income tax for a period of five years may be granted to companies engaging in approved new pioneer industries. Exemptions from Australian income tax may also be granted on dividends paid out of the income of such companies to Australian residents.

PAPUA

General description

Area, etc.

Papua lies wholly within the tropics. The northernmost point touches 5° S. Latitude; its southernmost portion, comprising Tagula and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Strait. The length of Papua from east to west is upwards of 930 miles; towards either end the breadth from north to south is about 320 miles, but about the centre it is considerably narrower. The Territory comprises also the islands of the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups. The length of coast-line is estimated at 3,664 miles—1,728 on the mainland and 1,936 on the islands. The total area is 86,100 square miles, of which 83,325 are on the mainland and 2,775 on the islands. A description of the physical characteristics of the Territory appears in previous issues of the Year Book (see No. 18, p. 633).

Administration

Particulars of the early administration of Papua are given in Year Book No. 19, page 576. The Territory was placed under the authority of the Commonwealth on 1 September 1906 by proclamation issued in pursuance of Letters Patent of 18 March 1902 and was accepted by the Commonwealth by the *Papua Act* 1905, which came into force by virtue of the aforesaid proclamation. The transfer was made under the authority of Section 122 of the Constitution. The Territory is under the control of the Commonwealth, but not included within it, and is divided into six administrative districts, Southern Highlands, Western, Gulf, Central, Milne Bay, and Northern.

Population

Non-indigenous population

At the Census of 30 June 1961 the non-indigenous population of Papua was 5,490 males, 4,304 females, 9,794 persons. The total non-indigenous population at the Censuses of 1921, 1933, 1947, and 1954 was, respectively, 2,078, 2,173, 3,239, and 6,313 persons. At 30 June 1965 the total non-indigenous population was 14,040. The European population of Papua increased slowly, and with some reversals in trend, from less than 700 in 1906, the year in which the Territory came under Commonwealth control, to 1,343 at the Census of 1921. At the 1961 Census it amounted to 8,260 persons.

Indigenous population

Within the major division Melanesian, into which most indigenous inhabitants of the Territory are classified, a distinction may be made between a Melanesian type and a Papuan type, the former representative of the eastern mainland and the island archipelagos to the east and south-east, and the latter representative of the western third and the interior of the Territory. Some negro traits have been noted in a few of the inland mountain groups. The enumerated and estimated population of the Territory of Papua at 30 June 1965 totalled 559,397 persons. This comprised 545,597 enumerated persons and 13,800 estimated. The total number was distributed through districts as follows: Southern Highlands, 181,066; Western, 59,161; Gulf (including the former Delta district), 61,203; Central, 109,061; Milne Bay, 95,841; and Northern, 53,065.

Land tenure

The basic principles applying to land tenure in Papua are the same as those applying to the whole of the Territory of Papua and New Guinea described on pages 1100-1. At 30 June 1965, of the total area of Papua, 55,104,000 acres, only 1,895,856 acres had been alienated. The distribution of alienated land at 30 June 1965 according to tenure was as follows: held by private non-indigenous inhabitants, freehold, 24,280 acres, leasehold, 371,864 acres; native reserves, 67,257 acres; other Administration land, including land reserved for public purposes, 1,432,455 acres.

Although a small amount of freehold land exists in Papua, present legislation does not provide for the granting of estates in freehold. Leases of various kinds may be granted by the Administration. The principal types of leases available are agricultural leases, pastoral leases, leases of town allotments, business leases and residence leases of other than town allotments, and various forms of special leases and licences over land. Leasehold terms are liberal, and, in general, leases may be granted for periods of up to ninety-nine years. Rent is based on the unimproved value of the land.

Leases of Crown land are granted by the Administrator following a land use examination, advertisement of leases available, and consideration of applications by the Land Board. Dealings in privately-owned land are a matter for private treaty. Native-owned land, however, cannot be acquired or leased from the native owners by private individuals. The Administration alone may purchase native-owned land, and then only if the owners are willing to sell and the Administration is satisfied that the owners do not require, and are not likely to require, the land.

The registration of titles, interests and dealings in alienated land is provided for under the *Real Property Ordinance* 1913-1962 modelled on the Torrens system of land registration.

Production

Primary production

The products of the Territory are obtained principally from its agricultural, forestry, mining, and fishing industries. Native subsistence agriculture, fishing and hunting produce most of the food requirements of the indigenous population. The main native agricultural products are taro, yams, sweet potatoes, bananas, and papaws. Peanuts are becoming of increasing importance in native diet. Non-indigenous enterprise produces most of the commodities exported. Indigenes, however, produce copra for export, while native enterprise in other fields of agricultural production for export purposes, e.g. cocoa and coffee, is undertaken. The principal agricultural products of Papua for the export trade are copra and rubber. Native production of copra is increasing. In 1964-65 nearly 17.5 million super. feet of logs were produced. The main products of fisheries exported from Papua are trochus shell and mother-of-pearl. Gold, manganese, zinc-lead, and copper ores have been mined in commercial quantities in the past, but current production is limited.

For information on the agricultural and animal industries, which for the sake of convenience covers the Territories of Papua and New Guinea singly and combined, see pages 1101-10. The following paragraphs relate to forestry, mining, fisheries, and water-power resources in Papua.

Forestry

A general description of the forest policy, which applies in Papua as well as in the Trust Territory of New Guinea, is given under the heading, Timber, on page 1120.

Mixed species tropical rain forest covers most of Papua, although north-east of Port Moresby there is an area of monsoonal savannah country. Because of the mixed nature of the timbers in any one area, their utilization on an economical basis is somewhat difficult. Mangroves occur in large areas fringing the Gulf of Papua. Forestry field work is carried out in Papua with a view to assessing the forest resources available and also to survey areas subsequently made available for cutting.

At 30 June 1965 fifteen permits and twenty-six licences were current. The total areas of forest involved were 228,919 acres and 64,811 acres respectively. The total number of mills was twenty, and the total sawn-timber produced for the year was 6.8 million super. feet, most of which was used locally.

Mining

Although a large number of minerals have been found in Papua, including platinum, gold, silver, copper, tin, lead, zinc, cinnabar, iron, osmiridium, manganese, sulphur, chromite, gypsum, and lignite, current mineral production is not of economic importance. Before the 1939-45 War gold was an important item in the Territory's production, but it has since dwindled to insignificance. Large quantities of copper ore were mined and exported up to 1940. Good samples of galena (sulphide of lead) have been obtained, but other minerals are not found in commercial quantities.

Since the search for oil began in Papua in 1911 approximately \$73 million has been spent. The existence of petroleum has been proved at scattered intervals over a large area, but commercial quantities have not been discovered. At 30 June 1965 fourteen prospecting permits and licences were effective under the provisions of the *Petroleum (Prospecting and Mining) Ordinance* 1951-1962. Oil prospecting is confined mainly to the Gulf and Western Districts, including off-shore areas in the Gulf of Papua.

Fisheries

Surveys have been carried out of the fisheries resources of Papua. These have been demonstrated to be considerable, and efforts are being made to increase the present small degree of utilization. Assistance is also being given by the Administration in improving the indigenous methods of fishing, and the use of improved gear is being encouraged by extension workers. Shell fishing, particularly trochus, provides the main cash return, exports being valued at \$26,000 in 1964-65.

Water power

Most of the rivers in Papua carry a large volume of water from a great height over a relatively short distance, thereby offering opportunities for the installation of hydro-electric power plants. It is estimated that at least ten million horse-power could be developed.

Shipping

In 1964-65, 247 British vessels and 42 of other nationalities called at Territory ports and discharged 179,071 tons of cargo and loaded 31,455 tons.

Regular passenger and freight services operate between Australia, New Guinea and Papua. Vessels trading between Australia and the East also call at Territory ports, and there are monthly services from continental and United Kingdom ports. Coastal and inter-island shipping services are maintained by vessels operating from the two principal ports of Port Moresby and Samarai.

Other forms of transport and communication

Scheduled flights provide a network of air transport throughout Papua, and regular air services link the Territory with Australia and neighbouring Territories. There were 102 aerodromes and seaplane alighting areas in Papua at 30 June 1965, and of these eleven were the responsibility of the Department of Civil Aviation, forty-seven were operated and maintained by the Administration, and forty-four were owned and maintained by Missions, plantation and mining interests. Much of the internal traffic and freight is carried on a charter basis.

At 30 June 1965 there were 2,257 miles of road in Papua, of which 1,229 miles were suitable for medium and heavy traffic, the greater proportion being located in the Central, Milne Bay and Northern Districts.

Telephone services operate in the main centres. The radio station at Port Moresby for both transmission and reception is shared by the Overseas Telecommunications Commission and the Administration. The former provides all external telephone and radio-telephone circuits, while the latter operates radio telephone and radio telegraph services from Port Moresby, Samarai, Kerema, and Daru to 215 outstations. Medium and short-wave programmes are broadcast from the Australian Broadcasting Commission stations 9PA, VLK3, VLT4, and VLT9 located at Port Moresby.

Education and health

Education

Education in the Territory is provided by the Administration and various Mission organizations. Schools for indigenes have been also established by Local Government Councils. The *Education Ordinance* 1952-1957 enables the Administration to establish an education advisory board, district education committees and European and native schools, and to grant financial aid for educational purposes. European teachers are recruited from Australia and overseas, and indigenous teachers are trained in the Territory by the Administration and Missions. During the year ended 30 June 1965, 173 schools were maintained by the Administration for 28,139 children, of whom 1,309 were Europeans, 152 Asian or of mixed race, and 26,678 indigenes. A further 2,728 children, all indigenes, were receiving tuition by correspondence. The total number of pupils in the various grades of mission schools was 43,367, of whom there were 285 Europeans, and thirty-four of Asian or mixed race. To assist the educational work of the Missions the Administration provides expert advice, educational equipment and text-books. In addition, the sum of \$341,840 was distributed among the Missions as grants-in-aid during the year ended 30 June 1965.

Health

The Department of Public Health of the Territory of Papua and New Guinea has the general oversight of all medical and dental services. The Department has the following seven functional divisions: medical services; preventive medicine; medical training; infant, child and maternal health; medical research; administration; and mental health. The services for the Territory of Papua are under the administrative control of a regional medical officer, with headquarters staff at Port Moresby.

The cases treated in hospital are mainly malaria, tropical ulcers, pneumonia, tubercular infections and tuberculosis, bronchitis, and confinements. At 30 June 1965 the Administration had established thirty-three general hospitals, two hospitals (together with special wards in four general hospitals) for the treatment of Hansen's disease, one Hansenide-tuberculosis hospital, two tuberculosis hospitals, and one mental hospital; the Missions had established fifty general hospitals, with special wards at Eroro, Sideia and Orokolo for the treatment of Hansen's disease, and two Hansenide hospitals. There were 493 village aid posts or medical centres (135 Mission) and 147 maternal and child welfare clinics (fifty-six Mission). School medical examinations, immunization, ante-natal, and post-natal care and pre-school services are also provided. The Missions employ their own doctors and nurses in their medical establishments.

For some years suitably qualified indigenes attended the Central Medical School at Suva, Fiji, to be trained as Assistant Medical Officers. In 1959 the Administration began training to a similar standard at the Papuan Medical College which is associated with the Port Moresby General Hospital. The College, planned to accommodate 600 students eventually, is being built in stages. The course consists of a preliminary year and five years further study. Training for nurses and medical auxiliaries in many categories is also being provided.

Finance

The following table shows the principal items of revenue and expenditure for the Territory for each year from 1960-61 to 1964-65.

(e) Transport costs have been transferred to consuming departments. (f) Includes costs of general stores for all departments except Public Works. (g) Printing costs transferred to consuming departments. (h) Before 1964-65, Department of Native Affairs. (i) Additional expenditure on this item included under 'Expenditure chargeable to Loan Fund'.

TRUST TERRITORY OF NEW GUINEA

General description

Area, etc.

The land area of the Territory of New Guinea is 92,160 square miles, and the area, including the sea, within the lines drawn through its extreme outer points is more than one million square miles. As the coastlines have not been completely surveyed, the areas of the various islands are known only approximately. The approximate area of the New Guinea mainland is 69,095 square miles and that of adjacent islands, including the Solomon Islands and the Bismarck Archipelago, is 23,065 square miles. Information regarding physiography and climate will be found in Year Book No. 22, page 613, and in the *Official Handbook of the Territory of New Guinea*.

Administration

The terms of the League of Nations mandate (1920) of the former German possession of New Guinea are given in Year Book No. 33 (see page 264). Particulars of the administration of the Territory of New Guinea prior to the setting-up of the Papua and New Guinea Administration are given in Year Book No. 36 and earlier issues, and of events following the outbreak of the Pacific War in Year Book No. 37 and subsequent issues up to No. 48.

Following the 1939-45 War the Commonwealth Government undertook to place the Territory of New Guinea under the Trusteeship System established under the Charter of the United Nations. The Trusteeship Agreement for the Territory, under which the Government of Australia is the sole administering authority, was approved by the General Assembly of the United Nations Organization on 13 December 1946. The terms of the Agreement are shown in Year Book No. 39, pages 355-7.

For administrative purposes the Territory is divided into the following twelve districts: East New Britain and West New Britain, comprising New Britain and the adjacent islands; Morobe, Madang, Eastern Highlands, Chimbu, Western Highlands, East Sepik, and West Sepik on the mainland; New Ireland, comprising New Ireland, Lavongai and adjacent islands; Manus, comprising the Admiralty Group; and Bougainville in the Solomon Islands. Each district is administered by a District Commissioner.

Population

Non-indigenous population

At the Census of 30 June 1961 the non-indigenous population of the Territory was 9,158 males, 6,378 females, 15,536 persons. The total non-indigenous population at the Censuses of 1921, 1933, 1947, and 1954 was, respectively, 3,173, 5,216, 6,200, and 11,442 persons. At the 1961 Census the European population numbered 11,702 persons. At 30 June 1965 the total non-indigenous population was estimated to be 17,446.

Indigenous population

The indigenous people of the Territory may in general be grouped with the Melanesians who occupy the greater part of the Western Pacific. They may be divided into two main types—Melanesian and Papuan—the former, with a few exceptions, constituting the population of the Bismarck Archipelago, the Solomon Islands and the coastal districts of the New Guinea mainland, the latter inhabiting the interior of the mainland. Some tribes of Negritos exist in the mountains of New Guinea. There is a strain of Papuan, and, possibly, of Polynesian blood in the Admiralty Islanders, while the Western Islanders and the inhabitants of the small islands east and south-east of New Ireland are Micronesians. (See Year Book No. 16, page 670, and *Official Handbook of the Territory of New Guinea*, Part V.)

The enumerated and estimated indigenous population of the Territory as at 30 June 1965 numbered 1,558,520 persons, comprising enumerated, 1,547,210 (811,952 males and 735,258 females), and estimated, 11,310. The total population was distributed throughout the several districts as follows: Eastern Highlands, 372,713 persons; Western Highlands, 295,509; Sepik, 266,696; Madang, 153,169; Morobe, 215,979; New Britain, 125,949; New Ireland, 42,349; Bougainville, 66,942; Manus, 19,214.

Land tenure

The principles governing the acquisition and ownership of land and types of tenure available in New Guinea are in general similar to those which obtain in Papua, and grants of estates are restricted to leasehold tenure. In New Guinea, however, the amount of freehold land of earlier

origin held by private non-indigenous owners amounts to more than half a million acres. Freehold titles to this land, which includes a good deal of plantation land, may be transferred by purchase, subject only to the general provision that dealings in land require the approval of the Administrator.

The area of the Territory of New Guinea is estimated at 59,000,000 acres, of which at 30 June 1965 only 1,525,113 acres were alienated. The following was the distribution of alienated land according to tenure at 30 June 1965: held by private non-indigenous inhabitants—freehold, 536,711 acres, leasehold, 393,604 acres; native reserves, 27,150 acres; other Administration land, including land reserved for public purposes, 567,648, acres.

Under German law there was a system of registration of titles in a Ground Book, but registration did not confer an indefeasible title. The German system has been replaced by one modelled on the Torrens plan, embodied in the *Lands Registration Ordinance* 1924–1962. The land registers were lost during the 1939–1945 War, but provision for restoration of the lost titles is made in the *New Guinea Land Titles Restoration Ordinance* 1951–1965.

Production

The products of the Territory are obtained principally from its agricultural, mining, fishing, and forestry industries. A copra crushing mill near Rabaul, established in 1952, commenced crushing at about 18,000 tons of copra per annum, and its capacity is now about 60,000 tons of copra per annum. At Bulolo a company is producing high quality moisture-proof plywood in a factory whose capacity is 40 million square feet, on a $\frac{3}{16}$ -in. basis, per annum. Native subsistence agriculture, fishing and hunting produce most of the food requirements of the indigenous population. The main native agricultural products are taro, yams, sweet potatoes, coconuts, bananas, and papaws. Non-indigenous enterprise produces most of the commodities exported. Indigenes, however, produce copra for export, and in recent years have taken up the production of introduced crops such as peanuts, rice, cucurbits, and maize for their own consumption and cocoa, coffee and pyrethrum for export. The principal agricultural products of New Guinea for the export trade are copra and coconut oil, cocoa, and coffee, but exports of timber and timber products are at a high level (*see below*). The main products of fisheries exported from New Guinea are trochus and green snail shell, including that collected by indigenes. Gold is the principal mineral mined. Indigenes are taking an increasing interest in mining for alluvial gold on their own account, and production from this source is continually rising, in contrast to falling European production.

For information on the agricultural and animal industries, which for the sake of convenience covers the Territories of Papua and New Guinea singly and combined, *see* pages 1101–10. The following paragraphs relate to the timber, fishing and mining industries in the Territory of New Guinea alone.

Timber

Various species of timber are found in the Territory, and one accessible pure stand is the valuable pine forests of the Bulolo Valley. This timber is used mainly for the production of plywood and veneer by Commonwealth-New Guinea Timbers Ltd., which has an annual cut of about 10 million super. feet of logs. About 23.3 million square feet of plywood, on a $\frac{3}{16}$ -in. basis, were produced by the company in 1964–65 from these logs and from veneer produced by South Pacific Timbers Limited at Lae. In 1964–65, 21.7 million square feet of plywood, valued at \$2,021,000, and 4.4 million square feet of veneer, on a $\frac{1}{16}$ -in. basis, valued at \$73,112, were exported. During the year 14.5 million super. feet of logs, valued at \$592,558, and 5.2 million super. feet of sawn timber, valued at \$823,604, were also exported from the Territory. The Territory forests also provided fitches, battery veneer and egg-case parts for export. The Administration operates a training centre for forestry workers, nurseries and a herbarium, and is establishing a research institute in Port Moresby.

The *Forestry Ordinance* 1936–1951 provides for the issue of permits and licences to cut timber. Present policy calls for the orderly development of the timber industry on sound forestry principles to ensure no waste of the resources and no over-exploitation; the grant of emergency timber permits for limited quantities to assist in providing timber for Territory requirements; the disposal by public tender of timber areas designated by forest officials of the Territory; and the development of the pine stand in the Bulolo Valley by Commonwealth-New Guinea Timbers Ltd. In addition, three large timber stands containing over 5,000 million super. feet of logs are being opened up and will be the subject of direct negotiation with major sawmill operators. Timber growing on native lands cannot be acquired by private purchasers direct from the native people, but must be obtained through the Administration. Royalty is payable on all forest produce taken under permit or licence. Reforestation of areas dedicated for forestry in perpetuity is carried out by the Administration. At 30 June 1965 forty-six permits and thirteen licences were current, the total area of forest involved being 506,194 acres and 23,949 acres respectively.

Fisheries

The wealth of the waters of the Territory has been little exploited, but as the result of surveys and the development of the Administration fisheries service, action is being taken to promote increased use of the resources. Fish are caught at many places along the coast to supply the small local demand of the natives and of Europeans. Trochus shell to the value of \$40,512 and green snail shell to the value of \$4,262 were exported during 1964-65.

Mining

The production of gold and associated silver is the most important mining activity in New Guinea, although other minerals, such as osmiridium, platinum, copper, iron ore, sulphur, and brown coal, have been discovered. The production of gold in New Guinea since the 1939-45 War has been on a much smaller scale than before the war, averaging only about \$1,278,000 in value per annum for the last five years. The 1964-65 production was valued at \$1,053,244. The discovery of extensive low-grade copper deposits on Bougainville has given impetus to the industry in the Territory.

The granting of rights, leases, and claims for mining purposes is provided for in the *Mining Ordinance* 1928-1962 and regulations thereunder. The *Petroleum (Prospecting and Mining) Ordinance* 1951-1963 has facilitated the carrying out of geological surveys and prospecting activities generally. There are two prospecting permits for oil current at the present time.

Shipping

Regular passenger and freight services operate between Australia, Papua and the Territory of New Guinea. Vessels trading between the East and Australia and the Pacific Islands call at Territory ports, and there are monthly services from continental and United Kingdom ports. Coastal and inter-island shipping services are maintained by vessels operating from the principal ports of the Territory. Shipping within the Territory is regulated by the *Shipping Ordinance 1951-1960* and the Coastal Shipping, Ports and Harbours Regulations. Main ports of call for oversea vessels are Lae, Madang, Wewak (mainland), Rabaul (New Britain), and Kavieng (New Ireland). In 1964-65, 303 British vessels and 109 vessels of other nationalities called at Territory ports and discharged 300,874 tons of cargo and loaded 180,961 tons. Corresponding figures for 1963-64 were 289,106, 226,594, and 171,729 respectively. There are no inland waterways, and the natural river system is not generally suitable for vessels except those of small tonnage.

Other forms of transport and communication

There are no railways in New Guinea, but a road construction programme is being undertaken progressively to assist the economic development of the Territory. Road transport services operate in the main towns and on the trunk roads linking Rabaul and Kokopo; Lae, Bulolo and Wau; Kavieng and Namatanai; and on the network in the Eastern and Western Highland Districts centred on Goroka and Mount Hagen. The total mileage of roads in the Territory of New Guinea at 30 June 1965 was 5,747, of which 3,639 were suitable for heavy and medium traffic.

Scheduled flights provide a network of air transport throughout New Guinea, and regular air services link the Territory with Australia and neighbouring territories. There were 214 aerodromes and seaplane alighting areas in New Guinea at 30 June 1965, and of these 11 were controlled by the Department of Civil Aviation, 72 by the Administration, and 131 by private interests.

Telephone services operate in the main centres. Radio telephone trunk circuits link Port Moresby with Lae, Rabaul and Madang, and service is available from subscribers' telephones in Port Moresby, Lae and Rabaul, and from the post office at Madang. Nine zone or group centres

for radio telegraph communication with out-stations have been established at Lae, Rabaul, Kavieng, Lorengau, Madang, Mount Hagen, Wewak, Sohano, and Goroka. From these centres radio telegraph services are also available to 577 out-stations. Medium wave broadcasting programmes are transmitted by the Australian Broadcasting Commission station 9RB Rabaul.

Education and health

Education

Education in the Territory is provided by the Administration and various Mission organizations. Schools for indigenes have also been established by Local Government Councils. The *Education Ordinance* 1952-1957 enables the Administrator to establish an education advisory board, district education committees and schools for all sections of the community, and to grant financial aid for educational purposes. Expatriate teachers are recruited from Australia and overseas, and indigenous teachers are trained in the Territory by the Administration and the Missions. During the year ended 30 June 1965, 326 schools were maintained by the Administration for 43,302 children, of whom 1,503 were Europeans, 386 Asians, 284 mixed race, and 41,129 indigenes. In addition, 2,906 indigenes were studying by correspondence. The total number of pupils in the various grades of mission schools was 131,866, of whom 167 were Europeans, 135 Asians and 230 of mixed race. To assist the educational work of the Missions the Administration provides expert advice, educational equipment and text-books. In addition, the sum of \$932,874 was distributed among the Missions as grants-in-aid during the year ended 30 June 1965.

Health

The cases treated in hospital are mainly malaria, pneumonia, tropical ulcers, bronchitis, tubercular infections and tuberculosis, skin infections, and confinements. At 30 June 1965 there were 69 Administration hospitals, including three Hansenide colonies, two tuberculosis hospitals, and one Hansenide and tuberculosis hospital. The Missions have established an additional 73 hospitals, including two Hansenide colonies and one Hansenide and tuberculosis hospital. There are 1,212 village aid posts or medical centres (131 conducted by Missions) and 619 maternity and child welfare centres (115 provided by Missions). The Missions staff their own medical establishments but receive financial assistance from the Administration, which also provides much of their medical stores and supplies.

Finance

The principal items of revenue and expenditure for the Territory of New Guinea during the years 1960-61 to 1964-65 are shown in the following table.

TRUST TERRITORY OF NEW GUINEA: REVENUE AND EXPENDITURE

TRUST TERRITORY OF NAURU

General description

Nauru is an oval-shaped atoll about twelve miles in circumference, having an area of about 8½ square miles, of which approximately two-thirds is phosphate-bearing. It is situated in latitude 0° 32' S. and longitude 166° 55' E. Portion of the island between the sandy beach and the coral cliffs is comparatively fertile, and it is there that most of the Nauruans reside. With the exception of a small fringe around an inland lagoon, the plateau which contains the phosphate

deposits possesses few food plants and is uninhabited, but portion of the area has been planted with fruit trees. The system of land tenure is governed by an old custom, and, with the exception of small allotments held by the Government, the British phosphate Commissioners and the Missions, the whole of the island is owned by individual Nauruans. The temperature range is from 76° F. at night to 94° F. during the day, and the average humidity is about 80 per cent. Normally the rainfall is comparatively low for islands of the Pacific, the annual average for the twenty years from 1920 to 1940 being 80.5 inches. However, falls as high as 181.76 inches during 1940 and as low as 12.29 inches during 1950 have been recorded.

Administration

The island, discovered by Captain Fearn in 1798, was annexed by Germany in 1888, and prior to 1914 was part of the protectorate of German New Guinea. Following the 1914-18 War a League of Nations mandate for its administration was conferred upon His Britannic Majesty, and on 2 July 1919 the British, Australian and New Zealand Governments agreed that the administration should be vested in an Administrator. Following the 1939-45 War, the General Assembly of the United Nations approved a Trusteeship Agreement for the Territory of Nauru submitted by the Governments of Australia, New Zealand, and the United Kingdom in substitution for the terms of the mandate under which the Territory had been administered. This Agreement designates the Governments of Australia, New Zealand, and the United Kingdom as the Joint Administering Authority, with the Government of Australia continuing, on behalf of the Administering Authority, to exercise full powers of legislation, administration and jurisdiction in and over the Territory. The terms of the Agreement were given in Year Book No. 39, pages 370-1.

Until 31 January 1966 power to make laws for the Island was vested in the Administrator. On that date a Legislative Council was established, consisting of the Administrator, nine elected Nauruan members and five official members. The Legislative Council is empowered to make Ordinances for the peace, order and good government of the Territory, except in respect of the phosphate industry as such, defence and external affairs. Legislative powers in respect of these subjects are vested in the Governor-General. At the same time an Executive Council was established with power to advise the Administrator. The Executive Council consists of the Administrator, two elected members of the Legislative Council and two official members of that Council. The Nauru Local Government Council, established in 1951 to advise the Administrator on matters affecting the Nauruan community, to carry out works and supply certain services for that community and to direct the Nauru Co-operative Society, also continues to function for the time being. All administration expenses are met from local revenue and phosphate royalties.

Population

The Nauruan component of the population numbered about 1,100 in 1921, but had grown to more than 1,800 before the Japanese invasion in August 1942. In 1946 it numbered less than 1,400, but by 30 June 1965 had risen to 2,734. Chinese have, for many years, formed a considerable part of the population of Nauru, but their numbers are not as great as formerly; at 30 June 1965 they amounted to 900. The number of other Pacific Islanders in the early 1920's was almost 300, but they subsequently decreased, then rose again, and at 30 June 1965 there were 1,481. The European population after 1921 fluctuated, with a generally upward trend, between one and two hundred, and in recent years has gradually increased, reaching 446 at 30 June 1965. The total population of Nauru at the Census of 30 June 1961 was 3,019 males, 1,594 females, 4,613 persons. At 30 June 1965 the total population of Nauru was 5,561, comprising 2,734 Nauruans, 1,481 other Pacific Islanders, 900 Chinese, and 446 Europeans.

Future of Nauruans

Resettlement. During recent years investigations have been made to find a suitable home for the Nauruan people after the exhaustion of the phosphate deposits towards the end of this century. After inspection of several islands, Curtis Island off the Queensland coast was agreed upon as a suitable location for resettlement purposes. Discussions took place in 1963 between the Director of Nauruan Resettlement and the Nauru Local Government Council and in 1964 between representatives of the Australian Government and a Nauruan delegation concerning proposals for resettlement of the Nauruan people. At the latter discussions the Nauruan delegation made it clear that, although Curtis Island was regarded as a place which would be suitable for Nauruan resettlement, the powers reserved to Australia in that event should be only those which relate to defence, quarantine and possibly external affairs and civil aviation. The Australian representatives informed the Nauruan delegation that the Commonwealth Government could not accept the proposal that the Nauruan people be established on Curtis Island on such terms, but gave further expression to the sympathy of the Australian Government with the desire of the Nauruan people to retain their identity as a distinct community and said that the Government was prepared to see what else could be done to achieve this end.

The Nauruan delegation informed the Australian representatives that the Nauru Local Government Council considered that there were no prospects of an agreement on the proposal for resettlement at Curtis Island because of the differences in the Australian and Nauruan views on the political aspects of the proposal, and they considered, therefore, that there should be no further discussion of resettlement on Curtis Island. The Council nevertheless expressed its willingness, if the Australian Government thought further talks would achieve a useful end, to take part in them. The delegates from the Nauru Local Government Council then informed the Australian Government representatives that the people of Nauru would elect to remain on Nauru.

Arrangements for two Nauruan observers to attend a meeting of the United Nations Trusteeship Council, projected for late in 1964 or early in 1965, at which it was expected that the future of Nauru would be discussed, lapsed when the meeting did not eventuate. The Nauruan views on their future were fully presented by the Australian Special Representative to the Trusteeship Council in 1965.

At a later series of discussions held in May and June 1965 the Australian Government agreed with representatives of the Nauru Local Government Council to pursue any proposals that might give promise of enabling the Nauruan people to resettle on a basis acceptable to them and one which would preserve their national identity.

Reclamation of worked-out lands. At the conference in July and August 1964 the Nauruan delegation raised the question of the possibility of reclaiming the worked-out phosphate land and suggested that if this land were covered with soil, it would be possible to use it for agriculture. The Australian representatives drew attention to the report made by the Commonwealth Scientific and Industrial Research Organization some years ago which said that there seemed to be little hope of widespread utilization in the future of the worked-out lands. The question was further discussed during the second series of talks in May and June 1965 between Australian Government representatives and a delegation from the Nauru Local Government Council, particularly in connection with the decision of the Nauruans to pursue their future on the Island of Nauru. It was agreed to establish at the earliest practicable date an independent technical committee of experts to examine what would be involved in, and the practicability of the rehabilitation of, the worked-out phosphate lands.

Phosphate deposits

From 1906 to 1919 the deposits were worked by the Pacific Phosphate Company, which also worked the deposits on Ocean Island (about 165 miles east of Nauru and part of the Gilbert and Ellice Islands Colony administered by the Colonial Office). The quantity of phosphate remaining on Nauru has been estimated at about 64 million wet tons.

The interests of the Pacific Phosphate Company in the two islands (though not in other islands in the Pacific in which it had workings) were bought by the British, Australian and New Zealand Governments on 25 June 1920 for £Stg3,500,000, the purchase money being contributed in the proportions of 42, 42 and 16 per cent respectively. The Agreement of 2 July 1919 provides for the working of the deposits by three British Phosphate Commissioners, one appointed by each Government, and the three countries are entitled to receive the output in the same proportions of 42, 42 and 16 per cent. In practice Britain has never taken its full entitlement of phosphate from Nauru. Consequently the bulk of the exports are to Australia and New Zealand.

Exports of phosphate from Nauru in 1964-65 amounted to 1,692,950 tons, valued at \$9,565,168, 58 per cent to Australia, 30 per cent to New Zealand and 12 per cent to the United Kingdom. During the five years ended 30 June 1965, 7,837,013 tons of phosphate were exported.

Apart from a limited number of Europeans the employees of the Commissioners are Chinese and Pacific Islanders engaged under one year contracts. Increasing numbers of Nauruans are being employed, mainly in trade capacities.

Royalties on phosphate

Dating from the establishment of the British Phosphate Commissioners in 1919 royalties have been payable for each ton of phosphate exported in amounts agreed upon between the Commissioners and the Nauru Local Government Council from time to time. Since 1 July 1962 the rate of royalties has totalled 37c per ton made up as follows: 19c to the respective landowners comprising an immediate cash payment of 12c, and 7c invested on their behalf for 15 years; 8c to the Nauru Royalty Trust Fund paid in cash to the Nauru Local Government Council and used for the Nauruan community; and 10c paid to a long term investment fund for the benefit of the Nauruans on the exhaustion of the phosphate deposits.

In addition, payments are made, currently at \$240 per acre, for land leased for phosphate mining or for sites for permanent installations on phosphate land. At discussions held with the Nauruans in May and June 1965 it was agreed to increase the royalty rates to \$1.35 a ton for 1964-65 and to \$1.75 a ton for 1965-66. Further discussions are in progress with the Nauruans in 1966 to consider the future operations of the phosphate industry at Nauru.

Trade, transport and communication

The Customs Tariff of Nauru provides for the free admission of all goods other than cigars, cigarettes, tobacco, spirits, wines, beer, cider, and perry. Articles imported by the Administration for its own use and spirits for scientific purposes are exempt. The tariff rates apply to all countries alike. In 1964-65 imports were valued at \$4,595,798 and exports, 1,692,950 tons of phosphate, at \$9,565,168. Of the total imports in 1964-65, Australia supplied 81 per cent valued at \$3,721,006; the balance came mainly from Hong Kong, New Zealand and the United Kingdom. In 1964-65, 982,400 tons of phosphate were exported to Australia, 505,550 tons to New Zealand and 205,050 tons to the United Kingdom.

There is no regular air service to Nauru, but when the need arises charter flights are made to the island. There is relatively frequent communication by sea with the island. Most of the vessels are run or chartered by the British Phosphate Commissioners for the carriage of phosphate. Many of them also provide for the carriage of passengers and other cargo as required. The total calls by vessels were 169 in 1964-65.

Education

The Administration assumed full responsibility for education on 1 October 1923. Prior to that date the education of Nauruan children was undertaken by the Missions, which were subsidized by the Administration. There are four infant schools, three primary schools, one Nauruan secondary school, and two mission schools. At 30 June 1965, 807 Nauruans, 265 other Pacific Islanders, seventy-six Chinese, and seventy-one Europeans were enrolled in the infant and primary schools, and 269 at the two secondary schools.

The curriculum is based generally on that used in Victorian schools, and the teaching is generally in English. Education is compulsory for Nauruan children from six to seventeen years of age. At 30 June 1965 eighty-one Nauruans were studying in Australia. Of these, fifty-six held Administration scholarships, twelve were Administration cadets, two were Administration sponsored apprentices, and eleven were privately sponsored. In addition to these, there was one student at the Central Medical School, Suva, and two apprentices and one tradesman in Australia.

Health

Cases of the usual diseases known in the Pacific occur, but the health of all sections of the population is generally satisfactory. An area has been set apart for the segregation of sufferers from Hansen's disease, and the latest methods of treatment are applied. The total number of persons receiving treatment at 30 June 1965 was forty-three, of whom, however, only three were in segregation at the Hansenide colony. Three hospitals are maintained on the island, one by the Administration for Nauruans and two by the British Phosphate Commissioners. The Administration also conducts eleven maternity and child health centres. A regular anti-mosquito campaign is conducted. Steps have been taken by the authorities to improve the water supply and to provide efficient sanitation generally. Every Nauruan is required to undergo medical examination at intervals of three months.

Judiciary

By virtue of the *Nauru Act* 1965 there is a Central Court which is a superior court of record consisting of a judge appointed by the Governor-General and such magistrates as are appointed by the Administrator. A Court of Appeal, comprising a judge or judges appointed by the Governor-General, has also been constituted under the Act. The District Court established by the *Judiciary Ordinance* 1957-1965 of the Territory is continued in existence by the same Act.

Revenue and expenditure

The revenue of the Administration for the year 1964-65 amounted to \$1,300,888 and expenditure to \$1,540,190. Of the revenue, payments by the British Phosphate Commissioners amounted to \$1,215,188, post office and radio receipts, \$51,544, and import duties, \$8,282. Expenditure comprised salaries, \$640,516, general expenses, \$327,880, miscellaneous services, \$370,470, and capital works and services, \$201,324.

HEARD ISLAND AND McDONALD ISLANDS

These islands, about 2,500 miles south-west of Fremantle, were transferred from the United Kingdom to Australia as from 26 December 1947. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard Island and McDonald Islands by the *Heard and McDonald Islands Act* 1953.

In December 1947 an Australian scientific station was established on Heard Island, and meteorological investigations were conducted until the station was closed in March 1955 following the establishment of Mawson station on the Antarctic mainland. Australian expeditions have since visited the island from time to time. Heard Island is about twenty-seven miles long and thirteen miles wide. The McDonald Islands are twenty-six miles to the west of Heard Island. They are small, rocky and precipitous.

AUSTRALIAN ANTARCTIC TERRITORY

An Imperial Order in Council of 7 February 1933 placed under Australian authority all the islands and territories other than Adelie Land situated south of 60° S. latitude and lying between 160° E. longitude and 45° E. longitude. The Order came into force with a Proclamation issued by the Governor-General on 24 August 1936 after the passage of the *Australian Antarctic Territory Acceptance Act* 1933. The boundaries of Adelie Land were definitively fixed by a French Decree of 1 April 1938 as the islands and territories south of 60° S. latitude lying between 136° E. longitude and 142° E. longitude. The *Australian Antarctic Territory Act* 1954 declared that the laws in force in the Australian Capital Territory are, so far as they are applicable and are not inconsistent with any ordinance made under the Act, in force in the Australian Antarctic Territory.

On 13 February 1954 the Australian National Antarctic Research Expeditions (A.N.A.R.E.) established a base on MacRobertson Land at latitude 67° 36' S. and longitude 62° 53' E. The base was named Mawson in honour of the late Sir Douglas Mawson and was the first permanent Australian station to be set up on the Antarctic continent. Meteorological and other scientific research is conducted at Mawson, which is the centre for coastal and inland survey expeditions.

A second Australian scientific research station was established on the coast of Princess Elizabeth Land on 13 January 1957 at latitude 68° 34' 36" S. and longitude 77° 58' 36" E. The station was named Davis in honour of Captain John King Davis of Melbourne, who commanded a number of famous Antarctic ships. The station was temporarily closed down in January 1965. In February 1959 the Australian Government accepted from the United States Government custody of Wilkes Station, which was established by the United States on 16 January 1957 on Vincennes Bay, at latitude 66° 15' S. and longitude 110° 33' E. The station was named in honour of Lieut. Charles Wilkes, who commanded the 1838-40 United States expedition to the area. A new station of advanced design is being constructed close to Wilkes which it will eventually replace. A.N.A.R.E. have also operated a station, since the 1947-48 Antarctic season, at Macquarie Island, approximately 850 miles south-east of Hobart. Macquarie Island is a dependency of the State of Tasmania.

On 1 December 1959 Australia signed the Antarctic Treaty with Argentina, Belgium, Chile, France, Japan, New Zealand, Norway, South Africa, the U.S.S.R., the United Kingdom, and the United States of America. Poland, Czechoslovakia and Denmark have subsequently acceded to the Treaty. The Treaty reserves the Antarctic area south of 60° S. latitude for peaceful purposes, provides for international co-operation in scientific investigation and research, and preserves, for the duration of the Treaty, the *status quo* with regard to territorial sovereignty, rights and claims. The Treaty entered into force on 23 June 1961. Since then the Antarctic Treaty powers have held three consultative meetings under the Treaty, the first at Canberra in July 1961, the second at Buenos Aires in July 1962 and the third at Brussels in June 1964. The fourth consultative meeting is scheduled to be held in Santiago in November 1966.

COCOS (KEELING) ISLANDS

General description

The Cocos (Keeling) Islands, two separate atolls comprising some twenty-seven small coral islands with a total area of about 5½ square miles, are situated in the Indian Ocean in latitude 12° 5' S. and longitude 96° 53' E. They lie some 1,720 miles north-west of Perth and 2,290 miles almost due west of Darwin, while Johannesburg is some 3,800 miles further distant to the south-west, and Colombo is 1,400 miles to the north-west of the group.

The main islands of the Territory are West Island, the largest, about six miles from north to south, on which are the aerodrome and most of the European community; Home Island, the head-quarters of the Clunies-Ross Estate; Direction Island, on which are situated the Cable and Wireless Staⁿ. and the Department of Civil Aviation's marine base; and Horsburgh Island. North Keeling Island, which forms part of the Territory, lies about fifteen miles to the north of the group and has no inhabitants.

Main settlements are on West Island, Home Island and Direction Island. The group of atolls is low-lying, flat and thickly covered by coconut palms, and surrounds a lagoon which has a harbour in the northern part but which is extremely difficult for navigation.

The climate is equable and pleasant, usually being under the influence of the south-east trade winds for about three-quarters of the year. However, the winds vary at times, and meteorological reports from the Territory are particularly valuable to those engaged in forecasting for the eastern Indian Ocean. The temperature varies between 70° and 89° F., and the average rainfall is about 67 inches. There are occasional violent storms. The worst cyclone in the recorded history of the islands was in 1909, when about 400,000 coconut palms were uprooted or decapitated and the accompanying tidal wave left only five buildings standing.

The population at 30 June 1965 was 675.

History and administration

Summarized particulars of the discovery of the islands and their history up to 1946, when they became a dependency of the Colony of Singapore, are given in Year Book No. 51, page 140, and in earlier issues. On 23 November 1955 the Cocos Islands ceased to form part of the Colony of Singapore and were placed under the authority of the Commonwealth of Australia. The transfer was effected by an Order in Council made by Her Majesty Queen Elizabeth the Second under the Imperial Act entitled the Cocos Islands Act 1955 and by the *Cocos (Keeling) Islands Act 1955* of the Commonwealth whereby the islands were declared to be accepted by the Commonwealth as a Territory under the authority of the Commonwealth to be known as the Territory of Cocos (Keeling) Islands.

Responsibility for the administration of the Territory rests with the Minister for Territories. The first Official Representative was appointed on 23 November 1955 to take charge of the local administration of the Territory. Under the *Official Representative Ordinance 1955-1961* of the Territory the Official Representative is given such powers and functions in relation to the Territory as are delegated to him by the Minister under the *Cocos (Keeling) Islands Act 1955-1963* or are otherwise conferred on him under that Act or by or under any other law of the Territory. The laws of the Colony of Singapore which were in force in the islands immediately before the date of the transfer were, with certain exceptions, continued in force by the *Cocos (Keeling) Islands Act 1955-1963*. They may be amended or repealed by Ordinances made under the provisions of that Act which empower the Governor-General to make Ordinances for the peace, order and good government of the Territory.

Transport and communication

There is an international airport at West Island under the control of the Commonwealth Department of Civil Aviation. This is a re-fuelling point for aircraft of Qantas Empire Airways Ltd. and South African Airways, which operate weekly services between Australia and South Africa. Although there is no regular shipping service, vessels from Australia and Singapore call at intervals. There is a telegraph station, operated and staffed by the Overseas Telecommunications Commission (Australia), on Direction Island.

CHRISTMAS ISLAND

Christmas Island is an isolated bank situated in the Indian Ocean in latitude 10° 25' 22" S., longitude 105° 39' 59" E. It is approximately 220 miles south from Java Head, at the south entrance to Sunda Strait, 815 miles from Singapore and 1,630 miles from Fremantle. Christmas Island covers an area of about fifty-two square miles. It consists of a central plateau of about 600 to 800 feet with several prominent rises up to 1,170 feet. The plateau descends to the sea in a series of steep slopes alternating with terraces, the last dropping in a cliff of 200 to 300 feet to a shore terrace, terminating in a sea cliff of 10 to 150 feet, which is continuous round the island except in a few places, the chief of which is Flying Fish Cove where the principal settlement is located and which is also the only known anchorage.

The climate is healthy and pleasant, the prevailing winds being from the south-east to east-south-east from May to December, but from then to April (the wet season) they occasionally shift round to north to north-east. The average yearly rainfall is about 80 inches with a marked summer incidence. The porous nature of the ground prevents the formation of pools of water, but there are several good springs which maintain an adequate supply of fresh water for the small population and the installations. The mean average temperature is about 80° and does not vary greatly throughout the year.

The economy of the Territory is based almost entirely on the mining and extraction of phosphate. Because of the nature of the land there appears little prospect of establishing any other economic activity.

The population of Christmas Island at 30 June 1961 was 3,099 (1,963 males and 1,136 females). At 30 June 1965 the total population was 3,332.

Education

At 30 June 1965 there were two school systems on the Island—the Christmas Island school system which serves the majority of the children and a European school which serves a small number of children. The Christmas Island school system follows the Singapore curriculum, with twenty-six teachers, mostly Singapore trained, and 851 pupils (698 primary and 153 secondary). The European school follows the Western Australian primary school syllabus, with one teacher seconded from the Western Australian Department of Education, and 31 pupils.

Four Administration scholarships are available each year for Asian students who have completed a three year secondary course to enable them to receive further secondary education at Singapore or Malaya up to University Matriculation level. An education allowance of \$290 per annum, plus annual return fare for the scholar, is paid to Europeans resident in the Territory who send their children to Australia for secondary education. The British Phosphate Commission awards scholarships from time to time.

History and administration

Summarized particulars of the history of Christmas Island up to its administration by the United Kingdom as a separate Crown Colony from 1 January 1958, pending transfer to Australia, are given in Year Book No. 51, page 141, and in earlier issues. On 1 October 1958 the Island was transferred to the Commonwealth of Australia by the *Christmas Island Act* 1958 and is now administered as a Territory under the authority of the Commonwealth. Responsibility for the administration and government of the Territory rests with the Minister for Territories, and day to day affairs on the island are administered by an Official Representative under delegation from the Minister. The laws which were in force in the island at 30 September 1958 were continued as the laws of the Territory after its transfer to Australia.

Phosphate deposits

The only commercial activity carried out is the mining of phosphate. The British Phosphate Commissioners act as managing agents for the Christmas Island Phosphate Commission. There are three principal phosphate deposits on the island of which the largest is that now being worked at South Point. This field is situated on the 600 feet to 800 feet level and is approximately 12 miles from the drying and shipping plant at Flying Fish Cove. During 1964–65, 843,283 tons of phosphate were exported, comprising 767,582 tons to Australia and 75,701 tons to Malaysia.

Transport

Transport to and from the island is maintained by vessels operated under charter by the Christmas Island Phosphate Commission. One vessel makes regular trips between Christmas Island and Singapore, and other vessels carry phosphate to Fremantle and other Australian ports.

CHAPTER 30

INTERNATIONAL RELATIONS

Relations with Commonwealth and other countries

Commonwealth relations

Australia's international relations have developed as a natural concomitant of Australia's growth from colonial status to independent nationhood. During this process Australia has remained on terms of close friendship and understanding with the United Kingdom. This intimate association, together with close co-operation with other countries of the Commonwealth of Nations, remains a basic principle of Australia's foreign policy.

Australia is represented at meetings of Commonwealth Prime Ministers, Finance Ministers and Ministers for External Affairs. It belongs to the sterling area, retains, with limitations, the system of judicial appeal to the Privy Council, maintains High Commissioners in twelve other Commonwealth countries, and is a member of the main Commonwealth organizations providing for co-operation in economic, scientific, educational, and other fields.

Between meetings of Commonwealth Prime Ministers the Australian Prime Minister consults with other Commonwealth Prime Ministers on matters of mutual interest. In addition, there is a constant flow of messages between the Australian Government and Governments of other Commonwealth countries. In defence matters Australia's armed services send representatives to discussions by Commonwealth Chiefs of Staff; Australian naval ships take part in combined exercises with the navies of other Commonwealth members, and Australian officers maintain liaison with the Services of other Commonwealth countries.

Relations with the United States of America

An important feature of Australia's international relations is her relationship with the United States of America. This relationship is formally expressed in a treaty known as the ANZUS Treaty which was signed pursuant to Articles 51 and 52 of the United Nations Charter, and provides that in the event of armed attack on any one of them in the Pacific the U.S.A., Australia and New Zealand would each act to meet the common danger in accordance with its constitutional processes. The Treaty is designed to establish a closer working relationship between the three countries. The ANZUS partners, in their consultations, make no attempt to decide matters affecting the vital interest of other countries. The machinery of the ANZUS Treaty consists of a Council composed of the three Foreign Ministers or their deputies, which meets periodically to discuss matters of mutual concern.

Australia and Asia

Australia's geographical location to the south of Asia has become an increasingly important factor in Australia's foreign policy: Australia has sought to develop close relations and understanding with her Asian neighbours. This was evidenced by Australia's inclusion in 1963 as a full regional member of the Economic Commission for Asia and the Far East (ECAFE) and more recently by Australia's decision to join the Asian Development Bank. There has been increasing recognition by Asian leaders of Australia's concern with, and contribution to, the solution of the problems of the region.

SEATO

Following the cessation of fighting in Indo-China in 1954, Australia, with other countries situated in the south-east Asian region, or having responsibilities there, supported a proposal to form a collective defence alliance to guarantee the peace and security of the region from external aggression. On 8 September 1954 Australia, France, New Zealand, Pakistan, the Philippines, Thailand, the United Kingdom, and the United States signed the South-East Asian Collective Defence Treaty at Manila. They also signed a Pacific Charter stating the principles on which they had acted. A Protocol to the Treaty extended its operation to Cambodia, Laos and the free territory under the jurisdiction of the State of Vietnam, although no action on these territories would be taken except at the invitation or with the consent of the government concerned.

While primary emphasis has been placed on the defence significance of the Treaty, an organization has been established in Bangkok to co-ordinate activities to combat subversion both by counter-propaganda and security training and by the development of the economic and social welfare of the peoples of the Treaty Area. To facilitate this task the Australian Government in 1956 instituted a SEATO Aid Programme, under which by 30 June 1966 aid to the value of \$15 million had been given to member countries in Asia to help develop their capacity to resist aggression and subversion and to stimulate economic development. This programme is complementary to Australia's Colombo Plan contribution. Under the scheme Australia is providing two geodetic survey vessels to the Philippines, a military technical training school, a vehicle base

repair shop, and two 50 kW radio transmitters to Thailand, telecommunication and technical training equipment to Pakistan, and barbed wire, corrugated iron and blacksmith's tools for a town water supply system for Bien Hoa, two surgical teams, and primary school textbooks for Vietnam. Australia has also provided military training, and technical training in the fields of engineering, telecommunications, naval architecture and dockyard maintenance, security procedures, and surveying for nearly 200 trainees from Asian member countries. In addition, a number of senior service officers of other member countries have visited Australia to foster understanding and to develop co-operation between the armed forces.

The Colombo Plan

The Colombo Plan originated at a meeting of Commonwealth Foreign Ministers in Colombo in January 1950. The meeting set up a consultative committee to review economic development in south and south-east Asia. The task of this committee was to devise the most effective means of tackling the problems of economic development in the area and of focusing world attention on them.

Membership of the consultative committee is now made up of Australia, Canada, Ceylon, India, New Zealand, Pakistan, the United Kingdom, Malaysia, the United States, Burma, Cambodia, Indonesia, Japan, Laos, Nepal, the Philippines, Thailand, Vietnam, Korea, Bhutan, the Maldiv Islands, and Afghanistan.

Australian assistance under the Colombo Plan to 31 December 1965 amounted to \$122,396,800. Of this, \$85,674,000 had been spent on economic development projects and \$36,722,800 had been spent under the Technical Co-operation Scheme. Australia has placed emphasis on the importance of technical assistance in providing a base for economic development. A summary of expenditure, by country and under different heads, is set out in the following table.

AUSTRALIA'S EXPENDITURE ON THE COLOMBO PLAN TO 31 DECEMBER 1965 (\$'000)

Country	Economic development	Technical assistance				Grand total
		Training	Experts	Equipment	Total	
Country—						
Afghanistan	30.4	0.2	..	30.6	30.6
Bhutan	269.6	269.6
Brunei	76.6	1.0	..	77.6	77.6
Burma	3,518.6	1,300.8	119.0	514.4	1,934.2	5,452.8
Cambodia	2,199.8	143.2	187.4	153.2	483.8	2,683.6
Ceylon	8,394.6	838.8	385.0	317.6	1,541.4	9,936.0
India	27,184.4	1,780.6	227.6	650.8	2,659.0	29,843.4
Indonesia	8,187.6	4,221.2	1,021.2	511.4	5,753.8	13,941.4
Korea	274.2	7.6	80.6	362.4	362.4
Laos	991.8	183.0	62.0	332.8	577.8	1,569.6
Malaysia—						
Malaya	1,071.9	3,262.8	932.6	538.4	4,733.8	5,805.6
Sabah	468.0	1,167.4	228.2	243.8	1,639.4	2,107.4
Sarawak	1,191.4	924.0	480.8	255.4	1,660.2	2,851.6
Nepal	265.0	163.8	61.2	29.6	254.6	519.6
Pakistan	23,583.6	1,504.6	507.8	876.6	2,889.0	26,472.6
Philippines	85.4	1,072.6	164.2	479.6	1,716.4	1,801.8
Singapore	1,423.6	513.0	755.4	2,692.0	2,692.0
Thailand	4,369.4	1,620.4	409.4	685.6	2,715.4	7,084.8
Vietnam	3,265.8	1,035.8	362.2	897.6	2,295.6	5,561.4
General—						
Mekong Project	342.2	130.0	472.2	472.2
Miscellaneous	627.2	2,233.6	2 860.8
Total	85,674.0	21,024.0	6,012.6	7,452.8	(a) 36,722.8	a 122,396.8

(a) Includes miscellaneous.

Economic development aid

Most of Australia's contribution under the Colombo Plan has been spent on providing predominantly Australian-made equipment for developmental projects or on gifts of commodities such as wheat, flour, fertilizer, coal, copper and condensed milk which have been sold in the recipient country to raise counterpart funds for agreed developmental projects.

The projects assisted by Australia cover a wide range, including irrigation and preparation of land for food crops, irrigation and electric power projects, secondary industries, municipal services, road building, transport and communications facilities, broadcasting equipment and lignite mining.

A Technical Co-operation Scheme has been an integral part of the Colombo Plan since its inception in 1950. Co-ordination of technical assistance is provided by a Council for Technical Co-operation, which meets regularly in Colombo, served by a Colombo Plan Bureau.

Technical assistance

Australia had spent a total of \$21,024,000 on training awards under the Colombo Plan up to 31 December 1965. A total of 6,105 awards for training in Australia had been made. The main fields of study include engineering, public administration, education, nursing, science, medicine and health, and agriculture. Substantial numbers have also been trained in such fields as accountancy, arts, economics, food technology, social studies, and industry.

At 31 December 1965 a total of 4,982 awards had been granted under the correspondence scholarship scheme inaugurated by Australia in 1955. Main fields of study are accountancy, engineering, English, and trade courses. Burma, Ceylon, India, Indonesia, Malaysia, the Philippines, and Thailand have joined the correspondence scheme. Malaysia has established a correspondence education scheme of its own, for which key personnel are trained in Australia under the Colombo Plan.

Australia had spent a total of \$6,012,600 on experts and advisers up to 31 December 1965. This involved the services of experts and advisers on 953 assignments. Of these, 61 experts were in the field at 31 December 1965. The majority were in Malaysia and Thailand.

The following table shows the number of training awards and experts provided to Colombo Plan countries by Australia up to 31 December 1965.

**AUSTRALIA: TRAINING AWARDS AND EXPERTS PROVIDED
UNDER COLOMBO PLAN TO 31 DECEMBER 1965**

Country	Training awards	Correspondence awards	Expert assignments
Afghanistan . . .	16	..	1
Brunei . . .	24	19	6
Burma . . .	441	404	31

At 31 December 1965 a total of 398 requests for technical equipment had been or were being met, at a total cost of \$7,452,800.* The range of items supplied includes text books and Australian reference books for schools, universities and technical training institutions; equipment

* Includes \$130,000 for equipment used in the Mekong Project and included under General in the table on page 1132.

and tools for technical education; livestock and equipment for breeding programmes; radio receivers for use in remote areas; film projectors and visual aids for training centres; X-ray equipment for hospitals; and agricultural research equipment.

In addition to training awards, experts and equipment, technical assistance funds have been spent on contributions to the Colombo Plan Bureau, publications, International House, training centres, and the ECAFE Asian Economic Development Institute.

Participation in the United Nations

Australia's contributions to the United Nations

Australia played an active part in drafting the Charter of the United Nations at the Conference on International Organization in San Francisco in 1945 and has been a consistent supporter of the principles and objectives of the United Nations since its foundation. Australia's influence in the affairs of the United Nations has been exerted primarily through the annual debates in the General Assembly, through membership of the Security Council (1946-47 and 1956-57) and the Economic and Social Council (1948-50, 1953-55 and 1962-64), and through the Trusteeship Council. In virtue of responsibilities for administration of the Trust Territories of Nauru and New Guinea Australia has been a member of the Trusteeship Council since it was established.

In 1950 Australia joined fifteen other member States in answering the Security Council's call to help the Republic of Korea to repel Communist aggression from the north, and members of all three armed services took part in the three years of fighting which followed. Australia has also been directly involved in United Nations activities in many other parts of the world. Australia has contributed its share of the costs, both assessed and voluntary, of all United Nations peace-keeping operations, the largest of which have been the United Nations Emergency Force (UNEF) in the Middle East since 1956, the United Nations Operation in the Congo (ONUC) in 1960-64, and the United Nations Force in Cyprus (UNFICYP) since 1964. In addition to financial contributions, an element of 40 Australian policemen has been made available for service with UNFICYP.

In the economic, social and cultural sphere Australia has contributed to the work of the United Nations through membership of its specialized agencies and of the Economic and Social Council. Australia is a foundation member of one of the four Regional Economic Commissions—The Economic Commission for Asia and the Far East, the 4th and 15th Sessions of which were held in Australia. In 1963 Australia became a regional member of ECAFE.

Australia has had varying periods of service as a member of the executive bodies of the principal specialized agencies. As a leading agricultural country, Australia played a large part in the establishment of the Food and Agriculture Organization (FAO). Australia is a member of the Board of Governors of the International Atomic Energy Agency. Australia served as a member of the governing body of the International Labour Organisation either as a Titular Government member or as a Deputy member from 1945 to 1960, and in 1963 was again elected to the Governing Body as a Titular Government member for a further three-year term. Australia has also been a prominent member of the International Civil Aviation Organization since its inception, and in 1962 was re-elected to the Council as one of the nine States of principal civil aviation importance. Australia was a member of the executive board of the United Nations Children's Fund (UNICEF) from 1947 to 1961 and was re-elected in 1966 for a three-year term.

Australia's contributions in international aid

Australia's contributions towards various forms of international aid through the United Nations and other international organizations to 1964-65 amounted to about \$21,000,000. This is additional to the funds provided for the Colombo Plan and the cash grant for the development of Papua and New Guinea in 1964-65.

The Australian Government contributed \$7,351,842 to the United Nations Expanded Programme of Technical Assistance (EPTA) from the inception of the Programme in 1950 up to June 1965. This was spent on the provision of experts, training, supplies, and equipment, and supplemented Australian aid under the Technical Co-operation Scheme of the Colombo Plan. Australia also contributed \$1,230,000 to the Special Fund up to June 1965. EPTA and the Special Fund were merged on 1 January 1966 into the United Nations Development Programme (UNDP) and Australia's contribution to the Programme to 30 June 1966 was \$1,170,000.

Australian experts sent abroad under the United Nations aid programmes up to 31 December 1964 totalled 455. A total of 590 United Nations trainees had come to Australia up to 31 December 1964.

Other contributions by Australia (to June 1966) have included \$45,044,000 to the United Nations Relief and Rehabilitation Administration (UNRRA); \$6,594,112 to the International Refugee Organization; \$3,660,000 to Post-UNRRA Relief; \$13,575,986 for food and medical

supplies to the United Nations Children's Fund (UNICEF), which has been helping the underprivileged children of the world since its establishment in 1946; \$3,598,000 of essential supplies to the United Nations Korean Reconstruction Agency; \$2,960,000 of supplies to the United Nations Relief and Works Agency for Palestine refugees; \$1,307,900 for the programmes for the United Nations High Commissioner for Refugees; \$310,000 for the relief of Hungarian refugees; and \$95,000 for the WHO Malaria Eradication Special Account.

Australia has also contributed \$529,870 to the Inter-Governmental Committee for European Migration's programme for providing transportation from Hong Kong to countries of resettlement for refugees of European origin coming out of Mainland China.

In addition, Australia has made significant contributions to the development funds of international financial institutions; to June 1965 these amounted to \$42,530,000 to the International Bank for Reconstruction and Development, \$1,996,000 to the International Finance Corporation, and \$8,944,000 to the International Development Association.

In 1962 Australia supported the establishment of the UN/FAO World Food Programme and will contribute \$1,338,000 in cash and kind for the three years of the Programme. Australia contributed \$2.4 million by the end of 1963 to the Freedom from Hunger Campaign and this money will be used on projects in south and south-east Asia.

Diplomatic representation

The Department of External Affairs is responsible for advising the Minister for External Affairs and the Australian Government on the conduct of foreign affairs and relations with foreign Governments. Its officers staff the Australian diplomatic service and the consular and administrative service.

Australian missions overseas

In May 1966 Australia maintained the following diplomatic and consular missions abroad.

AUSTRALIAN MISSIONS OVERSEAS

Embassies (29)

- Argentina*—Calle Rivadavia 1829, Piso 5, Buenos Aires.
- Austria*—Concordia-platz 2/3, Vienna 1.
- Belgium*—4, boulevard Brand Whitlock, Woluwe-St.-Pierre, Brussels-4.
- Brazil*—Caixa Postal 251-ZC-00, Rio de Janeiro.
- Burma*—88 Strand Road, Rangoon.
- Cambodia*—94 Moha Vithei Preah Bat Norodom, Phnom Penh.
- Ethiopia**—C/o Australian High Commission, Nairobi, Kenya.
- France*—13 Rue Las Cases, Paris 7E.
- Germany, Federal Republic of†*—Kölnerstrasse 157, Bad Godesburg, Bonn.
- Greece*—8 Makedonon Street, Athens.
- Indonesia*—Pegangsaan Barat 14, Djakarta.
- Ireland*—33 Fitzwilliam Square, Dublin.
- Israel*—145 Hayarkon Street, Tel Aviv.
- Italy*—Via Sallustiana 26, Rome.
- Japan*—9 Mita Tsuna-Machi, Shiba, Minato-ku, Tokyo.
- Korea*—32-10 Songwoldong, Sudae moon-ku, Seoul.
- Laos*—Quartier Phone Xay, Vientiane.
- Mexico*—Mexico City.
- Nepal‡*—C/o Australian High Commission, New Delhi, India.
- The Netherlands*—Lange Voorhout 18, The Hague.
- The Philippines*—L & S Building, 1414 Roxas Street, Manila.
- South Africa*—Standard Bank Building, Church Square, Pretoria.
- Sweden*—Sergelstorg 12, Stockholm 40.
- Thailand*—323 Silom Road, Bangkok.
- Union of Soviet Socialist Republics*—13 Kropotkinsky Pereulok, Moscow.
- United Arab Republic*—1097 Corniche el Nil, Garden City, Cairo.
- United States of America*—1700 Massachusetts Avenue, Washington, D.C.
- Vietnam*—Caravelle Building, Place Lam Son, Saigon.
- Yugoslavia*—Belgrade.

* The Australian High Commissioner in Kenya is concurrently Ambassador to Ethiopia. † The Australian Ambassador is also head of the Australian Military Mission in Berlin. ‡ The Australian High Commissioner in India is concurrently Ambassador to Nepal.

High Commissions (13)

- Britain**—Australia House, The Strand, London, W.C.2.
Canada—Royal Bank Chambers, 90 Sparks Street, Ottawa, 4, Ontario.
Ceylon—3 Cambridge Place, Colombo, 7.
Ghana—6/26 Milne Avenue, Accra.
India†—9/48 Sardar Patel Road, Chanakyapuri, New Delhi.
Kenya—Silopark House, Queensway, Nairobi.
Malaysia—44 Ampang Road, Kuala Lumpur.
New Zealand—I.C.I. House, Molesworth Street, Wellington N1.
Nigeria—Investment House, 21–25 Broad Street, Lagos.
Pakistan—9 Kutchery Road, Karachi 4.
Singapore—MacDonald House, Orchard Road, Singapore 9.
Tanzania—Bank House, Independence Avenue, P.O., Box 2996.
Uganda‡—C/o Silopark House, Queensway, Nairobi.

Other (14)

Military Mission in Berlin§—Olympia Stadium, Charlottenburg 9, Berlin.

Mission to—

- European Economic Community*—4, boulevard Brand Whitlock, Woluwe-St.-Pierre, Brussels-4.
United Nations (New York)—750 Third Avenue, New York 17, New York.
United Nations (Geneva)—56–58 rue de Moillebeau, Petit Saconnex, 1211, Geneva 19.

Consulate-General in—

- Spain*—Calle General Sanjurjo 44, Madrid 3.
Switzerland—56–58 rue de Moillebeau, Petit Saconnex, 1211, Geneva 19.
New York—International Building, 636 Fifth Avenue, New York 20, New York.
San Francisco—350 Post Street, Union Square, San Francisco, California.

Consulate in—

- Denmark*—Nørrevold 68, Copenhagen.
Germany, Federal Republic of—2 Hamburg 39, Neuerwall 39, Hamburg.
New Caledonia—45 Tce. Rue de Verdun, Noumea.
Portuguese Timor—Dili.
South Africa—1001 Colonial Mutual Building, 106 Adderly Street, Cape Town.

Commission in—

- Fiji*—C.M.L.A. Building, 3 Central Street, Suva.

The Department of External Affairs is responsible for the control and administration of all the diplomatic and consular missions listed above with the exception of the High Commission, London, which is the responsibility of the Prime Minister's Department.

Specialist officers of the Trade Commissioner Service, other Commonwealth Government Departments and the Defence Services stationed abroad are attached to Australian diplomatic or consular missions. Senior attached officers are in some cases accredited to the missions with diplomatic or consular ranks approved by the Minister for External Affairs. In addition, the Department of Trade and Industry maintains Trade Commissioner posts which engage in trade promotion in a number of cities where Australia does not have diplomatic or consular representation (for complete list of Trade Commissioner posts, see page 1138).

The Department of Immigration similarly maintains eighteen offices overseas which engage in recruitment of migrants. A complete list of these offices is given on page 1139.

Diplomatic representatives in Australia

There are thirty-four non-Commonwealth and eight Commonwealth countries represented by diplomatic missions in Australia.

The following list shows the addresses of the overseas representatives in Australia. Full details of Commonwealth and foreign representation in Australia may be obtained from publications issued by the Department of External Affairs, Canberra. Consular representatives are not included. Particulars of these are contained in a publication *Consular Representatives and Trade Commissioners in Australia*, issued by the Department of External Affairs, Canberra. There are more than 180 such representatives in Australia, and fifty-three countries are represented.

* Administered by Prime Minister's Department. † The Australian High Commissioner in India is concurrently Ambassador to Nepal. ‡ The Australian High Commissioner in Kenya is concurrently High Commissioner to Uganda. § The Australian Ambassador to Germany is also head of the Australian Military Mission in Berlin.

DIPLOMATIC REPRESENTATIVES IN AUSTRALIA

Embassies (30)

- Argentina*—5a Arkana Street, Yarralumla, Canberra, A.C.T.
Austria—Ainslie Building, 39 Ainslie Avenue, Civic Centre, Canberra, A.C.T.
Belgium—19 Arkana Street, Yarralumla, Canberra, A.C.T.
Brazil—55 Mugga Way, Red Hill, Canberra, A.C.T.
Burma—85 Mugga Way, Red Hill, Canberra, A.C.T.
Cambodia—5 Canterbury Crescent, Deakin, Canberra, A.C.T.
China—70 Empire Circuit, Forrest, A.C.T.
France—6 Darwin Avenue, Acton, Canberra, A.C.T.
Germany, Federal Republic of—Empire Circuit, Yarralumla, Canberra, A.C.T.
Greece—22 Arthur Circle, Forrest, Canberra, A.C.T.
Indonesia—4 Hotham Crescent, Deakin, Canberra, A.C.T.
Ireland—Ainslie Building, 39 Ainslie Avenue, Civic Centre, Canberra, A.C.T.
Israel—Turrana Street, Yarralumla, Canberra, A.C.T.
Italy—27 State Circle, Deakin, Canberra, A.C.T.
Japan—3 Tennyson Crescent, Forrest, Canberra, A.C.T.
Korea—42 Mugga Way, Red Hill, Canberra, A.C.T.
Laos—71 National Circuit, Forrest, Canberra, A.C.T.
Mexico—Flat 7, 67 Jervois Street, Deakin, Canberra, A.C.T.
*Nepal**—C/o Kitamo Arms, Flat F12, 9, 2-chome, Hirakawa-cho, Chiyoda-ku, Tokyo, Japan.
The Netherlands—120 Empire Circuit, Yarralumla, Canberra, A.C.T.
The Philippines—1 Moonah Place, Yarralumla, Canberra, A.C.T.
Portugal—22 Bougainville Street, Manuka, Canberra, A.C.T.
South Africa—3 Zeehan Street, Red Hill, Canberra, A.C.T.
Sweden—Turrana Street, Yarralumla, Canberra, A.C.T.
Switzerland—37 Stonehaven Crescent, Deakin, Canberra, A.C.T.
Thailand—9 Daly Street, Deakin, Canberra, A.C.T.
Union of Soviet Socialist Republics—78 Canberra Avenue, Griffith, Canberra, A.C.T.
United Arab Republic—38 Empire Circuit, Forrest, Canberra, A.C.T.
United States of America—State Circle, Yarralumla, Canberra, A.C.T.
Vietnam—39 National Circuit, Forrest, Canberra, A.C.T.

High Commissioners (8)

- Britain*—Commonwealth Avenue, Canberra, A.C.T.
Canada—Commonwealth Avenue, Canberra, A.C.T.
Ceylon—35 Empire Circuit, Forrest, Canberra, A.C.T.
India—63 Mugga Way, Red Hill, Canberra, A.C.T.
Malaysia—71 State Circle, Acton, Canberra, A.C.T.
Malta—261 La Perouse Street, Red Hill, Canberra, A.C.T.
New Zealand—M.L.C. Building, London Circuit, Civic Centre, Canberra, A.C.T.
Pakistan—59 Franklin Street, Forrest, Canberra, A.C.T.

Legations (4)

- Denmark*—115 Pitt Street, Sydney, N.S.W.
Finland—537 New South Head Road, Double Bay, Sydney, N.S.W.
Peru—17 Canterbury Crescent, Deakin, Canberra, A.C.T.
Uruguay—22 Bougainville Street, Manuka, Canberra, A.C.T.

Agents-General for States

From early times the Australian colonies maintained agents in London to encourage immigration and to carry out commercial and financial negotiations. Since federation the States have continued to maintain Agents-General in London, all of whom work in close co-operation with the High Commissioner for Australia at Australia House, The Strand, London. The addresses of the Agents-General are as follows: New South Wales—56–57 The Strand, London, W.C.2; Victoria—Victoria House, Melbourne Place, The Strand, London, W.C.2; Queensland—Marble Hall, 409–10 The Strand, London, W.C.2; South Australia—South Australia House, 50 The Strand, London, W.C.2; Western Australia—Savoy House, 115 The Strand, London, W.C.2; Tasmania—457 The Strand, Charing Cross, London, W.C.2.

* The Nepalese Ambassador to Japan is concurrently Ambassador to Australia and to New Zealand.

Oversea trade representation

The Australian Trade Commissioner Service

The Department of Trade maintains Trade Commissioners in thirty-two countries. The first permanent Trade Commissioner Post was set up in Canada in 1929. Before that Australia's only official trade representatives abroad were in the High Commission Office in London and at the Office of the Commissioner-General for Australia in New York. By May 1965 Trade Commissioners were established at the following posts: United States of America—New York, Washington, Los Angeles, and San Francisco; Canada—Vancouver, Ottawa and Montreal; West Indies—Trinidad; Britain and Europe—London, The Hague, Vienna, Athens, Paris, Bonn, Hamburg, Geneva, Stockholm, and Rome; Persian Gulf—Bahrain; Africa—Lagos, Nairobi, Johannesburg, and Cairo; Lebanon—Beirut; India—New Delhi, Bombay and Calcutta; Ceylon—Colombo; South-East Asia—Singapore, Djakarta, Kuala Lumpur, Bangkok, and Hong Kong; Japan—Tokyo, Osaka; New Zealand—Wellington, Christchurch and Auckland; Philippines—Manila; Pakistan—Karachi; South America—Buenos Aires and Lima. Twenty-eight editions of the Department of Trade's promotion periodical *Austral News* now circulate in over 100 countries in four languages. (See also Australian Trade Missions in the chapter Oversea Transactions, page 403.)

The addresses of Australian Trade Commissioner Posts overseas are shown in the following list.

Trade Commissioner Service of the Commonwealth of Australia

- Argentina*—Australian Embassy, Seccion Comercial, Calle Rivadavia 1823-1° Piso-Dto. 'A', Buenos Aires.
- Austria*—Australian Embassy, Concordia-platz 2/3, Vienna 1.
- Bahrain*—Almoayyed Building, Government Road, Bahrain.
- Britain*—Australia House, The Strand, London, W.C.2.
- Canada*—1155 Dorchester Boulevard West, Montreal 2, P.Q.; Suite 608, Burrard Building, 1030 W. Georgia Street, Vancouver 5, B.C.; Australian High Commission, Royal Bank Chambers, 90 Sparks Street, Ottawa 4, Ontario.
- Ceylon*—Australian High Commission, 3 Cambridge Place, Colombo 7.
- France*—2nd Floor, 26 Rue de la Pépinière, Paris, 8E.
- Germany, Federal Republic of*—Australian Embassy, Kölnerstrasse 157, Bad Godesburg, Bonn; 2000 Hamburg 36, Neuerwall 39, Hamburg 11.
- Greece*—Australian Embassy, 8 Makedonon Street, Athens.
- Hong Kong*—Union House, Chater Road, Hong Kong.
- India*—Mercantile Bank Building, 52 Mahatma Gandhi Road, Bombay 1; 2 Fairlie Place, Calcutta 1; 34 Golf Links Road, New Delhi.
- Indonesia*—Djalan Nusantara 39, Djakarta.
- Italy*—Australian Embassy, Via Sallustiana 26, Rome.
- Japan*—9 Mita Tsuna-Machi, Shiba, Minato-ku, Tokyo; Asahi Seimei Building, 4th Floor, 50, 5 chome, Koraibashi-suji, Higashi-ku, Osaka.
- Kenya*—Silopark House, Queensway, Nairobi.
- Lebanon*—5th Floor, L'Union de Paris Building, Rue Maamari, Beirut.
- Malaysia*—44 Ampang Road, Kuala Lumpur.
- The Netherlands*—36 Jan Van Nassastraat, The Hague.
- New Zealand*—London and Lancashire Building, 56 Shortland Street, Auckland C.1; Phoenix Building, 89-91 Worcester Street, Christchurch; Australian High Commission, Fourth Floor, I.C.I. House, Molesworth Street, Wellington.
- Nigeria*—Australian High Commission, Investment House, 21-25 Broad Street, Lagos.
- Pacific Islands*—c/o Department of Trade and Industry, A.N.Z. Bank Building, Cnr. Pitt and Hunter Streets, Sydney, N.S.W.
- Pakistan*—Australian High Commission, 9 Kutchery Road, Karachi 4.
- Peru*—Monterosa Buildings, Jiron Arica 837, Lima.
- The Philippines*—Australian Embassy, L & S Building, 1414 Roxas Street, Manila.
- Singapore*—Australian High Commission, MacDonald House, Orchard Road, Singapore, 9.
- South Africa*—10th Floor, Europa House, 32 Plein Street, Johannesburg.
- Sweden*—Australian Embassy, Sergelstorg 12, Stockholm 40.
- Switzerland*—Australian Consulate-General, 56-58 Rue De Moillebeau, Petit Saconnex 1211, Geneva 19.
- Thailand*—Australian Embassy, 40 Chartered Bank Lane, Bangkok.
- Trinidad*—Colonial Building, 72 South Quay, Port-of-Spain, Trinidad, W.I.
- United Arab Republic*—Australian Embassy, 1097 Corniche el Nil, Garden City, Cairo.
- United States of America*—Paramount Buildings, 1735 Eye Street, N.W. Washington, D.C.; Australian Consulate-General, International Building, 636 Fifth Avenue, New York 20, New York; Australian Consulate-General, 350 Post Street, Union Square, San Francisco, California; 3600 Wilshire Boulevard, Los Angeles, 5 California.

Australian Trade Correspondents and Marketing Officers

Australian Trade Correspondents and Marketing Officers have no official status but supplement the work of the Trade Commissioner Service. Correspondents are located in Suva, Fiji; Valetta, Malta; Port Louis, Mauritius; Tel Aviv, Israel; and Istanbul, Turkey. A Marketing Officer is located in Rangoon, Burma.

Trade Commissioners of Oversea Governments in Australia

- Britain*—Senior British Trade Commissioner—Commonwealth Avenue, Canberra, A.C.T.
 British Trade Commissioners—London Assurance House, 16–20 Bridge Street, Sydney, N.S.W.; 330 Collins Street, Melbourne, Vic.; M.L.C. Building, Cnr. Adelaide and Edward Streets, Brisbane, Qld.; F.C.A. Building, Franklin Street, Adelaide, S.A.; Prudential Building, 189 St. George's Terrace, Perth, W.A.
 Office of the Hong Kong Government Trade Representative—Kembla Building, Margaret Street, Sydney, N.S.W.
 Office of the Fiji Government Representative—38 Martin Place, Sydney, N.S.W.
Canada—Canadian Trade Commissioners—A.M.P. Building, Circular Quay, Sydney, N.S.W.; 2 City Road, South Melbourne, Vic.
Ceylon—Ceylon Trade Commissioner—The Wales House, 66 Pitt Street, Sydney, N.S.W.
China—Telford House, 300 George Street, Sydney, N.S.W.
India—Indian Trade Commissioner—Caltex House, 167–187 Kent Street, Sydney, N.S.W.
Malaysia—Malaysian Trade Commissioner—71 State Circle, Acton, A.C.T.
New Zealand—Senior New Zealand Trade Commissioner—280–288 George Street, Sydney, N.S.W.
 New Zealand Government Trade Commissioner—330 Collins Street, Melbourne, Vic.
Pakistan—Bligh House, 4–6 Bligh Street, Sydney, N.S.W.
South Africa—South African Trade Commissioner—622 St. Kilda Road, Melbourne, Vic.

Commonwealth Migration Offices

The Department of Immigration has established eighteen offices overseas. A series of Regional Offices has also been set up in certain countries to provide additional facilities.

Chief Migration Officers are attached to Australian Diplomatic Missions to Britain, the Netherlands, Greece, Austria, Germany, and Italy. In Spain the Chief Migration Officer is also the Consul-General. Senior Migration Officers have been attached to the Diplomatic Missions to Sweden and the United Arab Republic, and Migration Officers to the missions to Switzerland, Belgium, Denmark, and France. In the Lebanon and Hong Kong a Senior Migration Officer is attached to the Australian Trade Commission, and in Malta an independent office has been established under the control of a Senior Migration Officer.

The Administrative Officer to the Australian Trade Commissioner in Nairobi deals with migration matters in Kenya, and the diplomatic staffs of missions in other countries where Australia is represented are available to handle migration business on behalf of the Department.

Senior Migration Officers overseas

- Austria*—Australian Embassy, Migration Office, Teinfaltstrasse 1, Vienna.
Belgium—Australian Embassy, 4, boulevard Brand Whitlock, Woluwe-St.-Pierre, Brussels-4.
Britain—'Canberra House' Migration Office, 10–16 Maltravers Street, Strand, London, W.C.2.
Denmark—Australian Consulate, Norrevold 68, Copenhagen.
Fiji—Australian Commission, C.M.L.A. Building, 3 Central Street, Suva.
France—Australian Embassy, Migration Office, 28 Rue de la Pépinière, Paris.
Germany, Federal Republic of—Australian Embassy, Migration Office, Victoria Haus, Hohenzollernring 103, Cologne.
Greece—Australian Embassy, Migration Office, 8 Makedonon Street, Athens.
Hong Kong—Australian Government Trade Commission, Union House, Chater Road, Hong Kong.
Italy—Australian Embassy, Migration Office, Via Magenta 5, Rome.
Lebanon—Australian Migration Office, Al Ghanem Building, 211 Madame Curie Street, Sana'eh, Beirut.
Malta—Australian Migration Office, Airways House, Gaiety Lane, Cnr. High Street, Sliema, Valletta, Malta.
The Netherlands—Australian Embassy, Migration Office, 1 Javastraat, The Hague.
Spain—Australian Consulate-General, Calle General Sanjurjo 44, Madrid 3.
Sweden—Australian Embassy, Sergelstorg 12, Stockholm 40.
Switzerland—Australian Consulate-General, 56–58 Rue de Moillebeau, Petit Saconnex, 1211, Geneva 19.
United Arab Republic—Australian Embassy, Migration Office, 12 Hassan Sabri Street, Zamalek, Cairo.
United States of America—Australian Consulate-General, International Building, 636 Fifth Avenue, New York 20, New York.
 Australian Consulate-General, 350 Post Street, Union Square, San Francisco, California.

CHAPTER 31

MISCELLANEOUS

This chapter comprises statistics and other descriptive information not directly related to the subjects of the preceding chapters, or which it is convenient to assemble in single sections, arranged as follows: Valuation of Australian production; Indexes of farm production; Consumption of foodstuffs and beverages; Retail trade; Interstate trade; Statistical organization in Australia; Statistical and other official publications of Australia.

Valuation of Australian production

The value of production for Australia is computed in accordance with the decisions reached at the Conferences of Australian Statisticians and principally at the Conference held in 1935. The figures published in the following tables have been compiled by the Statisticians in the various States from the latest and best data available and are on a substantially uniform basis. However, marketing costs are not on a completely comparable basis between States and, in addition, accurate information is difficult to obtain for many items. In consequence, differences between States in the relationships of local to gross value should be treated with some reserve.

Attention is directed to the fact that the values shown in the tables herein refer only to the production of primary industries and factories, and exclude the building and construction industry, those industrial establishments not classified as factories and certain agricultural and farmyard produce obtained from areas of less than one acre.

Explanation of terms used

The following is a brief explanation of the terms used.

- (a) *Gross value of production* is the value placed on recorded production at the wholesale price realized at the principal markets. In general, the 'principal markets' are the metropolitan markets in each State. In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are presumed to be the principal markets.
- (b) *Local value* (i.e. gross production valued at the place of production) is ascertained by deducting marketing costs from the gross value. Marketing costs include freight, cost of containers, commission, and other charges incidental thereto.
- (c) *Net value of production* represents local value less value of materials used in the process of production. Materials used in the process of production include seed, power, power kerosene, petrol and other oils, fodder consumed by farm stock, manures, dips, sprays, and other costs. No deductions have been made for depreciation or certain maintenance costs as particulars are not available for all States. The net value of production is the only satisfactory measure to use when comparing or combining the value of primary industries with those of other industries.

For the years shown in the following tables, no allowance for power, power kerosene, petrol, and other oils has been made in New South Wales. In the case of the mining and quarrying industry, however, this allowance has been made in all States. Marketing costs for mining and quarrying and costs of materials used in the process of production in respect of bee-farming, trapping, forestry, and fishing and whaling are not available for all States. Local values have been used for these industries, with consequent understatement in gross value for the mining and quarrying industry and overstatement in net value for the other industries.

Value of production, Australia

The following table shows particulars of the gross, local and net values of production in Australia, by industry.

GROSS, LOCAL AND NET VALUE OF PRODUCTION OF PRIMARY INDUSTRIES
AND FACTORIES: AUSTRALIA, 1964-65

(\$'000)

Industry	Gross production valued at principal markets	Local value— gross production valued at place of production	Net value of production (with- out deduction of depreciation or maintenance)
Agriculture	1,323,722	1,126,044	978,771
Pastoral	1,483,049	1,356,346	1,221,300
Dairying	505,256	467,694	360,737
Poultry	137,425	119,294	50,916
Bee-farming	5,119	4,118	(a) 4,118
<i>Total, rural</i>	<i>3,454,571</i>	<i>3,073,496</i>	<i>2,615,842</i>
Trapping	14,601	13,060	(a) 13,060

Indexes of farm production

In the first two tables in this section indexes of price and quantum (i.e. value at constant prices) of production are given for the following industrial groups: Agriculture, Pastoral, Dairying, poultry and bee-farming, and All farming combined (including separate indexes for Wool and Products other than wool). In the third table indexes of quantum (i.e. value at constant prices) of production, exports and consumption of farm products for food use are shown.

Farm production price indexes

The farm production price indexes shown in the following table relate to average 'prices' of agricultural, pastoral, dairying, poultry and bee-farming products realized at the principal markets of Australia. The 'price' data used are average unit values for the total quantities of the relevant commodities produced or marketed in each year, and the index numbers therefore measure both the effects of changes in prices (as such) and of variations in the quality, type, usage, etc. of products marketed. The index numbers for any year relate to the average values of products produced or marketed in that year, irrespective of the periods in which payment is received by producers.

The indexes have been calculated by the fixed-base weighted aggregative method. 'Prices' for each commodity in any year are obtained by dividing gross value of production by the quantity produced in that year. In the original published series of Production Price Index Numbers the average quantities of the relevant commodities *produced* in the period 1923-24 to 1927-28 were used as fixed weights. This series, re-computed to the base average 1936-37 to 1938-39 = 100, was published in earlier issues of the Year Book (see No. 43, page 1050). For 1936-37 and later years the original series was replaced in December 1952 by a revised series in which average quantities of each product *marketed* during the period 1946-47 to 1950-51 were used as fixed weights. In the revised series the regimen was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were also incorporated in the revised indexes, the principal of which was the omission from the weights used for the All farming Index of quantities of crops marketed for livestock feeding in Australia.

**FARM PRODUCTION: INDEXES OF PRICES AT PRINCIPAL MARKETS, AUSTRALIA
1950-51 TO 1964-65**

(Base: Average of 3 years ended June 1939 = 100)

Year	Agri- culture	Pastoral	Dairying, poultry and bee- farming	All farming	Wool (shorn and dead)	Products other than wool
1950-51 . . .	291	818	258	505	1,098	308

1964-65 . . .	351	460	423	415	437	408

Indexes of quantum (i.e. value at constant prices) of farm production

The indexes shown in the following table relate to gross output of farm products valued at constant prices. They have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the base years.

In the original published series the period 1923-24 to 1927-28 was adopted as the base for revaluing each farm product. This series, re-computed to the base average 1936-37 to 1938-39 = 100, was published in earlier issues of the Year Book (*see* No. 43 page 1051). For 1936-37 and later years the original series was replaced in December 1952 by a revised series in which average unit values for the period 1936-37 to 1938-39 were used. The regimen used for the revised series was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were incorporated in the revised indexes, the principal of which was the omission, in calculating the All farming Index, of quantities of crops fed to livestock in Australia.

**INDEXES OF QUANTUM(a) OF FARM PRODUCTION: AUSTRALIA
1950-51 TO 1964-65**

(Base: average of 3 years ended June 1939 = 100)

Year	Agri- culture	Pastoral	Dairying, poultry and bee- farming	All farming	Wool (shorn and dead)	Products other than wool

1964-65	218	172	136	181	183	180

(a) Indexes of value at constant prices, i.e. quantities revalued at average unit values for the base years (*see* text preceding table).

Farm products for food use: Indexes of Quantum (i.e. Value at Constant Prices) of Production, Exports and Consumption

The indexes shown in the following table have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the years 1936-37 to 1938-39. The items included comprise products in the form in which they are sold from farms in all cases except livestock sold for slaughter for meat, which are included in terms of dressed carcass weight of meat. Quantity data relating to exports include exports of processed food in terms of farm product equivalent. The indexes of production relate basically to gross output of farm products for food use, including crops exported for stock-feeding overseas.

**FARM PRODUCTS FOR FOOD USE: INDEXES OF QUANTUM^(a) OF
PRODUCTION, EXPORTS AND CONSUMPTION,
AUSTRALIA, 1950-51 TO 1964-65**

(Base: average of 3 years ended June 1939 = 100)

Year	Production		Exports		Consumption in Australia	
	Total	Per head of total population	Total	Per head of total population	Total	Per head of total population
1950-51	109	90	104	86	120	99
1951-52	100	81	70	57	119	96
1952-53	118	93	113	89	119	94

1964-65p	184	112	220	134	165	101

^(a) Indexes of value at constant prices, i.e. quantities revalued at average unit values for the base years (see text preceding table).

Consumption of foodstuffs and beverages

Quantities consumed

The estimates of total consumption and consumption per head of population in Australia in the two tables which follow have been compiled by deducting net exports from the sum of production and imports and allowing for recorded movements in stocks of the respective commodities. While the estimates may be generally accepted as being reasonably accurate, there are some deficiencies to which attention should be directed. These relate chiefly to the quantities of poultry, game and fish (fresh and shell) and the quantities of certain oils and fats entering consumption. In addition, little information is available on the quantities of vegetables, fruit, eggs, etc. which householders produce for their own requirements and the extent of wastage occurring in the marketing of foodstuffs. In all these cases careful estimates have been compiled from the best available data, and the quantities shown as entering consumption in Australia have been adjusted to allow for these circumstances. The absence of particulars for stocks of certain commodities has resulted in some inaccuracies in the estimates of annual consumption. Consumption of foodstuffs is measured in general at 'producer' level. As a result, no allowance is made for wastage before the foodstuffs are consumed. In recent years wastage of foodstuffs has possibly been less than previously because of more efficient distribution and storage methods. Furthermore, it is likely that the quantities of foodstuffs shown in the following pages as available for consumption have been supplemented by production by householders for their own requirements. In most cases broad estimates of non-commercial (householders') production have been made. Except in a few special cases, no adjustment has been made for changes in stocks held by wholesalers and retailers. Where no allowance is made it is considered unlikely that these stocks would make any appreciable difference to consumption estimates. Allowance has not been made for the purchase of foodstuffs for dispatch overseas as gifts in bulk and by parcel post. These deficiencies, however, do not seriously impair the accuracy of the estimates compiled.

The estimates of consumption per head of population shown in the second of the following tables have been derived by dividing the total apparent consumption of each commodity or commodity group in a given year by the mean population of Australia in the same period.

More detailed information on the consumption of foodstuffs and beverages is contained in the statistical bulletin: *Report on Food Production and the Apparent Consumption of Foodstuffs and Nutrients in Australia*, issued by this Bureau.

The following tables show the average annual consumption during the three-year periods ended 1938-39, 1948-49 and 1958-59, together with the data for each of the years 1962-63, 1963-64 and 1964-65.

ESTIMATED QUANTITY OF FOODSTUFFS AND BEVERAGES AVAILABLE FOR CONSUMPTION ANNUALLY: AUSTRALIA, 1936-37 TO 1964-65

Level of nutrient intake

The table below shows details of the estimated supplies of nutrients available for consumption in Australia during the three years 1962-63 to 1964-65 in comparison with the annual averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. The table has been compiled by the Nutrition Section of the Commonwealth Department of Health and is based on the estimates of the quantity of foodstuffs available for consumption per head of population shown in the preceding table.

Retail trade

The statistics in this section relate to retail establishments throughout Australia and the value of retail sales of goods by these establishments.

Information of this nature was first collected in respect of the year ended 30 June 1948 by a full census of all retail establishments. As this was the first census of its type in Australia, its scope and the data sought were the minima consistent with the objective of securing a record of the number of such establishments, their type, their geographical distribution, their aggregate sales of goods, and a simple commodity dissection, together with a record of the value of certain services provided. This census was followed by a second census of all retail establishments trading during the year ended 30 June 1949.

Further censuses were taken in respect of the years ended 30 June 1953 and 1957. In these censuses retailers were asked to furnish more detailed information concerning the dissection of their turnover into commodity groups, and questions were asked about stocks of goods on hand, the number of persons engaged in retail activities, and credit sales. In addition, the 1956-57 census included questions relating to purchases, customers' indebtedness and type of organization.

The most recent census was taken in respect of the year ended 30 June 1962, and results have been published for all States and Australia. With the exception of some modifications to the scope of the collection (*see hereunder*), the 1961-62 census followed the same general principles adopted for the previous census.

In general terms the census covered the retail trading activities of establishments which normally sell goods by retail to the general public from fixed premises (i.e. shops, rooms, kiosks, and yards). Retail activities of wholesalers and manufacturers were included if they sold regularly by retail to the general public. Sales by itinerant vendors (e.g. hawkers, street sellers, etc.) and sales from casual stalls or booths were excluded. Organizations such as clubs and societies making sales to their own members were excluded from the main census collection, but a supplementary collection was made, covering sales by *licensed* clubs.

In general, establishments with retail sales of goods amounting to less than \$1,000 in the census year are not included in the census tabulations. However, some 'service' establishments with retail sales of less than \$1,000, but with takings of \$1,000 or more from repairs, meals or hairdressing were included in the main census collection, and details of these establishments are included in tables in Year Book No. 50, page 1244. The types of establishments in this category are boot repairers, repair-only garages, cafés and restaurants, and hairdressers.

The design of the census is such that particulars of retail sales relate principally to sales to the final consumer of new and second-hand goods generally used for household and personal purposes. For this reason, sales of building materials, farm and industrial machinery and equipment, earth-moving equipment, etc. have been excluded from the censuses. For the same reason,

and also because of difficulties in obtaining reliable and complete reporting, sales of builders' hardware and supplies, business machines and equipment, grain, feed, fertilizer and agricultural supplies, and tractors were excluded from the 1961-62 census. Retail sales of motor vehicles, parts, etc. have been included, whether for industrial, commercial, farm, or private use.

During the period between censuses variations in the value of retail sales have been measured by means of quarterly sample surveys. Annual totals derived from these surveys, adjusted to a basis comparable in scope with the 1961-62 census, and some of the results of the 1961-62 census, are included in this section.

Year Book No. 50, pages 1239-45, contains details of the number of retail establishments, the values of retail sales and of retail stocks, and particulars of hairdressing, boot repairing and motor repairing establishments, restaurants, self-service stores and licensed clubs, for each State and Territory, from the results of the 1961-62 census. Major classifications are by commodity groups and type of business. More complete details are set out in published bulletins of the 1961-62 Census of Retail Establishments. (See page 1155).

Value of retail sales in each commodity group, Australia

The following table shows the value of retail sales of goods in each of the commodity groups specified in the years 1959-60 to 1964-65 on a comparable basis throughout. The figures for the year 1961-62 were obtained from the census, whereas figures for the other years shown are estimates based on sample surveys.

VALUE OF RETAIL SALES: COMMODITY GROUPS, AUSTRALIA(a)
1959-60 TO 1964-65
(£ million)

Commodity group	1959-60	1960-61	1961-62	1962-63	1963-64	1964-65

Newspapers, books and stationery	155.4	160.1	166.4	172.6	191.0	202.6
Other goods(f)	452.7	483.9	489.7	518.2	553.1	593.1
<i>Total (excluding motor vehicles)</i>	<i>4,945.3</i>	<i>5,173.3</i>	<i>5,257.1</i>	<i>5,506.2</i>	<i>5,836.4</i>	<i>6,233.8</i>
Motor vehicles, parts, petrol, etc.(g)	1,654.7	1,649.7	1,603.2	1,981.8	2,169.7	2,300.9

(a) Excludes Northern Territory and Australian Capital Territory. (b) Includes fresh fruit and vegetables, confectionery, soft drinks, ice cream, cakes, pastry, cooked provisions, fish, etc., but excludes some delivered milk and bread. (c) Excludes sales made by licensed clubs. (d) Excludes basic building materials, builders' hardware and supplies such as tools of trade, paint, etc. (e) Includes radios, television and accessories, musical instruments, domestic refrigerators, etc. (f) Includes tobacco, cigarettes, etc., jewellery, sporting goods, etc. but excludes grain and produce and business machines. (g) Includes new and used motor vehicles, parts, petrol, etc. but excludes tractors, farm machinery and implements, earth-moving equipment, etc.

Interstate trade

Prior to the federation of the Australian Colonies (now States) each Colony published statistics of its trade with the other Colonies. A similar record was continued by the Commonwealth Government under the provisions of the Constitution (section 93). On the expiry of the 'book-keeping' period these records were discontinued as from 13 September 1910, and the last published statements were for the year 1909. Later, the Governments of Western Australia and Tasmania revived the records, and relevant statistics are available again for those States. A detailed collection for Queensland was re-introduced from July 1953.

At the Conference of Statisticians held in January 1928 it was resolved that efforts should be made in other States to record the interstate movement of certain principal commodities. Complete interstate trade statistics are now published in detail for Queensland, Western Australia and Tasmania by the Deputy Commonwealth Statisticians in those States, and incomplete statistics, relating mainly to trade with Western Australia and Tasmania, by the Deputy Commonwealth Statisticians in the remaining States.

Statistical organization in Australia

Information about the early development of Australian statistics, the creation of the Commonwealth Bureau of Census and Statistics and the integration of Commonwealth and State statistical services may be found in Year Book No. 51, pages 1247-8 and in earlier issues.

The Australian statistical organization and its functions

The Commonwealth Bureau of Census and Statistics consists of the Central Office, located in Canberra, and the six State Offices each under the control of a Deputy Commonwealth Statistician. The Central Office is responsible for the overall planning and direction of the Bureau's work and for the collection, compilation and publication of statistics relating to (i) Australia and (ii) the States as components of Australian totals. The State Offices are responsible for providing statistics for both State and Commonwealth requirements. Collection activities are largely concentrated in the State Offices, which also engage in the compilation and publication of statistics on a State basis, together with intra-State analysis by divisions, local government areas, geographical areas, etc.

The Bureau produces statistics relating to all aspects of the economy and social condition of Australia—population, employment, primary and secondary industries, national accounts, public and private finance, retail and wholesale trade, overseas transactions, and transport and communication.

Research into the theory and practice of sampling, data processing, population projections, price and quantum indexes, seasonal adjustment, classification systems, and other methodological aspects is conducted on a continuing basis. Pilot input-output tables for 1958-59 have been compiled, and work is continuing on a comprehensive table for a more recent year. The extension of the scope of the Bureau's statistics and the integration of existing statistical collections so as to place them on a co-ordinated and mutually exclusive basis are other important aspects of research and development work.

The economic interpretation of statistics and the use of models in economic analysis and forecasting is the responsibility of policy-making departments (including the Department of the Treasury and the Department of Trade and Industry). The Bureau provides these Departments with statistical information and expert statistical and methodological advice.

At the end of June 1966 the staff of the Bureau in its Central Office and six State Offices, numbered approximately two thousand. About half of this number were employed in the Central Office.

Nature of the Central Office of the Commonwealth Bureau of Census and Statistics

The Central Office of the Bureau is organized functionally into Sectors (*italic type*) and Divisions (*roman type*) dealing with specific fields of statistics or providing services for the Bureau as a whole. The organizational patterns of the State Offices are broadly similar, although local requirements have naturally given rise to differences in detail.

Production, Distribution and Development. Primary Industry; Secondary Industry; Internal Trade

Finance and Oversea Transactions. Oversea Transactions; Private Finance; Classification and Integration

National Accounts. National Income and Expenditure; Public Finance; Inter-industry Accounts

Sampling and Methodology. Sampling; Methodology and Mathematical Research

Automatic Data Processing. Systems Operations; Applications; Mechanical Tabulation

Services. Establishments and Finance; Publications; Secretariat

The work of each Division is supervised by a Director. Each Director in turn is responsible to an Assistant Statistician whose principal function is to co-ordinate and direct the operations of several Divisions.

Recruitment of statisticians

The demand by the Bureau for professionally qualified statisticians (*i.e.* graduates) is met in three principal ways. Firstly, the conditions under which persons are recruited to the Commonwealth Public Service ensure that the majority of junior appointees are qualified to matriculate, and the Bureau encourages these recruits in a variety of ways (*e.g.* free study time, payment of university fees, etc.) to pursue an appropriate university degree course on a part-time basis. A

substantial number of the professional statisticians have, in fact, acquired their qualifications in this way. Secondly, the Bureau awards to high level matriculant students statistics cadetships, of four years duration, tenable at an Australian university and leading to an honours degree in economics, statistics and/or mathematics. The cadetship scheme also provides for one- and two-year cadetships for undergraduates who have demonstrated their ability to succeed with an appropriate university course. These undergraduate cadetships also lead to an honours degree in economics, statistics and/or mathematics. The third way in which the Bureau acquires professionally qualified staff is by direct recruitment of graduates who have had no attachment to the Bureau prior to completing their university degrees. Recruits from this source are predominantly the product of Australian universities, but in recent years a substantial number of overseas graduates, principally from United Kingdom universities, have joined the Bureau's staff.

Mechanical and electronic equipment

The Bureau possesses considerable experience in the use of mechanical equipment for data processing, having first installed punched-card machinery in 1921. It has recently installed a large scale high-speed digital computer network which is progressively superseding most of the existing mechanical tabulation equipment. The computer network comprises Control Data 3600 and 3300 computers in Canberra, 3200 and 160-A computers in both Sydney and Melbourne and 3200 computers in the other three mainland States with a full complement of peripheral devices including twelve type 607 magnetic tape units. The computers are used to perform a wide range of accounting and administrative work for Government departments (notably the Department of the Treasury) in addition to normal statistical functions.

Relation of the Bureau to other Commonwealth Departments

The role of the Commonwealth Bureau of Census and Statistics relative to the compilation of statistics in other Commonwealth Departments is outlined in Year Book No. 51, page 1248.

Statistical and other official publications of Australia

The official statistical publications of Australia may be divided bibliographically into two main divisions, namely: (i) Commonwealth publications dealing both individually and collectively with the several States of Australia; and (ii) State publications dealing with individual States only. Commonwealth publications containing statistics may be grouped under two heads, namely: (i) publications issued by the Commonwealth Statistician; and (ii) Parliamentary and Departmental Reports and Papers. State publications may similarly be grouped into publications issued by the Deputy Commonwealth Statistician in each State and State Parliamentary and Departmental Reports and Papers. The statistics contained in the second group in each case are in the main incidental to the primary purpose of the particular report or paper.

Publications issued by the Commonwealth Statistician

Principal statistical publications. The following is a list of the principal statistical publications issued from the Central Office of the Commonwealth Bureau of Census and Statistics since its inauguration.

Australian Capital Territory Statistical Summary. Annually, 1963 to 1966.

Balance of Payments, Australia. Statements Nos. 1 to 3, 1928-29 to 1951-52.

* *Banking and Currency.* Bulletin, annually, 1961-62 and 1962-63 (first issue) to 1964-65.

† *Causes of Death.* Bulletin, annually; 1963 and 1964.

Census (1911) Results. Bulletins. Vols. I (Statistician's Report), II and III, with Appendix *Mathematical Theory of Population.*

Census (1921) Results. Bulletins. Nos. 1 to 26. Parts I to XVI, forming Vol. I, and Parts XVII to XXIX (Part XXVII, Life Tables), forming, with the Statistician's Report, Vol. II.

Census (1933) Results. Bulletins. Nos. 1 to 25. Parts I to XIV, forming Vol. I, Parts XV to XXVIII, forming Vol. II, and Parts XXIX to XXXVII, forming, with the Statistician's Report and Australian Life Tables, 1932-1934, Vol. III.

Census (1947) Results. Bulletins. Nos. 1 to 25. Parts I to XVI, forming Vol. I, Parts XVII to XIX, forming Vol. II, and Parts XX to XXVIII, forming with the Statistician's Report and Australian Life Tables, 1946-1948, Vol. III.

Census (1954) Results. Bulletins. Nos. 1 to 3. Vols. I to VI, comprising respectively Parts I to V for each State; Vol. VII, comprising Parts I to V for the Australian Territories; Vol. VIII, comprising Parts I to III for Australia, Australian Life Tables, 1953-1955, and the Statistician's Report.

* Previously included in Finance, Part I.

† Previously included in Demography.

- Census (1961) Results*. Vols. I to VI, comprising respectively Parts I to V for each State; Vol. VII, comprising Parts I to V for the Australian Territories; and Vol. VIII, comprising Parts I to III for Australia, Australian Life Tables, 1960-1962, and the Statistician's Report. The complete series has not yet been issued; for publications already issued see back pages of this volume.
- * *Conference of British Commonwealth Statisticians, 1951, Report of Proceedings*.
- * *Dairying Industry* (formerly *Summary of Dairying Industry*). Statistical Bulletin, monthly and half-yearly; first issue, September 1937.
- Demography*. Bulletin, annually, 1911 to 1964. Commencing 1963, excludes details of causes of death, see *Causes of Death*.
- * *Digest of Current Economic Statistics*. Monthly from August 1959 onward.
- * *Export Commodity Classification, Australian*. 1966-67 (and subsequent sectional revisions). *Exports, Australian*. Annually, 1958-59 to 1965-66.
- * *Factories, Principal Statistics, Summary*. Annually, 1948-49 to 1964-65.
- Finance*. Bulletin, 1907 to 1960-61. Commencing 1955-56, issued in two parts—Part I, Public and Private Finance; Part II, Commonwealth Taxation. Commencing 1961-62, issued as five separate bulletins, see *Banking, Finance (2), Insurance, and Taxation*.
- ** *Finance, Commonwealth*. Bulletin, annually, 1961-62 and 1962-63 (first issue) to 1965-66.
- ** *Finance, State, Territory and Local Government Authorities', and Government Securities*. Bulletin, annually, 1961-62 and 1962-63 (first issue) to 1964-65.
- * *Food Production and the Apparent Consumption of Foodstuffs and Nutrients in Australia, Report on*. Statistical Bulletin, half-yearly, 1946-47 to 1947-48; annually, 1948-49 to 1964-65.
- * *Fruit Growing Industry* (formerly *Summary of Fruit Growing Industry*). Statistical Bulletin, annually, 1944-45 to 1964-65.
- * *Import Commodity Classification, Australia*. 1965-66 (and subsequent sectional revisions). *Imports Cleared for Home Consumption*. Annually, 1950-51 to 1965-66.
- ** *Insurance and Other Private Finance (other than Banking and Currency)*. Bulletin, annually, 1961-62 and 1962-63 (first issue) to 1964-65.
- Labour and Industrial Statistics*. Memoranda and Reports, various, to 1922.
- Labour Report*. 1913 to 1964.
- Life Tables, Australian*, 1901-1910. *Australian Joint Life Tables*, 1901-1910.
- Life Tables, Australian*, 1920-1922.
- Life Tables, Australian*, 1932-1934. *Australian Joint Life Tables*, 1932-1934.
- Life Tables, Australian*, 1946-1948.
- Life Tables, Australian*, 1953-1955.
- Life Tables, Australian*, 1960-1962.
- * *Livestock Numbers* (formerly *Summary of Livestock Statistics*). Statistical Bulletins, annually, 1943 to 1965.
- Local Government in Australia*. July 1919.
- Manufacturing Industries*. Bulletins on Individual Industries, annually, 1936-37 to 1939-40, 1940-41 (issue incomplete) and 1944-45 to 1964-65.†
- Manufacturing Industry*. Bulletin, annually, first issue, 1963-64.
- Manufacturing Commodities*. Bulletin, annually, first issue, 1963-64 (in preparation).
- ‡ *Mineral Industry, The Australian* (formerly *Minerals and Metals Bulletin*). Part 2—*Quarterly Statistics* of a quarterly bulletin issued jointly with the Bureau of Mineral Resources.
- Monthly Review of Business Statistics*. October 1937 onward.
- Motor Vehicles, Census of, 31st December, 1955*. Bulletins Nos. 1 to 8.
- Motor Vehicles, Census of, 31st December, 1962*. Bulletins Nos. 1 to 9.
- Motor Vehicles, Survey of (1947-48), Results*. Bulletins Nos. 1 to 7.
- National Accounts, Australian (National Income and Expenditure)*, 1948-49 to 1961-62, first issue, mimeographed*, to 1964-65.
- § *Non-Rural Primary Industries and Value of Production*, Bulletin, annually, first issue 1963-64.
- Northern Territory Statistical Summary*. Annually, 1960 to 1966.
- * *Occupation Survey (1945) Results*. Detailed tables.
- Official Year Book of the Commonwealth of Australia*. 1907 to present issue (No. 52). Issues Nos. 40 to 51 also published in parts.
- Pocket Compendium of Australian Statistics* (formerly *Statistical Digest*). 1913, 1914, 1916 and 1918 to 1966, annually.
- Population and Vital Statistics*. Bulletins and Reports, various, 1906-1910.
- Primary Industries*. Bulletins, annually, 1950-51 to 1961-62 in two parts—Part I, Rural Industries; Part II, Non-rural Industries and Value of Production. Commencing 1962-63, issued as two separate Bulletins, see *Rural Industries* and *Non-rural Primary Industries and Value of Production*.
- Primary Industries, Australian*. Report prepared for the Empire Producers Conference, Sydney, March 1938.

- Production*. Bulletin, annually, 1906 to 1949–50. From 1936–37 to 1949–50 issued in two parts—Part I, Secondary Industries; Part II, Primary Industries (including Total Recorded Production); thereafter separate Bulletins (see *Primary Industries* and *Secondary Industries*).
- Professional Papers*. Various. A full list appears in Official Year Book No. 13, page 3.
- * *Publications of the Commonwealth Bureau of Census and Statistics*. Annually (1964 to 1966 printed).
- Quarterly Summary of Australian Statistics* (replaced *Monthly Summary of Australian Statistics*). December 1917 onward.
- * *Retail Establishments, Census of (1947–48), Results*. Bulletins, Nos. 1 to 7.
- * *Retail Establishments, Census of (1948–49), Results*. Bulletins, Nos. 1 to 7.
- * *Retail Establishments, Census of (1952–53), Results*. Bulletins, Nos. 1 to 14.
- Retail Establishments, Census of (1956–57), Results*. Bulletins, Nos. 1 to 8 (mimeographed*) and 9 to 15 (printed).
- Retail Establishments and Other Services, Census of (1961–62), Results*. Bulletins Nos. 1 to 7 (printed) and 8 and 9 (mimeographed*).
- * *Rural Holdings, Classification by Size and Type of Activity, 1959–60*. Bulletins, Nos. 1 to 7.
- Rural Holdings, Size Classification of, 1955–56*. Bulletins Nos. 1 to 7.
- †† *Rural Industries*. Bulletin, annually, 1962–63 to 1963–64.
- * *Rural Land Use and Crop Production* (formerly *Summary of Crop Statistics*). Statistical Bulletin, annually, 1943–44 to 1964–65.
- Secondary Industries*. Bulletin, annually, 1950–51 to 1962–63 (commencing 1960–61 issued in two parts—Part I, Factory and Building Operations; Part II, Materials Used and Articles Produced in Factories). Commencing 1963–64 issued as separate bulletins, see *Manufacturing Industry* and *Manufacturing Commodities*.
- Social Insurance*. Report to the Hon. the Minister for Trade and Customs, 1910.
- Social Statistics*. Bulletin, 1907 to 1915 annually, and 1918.
- Superannuation for the Commonwealth Public Service*. Report to the Hon. the Minister for Home Affairs, 1910.
- †† *Taxation Assessments, Commonwealth*. Annually, 1961–62 to 1964–65.
- Trade, Oversea*. Bulletin, annually, 1906 to 1965–66.
- * *Trade, Oversea*. Preliminary Bulletin, annually, 1952–53 to 1965–66, in two parts—Part 1, Exports; Part 2, Imports. (See also *Exports, Australian* and *Imports Cleared for Home Consumption*.)
- Transport and Communication*. Bulletin, 1906, 1908 to 1916 annually, 1919 to 1930 annually and 1932 to 1964–65 annually.
- Wealth*. The Private Wealth of Australia and its Growth as ascertained by various methods, together with a Report on the War Census in 1915.
- * *Wheat Industry* (formerly *Summary of the Wheat Situation*). Statistical Bulletin, periodically; first issue, July 1936.
- * *Wool Production and Utilization*. Bulletin, annually, 1952–53 to 1964–65.

The foregoing list includes all the printed publications issued from the Bureau and certain more important mimeographed publications issued for the most part annually. Minor changes in the titles of several publications have not been referred to above. Copies of a number of these publications, particularly earlier issues, are not available.

Other statistical publications. Other mimeographed statements are distributed by the Commonwealth Statistician and deal with a wide variety of subjects, as follows.

Triennially. Tractors on Rural Holdings.

Annually. Agricultural Statistics (Preliminary); Australian National Accounts—Gross National Product at Current and Constant Prices (No. 1), Personal Income, by States (No. 2), Gross National Product at Factor Cost, by Industry (No. 3) (Preliminary Statements); Bee Farming; Consumption of Tea and Coffee; Factories, Principal Statistics of, by Class of Industry; Factory Products, Principal; Factory Production, Indexes of; Factory Production, Packaging and

* Distributed by the Commonwealth Statistician—for methods of obtaining other publications still in print see back pages of this volume.

† The series for 1964–65 comprises: Nos. 1. Cement and Cement Goods, 2. Bricks, Tiles, Pottery and Earthenware, 3. Chemicals, Drugs and Medicines, 4. White Lead, Paints and Varnish, 5. Chemical Fertilizers, 6. Soap and Candles, 7. Basic Metal Industries, 8. Metal Fabricating Industries, 9. Motor Vehicles and Cycles, 10. Cotton Mills, 11. Woollen Mills, 12. Rope and Cordage, 13. Tanneries, 14. Boots and Shoes, 15. Clothing (including Hosiery and Knitted Goods), 16. Flour and Other Grain Mills, 17. Biscuits, 18. Confectionery, 19. Jam, Fruit, Vegetables, Pickles, Sauces, Condiments, etc., 20. Bacon Curing, 21. Butter, Cheese and Condensed, Concentrated, etc., Milk, 22. Aerated Waters and Cordials, 23. Meat and Fish Preserving, 24. Breweries, 25. Wineries and Distilleries, 26. Tobacco, Cigars and Cigarettes, 27. Sawmilling, 28. Pulp and Paper Making, 29. Rubber Works, 30. Brooms and Brushes, 31. Electric Light and Power Works, 32. Gas Works, 33. Plastic Moulding and Products, 34. Leather Goods (including Saddlery and Belting), 35. Printing and Stationery.

‡ Copies available from the Department of National Development in each capital city (\$1 each).

§ Previously Primary Industries, Part II.

* Previously included in Finance, Part I.

†† Previously Primary Industries, Part I.

†† Previously Finance, Part II.

Associated Items; Factory Statistics, Australian Capital Territory; Factory Statistics, Northern Territory; Factory Statistics (Preliminary); Farm Machinery on Rural Holdings; Finance Companies; Fire Marine and General Insurance; Fisheries (formerly Fishing and Whaling—also Preliminary); Fruit Statistics (Preliminary); Government Pension and Superannuation Schemes; Livestock Statistics (Preliminary); Minerals and Mineral Products; Mining and Quarrying (also Preliminary); Oversea Investment; Oversea Investment in Companies in Australia (Preliminary); Registered Building Societies; Registrations of New Motor Vehicles; Rural Statistics of the Australian Capital Territory; Survey of Private Pension and Retiring Allowance Schemes; Survey of Retail Establishments, Australian Capital Territory; Survey of Retail Establishments, Northern Territory; Survey of Selected Large Private Pension Funds; Commonwealth, State and Territory Taxation Collections; Trade of Australia with Eastern Countries; University Statistics (also Preliminary); Value of Primary Production (Preliminary); Value of Production and Indexes of Price and Quantum of Farm Production; Wholesale Sales and Stocks of Wine and Brandy; Wool Production (Preliminary).

Half-yearly. Balance of Payments; Labour Turnover; Trade of Australia with the United Kingdom—no longer published separately, included in quarterly publication *Overseas Trade*—Major Groups of Countries; Minimum Rates of Wage and Prescribed Hours of Work—Adult Male and Adult Female Occupations, Sydney and Melbourne.

Quarterly. Aerial Agriculture; Average Retail Prices of Food and Grocery Items; Balance of Payments; Building; Building—Australian Capital Territory; Building—Northern Territory; Building—Number of New Houses and Flats (Preliminary); Capital and Maintenance Expenditure by Private Businesses in Australia; Capital Expenditure by Private Businesses in Australia (Preliminary); Consumer Price Index; Industrial Disputes; Instalment Credit for Retail Sales; National Income and Expenditure; New Agricultural Machinery; New Capital Raisings by Companies in Australia; New Capital Raisings by Companies in Australia (Preliminary); New Tractors; Oversea Arrivals and Departures; Oversea Trade with Major Groups of Countries; Retail Sales of Goods (also Preliminary); Road Traffic Accidents; Unit Trusts, Land Trusts and Mutual Funds; Wholesale Prices—Price Index of Electric Installation Materials.

Monthly. Banking (General) (also Preliminary); Building Approvals; Employment and Unemployment; Exports of Wool; Export Price Index; Finance Companies; Gold Mining Industry; Imports of Assembled New Passenger Motor Cars (Other than Buses or Special Vehicles); Instalment Credit for Retail Sales (Preliminary); Life Insurance; Meat Industry; Minerals and Mineral Products; Oversea Arrivals and Departures (Preliminary); Overseas Trade (also Preliminary); Overseas Trade, Imports by Commodity Divisions; Production Statistics (also Preliminary); Production Summaries*; Registrations of New Motor Vehicles (also Preliminary); Retail Sales of Goods (Provisional); Savings Banks (also Preliminary); Wage and Salary Earners in Civilian Employment (Preliminary); Wage Rates and Earnings; Wholesale Price (Basic Materials and Foodstuffs) Index; Publications issued by Commonwealth Bureau of Census and Statistics.

Periodically. Demographic Review (separate issues cover population and vital statistics (quarterly), births, deaths and marriages (all annual)); Social Statistics, including Schools, Universities, Hospitals (all annual) and Divorces (annual and quarterly).

Occasional publications. In addition to the publications listed on pages 1153–6, most of which are issued regularly, there have been a number of statements issued by this Bureau which contain the results of special surveys or new statistical series and descriptions thereof. The more recent of these are listed below.

Special Business Survey No. 16. Incidence of Industrial Awards, Determinations and Agreements, May 1963; Minimum Wage Rates, January 1960 to June 1963; Wage and Salary Earners in Employment, June 1954 to June 1961; Wage and Salary Earners in Employment, June 1961 to June 1965; Projections of the Population of Australia (1966 to 1986); Survey of Private

* The current series comprises: Nos. 2. Chemicals, etc., 3. Plastic and Synthetic Resins and Plasticisers, 4. Paints and Other Surface Coatings, 6. Soaps, Detergents and Glycerine, 7. Internal Combustion Engines, 8. Lawn Mowers, 9. Electric Appliances, 10. Motor Bodies, Trailers, etc., 11. Pedal Cycles, 12. Meters, 13. Building Fittings, 14. Cotton Goods, 15. Wool-scouring, Carbonizing and Fellmongering, 16. Wool Textile Industry, 17. Wool Weaving, 18. Hosiery, 19. Shirts, Cardigans, Nightwear, Underclothing, etc., 20. Cellulosic and Synthetic Fibre, Tops, Yarns and Woven Fabrics, 21. Paper, Wood Pulp and Adhesive Tapes, 22. Floor Coverings, 23. Electric Motors, 24. Men's, Youths' and Boys' Outer Clothing, 25. Foundation Garments, 27. Gloves; Slide Zip Fasteners, 28. Footwear (excluding Sandshoes, Goloshes, and Gumboots, etc., of Rubber), 29. Biscuits, Ice Cream, Cocoa, Confectionery, 30. Storage Batteries, 31. Assembly of Motor Vehicle Chassis, 32. Perambulators, Pushers and Strollers, 33. Motor Vehicles, 34. Radio, etc., Television Sets and Cabinets, 35. Mattresses, 36. Preserved Milk Products, 38. Canned Fish, 39. Jams and Preserved Fruit and Vegetables, 40. Cereal Products, 41. Margarine and Other Edible Processed Fats, 42. Malt and Beer, 43. Stock and Poultry Meals (Other than Cereal), 45. Phonograph Records, 47. Aerated Waters, Cordials and Syrups, and Concentrated Cordial Extract, 48. Sports Goods, 49. Building Materials, 50. Electrodes for Manual Welding, 51. Hides and Skins used for Tanning, 52. Electrical Power Transformers, Chokes and Ballasts, 53. Plastics Film, Sheet and Coated Materials, 55. Butter and Cheese, 56. Canned Meat, 58. Steel Wire and Wire Products, 59. Non-ferrous Rolled, Extruded and Drawn Products.

Pension and Retiring Allowance Schemes, 1962-63; Surveys of Weekly Earnings and Hours, October 1962, October 1963 and October 1964; Survey of Weekly Earnings, October 1965; Mining and Quarrying, Statistical Summary (1952-1964); Minimum Wage Rates, March 1939 to June 1965.

Information on current Bureau publications. Further information on current publications of the Commonwealth Bureau of Census and Statistics is contained in *Publications of the Commonwealth Bureau of Census and Statistics*, April 1966, available free on request from the Commonwealth Statistician, Canberra. This contains a list of all Bureau publications and also a subject index to show the central office publications in which information on the various subjects dealt with by the Bureau is to be found. The information on issues in this publication is supplemented in monthly statements.

Commonwealth and State Parliamentary and Departmental Reports and Papers

No comprehensive list of current publications of this nature is available, but the National Library of Australia issues an annual publication *Australian Government Publications*, a list of official publications of the Commonwealth, States and Territories, compiled from records of material received by the Library during the year.

The Publications Branch of the Commonwealth Government Printing Office, Canberra, issues a monthly publication *Commonwealth Publications* and at irregular intervals *Commonwealth Publications Consolidated List*. These publications list Commonwealth publications currently becoming available or in stock, showing the titles and prices of Parliamentary Papers, Parliamentary Debates (Hansard), records of Parliamentary proceedings, Acts, Statutory Rules, Ordinances, and departmental bulletins and reports issued annually or irregularly.

The National Library of Australia issues annually a publication *Australian Books*, its aim being to provide an authoritative current reference and reading list of books dealing with Australia or of Australian authorship, wherever published. The list is comprehensive and is classified broadly under the following subject headings: general and descriptive: Commonwealth territories; history; biography; political history; military and naval history; philosophy; religion; education; social conditions; economics and economic history; industrial relations; industries, resources, trade and communications; constitution and law; international relations; administration; science and technology; natural history; ethnology; home economics; art, architecture, music and theatre; sport; literature and languages; poetry; drama and essays; fiction, children's books; directories, indexes and bibliographies. This list was included in issues of the Year Book prior to No. 49 (see No. 48, page 1166), but considerations of space preclude the inclusion of the latest list (1965) in this issue. See page 624 of the chapter Education, Cultural Activities and Research for further information concerning the National Library's publicizing of Australian publications.

Publications issued by the Deputy Commonwealth Statisticians

A list of the current publications issued by the Deputy Commonwealth Statistician of each State appears in *Publications of the Commonwealth Bureau of Census and Statistics*, April 1966, and this information is supplemented also in the monthly statements mentioned above.

TRAVEL AND TOURISM*

This article outlines the history and growth of travel and the structure of tourist organizations in Australia. It presents summaries of available statistics of overseas and internal travel by various means, provides some indications of tourist spending patterns and accommodation, and refers to research, training and other matters related to tourism. A selected bibliography at the end of the article provides references to articles, reports, etc. on, or relating to, tourism in Australia.

INTRODUCTION

Travel and tourism, whether domestic or international, are rapidly growing activities in Australia as well as in many overseas countries. The essential part of *travel* is transportation, but *tourism* comprehends, in addition, accommodation and the other facilities and attractions provided as the result of such travel, i.e. it relates to the activities of *tourists*.

The travel industry may be regarded as a service industry, as 'that part of the national economy which caters for the traveller who is visiting places outside the locality where he resides or works. It is a heterogeneous group, embracing a large variety of trades and industries which have the supplying of travellers' needs as their common function'.

Because of the difficulty of isolating the services provided for travellers and of relating them to travel, it is only recently (at least in Australia) that attempts have been made to consider travel and tourism as a whole. Lack of appropriate statistics, the complexity of the economic transactions which need to be considered, and tardy recognition of the growing importance of this field are reflected in the meagre literature available.

Definitions

The absence of common definitions in the field of international tourism has been a matter of concern to national and international organizations for many years, particularly to those engaged in research work involving comparative studies. However, international organizations such as the International Monetary Fund, the Statistical Commission of the United Nations and the International Union of Official Travel Organizations are now working towards the adoption of standard terms. The first United Nations Conference on International Travel and Tourism, held in Rome in August-September 1963, suggested that, for statistical purposes, the term 'visitor' should apply to any person visiting a country other than that in which he has his usual place of residence, for any reason other than following an occupation remunerated from within the country visited. This definition would cover *tourists*, i.e. temporary visitors, staying at least twenty-four hours in the country visited, the purpose of whose journey can be classified as relating to leisure (i.e. recreation, on holiday, or for reasons associated with health, study, religion, or sport), for business or for family reasons, on a mission, or for a meeting; and *excursionists*, i.e. temporary visitors staying less than twenty-four hours in the country visited (including travellers on cruises). It was further suggested that statistics should not include travellers who, in the legal sense, do not enter the country (air travellers who do not leave an airport's transit area and similar cases). The Statistical Commission of the United Nations, at its 1965 session, did not accept this definition for recommendation to member countries and suggested that further studies be made. While the Rome definitions may not be satisfactory for international statistical purposes, they serve to indicate broadly the scope of such terms as 'visitor', 'tourist', and 'excursionist'.

For the purposes of this article a *domestic tourist* is similarly defined as any person journeying in Australia and absent from his usual place of residence for twenty-four hours or longer; a distinction is made between interstate tourists (staying at least twenty-four hours in another State) and intrastate tourists. This definition of 'tourist' and 'visitor' is wider than the common interpretation of 'tourist' as a person travelling for pleasure or recreation.

The phrase *the tourist industry* is commonly used in Australia to describe the activities of all establishments which provide goods and services to the person travelling away from home.

* The following article on Travel and Tourism was specially prepared for this issue of the Year Book by Mr. R. D. Piesse, B.A., LL. B. (Melb.), Director of Travel Development, Australian National Travel Association.

The term *visitor plant*, defined as the entire range of tangible and intangible factors which attract or cater for tourists, is used especially in studies of travel development and promotion. While the term is useful to indicate the wide variety of facilities (transport, accommodation, restaurants, shops), attractions (scenic, recreational, historic, cultural), and such intangible factors as climate, organized programmes to enable people to meet people, business opportunities and the like, which all affect the visitor, the concept which this term expresses is not measurable and is thus of limited use in practical studies.

The term *destination area* means a locale with certain characteristics sufficient in themselves to attract travel.

History of travel and tourism in Australia

From colonial days the idea of travel has been more natural to Australians than to people long established at one place. Immigrants, having once broken away from their homes, were prone to continue their search for wealth or security for a while, or, having settled down, to return to the old countries to visit their kin and refresh old memories. The opening of new lands, the establishment of industries and towns and the consequent dispersal of people over Australia created a habit of mobility and enterprise which encouraged Australians to face the hardships of early travel by coach, on horseback or by ship. Even so, the slow and uncomfortable modes of travel and the vast distances separating Australian towns tended to restrict travel to essential journeys for purposes of trade, to pursue an occupation or to settle. This changed somewhat with the advent of rail travel.

The initial emphasis in tourism for purposes of pleasure was strongest on travel to resorts near the main population centres. These included the Blue Mountains in New South Wales and the hill and coast resorts close to Melbourne and other major cities. The existing railway services radiating from these cities, together with the 'feeder' horse-drawn, and later motor, coach transport connecting with the railways, rendered the State Government railway tourist bureaux the main means for selling intrastate, and even some interstate, travel.

After the 1914-18 War in the 1920's, and again after the easing of the effects of the depression of the 1930's, travel for all purposes increased steadily. It continued to be mainly by rail, but also by sea, although the family motor car began in the 1930's to participate in the shorter intrastate traffic. A considerable fleet of passenger ships provided frequent and popular services linking most ports between Fremantle and Cairns. Other services linked Sydney and Melbourne with Tasmanian ports. The winter cruise of those days to Queensland ports could be regarded as the equivalent of today's drive or flight north for a winter holiday at the Gold Coast or a Barrier Reef Island, or today's shorter South Pacific cruises. The first cruises from Australia to New Zealand were organized in the summer of 1934-35, and Australians were travelling to Britain for as low as \$78, tourist class, in the years immediately preceding the 1939-45 War.

In the period following the 1939-45 War the advent of new and improved methods of transportation, combined with rising standards of living and the energetic publicizing of foreign destinations, developed international travel into a mass-movement. New ocean liners shortened travelling time considerably, and travel by car and bus increased in many countries. Most of all, air travel became widely available, faster, safer, and cheaper. The beginning of the jet age in 1960, with larger aeroplanes carrying more than 100 passengers at speeds approximating 600 miles per hour, diminished the world by half in terms of time. Rising standards of living in the post-war period led to greater expenditure on tourism, thus making it more important to the national economy.

Australia has shared in this world-wide expansion of travel, particularly in respect of its domestic tourism. Because of the marked increase in incomes and private car ownership among large sections of the population, greater leisure time, three weeks paid annual holidays (introduced first in New South Wales in 1958) and the introduction of long-service leave, thousands of Australians now travel by road into almost every part of the Commonwealth. This has led to investment in the development of new and improved facilities, especially accommodation, of new resorts at dispersed points around Australia, and to modifications in organization and methods of tourist administration, development and promotion. These activities in turn have had an important influence on matters such as the improvement of highways and the opening up of national parks and foreshores. A recent consequence is the first detailed study and survey of the entire Australian tourist industry, its development and its future potential.

Government interest in tourism and development of State tourist bureaux

Under the Constitution of the Commonwealth the Commonwealth has no direct powers to regulate travel and tourism, except in so far as matters related to freedom of trade and intercourse between States, the publicizing of Australia abroad and promotion of visitor traffic as an external trade activity, and the administration, development and promotion of travel and tourism to and within the Territories of Australia may be involved. Tourism within Australia

thus falls into the residual powers of the State Governments. All States have for many years exercised their rights in respect of domestic travel and tourism, and some at times have extended their activities to promotion abroad.

The operation of travel and tourist bureaux and departments by the States, following the pattern set by New Zealand, evolved from the State railways' booking offices. Because of the emphasis at that stage on railways as the principal means of travel, the provision of rail booking facilities was, in fact, the primary purpose of these bureaux. New South Wales (1906), Victoria, South Australia, and then Tasmania (1915) entered the field early. In 1908 Victoria set up a Government Tourist Bureau which took over the functions of the Victorian Railways Central Booking and Enquiry Section established in 1895. This in turn had its origin in 1888 in the Railways Information Centre created for the International Melbourne Exhibition of that year. In opening the new Government Tourist Bureau in Adelaide in 1908 the then Treasurer of South Australia said that he expected that the development of a tourist traffic would add considerably to the coaching receipts of the railways. Government Tourist Bureaux were established by Western Australia in 1921 and Queensland in 1926.

Government support for, and participation in, the development of tourism grew rapidly in the middle and late 1950's in Victoria and Queensland and the early 1960's in Western Australia and the Northern Territory. Along with the efforts of the domestic airlines and coach tour operators, it began to bring appreciably greater benefits to the tourist industries of these States and the Northern Territory.

Although Australian residents traditionally have been travellers to the United Kingdom and Europe, it was only in the late 1920's that the impetus first arose towards attracting international travellers to Australia and the Commonwealth Government's interest was aroused, largely because of the repeated representations by Australians returning to their homeland and through the vision of a group of business leaders. The promotion of travel to Australia was seen as a means of stimulating development, migration and, by virtue of the currency brought in by visitors, of increasing overseas earnings. The Chairman of Commissioners of the Victorian Railways, Mr. (later Sir) Harold Clapp, who had first-hand knowledge of methods used by various United States railroads to promote travel to resort attractions, initiated similar travel promotion techniques for the Victorian Railways and also urged the development of a national policy for travel promotion.

In consequence of a recommendation by the Development and Migration Commission, the Australian National Travel Association was inaugurated by the Commonwealth Government in 1929 as a national, non-profit organization under the *Companies Act* 1928 of Victoria. The Commonwealth Government authorized an annual contribution of \$4,000 for five years to ANTA, whose initial annual budget was \$35,000. By 1930 Australian publicity and travel promotion offices were established in London and San Francisco. Australia became the first country to establish a tourist promotion office on the west coast of the United States. A few years later Australia established a similar 'first' for the Asian continent when ANTA opened an office in Bombay. Later it opened an office in New Zealand. During its first three-and-a-half years of operation the Association raised \$122,000. By the outbreak of the 1939-45 War its budget was \$106,000, largely because of a special Commonwealth grant of \$42,000 for the San Francisco Exposition.

ORGANIZATION OF TRAVEL AND TOURISM IN AUSTRALIA

Structure, organization and roles of official, semi-official and voluntary associations

The role of the Commonwealth Government

The Commonwealth Government contributes financially and in certain other specialized ways to the promotion of the flow of tourists to Australia. The Minister for Trade is responsible for tourism matters at the Commonwealth level. The Department of Trade and Industry provides publicity in its magazines, assists in the distribution of travel promotional literature, co-operates with ANTA at overseas fairs and displays, and makes its overseas facilities available for tourist promotion. Furthermore, through the Inter-departmental Committee on Publicity Co-ordination, the Commonwealth ensures that, as far as possible, economy of effort and money is observed in respect of the promotional and publicity activities of the various Commonwealth departments and ANTA. The Commonwealth is represented at the annual discussions of the Tourist Ministers' Council (see page 1162).

The Commonwealth is involved also in the following other activities concerned with tourism: Commonwealth Film Unit production from time to time of films which have direct application to the promotion of travel to Australia; Commonwealth financial assistance to organizations for the staging of international conventions in Australia; and through the Snowy Mountains Hydro-Electric Authority as a government instrumentality carrying out tourist promotion and public

relations as well as tour organization work within its statutory region. The policy of the Authority since its inception has been to encourage visits, and hundreds of thousands of visitors have been conducted on tours of the Snowy Scheme.

The Australian National Travel Association (ANTA)

This organization is the national body responsible for the promotion of travel to Australia. The Association makes no bookings or reservations itself, but concentrates on presenting a national image to overseas tourists. It has its Head Office in Melbourne, and branch offices are located in London, New York, San Francisco, Auckland, and Sydney.

ANTA has an Honorary Board of fifteen government representatives (Commonwealth, all State Governments, and government instrumentalities) and sixteen representatives from related industries, such as shipping, airlines, accommodation, motor coach transport, travel agents, Chambers of Commerce and Manufactures, the Australian Automobile Association, the Australian Bankers' Association, retail traders, and other business interests. As well as this balance in representation between government and business interests, Board representation is intended also to keep a balance as far as possible between the major sectors having interests in the travel and tourist industry. Thus the accommodation industry has five representatives (including those of both hotels and motels) and transportation has eight (half of whom represent overseas air and sea passenger carriers). There is also an Executive Committee of the Board to guide the Association's activities.

ANTA's budget in 1965-66 was \$1,021,425, of which \$737,748 (72 per cent) came from the Commonwealth Government and the remainder from State Governments and industry sources. The Commonwealth financial support for ANTA consists of a base grant of \$462,000 and a \$ for \$ subsidy matching contributions received from non-Commonwealth Government sources. The following table sets out the sources of ANTA's revenue and the growth in numbers of members and contributors in recent years.

AUSTRALIAN NATIONAL TRAVEL ASSOCIATION: TOTAL BUDGETS, SOURCES OF REVENUE, MEMBERS AND CONTRIBUTORS, 1961-62 TO 1965-66

Year	Total budget	Commonwealth Government payments		Non-Commonwealth Government payments		Number of ANTA members and contributors
		Grant	Percentage of total budget	State Governments	Other	
	\$	\$		\$	\$	
1961-62 . . .	528,166	410,114	77.6	28,500	89,552	150
1962-63 . . .	680,938	537,388	78.9	28,550	115,000	234
1963-64 . . .	827,582	640,000	77.3	36,000	151,582	280
1964-65 . . .	954,514	700,000	73.3	36,050	218,464	352
1965-66 . . .	1,021,425	737,748	72.2	36,400	247,277	421

The number of Association members and financial contributors has increased 181 per cent in the last five years. A considerable amount of the money ANTA receives from non-Commonwealth Government sources comes from contributions from carrier companies and others for joint promotional projects, such as advertising in overseas journals. The latter was largely responsible for the 13.2 per cent increase in contributions from non-government sources in 1965-66.

ANTA is assisted in policy formation by three advisory committees concerned with Promotions, Research, and Visitor Facilities. Each comprises experts in their respective fields, drawn from a variety of government and private organizations, some within the travel industry and others not directly connected with it.

ANTA funds are spent in advertising and publicity campaigns and in associated promotional activities in overseas countries, particularly in New Zealand, North America, the United Kingdom, and Western Europe. In addition, the Association brings to Australia travel agents, writers, photographers, and other publicists so that they may see at first hand what the country has to offer visitors. The following are some of the activities in which ANTA has been engaged recently.

The launching of the first fully-integrated marketing programme in North America. Entitled '*Destination South Pacific*', it embraces advertising, merchandising, sales promotion, and publicity campaigns. It has been presented during 1965-66, with the help of travel agents, to 50,000 specially selected members of the public regarded as travel prospects for the Pacific area and representative of almost every major city in the United States and Canada. This is a co-operative project with the New Zealand Travel Commission, tourist organizations of South Pacific Islands and carrier companies operating into and through the area.

Advertising campaigns in the United Kingdom and New Zealand, including joint advertising with shipping companies and airlines serving Australia.

The production and supply of more than two million pieces of literature, articles and films on Australia's attractions and visitor facilities, and co-ordinating publications such as *The Australians*. This is a 300-page portrayal in words and pictures of Australia and Australians.

Participation in certain trade fairs and assistance to Australian organizations in order to attract conventions to Australia.

Since 1934 ANTA has published the monthly magazine *Walkabout*, designed to disseminate knowledge of Australia and its way of life. The Association also carries on research and survey work at home and in overseas market areas to assist in guiding its activities.

State and Territory Authorities

The States and internal Territories maintain government tourist organizations. They operate information and reservation offices, earning commissions on transportation and accommodation bookings. They encourage the development of tourist facilities and of local tourist promotion organizations. Their principal objective is to promote interstate and intrastate tourist traffic. Directors of each State and Territory tourist organization, together with a representative of the New Zealand Tourist Department, meet annually at the Australian and New Zealand Government Tourist Conference to formulate joint policies and procedures and discuss matters of mutual interest. ANTA takes part at this Conference in discussions dealing with overseas tourism to Australia. The Tourist Ministers' Council, representative of Commonwealth and State Governments, was formed in 1960 to discuss informally each year policy matters concerning the development of tourism and its problems. The Minister for Trade and Industry is represented at these meetings by the Chairman of the ANTA Board.

The State and Territory tourist organizations have the following main purposes in common.

Administering and managing tourist bureaux for bookings, reservations and supplying information in their capital and provincial centres and, except in the case of the Northern Territory and Canberra Tourist Bureau, in the cities of other States.

Encouraging the development of tourist attractions and facilities, including advice to regional tourist promotion organizations on matters of tourist organization, development, promotion, and publicity.

Publicizing the tourist attractions of, and supplying tourist information about, the State or Territory.

Generally stimulating the flow of tourist traffic to and within the State or Territory.

There are, however, distinctive features in the organization, financing and functions of particular authorities. For instance, the *New South Wales Department of Tourist Activities* operates cave resorts and the Jenolan Caves Hotel, as well as administering State migration matters, grants subsidies to regional tourist organizations to assist in setting up and maintaining local tourist bureaux, and organized Conferences for Representatives of Regional Tourist Organizations in 1964 and 1965.

The *Tourist Development Authority of Victoria* was established under the *Tourist Act* 1958, as an authority consisting of representatives of various State departments such as the Premier's, Lands, Roads, Forests, and Public Works. There is also one representative (the Royal Automobile Club of Victoria) of organizations having an interest in tourism. The Authority's budget is linked to a statutory contribution from the Country Roads Board Fund based initially on a contribution of two per cent of motor registration fees.

The *Queensland Government Tourist Bureau* is administered under the Department of Labour and Industry. Unlike other States, it carries on some sales promotion activities among travel agents abroad, particularly in New Zealand. It also subsidizes regional tourist committee publications, makes special grants for the encouragement of festivals, and in 1964 organized the first Tourist Industry Seminar in Queensland.

The *South Australian Government Publicity and Tourist Bureau*, established in 1908, is administered under the Premier's Department. It is responsible for the administration of immigration to the State, of the National Pleasure Resorts Act, and of government publicity activities generally. It leases a chalet at Wilpena, in the Flinders Ranges, and maintains its own film-making unit.

The *Tourist Development Authority of Western Australia* was created under the *Tourist Act, 1959*, legislation similar to that of Victoria. Local authorities have taken advantage of schemes whereby the Tourist Development Authority, as in Victoria, provides subsidies for approved works. Improved tourist amenities for which assistance has been provided since 1960 by the Authority have cost more than \$1,400,000, of which more than \$800,000 has been provided by the State Government. It also promotes traffic to the State from Singapore and Malaysia.

The *Tasmanian Government Tourist and Immigration Department* was created in 1914. It administers immigration to the State and also the operation of the Accommodation Loans Act Fund. The Department runs its own 'Tasbureau' coach tours and administers three caves resorts.

In the Australian Capital Territory the *Canberra Tourist Bureau* is administered by the Department of the Interior. The Bureau's vote for publicity is spent largely on tourist literature production. The development and maintenance of attractions for visitors to Canberra are the responsibility of the National Capital Development Commission and the Department of the Interior respectively. In October 1965 the Department announced the appointment of a Director of Tourism for the Australian Capital Territory.

The *Northern Territory Tourist Board* was created under a Northern Territory Ordinance in 1962 to develop tourism in and to the Northern Territory. It operates information and booking bureaux in Darwin and Alice Springs, and exercises other functions broadly along the lines of the State tourist bureaux. The Board consists of a Chairman, members of various branches of the Northern Territory Administration, a representative of each major domestic airline, and a representative of elected members of the Northern Territory Legislative Council.

The *Papua and New Guinea Tourist Board* was constituted in August 1966 with twelve members representing various districts and tourist interests in the Territory.

Regional and local bodies

Throughout Australia there is a variety of regional and local tourist bodies, ranging from local government offices and bureaux to voluntary regional, district, highway-league, and chambers of commerce bodies. However, limitations are often imposed on the latter, owing to their voluntary nature and the necessity of making special approaches to their members for funds. There are also some convention bureaux.

In *New South Wales* there is a well-developed network of regional tourist development and publicity organizations, each having a 'community of tourist interest', but whose boundaries correspond to single, or groupings of, local government areas. These regional organizations are eligible for financial assistance grants from the Department of Tourist Activities on certain conditions, one of which is that they maintain tourist information bureaux. The usual annual grant is \$2,000. Many individual cities and towns carry out tourist publicity and promotional activities through other organizations, including chambers of commerce and highway development leagues.

There is a growing number of regional and local tourist promotion organizations in *Victoria*. Although some are also general progress associations (and are so known), most are primarily, or solely, concerned with tourism. Assistance in tourist development projects and the production of tourist folders is provided in approved cases by subsidies from the Tourist Development Authority.

In *Queensland* the growth and activities of local tourist promotion organizations have been quite marked in recent years. Some of the 'travel leagues' and chambers of commerce of individual towns, such as the Surfers' Paradise Chamber of Commerce, also take an active part in publicity and promotion of tourism to and in their town areas. The Gold Coast City Council formed a *Gold Coast Tourist Advisory Board* in 1966 with representatives from private enterprise and the City Council. This is believed to be the first organization of its type wholly set up and appointed by a local government authority in Australia.

A system of subsidies to country tourist bureaux and tourist committees operates in *South Australia*, where, however, individual chambers of commerce also play an active part in tourist publicity in a number of centres.

In *Western Australia* country tourist bureaux carry out district tourist promotion and supply information to tourists. They operate under a system of approved bureaux for the purpose of subsidy payments from the Tourist Development Authority. In 1963-64 eight of these bureaux were operating, most of them in the far south-west of the State.

The *Tasmanian Tourist Council* is a non-government body with a largely advisory and co-ordinating function among private tourist enterprise. As reorganized in September 1964, the Central Council comprises representatives from Northern, Southern, North-western, Eastern, South-eastern, and Midlands Divisions, with the Minister for Agriculture and Tourists and the Tourist Director *ex officio* members. The Council adopted a proposal late in 1965 for the establishment of a tourist advisory service throughout the State to assist visitors. Under this scheme

appointments are made through municipal councils. In July 1966 it launched its 'Operation Tourism' campaign to improve attitudes to, and welcoming arrangements for, tourists and to stimulate community tourist development and beautification schemes.

The *Australian Capital Territory Advisory Tourist Council* is a body made up of representatives of the accommodation industry, Chamber of Commerce, the National Capital Development Commission, and the Director of the Canberra Tourist Bureau. From time to time it makes suggestions and proposals to the Department of the Interior on travel and tourism.

The *Murray Valley Tourist Promotion Council*, which operates under the aegis of the Murray Valley Development League, is another regional publicity body. It is supported by shire councils, business enterprises and private citizens, and covers tourist centres in South Australia, Victoria and New South Wales.

Organisation and development of travel and tourist industry facilities

Transportation

Rail travel. The main trunk route for rail travel extends from Perth in Western Australia through the eastern States to Cairns in Queensland, and several important inland lines serve tourists as well as local residents (e.g. Port Augusta to Alice Springs, Melbourne to Mildura, Sydney to Broken Hill, and Townsville to Mount Isa).

Three factors have helped to improve the standard of travel on major railway lines in recent years.

Firstly, the introduction of new equipment. The appeal of modern passenger trains is directly linked to progressive improvements in air conditioning, smooth-riding bogies and noise insulation. The Victorian Government Railways in 1935 was the first system in Australia to instal air-conditioning plant on a railway carriage. Plans for railway modernization in general had to be laid aside during the 1939-45 War, however, and it was not until the 1950's that Australian railways were able to embark on a rebuilding programme in which air-conditioned carriages were a feature. A notable improvement in train travel was achieved with the introduction of five air-conditioned streamlined trains on the Trans-Australian Express services. New South Wales, for example, has twenty-seven air-conditioned expresses in operation, serving both country districts and interstate capitals.

Secondly, the popularity of the 'Daylight' inter-capital express services between Melbourne and Sydney and of the extended rail tours along the Queensland coastal route to Cairns.

Thirdly, the improvement in convenience and speed due to progress in the railway gauge standardization projects and the change-over to diesel locomotives. The developments since 1962 between Sydney and Melbourne, where the *Southern Aurora* Express provides service in keeping with world standards, will be extended in a few years to standard gauge trans-Australia travel between Sydney and Perth via Broken Hill.

Rail passenger travel in Australia is comparatively cheap, but, except on trains such as the 'name' express trains on certain interstate routes, there has been a decline overall in travel by rail in recent years in favour of other methods of travel, notably by air and by private car.

Air travel. Australians are recognized as one of the most air-minded peoples of the world. Suitable operating distances between major population centres, favourable weather and visibility conditions making for minimal interruptions to schedules, a very high safety record, and Australia's vast area are factors that have assisted in the growth of domestic aviation, while Australia's isolation from other world population centres is basically the reason for the development in air travel between it and other countries.

Significant events in the development of Australia's airlines over the last decade include the introduction in 1954 of the turbo-jet Vickers Viscount four-engined airliners on main domestic routes and of pure jet Boeing 707's in 1959 on most international routes serving Australia; the introduction of the high performance, high passenger-capacity Boeing 727 pure-jet aircraft on the Perth-Brisbane route in late 1964 (thus enabling the air services on most other routes to be increased); and the commencement of the Commonwealth Government's five-year programme of airport development in 1962. The airlines provide scheduled services to more than one hundred principal destinations in Australia.

The rates of growth of domestic passenger traffic in recent years have been high. The growth of air travel has taken place not only on the east coast trunk route services, but also in Western Australia and in services between Australia and the Territory of Papua and New Guinea.

There were eleven international airlines serving Australia in 1965, in addition to the Australian-owned Qantas Empire Airways. The number of overseas air services, capacity and passengers carried have been increasing rapidly in recent years, and seats available on all routes to and from Australia (excluding assisted migrant traffic) increased by 93 per cent from 275,000 in 1962 to 530,000 in 1965. The largest component of this increase is the Tasman traffic which increased by 152 per cent from 107,000 to 270,000.

There has been a marked development in recent years in air tours and 'packaged' (i.e. inclusive-priced) holidays which include air travel, such as extended tours to central and northern Australia, Queensland resorts and Tasmania by airlines and to the outback by private air charter tour operators. The first helicopter service to a tourist resort—to Hayman Island, in the Great Barrier Reef region—commenced in 1965. Major domestic airlines have reported an increase from about 55 in 1964 to more than 95 in 1966 in the number of organized escorted group tours sold. Such 'packaged' tours have assisted in the development of tourism to areas at some distance from the main population centres.

'Rent-a-plane' facilities are now available in many centres in Australia, as are small aircraft for passenger charter flights. There were 208 air charter operators in October 1964. The main operators of tourist charter flights are based in Sydney, the Barrier Reef—Cairns area, Alice Springs, Adelaide, and Hobart.

Sea travel. Local passenger travel by sea has declined since 1945 in Australia as it has elsewhere in the world, and many passenger vessels used for interstate trade before the 1939–45 War have been withdrawn from service and have not been replaced. Now there remain the Western Australian State Shipping Service plying mainly between Fremantle, north-west ports and Darwin, and the Australian National Line's Bass Strait passenger services. Interstate passengers are also carried by permit (*see* page 446) on overseas vessels while in Australian waters. Oversea ships serve the major Australian ports, particularly Sydney, Melbourne, Adelaide, and Fremantle on Europe-Australia-Pacific services, and Brisbane on some voyages to or from south and east Asian destinations. The number of Australia-based cruises in the south Pacific region by such vessels has increased considerably in the last five years or so.

Two passenger-car ferries provide services between Tasmanian ports and the mainland (*see* page 443), and have played an important role in the development of touring in Tasmania. The Sydney-Hobart and northern Tasmanian ports ferry commenced operation in 1965. The Melbourne-Devonport ferry has had consistently high loadings and it has been decided to build a second, larger, passenger-car ferry for this route. This will increase frequency to six services a week in each direction.

Road passenger transport. There are two main types of motor-coach operations—interstate express services and coach sightseeing tours. The low standard of some highways and equipment used has hitherto militated against the popularity of express-coach services in Australia. However, not only have roads been improved, but new and better types of vehicles have been introduced. These have quick acceleration to cruising speed, better hill-climbing capacity, virtually no maintenance delays, and much improved passenger comfort and amenities. Between 1957 and 1965 there has been a saving in time of about five and six hours respectively, about a quarter of the original times, on the Melbourne-Sydney and Sydney-Brisbane journeys of the principal operator. The same operator reports an overall increase of 23 per cent in passengers carried between 1962–63 and 1964–65.

Since the early 1960's there has been a rapid increase also in the popularity of long-distance, economy-type tours in which passengers are responsible for their own camping and cooking arrangements. This development has served to enable many Australians, particularly the more youthful, to see many parts of their country which would have been inaccessible to them before.

Private motor car travel and touring. It is in the field of travel and touring by private car that by far the biggest advance in Australian tourism has occurred in the last decade. Whereas in 1952–53 there were 1.1 million private cars registered, by 1964–65 the number was 2.8 million. Increased annual leave and long-service leave for many have made for greater use of cars for touring holidays. In addition, a family as a unit can travel more economically by private car than by public transport. Membership of automobile clubs increased by 40 per cent between 1961 and 1965. Market research organization surveys taken in recent years have indicated the intention to travel by private car of between three-quarters and nine-tenths of the families surveyed who planned to take their holidays in Australia.

Accommodation

Travel involves not merely the *movement* of people. Development of accommodation facilities goes hand in hand with development of transport, sightseeing, shopping, and entertainment for tourists, and is equally important. The existence of good, well-advertised accommodation can attract tourists as much as any other facility provided and is an essential prerequisite for successful travel development.

Variety and types of accommodation. Until recent years broad distinctions only have been drawn in Australia in classification of accommodation. Firstly, there has always been a primary distinction between licensed and non-licensed (so-called 'private') hotels and, to a degree, this applies also in respect of motel-type accommodations which may be licensed fully or for dining-room service only. Furthermore, there has always been a distinction between the terminal-type hotel (i.e. catering mainly for people who travel for commercial purposes) and the resort-type hotel (i.e. catering for people who travel for holidays, etc.). The advent of motels has introduced a further term, 'transit'. Thus motels in particular are classified either as *terminal* (or destination), *transit* (i.e. located along a highway between main destination points) or *resort* motels.

Since the 1950's a variety of types of accommodation has evolved to cater for varying needs and to suit varying pockets. There are *hotels*; *motor-hotels* (larger, hotel-like establishments, often in main centres, but catering for the needs of the motorist and not emphasizing public space such as lounges); *motels*; *guest-houses*, *chalets* and *lodges* (these barely distinguishable except perhaps by their location); *serviced apartments* or *flats*; *caravan* and *trailer-rental parks*; and *hostels*. There are also many *camping parks* with various facilities and amenities.

The diversification in the types of accommodation offered to the public has come about partly in response to changing attitudes (e.g. increased emphasis on informality, family privacy, etc.) and to cater for travellers in a wider range of income groups. With the expansion of the Australian economy (and consequent increased business travel), the increase in the number of private cars and the improvements to major highways came the introduction, in the mid-1950's, of the motel to Australia. From two or three motels only in 1955, the total has risen to more than 700 throughout Australia. Furthermore, greatly speeded-up inter-capital air services and the use of cars rented at airports favoured the growth of motels at the expense of the majority of hotels, which, in the main, were unable to match the parking facilities and general convenience offered by the former.

Volume of accommodation. There are no precise figures on a uniform basis of rooms or beds available in Australia. In particular, information in respect of unlicensed establishments (which are not necessarily under the same government supervision as licensed establishments) is incomplete. It has been estimated recently that the total number of rooms available for accommodation in Australia approximates 50,000. This estimate is derived from listings in directories of accommodation designed for travellers and does not include accommodation in rented flats (important for holiday makers in many cities and resorts), caravan parks, hostels, and the like. The following table provides estimates of accommodation within three miles of the General Post Office at capital cities in 1964.

CAPITAL CITY ACCOMMODATION(a), 1964

Type of accommodation and facilities	Number of premises	With private bath or shower and toilet		Without private bath or shower and toilet		Total	
		Rooms	Beds	Rooms	Beds	Rooms	Beds
All capital cities—							
All rooms with private bath or shower and toilet—							
Licensed hotels	35	3,346	6,047	3,346	6,047
Non-licensed hotels, etc. .	20	774	1,561	774	1,561
Motels	61	2,592	6,166	2,592	6,166
Some rooms with private bath or shower and toilet—							
Licensed hotels	50	1,018	1,787	1,703	2,433	2,721	4,220
Non-licensed hotels, etc. .	28	831	1,375	1,732	2,619	2,563	3,994
Motels	2	2	5	20	47	22	52
No rooms with private bath or shower and toilet—							
Licensed hotels	148	2,849	4,318	2,849	4,318
Non-licensed hotels, etc. .	79	3,895	6,168	3,895	6,168
Total	423	8,563	16,941	10,199	15,585	18,762	32,526
Sydney	83	2,773	5,516	2,988	4,693	5,761	10,209
Melbourne	57	2,168	4,188	2,290	3,267	4,458	7,455
Brisbane	56	894	1,745	1,186	1,797	2,080	3,542
Adelaide	85	1,000	1,854	1,359	2,103	2,359	3,957
Perth	44	584	1,121	1,228	1,875	1,812	2,996
Hobart	72	486	1,069	795	1,235	1,281	2,304
Darwin	9	74	151	106	201	180	352

Total	423	8,563	16,941	10,199	15,585	18,762	32,526

(a) Within three miles of the General Post Office.

About one-quarter of the capital city hotel and motel accommodation within three miles of the General Post Office in each of the eight capital cities comprised rooms either newly-built or improved to international standard during the period 1958 to 1964, as the following estimates show.

**NEW AND IMPROVED TO INTERNATIONAL STANDARD
CAPITAL CITY HOTEL AND MOTEL CAPACITY(a)
BUILT 1958 TO 1964**

(Rooms)

City	Hotels	Motels or motor hotels	Total
Sydney	836(b)	616	1,452
Melbourne	621(b)	507	1,128
Brisbane	165	237	402
Adelaide	189(b)	450	639
Perth	298(b)	127	425
Hobart	99(b)	129	228
Darwin	15	22	37
Canberra	175(b)	381	556
Total	2,398	2,469	4,867

(a) Within three miles of General Post Office. (b) Improved to international standard involving some reduction in previous room capacity.

Within nine miles of the General Post Office, available accommodation in 1964 amounted to 23,902 rooms in 644 establishments. Of these rooms, 11,030 had a private bath or shower and toilet.

Conventions and conferences and facilities. Conventions and conferences have increased greatly, keeping pace with the growing facilities for holding them. These include the necessity in many cases for simultaneous multi-lingual translation facilities and large hotels or other venues with a complex of convention meeting rooms. The favoured centres appear to be Sydney and Melbourne, the Gold Coast, Canberra, Adelaide, and Brisbane. Spring and autumn, with peaks in October and May, appear to be the most favoured times of the year for holding conferences, except for Canberra, which is the venue for a number of summer conferences, and the Gold Coast, which is busy in winter also.

Until about 1961, following the introduction of jet flights, it was fairly rare for Australia to be chosen as the venue for international conferences except those of Pacific or regional organizations. There were some half dozen international meetings of note in that year and double that number in 1962, a year which included large gatherings such as the World Power Conference and Associated Country Women of the World, both held in Melbourne, and the World Poultry Congress, held in Sydney. The World Timber Congress (1963), the International Mining and Metallurgy Conference (1964), Pacific Area Travel Association Conference (1964), and the World Congress of Junior Chambers International (1965) are some international conventions held in Australia in recent years. The lack of a large, specialized conference building in Canberra has prevented the National Capital from being a venue for bigger national and international conferences. However, in 1964-65 about eighty national conferences, involving about 7,000 delegates, were held there.

Although Australia has demonstrated its ability to handle international conventions, the limitations imposed by distance and the venue requirements of large international bodies remain problems in developing this important aspect of international travel.

Financing accommodation development. Investment in motel companies over the last five years or so has increased rapidly. Shareholders' capital in listed motel companies totalled \$2.6 million in 1960, \$7.8 million in 1961, \$13.0 million in 1962, and \$14.2 million in 1963. However, construction of hotels of a primarily residential nature has, in general, been inactive. Since 1960 there have been only two large international-standard hotels opened, one in Sydney and one in Melbourne, with a third (in Sydney) scheduled for completion in 1966. Growth of new accommodation at resorts, with exceptions such as in the Kosciuszko State Park and on the Gold Coast of Queensland, has been fairly slow.

In the past, finance, or the lack of it, has been a controlling factor in the development of travel and tourism, and adequate finance is essential to future tourism in Australia. Hotel investment is characterized by heavy capital costs in fixed property assets, on which depreciation is not allowable for taxation purposes, and offers moderate returns, in the short term, on capital. A modern international hotel may take three years to plan and another two to become established. Thus it is necessary to have at least two-thirds of the capital investment in long-term, low-interest loans. It is difficult to attract capital for hotel investment where other investment opportunities offering quick and safe returns exist. Equity capital must often come from persons or organizations who wish to diversify their investments by the inclusion of some ventures with good long-term prospects. Such organizations may include carrier companies and land developers. The three major hotel projects in Sydney and Melbourne in recent years have been of a type where capital has been furnished by or through carrier or other outside institutions, and in two of the three cases the hotel was a part of a multi-purpose site development plan. In only one case has any Australian-owned accommodation organization been able to attract a large amount of over-sea capital for its own development.

Tasmania has endeavoured to solve the problem of financing accommodation development by means of the *Tourist Accommodation Loans Act 1945*, which set up a fund for loans for approved projects. The amount lent from 1945 to 30 June 1965 was \$1,830,000. This has assisted in achieving a more balanced development of accommodation in that State. The Western Australian Government has given guarantees, under the Industries Advances Act, to enable loans for essential additional self-contained accommodation to be provided in certain areas of the State. Similarly, Queensland has provided bank guarantees, through its Department of Industrial Development, for comparatively small sums to some resort operators in under-developed or semi-developed areas.

Grading of accommodation. Standard gradings not only help the tourist to choose the accommodation best suited to his needs, but they are also valuable in raising standards. Although there are no grading systems on the lines of the *Michelin Guide* of France and those of other European countries, the National Roads and Motorists' Association in New South Wales, the Royal Automobile Club of Victoria, and the Royal Automobile Association of South Australia each has its own classification according to star ratings. The Western Australian Tourist Development Authority announced in 1965 that a system of grading of accommodation would be introduced by the State Licensing Court, in co-operation with the Authority.

Other accommodation matters. There is insufficient trained personnel, particularly at management levels. The staggering of holidays would reduce seasonality of demand for accommodation, especially at certain resort areas. The lack of a uniform system of accommodation accounting (such as that used in the United States) and an absence of accurate knowledge of occupancy ratios for the main categories of accommodation at principal centres handicap persons interested in investing in existing, and developing new, accommodation.

The Australian Hotels Association (AHA), which has Residential Divisions in each State, is the trade association representing the interests of hotels. In the motel field the principal organizations are the Motel Federation of Australia (MFA) and Flag Motels ('Flag'), both of which set membership standards and whose members mutually refer bookings within their own membership. About ninety per cent of Australia's motels belong to such referral groups or large motel chain operations. A significant step was taken in 1965 when representatives of the A.H.A., M.F.A., Flag, and other motel organizations met to form the Australian Accommodation Council, whose purpose is to act on behalf of the whole industry on appropriate occasions.

Travel agencies

Travel is sold through private travel agents as well as by transportation and accommodation principals through their own booking offices. A great deal of travel is sold also through bank travel services, automobile club travel departments and State Government tourist bureaux. Travel agencies of whatever type earn their income from commissions on transport, tour, cruise, and accommodation bookings. Travel to overseas destinations is thus of greater importance to travel agents than is domestic travel (with its lower, or even non-existent, commission rates) or handling incoming travellers' arrangements in Australia.

The *Australian Federation of Travel Agents* is a trade association of travel agents founded in 1957, whose aims include establishing and maintaining a code of ethics for travel agents and the linking into one organization of persons engaged in the travel agency field. Active members, who must be travel agents appointed by principals or conferences of principals, such as the Australian Passenger Agents Conference or the International Air Transport Association, numbered 130 at 30 June 1965. There are also thirty-one associate members, i.e. travel agents who do not qualify as active members, and forty-five allied members (e.g. hotels, motels and car rental firms).

International travel and tourism organizations

The growth of international travel and tourism in recent times has contributed to the extension of the activities of existing, and the creation of new, international organizations in this field. The work of the new organizations, whose main aim is to achieve international collaboration in the field of travel, tourism and activities directly connected with or depending on tourism, has in turn facilitated the growth of travel and tourism. Most of the promotion and transport organizations and the accommodation and travel agency associations in Australia are affiliated with international organizations in their field.

The *International Union of Official Travel Organizations (IUOTO)*, with headquarters in Geneva, has consultative status with ECOSOC and UNESCO and had ninety-five full members in 1965. Full members comprise governmental organizations or national organizations established or recognized by their governments and dealing with the development of national and international tourism to or in their countries. Australia is represented by the Australian National Travel Association as full member. Amongst the most significant activities of the Union are the establishment and application of technical training in tourism (under which five trainees have now come to Australia in the last two years for three months training with ANTA); action with a view to the convening by the United Nations of a world conference on international travel and tourism; and organization of travel research seminars devoted to questions of travel statistics, market surveys, forecasting, and tourist publicity. There are seven Regional Commissions, and Australia is a member of the Regional Commission for the Pacific and Far East. In addition, there are five Technical Commissions studying travel development, elimination of travel barriers, travel plant, research, and transport.

The *Pacific Area Travel Association (PATA)* is a regional promotion organization which, in 1966, had 785 members from forty-eight countries. Its headquarters are in San Francisco. Membership in February 1966 included thirty-three active government members (Australia is represented by the Australian National Travel Association and also one State—the New South Wales Department of Tourist Activities); forty-three active carrier members (representatives from Australia are Qantas Empire Airways, the two main domestic airlines and Ansett-Pioneer); and 711 other members in the fields of travel agencies, hotels, restaurants and operators of sightseeing tours, publishers and others, distributed over the categories of Allied Members and Associate Members. The aim of PATA is to develop, promote and facilitate travel to and within the Pacific area, and for this purpose to co-ordinate the efforts of groups concerned in co-operation with official tourist departments. The Association engages in tourist publicity activity for the Pacific, primarily in North America and, in more recent years, in Western Europe and elsewhere. It also maintains an information service and undertakes research.

The *International Automobile Federation* is composed of national automobile associations (one from each country) and has more than fifty members. Australia is represented by the Australian Automobile Association, with which Australian motoring organizations are affiliated.

The *International Air Transport Association (IATA)*, with headquarters in Montreal, Canada, has regional offices in New York, Paris and Singapore. There are two categories of members, active members representing the air transport enterprises which carry the flag of a member-country of the International Council of Aeronautical Organizations (ICAO) and which operate a regular air transport service for passengers, mail or freight between the territories of two or more countries, and associate members which operate air transport enterprises in one country alone. The main aims of IATA are to promote the development of reliable, regular and economic air transport and to encourage co-operation amongst air transport enterprises working directly or indirectly on international routes.

The *International Hotel Association (IHA)* had fifty-one national-member hotel associations (one from each country) in 1965 and also had members drawn from individual hotels and restaurants in more than seventy-five countries. The Australian Hotel Association and eight individual Australian hotels are members. IHA studies problems of the industry from an international point of view as well as problems of international tourist traffic, and also deals with relations between the hotel industry and travel agencies, professional instruction and training visits abroad.

The *Union of Official Travel Agents' Associations* was formed in 1964 by the national travel agency organizations. Its aims are to protect and further the interests of its members at the international level. Australian travel agents are represented by the Australian Federation of Travel Agents.

Inter-governmental organizations

The *Economic and Social Council of the United Nations Organization* has on several occasions manifested an interest in tourist problems, especially in its resolutions on the development of international tourism in March 1955 and in April 1957. In 1959 the Council referred to the

resolution adopted by the International Union of Official Travel Organizations in 1958 asking for the convening by the Council of an international diplomatic conference on international tourism. The Council invited the Secretary-General of the United Nations to pursue studies in the matter of international tourism and to submit to the Council recommendations concerning the development of international tourism, including the advisability of convening an international conference on this subject. This resolution of the Economic and Social Council was the starting point of work which culminated in the convening of the United Nations World Conference on International Travel and Tourism in Rome in August-September 1963. The Conference, which was attended by a delegation from Australia, and its many recommendations represent a great step forward in the development of world tourism. The recommendations are being followed up by IUOTO and its members.

The following *specialized agencies* of the United Nations carry out activities which concern international tourism. UNESCO encourages international tourism, particularly of young people. It facilitates international contacts through conferences and strives for the preservation of historical sites. It maintains close relations on these and similar topics with IUOTO. The *International Civil Aviation Organization* (ICAO), of which Australia is a member through the Department of Civil Aviation, aims to determine and develop principles on which international air navigation is based, and to encourage the development of international air routes, airports and air navigation facilities. ICAO also aims to reduce or even abolish certain formalities associated with air travel and consequently to make air travel easier and more comfortable. The results of this facilitation activity are contained in Annex 9 of the 1944 Convention on International Civil Aviation, which has been modified and added to on several occasions. In Annex 9 of the ICAO Convention a set of standards and recommended practices are set out, which member countries are encouraged to achieve. Under the articles of the convention, member countries must report regularly on remaining differences between these standards and national practices. National 'FAL Committees' in member countries meet regularly to achieve facilitation of air travel. The *International Maritime Convention Organization* has similar aims and activities in respect of the facilitation of sea travel, and non-governmental organizations such as IUOTO and PATA also work towards the facilitation of international travel generally.

Training facilities in the travel and tourist industries

The quality of services rendered by the employees of the various businesses involved in travel and tourism is a most important factor in visitor satisfaction. It has given cause for some concern in Australia, where most training is provided on the job or by courses of the 'in-service' type. The airlines, one or two of the State tourist departments and national park services, a car rental company, one major motel chain, and a motor-coach company hold training courses from time to time for particular groups of employees. Air and shipping companies hold short training seminars periodically for staff of travel agencies to familiarize them with particular aspects or features of the carriers' equipment or procedures of the States. The New South Wales Department of Tourist Activities has held an annual conference in recent years for the purpose of providing training for, and opportunity for discussion between, representatives of the regional tourist organizations. The Queensland Government Tourist Bureau held a Tourist Industry Seminar in 1963.

Formal training facilities are available only in the catering and hotel management fields and in certain trades. There are no intramural training courses in Australia which provide a qualification for employees of travel agents or for tourist guides, although the Australian Federation of Travel Agents has set up a course of studies by correspondence leading to a diploma in travel.

A three- to four-year full-time course (seven months at school, five months in industry) towards a Diploma of Catering and Hotel Management is available at the William Angliss Food Trades School in Melbourne (from which one student graduated in 1966); and a four-year part-time course is offered at the East Sydney Technical College in Sydney, both for potential hotel executives. Certificate and diploma part-time courses are available at the Brisbane Technical College in management—hotel executive staff, and a part-time course at the Hobart Technical College in hotel management. Full-time and part-time courses in some accommodation and catering industry occupations, such as cooks, housekeepers, waiters, and bartenders, are offered at technical colleges in Sydney, Melbourne, Brisbane, Adelaide, Perth, and Hobart. However, it is generally agreed that there is a shortage of trained personnel, which may be relieved by wider appreciation of the skills required in these trades.

MEASURES OF TRAVEL VOLUME AND FLOW AND VISITOR SPENDING

The following paragraphs provide a summary of available statistics relating to tourism.

Oversea movement

Definitions

As part of the official collection of statistics of overseas arrivals in, and departures from, Australia, the Commonwealth Statistician provides information about the volume and characteristics of overseas travel to and from Australia. The Statistician classifies all arrivals and departures into three categories, namely: *permanent movement* (i.e. settlers arriving and Australian residents departing permanently); *long-term movement* (i.e. Australian residents returning to Australia after a stay in a country abroad for one year or longer, or departing from Australia with the intention of staying in a country abroad for one year or more, also overseas visitors arriving with the intention of staying in Australia for a year or more or departing after a stay in Australia of a year or more); and *short-term movement* (i.e. all other movements). The statistics which follow relate to this short-term movement. The short-term movement, as defined by the Statistician, refers basically to travellers, Australian residents and visitors from overseas, who intend to, or actually do, spend a period of less than twelve months in a country abroad or in Australia. The concept does not entirely coincide with the concept of tourists used by international agencies and tourist organizations. The definition includes the movement of Australian troops, regardless of their length of stay abroad, and persons who come to Australia or go abroad for paid work or to study (as long as their intended or actual length of stay is less than one year). It excludes visitors to Australia and residents on visits abroad if their stay in Australia or in a country abroad is one year or more and all crew and persons who arrive in and depart from Australia on the same ship's voyage or on the same flight, but includes persons who, on arrival, declare their purpose of visiting Australia to be 'in transit', as long as a change of ship or flight takes place. Australian residents visiting abroad may be *away from Australia* for more than a year but still be included in the short-term movement as long as their *stay in any one country abroad* is not for a year or more.

Short-term movement—visitors and residents

The following table of short-term visitor arrivals from, and returns to, overseas countries indicates a substantial growth in travel to and from Australia since 1960, mainly by air.

OVERSEA ARRIVALS AND DEPARTURES—SHORT-TERM MOVEMENT
VISITORS, AUSTRALIA, 1956 TO 1965

Year	Arriving			Departing		
	By sea	By air	Total	By sea	By air	Total
1956 . . .	23,135	42,883	66,018	24,818	39,515	64,333
1957 . . .	20,464	38,152	58,616	23,097	36,988	60,085
1958 . . .	19,834	41,508	61,342	21,580	39,452	61,032
1959 . . .	18,907	49,213	68,120	21,792	50,238	72,030
1960 . . .	19,581	65,042	84,623	21,804	62,866	84,670
1961 . . .	19,899	79,397	99,296	25,410	77,130	102,540
1962 . . .	19,165	92,259	111,424	23,253	90,330	113,583
1963 . . .	18,066	107,311	125,377	22,358	106,973	129,331
1964 . . .	18,916	128,962	147,878	22,147	128,494	150,641
1965 . . .	20,291	153,037	173,328	24,491	154,442	178,933

With the number of visitors increasing from year to year, some excess of arrivals over departures in any one year might be expected. However, the reverse has been the case in eight of the ten years shown, and over the whole period departures exceeded arrivals by more than 21,000. The reason lies broadly in the difference between the period of intended stay, as stated on the arrival of the visitor, and the period actually spent in Australia, as stated on his departure, resulting in a different classification on arrival from that on departure. There are other contributory factors, such as complicated travel patterns, which have similar effect.

The increase in travel overseas by Australian residents has been more sustained, both by sea and by air, than the increase in visitor travel to and from Australia.

**OVERSEA ARRIVALS AND DEPARTURES—SHORT-TERM MOVEMENT
AUSTRALIAN RESIDENTS, 1956 TO 1965**

Year	Departing			Returning		
	By sea	By air	Total	By sea	By air	Total
1956	29,161	22,239	51,400	32,789	24,819	57,608
1957	28,189	25,249	53,438	29,897	26,120	56,017

1959	33,715	30,916	64,631	28,070	33,684	61,754
1960	37,160	40,601	77,761	31,945	43,222	75,167
1961	41,870	48,010	89,880	34,818	51,390	86,208
1962	39,230	56,642	95,872	34,531	61,384	95,915
1963	41,053	71,374	112,427	34,205	76,977	111,182
1964	43,785	89,463	133,248	36,430	94,924	131,354
1965	51,138	110,554	161,692	43,382	117,162	160,544

Information is also available as to the country of embarkation on the ship or aircraft which brought visitors to Australia and the country of disembarkation from the ship or aircraft which took residents abroad. The shipping and flight routes available to intending passengers must be taken into account when considering these figures. They do not necessarily indicate the country of origin of visitors, nor the country of destination of residents going abroad.

**OVERSEA ARRIVALS AND DEPARTURES—SHORT-TERM MOVEMENT

(a) Country in which the visitor was last resident for a period of one year or more.

The two preceding tables present contrasts between the countries in which visitors actually resided (for one year or more) prior to their visit to Australia and the countries in which they embarked (on what in many cases would have been a stage of their journey determined by the available shipping or flight route). While about 14,000 short-term visitors embarked in the United States for their visit to Australia, nearly 24,000 United States residents visited Australia in the short-term movement. Many Canadian and European residents also arrive in Australia on ships or planes which they boarded after leaving their home countries.

The intended length of stay by visitors to Australia and by residents going abroad is related to the purpose of the journey in the following tables.

**OVERSEA VISITORS ARRIVING—SHORT-TERM MOVEMENT
LENGTH OF STAY, BY PURPOSE, 1965**

Intended length of stay	Business	Holiday	Education	Other and not stated	In transit(a)	Total
Under 1 week	5,869	7,257	205	1,316	22,257	36,904
1 week and under 2 weeks	7,822	12,278	392	1,433	2,463	24,388
2 weeks and under 3 weeks	6,404	15,457	377	1,496	1,012	24,746
3 weeks and under 1 month	2,411	11,393	197	562	304	14,867
1 month and under 2 months	4,295	14,741	335	1,346	507	21,224
2 months and under 3 months	1,557	8,140	254	766	..	10,717
3 months and under 4 months	1,461	7,690	980	1,126	..	11,257
4 months and under 6 months	425	3,022	260	324	..	4,031
6 months and under 12 months	1,211	6,199	3,614	1,249	..	12,273
Indefinite, not stated, etc.	715	2,914	418	1,346	7,528	12,921
Total	32,170	89,091	7,032	10,964	34,071	173,328

(a) Includes those visitors who stated 'In transit' as the purpose of their journey to Australia and whose intended length of stay did not exceed one month, but excludes passengers passing through Australia without change of ship or aircraft.

More than one-third of the short-term visitors arriving stated that they intended to stay less than two weeks. The preponderance of persons on holidays in the two- to three-weeks group may be attributed in some degree to the short 'Airconomy' package tours available to New Zealanders.

**AUSTRALIAN RESIDENTS DEPARTING—SHORT-TERM MOVEMENT
LENGTH OF STAY, BY PURPOSE, 1965**

Intended length of stay	Business	Holiday	Education	Other and not stated	Total
Under 1 week	4,231	1,680	137	679	6,727
1 week and under 2 weeks	4,825	5,992	156	708	11,681

(a) The country in which the visitor was last resident for a period of one year or more. (b) Excludes 34,071 passengers who stated 'In transit' as the purpose of their journey to Australia and whose intended length of stay did not exceed one month.

Statistics have not been compiled so far to indicate the respective lengths of stay of visitors from various countries according to purpose of journey.

The seasonal pattern of overseas short-term travel to and from Australia is shown in the next table which provides monthly figures of arrivals and departures during 1965.

OVERSEA ARRIVALS AND DEPARTURES—SHORT-TERM MOVEMENT

Visits to Australia are most popular in the period October to February, which corresponds to the northern hemisphere winter and is the traditional New Zealand holiday season. The autumn months are most popular with Australian residents going abroad.

The sex, marital status and age of travellers in the short-term movement to and from Australia are shown in the next table.

**OVERSEA VISITORS ARRIVING AND AUSTRALIAN RESIDENTS DEPARTING
SHORT-TERM MOVEMENT: MARITAL STATUS AND AGE, AUSTRALIA, 1965**

Direct transit travellers

As pointed out on page 1771, all the preceding figures in this section exclude persons who arrive in and depart from Australia on the same ship's journey or on the same flight. Persons thus excluded are not all normally considered visitors to Australia. For instance, settlers or other persons going to New Zealand, Papua and New Guinea or other neighbouring countries or leaving such countries may travel through Australia on their way. On the other hand, all persons visiting Australia on various cruise vessels, which may remain in Australian waters for a considerable time, are also treated as direct transit travellers and are thus excluded from the figures shown on previous pages. In 1965, 26,661 persons were reported as direct transit passengers on ships calling at Australian ports, accounting for approximately 166,000 passenger-days between arrival at first port and departure from last port in Australia.

**OVERSEA SHIPPING PASSENGERS IN DIRECT TRANSIT(a)
AUSTRALIA, 1965**

Approximate period from first to last Australian port (days)	Passengers	Passenger-days
	per cent	per cent
2 or less	22.3	4.4
3- 4	13.0	6.3
5- 6	4.1	3.7
7- 8	27.1	32.7
9-10	30.9	46.0
11-21	2.1	4.3
22 and over	0.5	2.6
Total	100.0	100.0

(a) Persons who arrived in and departed from Australia on the same ship's voyage.

Interstate and other internal movement

Information about the volume and pattern of travel within Australia is limited. Figures are available on passengers transported in Australia by sea, air and rail, but the last two do not distinguish different types of travellers, nor provide detail of their origin and destination.

Sea travel

Interstate movement by sea is shown in the following table, according to State or Territory of embarkation and of disembarkation.

**INTERSTATE PASSENGERS BY SEA, BY STATE OR TERRITORY OF EMBARKATION
AND OF DISSEMBARKATION, 1965(a)**

State or Territory of embarkation	State or Territory of disembarkation							Total
	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	
New South Wales . .	694	4,240	832	1,883	3,865	10,473	..	21,987
Victoria	5,868	2,095	706	475	2,677	44,908	..	56,729
Queensland	496	265	20	4	121	906
South Australia . .	649	130	32	9	777	1	..	1,598
Western Australia .	2,269	1,427	167	195	72	4	1,106	5,240
Tasmania	9,739	43,925	8	..	1	53,673
Northern Territory .	3	4	28	..	746	781
Total	19,718	52,086	1,793	2,566	8,259	55,386	1,106	140,914

(a) Excludes crew and persons carried as supernumerary crew.

The above table includes passengers on interstate journeys beginning and ending in the same State. It excludes, however, passengers on cruises from Australia to the south-western Pacific area and back. It is estimated that about 15,300 travellers embarked on such cruises in 1965. All these, and about one in four of the interstate passengers included above, were carried on oversea vessels. Most of the passengers carried interstate by Australian-licensed vessels travelled between the mainland and Tasmania.

The following table shows the movement of passengers and cars between Melbourne and Devonport by the Australian National Line passenger-car ferry service inaugurated in 1959.

**AUSTRALIAN NATIONAL LINE: MELBOURNE-
DEVONPORT PASSENGER-CAR FERRY(a)
1959-60 TO 1965-66**

Year	Passengers	Cars
1959-60	64,860	16,980
1960-61	83,191	19,841
1961-62	86,792	19,172
1962-63	89,589	19,755
1963-64	89,235	20,054
1964-65	89,694	20,476
1965-66	88,274	21,270

(a) Passengers and cars which are carried both to and from Tasmania are counted twice.

Air travel

During 1964-65 regular internal air services throughout Australia recorded 3.77 million journeys of paying passengers. This figure represents the embarkations on all airline flights, and passengers making a journey consisting of more than one flight (as identified by a particular flight number) are recorded as making more than one journey. A total of 1,639 million paying passenger-miles was recorded during 1964-65, an increase of 114 per cent over the figure recorded for 1954-55. *See also* page 482 of the chapter Transport and Communication.

The following table shows the passenger movement on internal flights through each of the principal Australian airports during the years 1960-61 to 1964-65. The movement figures represent total embarkations on, and disembarkations from, each airline flight at the airports specified. Movements to and from Papua and New Guinea and Norfolk Island are included.

**CIVIL AVIATION: INTERNAL PASSENGER MOVEMENT AT PRINCIPAL
AUSTRALIAN AIRPORTS, 1960-61 TO 1964-65**

Airport	1960-61	1961-62	1962-63	1963-64	1964-65
Sydney	1,442,317	1,493,820	1,566,778	1,802,618	2,086,571

Mackay	42,074	38,502	38,270	45,310	61,071
Rockhampton	40,356	37,981	41,623	46,524	55,809
Cooma	36,763	39,156	40,733	46,864	50,757
Devonport	32,753	34,329	35,971	39,377	45,401
Wagga	55,359	39,868	36,836	41,135	43,404
Kingscote	29,258	29,008	30,792	32,821	40,591
Tamworth	30,798	30,522	31,592	36,869	40,253
Port Lincoln	30,966	30,342	32,057	33,859	38,858
Darwin	23,443	25,803	29,721	34,159	38,804

This table indicates a substantial over-all increase over the past few years in travel by air within Australia. Outside the capital cities, the most significant increases occurred on the Central and North Queensland Coast.

Rail travel

The following table shows the number of passenger journeys (excluding suburban journeys) made within each railway system. *See also* page 465 of the chapter Transport and Communication.

GOVERNMENT RAILWAYS: PASSENGER JOURNEYS^(a)

(EXCLUDING SUBURBAN JOURNEYS)

('000)

System	1954-55	1963-64	1964-65
New South Wales	12,401	13,358	13,312
Victoria	6,247	5,082	4,907
Queensland	6,207	3,391	2,961
South Australia	1,399	895	870
Western Australia	785	516	484
Tasmania	(b) 595	197	205
Commonwealth—			
Trans-Australian	110	236	238
Other	105	102	109
Australia	27,849	23,777	23,086

(a) Based on ticket sales, making allowances for periodical tickets. Inter-system traffic is included in the total for each system over which it passes. (b) Concession tickets were counted according to the proportion of the adult fare charged, but subsequently have been counted as full journeys.

Passenger traffic on the Trans-Australia route more than doubled over the ten-year period; it is expected to increase even further with the completion of the trans-continental standard gauge line from Sydney to Perth in 1968-69.

Motor vehicle travel

Some information on the usage of motor vehicles was obtained in a sample survey conducted throughout Australia by the Commonwealth Bureau of Census and Statistics in November 1963. The sample comprised 19,676 vehicles, of which 2,742 were cars or station

wagons. Because the survey results are based on a sample, they are subject to sampling variability and may therefore differ somewhat from the results that would have been obtained from a complete enumeration of all registered motor vehicles. The principal figures relating to cars and station wagons are shown in the following table. They are quoted from a preliminary report on the survey and are subject to revision.

SURVEY OF MOTOR VEHICLE USAGE, 1963
CARS AND STATION WAGONS: STATES AND TERRITORIES
(Preliminary estimates)

	N.S.W. (a)	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.

at registration.

(b) Includes vehicles in dealers' ownership.
(d) Excludes vehicles in dealers' ownership.

(c) Average of
(e) Address

An indication of the growth in the use of the motor vehicle as a means of travel is provided by the following figures of combined membership of Australian motoring organizations affiliated with the Australian Automobile Association.

1961	. . .	1,194,658
1962	. . .	1,291,021
1963	. . .	1,406,055
1964	. . .	1,543,415
1965	. . .	1,676,592

For information on the numbers of motor vehicles on the registers of the States and Territories see pages 473-5 of the chapter Transport and Communication.

Visitor spending

Spending by overseas visitors to Australia and by Australians abroad

Balance of payments estimates. No direct measure is available of the spending by short-term visitors to Australia or by Australians going abroad in the short-term movement. Expenditures by or on behalf of these visitors, insofar as they are met from external sources of funds, represent a credit item in the balance of payments of the country visited. Official estimates are made of

transactions between Australian residents and the rest of the world classifiable to 'travel' in the course of preparation of estimates of Australia's balance of payments. These estimates are based largely on the foreign exchange record compiled by the Reserve Bank of Australia, which covers travellers' cheques cashed, Australian currency exchanged for visitors' foreign currency, and drawings under letters of credit, etc. by persons visiting Australia for pleasure, business or other reasons, and by Australians visiting overseas. Earnings of Australian domestic airlines for the on-carriage of overseas visitors over internal air routes are included, but, in accordance with the internationally adopted definitions recommended by the International Monetary Fund, overseas earnings of Australian carriers and earnings of overseas shipping and airline companies in respect of fares paid in Australia are excluded from this item and included in the item 'transportation'. Papua and New Guinea are not treated as part of Australia for balance of payments purposes.

(a) Net receipts of travellers' cheques, etc., from persons visiting Australia.

(b) Net remittances of travellers' cheques, etc. by Australians visiting overseas.

The scope of these balance of payments estimates does not necessarily correspond to various concepts of international tourist expenditure. The estimates record only the direct expenditure by travellers, whereas in assessing the net gain or loss in foreign exchange resulting from international tourism indirect effects as well as these direct effects may be taken into account.

Surveys of direct spending. Surveys of direct spending by visitors, requiring the questioning of visitors at or near the time of their departure, have been made from time to time. One such survey was undertaken on behalf of the Australian National Travel Association by a private market research organization in 1962-63. The survey consisted of a sample of departing visitors who were given questionnaire cards to complete (about 1,360 usable returns were obtained) and a sample of about 400 overseas visitors staying at Sydney hotels who were interviewed. The average daily spendings of visitors as indicated by the results of this survey were as follows.

SURVEY OF OVERSEA TRAVELLERS IN AUSTRALIA, 1962-63
AVERAGE DAILY SPENDING PER HEAD(a)

(Source: Survey undertaken for Australian National Travel Association)

(\$)

	Visitors from—				
	United Kingdom	Other Common-wealth countries excl. New Zealand	New Zealand	United States of America	Elsewhere
Interviews at Sydney hotels(b)—					
Business visitors	24.6		24.8	25.2	23.6
Non-business visitors	18.2		17.2	19.4	25.6
Returned questionnaire cards(c) .	7.36	8.90	8.86	13.32	9.82

(a) The amounts shown relate to spending in Australia, as information regarding advance payments was sought in a separate questionnaire. The results were divided by the number of persons covered and by the number of days spent in Australia. (b) The question asked was 'How much would you (and your family) spend daily here?'. (c) The question asked was 'How much did you spend on your visit within Australia?'.

Visitor spending is likely to be at a lower daily rate as the length of the visit is prolonged. The following estimates of average daily visitor spending were published in the report submitted to the Australian National Travel Association by two firms of consultants consequent to a survey undertaken during 1964 (*see* page 1182).

**ESTIMATES OF AVERAGE DAILY VISITOR SPENDING
PER HEAD, 1965**

(*Source:* Survey undertaken for Australian National Travel Association)

Market area	Period of stay	
	Under one month	Over one month
New Zealand and Oceania	14	8
United States and Canada	26	14
United Kingdom and Europe	16	8
Japan, Hong Kong and Philippines . .	20	10
Other areas	14	8

Although the proportions of money spent by visitors on accommodation, food, shopping souvenirs, etc. vary, amongst other reasons, in accordance with personal predilections of visitors and with the differing opportunities for spending provided, they tend to follow a similar pattern. Differences in estimates of spending patterns given by various surveys may not be entirely due to actual differences in the spending patterns of the visitors surveyed, but may be partly explained by differences in the allocation of items of expenditure to the various categories of expenditure. The report *The Future of Travel in the Pacific and Far East* indicated that spending by an overseas visitor in the country visited tended to be in the following proportions: accommodation, 25 per cent; food and drink, 32 per cent; purchases, 25 per cent; sightseeing and amusement, 10 per cent; local transportation, 5 per cent; and other spending, 3 per cent. The ANTA Survey of 1962-63 classified spending as follows: accommodation (including meals in hotels), 38 per cent; other meals, 18 per cent; shopping, 18 per cent; tours, 5 per cent; entertainment, 10 per cent; local transport, 11 per cent.

Miscellaneous measures and local surveys of tourist travel and spending

Apart from the estimates of travel, spending, accommodation, etc. referred to elsewhere in this article, all of which are attempts to measure aspects of tourist travel and spending for Australia as a whole, there are many types of statistics collected or estimates made which refer to specific areas, often in considerable detail. While the main purpose of such collections is to assist in the planning of services in, and development of, the areas concerned, they also provide information on, or at least impressions of, travel and spending patterns elsewhere. Some of these statistics are briefly referred to here.

The National Capital Development Commission in the Australian Capital Territory conducts, for planning purposes, sample surveys of visitors, usually over the Easter period, to obtain data about their origin, route, destination, means of transport, length of stay, type of accommodation used, and reactions to Canberra's facilities and attractions. The Commission has also made studies of convention facilities and accommodation occupancy and growth to assist its planning activities.

A series of surveys has been initiated in New South Wales, commencing with a pilot study of the characteristics and economic value of tourism to Port Macquarie.

The Snowy Mountains Authority has maintained statistics since 1958 of the number of passengers on conducted tours of the Scheme. For the year 1964 the total was estimated at 53,000.

The South Australian Government Tourist Bureau has compiled an annual estimate of the number of interstate and overseas holiday and business visitors to South Australia. For 1964 it was estimated that nearly half a million visitors to South Australia spent approximately \$21 million.

In Queensland the Gold Coast City Council in 1964 made an assessment of the number of visitors and the value of their expenditure to the Gold Coast. Working from estimates of the

average costs of a family of four in various types of accommodation, including caravan and camping parks, and based on the assumptions of fifty per cent occupancy and an average length of stay of one week, the total income from the tourist trade in 1964 was assessed at nearly \$72 million.

The Northern Territory Tourist Board has estimated that 28,500 people visited the Northern Territory in 1964, about seven per cent of whom came from overseas. On the basis of its estimate that the average visitor to Alice Springs stays eleven days and spends \$13.75 a day, and the average visitor to Darwin stays 3.75 days and spends \$17.50 a day, the value of tourist spending to the Northern Territory is estimated at about \$8 million a year.

Small local surveys, often by means of questionnaire cards filled in by visitors, have been undertaken in many centres. The Municipality of Cooma estimated that in 1964 about \$800,000 a year in wages earned by the local population could be attributed to visitors. Sixty-eight per cent of the total parties surveyed were on their first visit. Average length of stay was three days. The Proserpine Regional Planning and Tourist Promotion Advisory Committee estimated that the value of tourists' spending to Proserpine for the year ended October 1962 was \$337,000, and that more than 32,000 tourists passed through the area, nearly half of them arriving by air.

Plans for the development of travel statistics

There has been a remarkable development in the volume and diversification of travel and tourist activity in Australia in recent years, accompanied by an increase in the numbers and types of people and organizations involved—both as users and as suppliers of tourist services and facilities. In consequence, considerable interest has arisen in the development of adequate measures of the various aspects of this subject. The Commonwealth Bureau of Census and Statistics has conducted surveys of motor vehicle usage and of interstate travel, and investigations are being made towards further development along these lines. The gradual development of passenger statistics so as to provide more information relative to tourist travel, particularly for rail and air transport, is also being planned.

Perhaps the most important development is the increasing involvement of State authorities in fact finding and in the analysis of tourist information. Some of the work being done has been referred to in previous paragraphs. Tourist authorities of some States have expressed the intention of undertaking local or State-wide surveys.

RESEARCH IN THE FIELD OF TRAVEL AND TOURISM

ANTA surveys

Travel research and surveys are comparatively undeveloped in Australia. At the national level, ANTA in the last four or five years has carried out some market research and survey studies, although a great deal remains to be done. Studies conducted by or for ANTA can be grouped as follows.

Research into existing or potential markets abroad. Field studies have been carried out in the United States of America, Britain and the Far East. They stem from the needs of ANTA's promotions division and overseas offices for data to guide their advertising, publications and public relations activities.

Research into the characteristics, attitudes and reactions of overseas visitors to Australia. In 1962-63 ANTA had a major study carried out regarding overseas visitors to Australia. From time to time it has carried out surveys on matters such as cruise passengers visiting Australia, spendings resulting from individual cruise ships calling at Australia, and the routes followed by overseas visitors' tours.

Surveys of aspects of Australia's attractions and travel and tourist industry plant. These studies have ranged from measures of accommodation growth and means of financing it to visitor shopping and souvenirs. The purpose of this work is to inform ANTA of the volume and quality of Australia's facilities in relation to the needs and preferences of existing and potential visitors from the main overseas markets.

ANTA also gathers information through overseas sources on aspects of international travel and tourism which have relevance to the Australian situation. It maintains a technical library at its Melbourne Head Office. A Research Bulletin is published six times a year, through which the results of ANTA'S research and survey work are disseminated.

Australian Tourist Industry Development Survey

During 1964 an Australian Tourist Industry Development Survey was undertaken by two New York firms for ANTA on behalf of the Commonwealth and State Governments. The

Report, entitled *Australia's Travel and Tourist Industry*, 1965, was published in July 1966 and covers many aspects of travel and tourism in Australia and their potential. The report states that Australia stands on the threshold of great opportunity in the field of international tourism and that it should meet the challenges provided by an expanding travel movement of Australians at home and the travel needs of a greatly increased flow of overseas visitors, and should establish policies and plan for the development of its tourist industry, destination areas and travel facilities. International travel to Australia is projected in this report to potential targets of 320,000 visitors by 1970 and 607,000 by 1975. Their spending in Australia could reach over \$120 million in 1970 and over \$206 million in 1975. The authors suggest that these estimates of spending, which exclude any allowances for spending by cruise ship passengers, are conservative. Accommodation needs within the next decade are projected at 46,600 additional rooms. The report indicates what it considers to be the more important requirements if substantial benefits are to be realized. Among them are the following.

Recognition by the Commonwealth and State Governments of the role of travel and tourism and of an adequate travel plant in the overall economy of the country, accompanied by increased recognition thereof by the public generally.

Determination of the roles of the Commonwealth Government and the State and Territory Governments in relation to each other and to the activities of the many business organizations and individuals engaged in the various segments of the industry.

Planning of, and financial encouragement for, additional accommodation to supply the needs of the steadily increasing numbers of domestic and overseas travellers.

Constant efforts towards reduction, as feasible, of international air fares from distant markets, particularly through special promotional fares.

Creation of special tourist fares within Australia, primarily by air, to encourage travel over circular routes designed to induce more travellers, domestic and overseas, to visit more of the continent.

Adoption of an intensive promotion programme in travel markets overseas, correlated with development of travel attractions and facilities in Australia.

Surveys by New South Wales Department of Tourist Activities

In 1965 the New South Wales Department of Tourist Activities appointed a research officer and initiated a pilot survey of the tourist industry at Port Macquarie. This was preliminary to the design of an effective survey for resort towns, conducted by means of questionnaires completed by tourists and information obtained from accommodation operators, retailers and others. The Department of Tourist Activities proposes to institute a series of surveys of movement and spending of tourists within the State.

Conclusion

To sum up, little research has been carried out so far in the field of travel and tourism in Australia. Perhaps because tourism in Australia is, by overseas standards, still at a comparatively unsophisticated stage of development, there is little emphasis on the use of market research and survey techniques by government tourist departments and private enterprise organizations. Only a few market research studies have been carried out in recent years, and there are few research officers engaged specifically in this subject, although some organizations have well set-up market research and planning departments carrying out continuing analyses of various aspects of their particular industry.

FUTURE PROSPECTS FOR TRAVEL AND TOURISM

Great hopes are held for the future of travel and tourism in Australia, since public demand for tourist goods and services is steadily increasing and there are no apparent signs of the limit being reached. Australia has, with much of the rest of the world, been participating in the last couple of decades in an extension of the travel market, both domestic and international, on an ever-broadening economic and social base.

The vast technological developments in transportation are continuing, and provide an exciting prospect for Australia in terms of its still rather remote geographical relationship to the rest of the world. By 1970, for instance, the aviation industry expects that the large sub-sonic 'jumbo-jets', or 'jet-buses', will be in service. These are designed to carry 490 economy or 378 mixed-class passengers, and will be faster than present jets. Economical operation may eventually be expected to make substantial fare reductions possible. The successors to these aircraft will be supersonic airliners flying at twice the speed of sound, with the capacity to halve present flying times to Australia.

DIARY OF PRINCIPAL ECONOMIC EVENTS, 1965-66

The principal economic events in earlier years were shown in the following issues:

<i>Years</i>	<i>Year</i>	<i>Book No.</i>	<i>Pages</i>
1931 to 1938	.	33	. . 968-77
1939 to 1944	.	36	. . 1129-41
1945 to 1948	.	37	. . 1235-45
1949 to 1951	.	39	. . 1331-40
1952 to 1955	.	42	. . 1149-60
1956 to 1958	.	46	. . 1185-92
1958-59 to 1961-62	.	48	. . 1188-1200
1962-63	.	49	. . 1253-56
1963-64	.	50	. . 1283-88
1964-65	.	51	. . 1269-74

In the year 1965-66 the rate of economic progress was less than that of recent years.

In current prices gross national expenditure increased in 1965-66 by about 5 per cent compared with an increase of 14 per cent in 1964-65. Similarly, gross national product increased in 1965-66 by 4 per cent compared with 9 per cent in 1964-65. The smaller increase in gross national product in 1965-66 is largely a reflection of the fact that the drought in that year caused a substantial reduction in both volume and value of farm output. However, the gross operating surplus of companies in the trading enterprise sector increased by only 2 per cent compared with 10 per cent in 1964-65. The Consumer Price Index, the components of which relate to a substantial portion of total consumption expenditure, increased by 3.7 per cent between 1964-65 and 1965-66. This, together with other available but incomplete price and cost data, indicates that the average increase in prices of all items included in gross national expenditure may have approached 4 per cent in 1965-66.

There was an increase of \$21 million in international reserves in 1965-66 and exports of goods and services increased by 3 per cent compared with an increase of 4 per cent in imports.

An increase in retail sales (excluding motor vehicles, parts, petrol, etc.) of 5 per cent was accompanied by a decrease in outstanding balances in transactions financed by instalment credit from \$1,445.4 million in June 1965, to \$1,427.2 million in June 1966, and an increase of \$213.9 million in loans, advances, and bills discounted by Major Trading Banks. At the same time the combined trading bank and savings bank deposits reached \$10,562 million. The liquid assets and Government securities ratio of Major Trading Banks increased from 22.2 per cent in June 1965 to 24.2 per cent in June 1966, while the amount in the banks' Statutory Reserve Deposit Accounts with the Reserve Bank declined from \$656 million in June 1965 to \$473 million in June 1966 as a result of releases of funds to assist the trading banks to continue lending and the establishment of a farm development fund of \$50 million to assist primary producers.

There was considerable activity in the iron ore mining industry during the year. New contracts were made by a number of companies operating in Western Australia and Tasmania for export of ore mainly to Japan. Bauxite deposits were also the centre of considerable activity, and new deposits of nickel and silver-lead were reported. Oil and gas exploration continued and resulted in discoveries of commercial quantities of gas in central Australia and off-shore in Victoria and oil at Barrow Island in Western Australia and in Queensland.

Average earnings increased by 3.2 per cent between June 1965 and June 1966 compared with an increase of 7 per cent in the previous year. The judgment of the Commonwealth Conciliation and Arbitration Commission in the 1966 Basic Wage Case handed down in July 1966 granted an increase of \$2 a week in the basic wage.

The continuing drought caused a substantial reduction in both volume and value of farm output. Rainfall was inadequate over large areas of southern Queensland and northern and western New South Wales, and the Commonwealth made substantial amounts of money available for drought relief. Livestock numbers decreased in New South Wales and Queensland from 96 million sheep and lambs and 12 million cattle to 79 million and 11 million respectively during the year ended 31 March 1966.

The levelling-off in building activity which was evident at the end of 1964-65 developed into a downward movement in the first half of 1965-66 and despite a renewed upward trend in the second half of the year the number of new houses and flats commenced decreased from 116,700

in 1964-65 to 107,200 in 1965-66. In the motor industry, too, there was a falling-off during the year. Registrations of new motor vehicles decreased markedly after August 1965 and have since been consistently at a lower level than for some years past. The reduced activity in these key industries had some effect on employment levels, but although there was an increase of 6,402 in the number of persons in receipt of unemployment benefit (19,058 at the end of June 1966), total civilian employment (other than rural) continued to increase (from 3,604,000 in June 1965 to 3,704,000 in June 1966, an increase of nearly 3 per cent).

21 July. Increase of 6.6 per cent in shipping freight charges for cargoes from Australia to Europe announced. To operate from 1 September (wool), 1 October (general cargo), and 1 February (fruit).

22 July. Broken Hill Pty. announced \$80 million expansion programme over next two years for Port Kembla steel works.

4 August. Commonwealth cash loan of \$70 million opened, issued with yields of 5 per cent for 2 years 9 months, 5.13 per cent for 9 years 6 months, and 5.25 per cent for 19 years 9 months; over-subscribed by \$35 million.

17 August. Commonwealth Budget for 1965-66 introduced into House of Representatives. In 1964-65 receipts of the Consolidated Revenue Fund were \$4,418.2 million, and expenditure (excluding payments of \$222.8 million to the Loan Consolidation and Investment Reserve) amounted to \$4,195.4 million. The main items of revenue (1963-64 figures shown in parenthesis) were: income taxes, \$2,295.6 million (\$1,874.4 million); excise duties, \$631 million (\$582.2 million); customs duties, \$268.8 million (\$232.8 million); sales tax, \$362.8 million (\$325.2 million); and pay-roll tax, \$150.1 million (\$136.4 million). The main items of expenditure were: payments to or for the States, \$976.8 million (\$896.2 million); social and health services, \$890.4 million (\$832.6 million); defence services \$609.0 million (\$443.4 million); war and repatriation services, \$239.0 million (\$225.4 million); capital works services, \$387.0 million (\$352.6 million). The Budget for 1965-66 provided for an estimated expenditure of \$4,987.9 million, to be provided from Consolidated Revenue Fund.

Australian and New Zealand Governments confirmed agreement made for limited free trade area which will apply to about 60 per cent of the trade between the two countries. (Approved by G.A.T.T. on 6 April 1966.)

26 August. Order placed for building of Macchi jet trainers for R.A.A.F. in Australia. Government announced plans for extending production by gaining export contracts.

31 August. 1965-66 Budget introduced into Tasmanian House of Assembly. The transactions of the Consolidated Revenue Fund in 1964-65 resulted in a deficit of \$1,618,000. Receipts of the Consolidated Revenue Fund totalled \$74,846,000 and expenditure \$76,465,000. For 1965-66 it was estimated that expenditure would be \$84,308,000 and revenue \$82,948,000, leaving a deficit of \$1,360,000.

Contract for \$8 million let for construction of standard gauge railway between Merredin and Koolyanobbing (Western Australia).

1 September. 1965-66 Budget introduced into South Australian House of Assembly. In 1964-65 revenue amounted to \$222,182,000 and expenditure to \$224,804,000, leaving a deficit of \$2,622,000. For 1965-66 it was estimated that revenue would be \$239,954,000 and expenditure \$243,036,000, leaving a deficit of \$3,082,000.

Minister for Territories announced plans for setting up Development Bank in Papua-New Guinea with capital of \$2 million.

8 September. Tariff Board report on crude oil issued and consequential Government policy decisions announced. (See the chapter Mineral Industry, page 1050.)

15 September. 1965-66 Budget introduced into Victorian Legislative Assembly. In 1964-65 revenue and expenditure amounted to \$480,668,000. The 1965-66 Budget provided for expenditure and revenue of \$515,788,000. Railway operating expenses and income were estimated at \$106,579,000 and \$105,200,000 respectively, and it was anticipated that the Railway Equalization Account would have to provide the balance of \$1,379,000.

Australian consortium, in association with Swiss group, granted lease of Gove (Northern Territory) bauxite deposits. Alumina plant with 300,000 ton capacity to be built by 1971.

20 September. Visiting trade mission from Taiwan made deals exceeding \$6 million for purchase of primary produce and sale of textiles and processed foodstuffs.

21 September. Trade agreement signed in Seoul between Australia and Korea. Report of Vernon Committee of Economic Enquiry tabled in House of Representatives.

22 September. 1965-66 Budget introduced into New South Wales Legislative assembly. During 1964-65 the transactions of the Consolidated Revenue Fund, Railways, Metropolitan and Newcastle Transport Services and Maritime Services Board resulted in a deficit of \$9,162,000 (total revenue overall was \$730,691,000, total expenditure \$739,853,000). After providing for

debt charges, there was a surplus of \$176,000 on the Department of Railways, a deficit of \$4,938,000 on the Metropolitan and Newcastle Transport Services, and a surplus of \$72,000 from the operations of the Maritime Services Board. The 1965-66 Budget provided for an overall deficit of \$8,092,000 (revenue \$763,007,000, expenditure \$771,099,000). After meeting debt charges, it was estimated that there would be a deficit of \$219,000 on the Railways, a deficit of \$6,356,000 on the Metropolitan and Newcastle Transport Services, and a surplus of \$43,000 on the Maritime Services Board.

30 *September*. 1965-66 Budget introduced into Queensland Legislative Assembly. In 1964-65 receipts of the Consolidated Revenue Fund amounted to \$267,139,312 and expenditure to \$271,215,060. For 1965-66 it was estimated that revenue would amount to \$290,090,000 and expenditure to \$293,082,116.

5 *October*. 1965-66 Budget introduced in Western Australian Legislative Assembly. Financial transactions for the year 1964-65 resulted in a deficit of \$4,697,050. For 1965-66 it was estimated that expenditure would be \$203,628,000 and revenue \$201,982,000, leaving a deficit of \$1,646,000.

Australia agreed to an increase of \$US 100 million in its quota to the International Monetary Fund.

16 *October*. Trade agreement signed in Moscow between Australia and U.S.S.R. Australian airlines announced 6 per cent increase in air fares and cargo rates in Australia and New Guinea.

21 *October*. Australia took part in discussion on proposed establishment of an Asian Development Bank to promote economic development in the ECAFE region. Australian proposed contribution \$75 million.

9 *November*. Commonwealth \$US 25 million loan opened in New York, issued at 99.75 per cent with interest of 5.75 per cent and a period of 20 years. It was fully subscribed, predominantly from European sources. The proceeds were applied to the 1965-66 programme for works and housing.

11 *November*. Commonwealth cash loan of \$100 million opened, issued with yields of 5 per cent for 2 years 6 months, 5.13 per cent for 9 years 9 months, and 5.25 per cent for 22 years; over-subscribed by \$33 million.

16 *November*. Economic sanctions imposed on Rhodesia.

25 *November*. New South Wales Government provided for making of long-term low interest loans to primary producers in necessitous circumstances as a result of the drought.

26 *November*. Housing Loans Insurance Corporation commenced operations in all States.

1 *December*. Australian Aluminium Company Ltd. announced plans for building \$22 million aluminium smelter in Newcastle area.

5 *December*. New reserves of hard coking coal, estimated at 260 million tons of recoverable coal, discovered on south coast of New South Wales.

6 *December*. Reserve Bank released \$48 million from statutory reserve deposit accounts to enable banks to maintain lending.

9 *December*. Wool-growers voted against referendum on proposed reserve price scheme for wool sales (see chapter Rural Industry, page 945.)

22 *December*. American company awarded \$15 million contract for building Murray 2 project in Snowy Mountains scheme.

1 *January*. Commonwealth Special Bonds Series 'A' reached final maturity. Out of the \$44 million total debt, \$33 million was converted to Special Bonds Series 'L' and the remainder was redeemed.

13 *January*. It was announced by the Reserve Bank that female employees were now able to keep their jobs after marriage and could be given paid leave when having babies.

28 *January*. Announcement made that two roll-on, roll-off vessels for Australian National Line are to be built in Brisbane.

14 *February*. Australia adopted dollar-cent system of decimal currency (see chapter Private Finance, page 671).

Special Bonds Series 'M' issued at par with interest rising from 4.5 to 5.25 per cent and optional redemption prices at par to 103 per cent at maturity. Commonwealth Treasury Note terms adjusted, price 98.87 to yield 4.58 per cent at 13 week maturity. Income tax rebate of 10c on each \$1 of Treasury Note income was withdrawn.

18 *February*. Commonwealth cash loan of \$100 million opened, issued with yields of 5 per cent for 3 years, 5.13 per cent for 9 years 9 months, and 5.25 per cent for 23 years 9 months; over-subscribed by \$74 million.

- 22 *February*. Northern Territory Administrator announced that world's largest cattle station, Alexandria Downs, was to be subdivided following a land resumption. Resumption will provide for three new cattle stations each of over 1,000 square miles, and a fauna and flora reserve of 4,000 square miles.
- 24 *February*. Commonwealth Government offered long-term loans totalling \$20 million over next 5 years to increase planting rate on Government softwood plantations so as to make Australia ultimately self-sufficient in timber.
- 7 *March*. Commonwealth Arbitration Commission Award (to become operative December 1968) provided for pay and working conditions of Aboriginal stockmen in Northern Territory to be on same basis as for white employees.
- 8 *March*. Prime Minister announced that Government would underwrite loans to farmers for developmental purposes totalling \$50 million repayable over 12 to 15 years at less than 5 per cent interest.
- 15 *March*. Oil flowed from well 27 miles off-shore from Lakes Entrance (Victoria).
- 16 *March*. 150,000 square miles of grazing lands in Queensland leased to United States syndicate. Commonwealth Government offered additional loan finance of \$15 million to States to give stimulus to their housing programme.
- 21 *March*. Ratification of the Commonwealth's raising of a private loan of \$US 54 million in New York for financing the purchase of aircraft and parts by Qantas Empire Airways and Australian National Airlines Commission (T.A.A.). The loan is repayable in half-yearly instalments from 1968 to 1974, with interest rates from 5 to 5.75 per cent.
- 22 *March*. Maritime Services Board announced plans for modernizing New South Wales ports, involving estimated expenditure of \$166 million (Sydney \$96 million, Newcastle \$58 million, other ports \$12 million) over next 10 years.
- 30 *March*. New South Wales Parliamentary Salaries Act gave Members of the Legislative Council a salary (\$2,040 a year) for the first time (as distinct from the expense 'allowance' previously payable) and increased salaries of Members of the Legislative Assembly by \$1,540 a year.
- 1 *April*. Reserve Bank of Australia released \$125 million of reserves to help establish the \$50 million Farm Development Loan Fund (*see* 8 March) and to maintain bank liquidity anticipated as a result of deficit in balance of payments.
- 8 *April*. Large nickel deposit discovered near Kalgoorlie (Western Australia).
- 11 *April*. \$US 100 million borrowed by Commonwealth Government for current defence programme.
- 12 *April*. Wide range of products of less developed countries admitted from this date at preferential rates of duty, also traditional cottage industry products of these countries to be duty free.
- 10 *May*. Commonwealth cash loan of \$75 million opened, issued with yields of 5 per cent for 3 years 2 months, 5.13 per cent for 9 years 6 months, and 5.25 per cent for 21 years 6 months; under-subscribed by \$13 million.
- 26 *May*. Australia's third commercial oil-field declared at Barrow Island, 50 miles off Western Australian coast.
- 2 *June*. First shipment of iron ore from Mount Goldsworthy field left Port Hedland (Western Australia).
- 16 *June*. Loan Council met in Canberra and approved borrowing programme for 1966-67 of \$645 million (\$525 million for State Works, \$120 million for Commonwealth-State Housing).
- 30 *June*. Commonwealth Special Cash Loan of \$169 million issued with yields of 5 per cent for 3 years 1 month, 5.13 per cent for 9 years 5 months, and 5.25 per cent for 21 years 4 months.
Average increase of \$3.50 a ton for phosphate rock delivered to the superphosphate industry announced by British Phosphate Commissioners.

1966-67

- 8 *July*. Commonwealth Arbitration Commission handed down decision in 1966 Basic Wage Case. Basic wage increased by \$2 a week. Margins to be reviewed and decision made later.

CHRONOLOGICAL TABLE

CHRONOLOGICAL TABLE OF CHIEF EVENTS IN AUSTRALIA SINCE 1955

NOTES. In issues of the Year Book up to No. 48 (*see* No. 48, page 1201) this table covered events back to the establishment of settlement in Australia in 1788. Later issues up to No. 50 (*see* No. 50, page 1289) covered events back to 1945. This issue covers the years 1955 to 1965.

For each earlier year this Table rarely contains more than two or three items; for recent years, however, in order to provide a wide cover of events, etc., it includes a much greater number. Both the nature of the Table and considerations of space render necessary a continual reduction in these items, and for more information the reader should therefore consult earlier issues.

- 1955 First power generated by Snowy Mountains Hydro-electric Authority. Australian population reached 9,000,000. Cocos (Keeling) Islands became Territory under authority of Commonwealth.
- 1956 Amendment to Conciliation and Arbitration Act altered the structure of the arbitration machinery by separating judicial functions from conciliation and arbitration functions.
- 1957 High Court ruled that interstate vehicles could not be compelled to register in New South Wales, but upheld validity of Victorian tax on commercial vehicles, including those engaged in interstate trade, imposed solely for the maintenance of roads. National Capital Development Commission set up to co-ordinate development of Canberra as centre of government.
- 1958 Prime Minister officially opened Australia's first nuclear reactor at Lucas Heights, near Sydney. Christmas Island (Indian Ocean) transferred to Australian Administration.
- 1959 Appointment of Decimal Currency Committee to investigate advantages and disadvantages of a decimal currency. Annual Holidays Act, 1944-1958 provided for three weeks annual holiday for all New South Wales workers. Population reached 10,000,000.
- 1960 Provision made for Social Service benefits to be paid to Australian Aborigines. *Commonwealth Banks Act* 1959 and *Reserve Bank Act* 1959 proclaimed (*see* page 681). Goods comprising 90 per cent of Australia's current imports exempted from licensing provisions. National Service training suspended. Report of Decimal Currency Committee presented to Parliament—decimal currency system favoured. Changes made in Constitution of Papua and New Guinea providing for an increase in number of indigenous members of Legislative Council to eleven, including six elected by indigenes. Commonwealth Government announced special economic measures designed to counter inflationary trend and safeguard overseas funds.
- 1961 Australia's first guided missile base established at Williamstown (New South Wales). *Commonwealth Matrimonial Causes Act* 1959 unifying State Acts, became operative (*see* page 533). Commonwealth Government announced tax concessions to exporters for promotional expenses in developing overseas export markets. Oil discovered in south-west Queensland. Australian population census taken. Iron ore deposits estimated at 1,800 million tons discovered at Pilbara (Western Australia).
- 1962 Western Australian Premier signed agreement with American companies for 21-year lease to extract and export up to 15 million tons of iron ore from Pilbara deposits. Commonwealth and Western Australian Electoral Acts amended to provide for votes for Aborigines. Work began on standardization of rail gauge from Kwinana to Kalgoorlie (Western Australia). Commonwealth provided \$3,530,000 grants to States for assistance to universities in development of training facilities for medical students in teaching hospitals. First production of bauxite ore from Weipa deposits. Aborigines exercised voting rights in Northern Territory for first time.
- 1963 Commonwealth Committee of Economic Enquiry appointed to investigate broad aspects of the Australian economy. Approval given to agreement for United States to establish, maintain and operate a naval communications station at North West Cape, Western Australia. Western Australian Government signed \$156 million contract for the establishment and development of a new iron and steel industry in the State. Australia signed Nuclear Test Ban Treaty. Uniform *Marriage Act* 1961 came into effect. Decimal currency legislation introduced into House of Representatives (*see* page 672). Australian population reached 11 million.

- 1964 Agreement concluded with United States of America on establishment of meteorological research station at Pearce (Western Australia) R.A.A.F. Base. Australian Defence Mission sent to Malaysia. R.A.N. Destroyer *Voyager* sunk in collision off Jervis Bay with loss of eighty-two lives. First general election from common roll in Papua-New Guinea. New South Wales Government employees granted four weeks annual leave. Australia represented as full regional member of ECAFE for the first time at 20th Conference in Teheran. Commonwealth Government announced programme of assistance for schools for teaching of science. Commonwealth Bureau of Roads to be set up to make a full and continuous study of the roads problem. Moonie to Brisbane oil pipeline opened and Australia's first commercial oil production started. Additional naval, army and air-force units made available for service in Malaysia. Advance party of army engineers left for Sabah (North Borneo). Northern Territory Legislative Council passed legislation removing discrimination against Aborigines. Army sent instructors and advisers to Vietnam. First applications lodged for Commonwealth Home Savings Grants. Australia joined eighteen other members of International Telecommunications Union in setting up an international communications satellite system. United States and Australian Governments agreed to establish joint educational foundation to succeed Fulbright Scheme. Commonwealth Government approved construction of \$2 million tracking station at Gove in the Northern Territory for ELDO (see page 1062). Construction began of new \$8 million jet airport at Tullamarine, Victoria, to handle international air traffic. Northern Territory *Social Welfare Ordinance* 1964 (see page 1090) repealed *Welfare Ordinance* 1953-1963 and provided for assistance without control for any person socially or economically in need of it. Sydney and Cornell (United States of America) Universities pooled resources to set up joint Astronomy Centre, the largest of its kind in the world. New South Wales State Electricity Commission began construction of \$200 million power station at Liddell. Commonwealth Government established licensing system for intrastate civil aviation. Australian forces saw action in Malaysia. Prime Minister announced expansion of defence provisions involving additional defence expenditure of \$2,440 million over three years, resumption of National Service Training, and establishment of special Reserve Forces (see page 1054). *National Service Act* 1964 passed. Commonwealth Government allowed export of iron ore to Japan from fields in Western Australia (see page 1048). Legislation introduced in New South Wales Parliament to establish University of Newcastle (see page 603). First awards of Commonwealth Scholarships to secondary school students.
- 1965 *January*. New passenger car ferry, the *Empress of Australia*, commissioned for Sydney-Hobart run. Two more roll-on roll-off cargo ships ordered by Australian Shipping Commission.
- February*. Full High Court judgment on intra-state airlines case held that New South Wales Air Transport Act requiring intra-state services to hold a State licence was valid, but also that four out of five relevant Commonwealth regulations were valid, so that airlines needed Commonwealth licence as well. Australia signed major defence agreement to buy \$312 million of aircraft and other military equipment in next three years. Royal Australian Mint opened.
- March*. First ballot for National Service call-up. Premier of Singapore made short visit for talks with Commonwealth and State Ministers and senior officials. Martin Report on tertiary education tabled in House of Representatives (Commonwealth will provide grants, subject to matching grants by States, rising from \$5 million to \$50 million over six-year period for development of technical education at tertiary level and will award 1,000 additional scholarships, to total of 6,000).
- April*. Australia changed to metric system for dispensing of medicine.
- May*. Australia received orders for supply of \$12 million Ikara anti-submarine weapons system to Royal Navy. New steelworks opened at Whyalla (South Australia). 1st Battalion, Royal Australian Regiment, embarked for service in South Vietnam.
- June*. Australia agreed to establishment of Legislative Council for Nauru and payment of substantially higher phosphate royalties. Victorian fodder shipped to New South Wales to relieve stock losses in worst drought for sixty-three years.
- July*. First recruits under new National Service call-up entered camp. Minister for Defence announced establishment of a United States radio research base at Amberley air-force base (Queensland). First R.A.A.F. Squadron equipped with Mirage jet fighters formed.
- August*. Australia gave separate diplomatic recognition to Singapore. Third Commonwealth and Empire Law Conference held in Sydney. \$8 million contract let for construction of Merredin-Koolyanobbing (Western Australia) standard gauge railway.
- September*. Report of Vernon Committee of Economic Enquiry tabled in House of Representatives. Lord Casey took office as Governor-General. Australia's first woman judge appointed (to South Australian bench). Australia's first submarine for 34 years launched at Greenock, Scotland.

- 1965 *October.* House of Representatives passed Stevedoring Industry Act (*see* page 443). Sir Robert Menzies appointed by Queen to post of Lord Warden of the Cinque Ports (invested July 1966). First trade agreement between Australia and U.S.S.R. signed in Moscow.
- November.* President of Malagasy Republic arrived in Australia for six-day visit. One of world's largest seismological installations was set up in Northern Territory over a period of time by United Kingdom Atomic Energy Authority in association with Australian National University. Economic sanctions imposed on Rhodesia. Mills Cross radio telescope opened by Prime Minister near Hoskinstown (N.S.W.). Housing Loans Insurance Corporation commenced operations in all States. Winston Churchill Memorial Trust announced award of first forty-eight Churchill fellowships.
- December.* Australian Aluminium Co. Ltd. announced plans for building \$22 million smelter in Newcastle district. Largest Australian built ship, the 49,000 ton bulk ore carrier *Darling River*, launched. First section of Sydney-Newcastle expressway opened as toll-road by New South Wales Minister for Highways.
- 1966 *January.* United States Ambassador-at-large arrived in Australia for talks on Vietnam War. Sir Robert Menzies announced his retirement as leader of Liberal Party. Mr. Harold Holt sworn in as Prime Minister. Dame Annabelle Rankin included in new ministry, first woman to administer a Government department in Australia. Charles, Prince of Wales, arrived in Australia for period of schooling at Timbertop school, Victoria.
- February.* Ten o'clock closing of hotels introduced in Victoria. Australia adopted dollar—cent system of decimal currency. United States Vice-President, Mr. Humphrey, made two-day visit to Australia.
- March.* Commonwealth Arbitration Commission gave judgment that by December 1968 pay and working conditions of Aboriginal stockmen in Northern Territory were to be on same basis as for white employees. Immigration laws amended to provide for relaxation of restrictions on entry of persons of non-European race (*see* page 220). Prime Minister announced the replacement of the Australian Army battalion in Vietnam by an Army Task Force of two battalions and support units. H.M.A.S. *Perth*, Australia's new guided missile destroyer, arrived in Sydney. Parliament passed Act giving member for Australian Capital Territory full voting rights. Oil flowed from well 27 miles off-shore from Lakes Entrance (Victoria). Australia and Mexico agreed to exchange of Ambassadors. New South Wales Parliamentary salaries increased.
- April.* First National Service personnel left for Vietnam. Prime Minister made four-day visit to Vietnam. All National Servicemen posted overseas to have vote at Commonwealth elections.
- May.* Europa 1, first ELDO rocket, launched at Woomera. First National Serviceman in Australian army ever to die on foreign soil killed in action in Vietnam. Australia's third commercial oilfield declared at Barrow Island, 50 miles off Western Australian coast.
- June.* World's largest solar still, and first to be used for town water supply in Australia, set up at Coober Pedy (South Australia). First shipment of iron ore from Mount Goldsworthy field left Port Hedland (Western Australia). Australia joined eight other Asian and Pacific nations in forming Asian and Pacific Cooperation Council (ASPAC). Loan Council and Premiers' Conference met at Canberra. Leader of the Federal Opposition wounded by shot while leaving political meeting. Tighter security advocated for safety of politicians. SEATO Conference held in Canberra. Prime Minister left on mission to United States and United Kingdom. ELDO decided to transfer base to French Guiana. 1966 Census taken. ANZUS foreign ministers held Conference in Canberra. Australian and New Zealand Prime Ministers held Conference in Canberra.
- July.* Commonwealth Arbitration Commission increased basic wage by \$2 a week. Margins to be reviewed and decision made later.

STATISTICAL SUMMARY: AUSTRALIA

In most cases where figures are available back to 1861, these were shown in Year Book No. 39, pages xxviii-xxix.

The statistics in this summary relate in general to the periods shown in the table headings; where the statistics relate to other periods, this is indicated in footnotes.

APPENDIX

Some recent information which has come to hand since the various chapters were sent to press is given in summarized form in the following pages. In this issue of the Year Book the Appendix has been restricted to a few items of importance and no longer provides a selection of statistics from the various chapters. For the latest available statistics on subjects dealt with in chapters reference should be made to other publications issued by this Bureau, e.g. the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, the *Digest of Current Economic Statistics*, and the various mimeographed statements issued on particular subjects (see Publications issued by the Commonwealth Statistician, pages 1153-7 of the chapter Miscellaneous).

CHAPTER 3. GENERAL GOVERNMENT

Parliamentary government

State Governors, page 54

Queensland. Sir Alan Mansfield, K.C.M.G., succeeded Sir Henry Abel Smith on 21 March 1966.

Commonwealth Ministries, page 56

On 26 January 1966 Sir Robert Menzies resigned from the Prime Ministership and the Rt. Hon. H. E. Holt, M.P., was sworn in as his successor, with the following Ministry.

HOLT MINISTRY (from 27 January 1966)

(The State in which each Minister's electorate is situated is shown in parentheses.)

- | | |
|---|---|
| *Prime Minister—
THE RT. HON. H. E. HOLT, M.P. (Vic.) | Minister for Shipping and Transport—
THE HON. GORDON FREETH, M.P. (W.A.) |
| *Minister for Trade and Industry—
THE RT. HON. J. McEWEN, M.P. (Vic.) | Minister for Immigration—
THE HON. HUBERT OPPERMAN, O.B.E., M.P. (Vic.) |
| *Treasurer—
THE RT. HON. W. McMAHON, M.P. (N.S.W.) | Minister for Civil Aviation—
THE HON. R. W. C. SWARTZ, M.B.E., E.D., M.P. (Qld) |
| *Minister for External Affairs—
THE RT. HON. PAUL HASLUCK, M.P. (W.A.) | Attorney-General—
THE HON. B. M. SNEDDEN, Q.C., M.P. (Vic.) |
| *Minister for Primary Industry—
THE HON. C. F. ADERMANN, M.P. (Qld) | Minister for Health—
THE HON. A. J. FORBES, M.C., M.P. (S.A.) |
| *Minister for Defence—
THE HON. ALLEN FAIRHALL, M.P. (N.S.W.) | Minister for the Interior—
THE HON. J. D. ANTHONY, M.P. (N.S.W.) |
| *Minister for Supply—
SENATOR THE HON. N. H. D. HENTY (Tas.) | Minister for the Navy—
THE HON. F. C. CHANEY, A.F.C., M.P. (W.A.) |
| *Postmaster-General and Vice-President of the Executive Council—
THE HON. A. S. HULME, M.P. (Qld) | Minister for Air; and Minister assisting the Treasurer—
THE HON. PETER HOWSON, M.P. (Vic.) |
| *Minister for National Development—
THE HON. D. E. FAIRBAIRN, D.F.C., M.P. (N.S.W.) | Minister for Customs and Excise—
SENATOR THE HON. KEN ANDERSON (N.S.W.) |
| *Minister for Territories—
THE HON. C. E. BARNES, M.P. (Qld) | Minister for Repatriation—
SENATOR THE HON. G. C. MCKELLAR (N.S.W.) |
| *Minister for Works; and under the Prime Minister, Minister-in-Charge, Commonwealth Activities in Education and Research—
SENATOR THE HON. J. G. GORTON (Vic.) | Minister for Social Services—
THE HON. I. MCC. SINCLAIR, M.P. (N.S.W.) |
| *Minister for Labour and National Service—
THE HON. L. H. E. BURY, M.P. (N.S.W.) | Minister for Housing—
SENATOR THE HON. DAME ANNABELLE RANKIN, D.B.E. (Qld) |
| | Minister for the Army—
THE HON. J. M. FRASER, M.P. (Vic.) |

* Minister in the Cabinet.

State Ministers, etc., pages 57-9

Victoria. The Minister of Transport is the Hon. E. R. Meagher, *not* E. L. Meagher.

Queensland. Following the 1966 elections a new ministry took office as from 10 June 1966. The holders of office were unchanged but the portfolio of Labour and Industry was changed to Labour and Tourism.

Leaders of the Opposition, page 59

Queensland. Mr. J. E. Duggan resigned as Leader of the Opposition on 11 October 1966, and Mr. J. W. Houston was chosen as his successor.

South Australia. Consequent on the resignation of Sir Thomas Playford on 13 July 1966 as Leader of the Opposition, Mr. R. S. Hall succeeded him in that office.

Franchise—Commonwealth Parliament, page 60

In 1966 the franchise was extended to entitle a person who is less than twenty-one years of age, has lived in Australia for six months continuously and who is, or has been, on 'special service' outside Australia as a member of the Defence Force, to vote at elections as if his name appeared on the Roll. 'Special service' takes the same meaning as that term in the Repatriation (Special Oversea Service) Act and means, in relation to a person, service during a period when he is outside Australia and he or his unit is allotted for special duty in a special area.

Members of the Commonwealth Parliament, pages 63-5

Senator the Hon. Sir Shane Paltridge died on 8 March 1966 and Senator R. D. Sherrington died on 17 March 1966. In accordance with section 15 of the Constitution Senators R. G. Withers and W. C. Heatley, respectively, were appointed to fill the vacancies until the next election. The deaths of Messrs. G. W. Shaw, M.P. (Dawson, Qld), and J. S. Cockle, M.P. (Warringah, N.S.W.) were reported on 8 March 1966 and 16 August 1966, and the resignation of the Rt. Hon. Sir Robert Menzies, K.T., C.H., Q.C. (Kooyong, Vic.) was reported on 8 March 1966. By-elections were held for the seats of Dawson and Kooyong at which Messrs. R. A. Patterson and A. S. Peacock, respectively, were elected. The vacancy in the Warringah electorate will not be filled until the 1966 general election. Senator C. W. Sandford died on 21 October 1966 and a successor will be elected in November.

CHAPTER 5. MANUFACTURING INDUSTRY**Factory development, page 94**

The following table gives a summary of operations in manufacturing industries during 1964-65.

(a) Average over whole year; includes working proprietors. (b) Excludes drawings by working proprietors. (c) Includes also value of containers, packing, etc., replacements of tools and repairs to plant. (d) Value added in process of manufacture (i.e. value of output less value of materials and fuel, etc. used). (e) Value at the factory of goods produced.

CHAPTER 8. POPULATION**Population recorded at Censuses, page 192**

Preliminary results of the Census of 30 June 1966 compiled by field personnel during the taking of the Census are given in the following table. Particulars of full-blood Aborigines are excluded from this table.

CENSUS OF AUSTRALIA, 30 JUNE 1966: PRELIMINARY RESULTS

State or Territory	Population Census, 30 June 1966			Increase 1961-1966		
	Males	Females	Persons	Numerical increase	Percentage increase	Average annual rate of growth
New South Wales ..	2,124,645	2,110,385	4,235,030	318,017	8.12	1.57
Victoria ..	1,613,286	1,604,546	3,217,832	287,719	9.82	1.89

(a) Includes persons employed in the Australian Capital Territory who reside in adjoining areas.

CHAPTER 20. PRIVATE FINANCE

Trading bank charges, page 705

From 1 October 1966 the service charges made by trading banks were increased. The following are the current charges.

Basic maintenance current account fee. Sixty-five cents quarterly (non-rebated).

Ledger activity fee (quarterly). Up to $\frac{1}{4}$ folio (20 entries), 25 cents; over $\frac{1}{4}$ folio to 1 folio, 80 cents; over 1 folio to 2 folios, \$2.25; over 2 folios to 3 folios, \$5; over 3 folios to 4 folios, \$7.75; over 4 folios to 5 folios, \$10.50; over 5 folios to 6 folios, \$13.25; over 6 folios to 7 folios, \$16; over 7 folios to 15 folios, \$16, plus \$2.25 per folio or part thereof exceeding 7; over 15 folios to 35 folios, \$34, plus \$1.75 per folio or part thereof exceeding 15; over 35 folios, \$69, plus \$1.25 per folio or part thereof exceeding 35. Rebates of one free folio (or equivalent of approximately 40 entries) will be allowed for each complete \$1,000 minimum quarterly credit balance. Where rebates are applicable the number of free folios is deducted before the activity fee is calculated.

Collection fee on cheques, etc., deposited. Up to 20 cheques per quarter, free; 21 to 100, 60 cents, plus 30 cents per 10 cheques or part thereof exceeding 20; 101 to 500, \$3.00, plus \$1.50 per each 50 or part thereof exceeding 100; 501 to 1,000, \$15, plus \$3 for each 100 or part thereof exceeding 500; 1,001 to 10,000, \$30, plus \$15 per each 500 or part thereof exceeding 1,000; 10,001 to 50,000, \$300, plus \$20 per each 1,000 or part thereof exceeding 10,000; 50,001 to 100,000, \$1,100, plus \$75 per each 5,000, or part thereof exceeding 50,000; over 100,000, \$1,850, plus \$125 per each 10,000 or part thereof exceeding 100,000.

LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED IN PREVIOUS ISSUES

This list refers to special articles and other more or less important miscellaneous matter which have appeared in previous issues of the Year Book but which are not included, or are included in abbreviated form only, in the present issue.

The figures below indicate, respectively, the number and page of the Year Book to which reference is made. In cases where matter was published in more than one previous issue, the volume and page for the last issue containing such matter are given. For possible revisions, however, issues immediately following the one referred to should also be consulted.

GENERAL INDEX*

This index is preceded by a list of the special articles, etc. which have appeared in previous issues of the Year Book. The illustrations contained in this issue are listed under the various chapters in the Contents (pages vii-xii). Subject matter extending continuously over more than one page is indexed according to the first page only. *Where more than one reference to a subject is given, the chief reference, wherever it has been possible to determine it, is indicated by italic type. Two references to a subject so indicated signify major, and approximately equal, importance.*

PRINTED PUBLICATIONS ISSUED BY THE CENTRAL OFFICE OF THE COMMONWEALTH BUREAU OF CENSUS AND STATISTICS

NOTE. The publications listed below may be bought from the Government Printer, Canberra, and in each capital city from the Deputy Commonwealth Statistician and the Commonwealth Sub-Treasurer. They may also be ordered through the leading booksellers in the principal cities of Australia. In addition to printed publications, a number of mimeographed publications are available in limited numbers free of charge. Publications dealing with individual States only are produced by the Deputy Commonwealth Statistician in each State. A complete list of publications issued by the Bureau is given in *Publications of the Commonwealth Bureau of Census and Statistics* (with subject index) available from the Commonwealth Statistician, Canberra (see also pages 1153-7 of this Year Book).
